14,531. Do you think that an extensive and perfect organization amongst the men, headed by such delegates as you speak of, would be likely on the whole to keep the peace better than the old system of different small unions scattered all round with no regular rule?—Well, I do not think so, because they become more powerful and capable of carrying their own views whether reasonable or not when they are so extensive.

14,532. But they carry them apparently, as far as your experience has gone, with more reason, and with less violence of any kind?—Well, in this particular instance I am speaking of they did so.

14,533. That has been your experience in fact as far as it has gone yet?—Yes.

14,534. (*Chairman.*) In 1866 the men at the head of the union were, as far as you could judge, sensible, well-intentioned men?—No, not in the onset. I am quite opposed to their views with reference to that, because they would not listen to me in the first instance, but since then, having been compelled to submit to the dictate of the union, I was obliged to consult them. I had nothing else left for it.

14,535. (*Mr. Hughes.*) But when you did consult them you found them reasonable men?—I found that I could manage them tolerably well. But in the first instance in this strike I objected to giving 5 per cent., because some men were earning 10*s.* or 12*s.* a day and others were earning only 5*s.* Consequently the man that was earning his 10*s.* would get sixpence at 5 per cent., and the man that was earning 5*s.*, who had a worse job

to work, was only getting his threepence at 5 per cent. I objected to the principle, and the consequence was I had 36 weeks' strike.

14,536. (*Mr. Roebuck.*) Let me direct your mind back to an answer which you gave just now. You said something about the legislature intervening. I want to know in what way, in your opinion, the legislature ought to intervene?—To prevent men coercing us in our efforts to get new men.

14,537. What is your idea of the men coercing you; how did they coerce you?—They would not allow me to get other hands.

14,538. How did they prevent you?—Well, when I got hands they mobbed them and drove them away, and broke their windows and intimidated them.

14,539. That means to say that you want a law made against violence?—Yes, and I want to be able to put it in force.

14,540. Is there already a law against violence?—We did not get proper protection or redress; the law as at present administered is inoperative.

14,541. Will you answer me the question; is there not already a law against violence?—I have never been able to get that law put in force.

14,542. Why were you unable to get it put in force?—Because in most cases when we took them before the magistrates they would not commit them.

14,543. What you mean to say is, I suppose, that the magistrates thought that you had not sufficient evidence to prove those men guilty?—It was not so, because there was violence and tumult throughout the whole district; thousands of men and women getting up disturbances and annoying our workmen when they came to and from their work.

14,544. Let me put it thus to you: supposing you took up John Brown (I will take a common name, not signifying anybody) and charged him with violence against John Smith, and you brought that before the magistrates; you say the magistrates did not convict him. I ask you why?—They did convict some of them; but it was very inoperative and did not produce the desired effect, because again and again they came and violated the law.

14,545. Then I bring you back to that. What would you have the law do? The law protects parties against violence; the law is enforced and the men commit violence again. What would you have the law do; you would not have the law hang them, I suppose?—No.

14,546. What would you have the law do?—I would have the law restrain them from intimidation.

14,547. But you see that the law acts by means. What would you have the law do?—I want the law to protect the men in going to and from their work, and to protect them in their dwellings.

14,548. And you say that they were not protected?—They were not protected, at least not efficiently protected.

14,549. There was violence committed against the men?—Yes.

14,550. And in most cases did you succeed in proving that A. B. was guilty of that violence?—We succeeded in some instances.

14,551. And in all those instances in which you succeeded in proving the identity of the men were they punished?—Some of them.

14,552. In what way?—Some of them were sent to prison, and some of them were fined, and others were bound over to keep the peace.

14,553. Then what the thing comes to, I suppose, is this; that the magistrates, in your opinion, did not effectively carry out the law?—They did not.

14,554. Had you an increase of police?—An increase of 20 police on the spot.

14,555. Had you a sufficient increase of police?—Yes, they were sufficient.

14,556. Who bore the expense of that?—We paid the extra expenses.

14,557. That is a point, I suppose, in which I might suggest to you that the law might be improved—that the expense of the defence of the public might be borne by the public?—We think so.

14,558. Is that one of your improvements, for which you desire legislation?—Yes. We think we are hardly dealt with.

14,559. What was the general class of violence employed against the new men whom you brought in?—Breaking windows and threatening that they would kill them if they did not stay away, and mobbing them in the street and throwing stones at them.

14,560. Was it generally known who the men were that did those things?—Sometimes; but you cannot always identify the men.

14,561. Did they commit any of this violence in the dark, at night, for instance?—They did violence on the houses at night. We had many windows broken at night.

14,562. Were the men beaten?—Yes.

14,563. Were the men beaten at night, coming from a public-house, we will say?—Yes, and in going to and from their work; but after the first beating we had the police to protect them.

14,564. But the men at other times, I suppose, were not able to go out of their houses without danger, were they?—No, and they were often waylaid in different ways.

14,565. Now I will bring you to another point. Do you think that that violence was at all suggested by, or countenanced by the unions?—Well, I do not believe that the managers of the union would suggest it, but they always paid the expenses out of the union funds, and it is a principle held by all unionists that all non-union men should be compelled to join the union.

14,566. I take it that a man who intends to break the law does all he can to prevent the law finding him out; but these men who were brought up were always defended by the union, if I rightly understand you?—The bulk of them. When we agreed with the men to go in we also made a bargain, that all the men who had been working and had contracts were to be allowed to go peaceably to their work. But when they met on the first morning, when some of these men came to go to their work, the others set on them and beat them most cruelly, and nearly killed some of them. We took out summonses against three parties for that and in the end compromised it with the union.

14,567. You compromised it with the union you say?—Yes. They were to pay certain fines to these men that they had abused and all the expenses.

14,568. Did a delegate or anybody authorized by the union enter into that compromise with you?—Yes.

14,569. You knew the man who was acting for the union?—Yes.

14,570. May I ask his name, because it must be a public thing?—It was the chairman, Mr. Normansell.

14,571. He entered into a distinct negotiation with you about those guilty men?—Yes. I must say this for him, that he used his influence to get them to be peaceable afterwards.

14,572. (*Mr. Hughes.*) Did he in any way justify the attack that had been made upon the man?—No, he said that he was very much grieved at it.

14,573. (*Mr. Mathews.*) But yet he paid the expenses?—Yes.

14,574. So that if he did not give the proceeding an actual sanction, he gave it an indirect sanction by paying the expenses of the men who had been guilty of these outrages?—Yes.

14,575. (*Chairman.*) I understand that that was a private arrangement between you on the employers' side and Mr. Normansell on the part of the working men?—Yes.

14,576. That you made a private arrangement that so much money should be paid to the parties injured, and the expenses, and that Mr. Normansell found funds for that?—Yes.

14,577. (*Mr. Harrison.*) What did he pay, I do not mean the sum, but what was it in respect of?—I know I required him to pay 5*l.* to one man.

14,578. You mean that some workman in your employment had been seriously injured by some members of the union, that you were on the point of

Mr. J. Chambers.

28 April 1868.

prosecuting the men for it, and the union paid a sum as compensation for the man injured, and the expenses of witnesses, or what was it they paid?—All the expenses which we had gone to up to that time.

14,579. (*Mr. Mathews.*) In the case of conviction before the magistrates, and the offender being fined, is it not the custom of the union to pay the expenses?—Yes.

14,580. And also to find funds for defending them before the magistrates?—If they are members of the union.

14,581. So that in fact the union adopts the proceedings of these men by paying the expenses in case they are fined, and by defending them before the magistrates?—Yes.

14,582. (*Mr. Roebuck.*) The transaction is in this wise:—a violence and breaking of the law is committed by union men, the violence and breach of the law is defended by union money, and if a fine is inflicted the fine is paid by the union?—That is my opinion.

14,583. (*Mr. Harrison.*) But when you speak of their defending a union man I presume you mean to say that they see that he has legal assistance when put on his trial?—Yes.

14,584. You do not mean defence in the usual sense of justifying him in his course?—No; that they pay his expenses and provide the counsel or advocate.

14,585. Is it your opinon that providing a sum enabling a man to have legal assistance when he is put on his trial necessarily implies that you justify the acts of which he is accused?—Well, it goes a long way towards it, and will bear that construction.

14,586. (*Mr. Booth.*) Suppose you pay a fine imposed upon the man, then you would think that you were justifying what he has done?—Yes, and I think if you pay his expenses you are justifying him to some considerable extent.

14,587. When you have attempted to discuss matters with your men as to the rate of wages or hours, and matters of that kind, have you found that they have been unwilling to come to terms without consulting their union?—They will not come to terms with me now at all without consulting the union.

14,588. But supposing that there had been no union do you think that you would have had any difficulty in coming to terms with your men, and discussing matters with them amicably?—I think not, and I give this reason. I have some 200 or 300 ironstone miners not in the union at all, and we have the best understanding with those men, and have no quarrels or strikes or anything else.

14,589. So that in the absence of unions you could deal more satisfactorily with your men than now you can with the unions?—Yes; it would be very much better I think for us to be without unions.

14,590. (*Mr. Roebuck.*) That is, in your opinion, if the unions were absent there would be more peace and better understanding between the men and you, and the wages of the men would be kept up to the point which they are now at?—Well I do not know about the matter of wages. I think the wages have been driven beyond what is reasonable.

14,591. Then you think that with the exclusion of the keeping up of the wages, all that is indicated in the former part of my question was as I put it to you?—Yes; quite so.

14,592. And you think that wages have, by the action of the union, been kept at an unreasonable height?—Yes, I think so.

14,593. Do you mean by that to say, that they have been kept to a height that eventually will prevent your working the mine?—Yes.

14,594. And that eventually the effect of the union will be to put an end to the work altogether?—Well, it will in the iron trade, but with the coal trade, you know we can make a customer pay for it, at least, unless we are opposed in other markets. But it will drive the making of pig iron out of our district.

14,595. In your district, have you any evidence up to the present time, that the effect of the unions has been to drive the iron trade out of it?—Yes, we are putting down our iron stone pits. The colliers' wages being so high, we are obliged to give the ironstone miners something in proportion, and the ironstone is so dear to get, that we cannot afford to use it—we can buy pig iron cheaper than we can make it.

14,596. You are about to put down some pits?—We have put down five ironstone pits already.

14,597. Where are they?—At Thorncliffe Iron Works, near Sheffield.

14,598. To that extent, at least, the effect of the union has been to drive away the business?—Yes.

14,599. Have you any knowledge or evidence of their having done something of the same sort in any other district?—The iron trade is so injured here, that in fact we had offered to us twelve months ago Belgian bar iron 10*s.* cheaper than the Staffordshire iron, and good iron it was.

14,600. Are you aware whether it has been the case to any extent in your district—that Belgian iron has been brought in?—I believe some Belgian iron has been brought into Sheffield. I have heard so.

14,601. That Belgian iron has been brought in cheaper than you could supply it?—Yes, it has been brought in cheaper than could be supplied from Staffordshire.

14,602. Have you any notion of the difference of price?—Ten shillings a ton.

14,603. Is that what is called pig iron?—No, it would be bar iron. The Belgians import pig iron for the making of their iron—for a mixture.

14,604. They import our iron and make it into bars, and bring it back to us more cheaply than we can supply it to the market?—They use a portion of pig iron from this country. What sort of iron they make to bring here and to sell to us at a cheaper rate than they do in Staffordshire, I do not know, but I was offered at our works some Belgian bar iron at 10*s.* a ton under the Staffordshire prices.

14,605. (*Mr. Hughes.*) When was that?—About twelve months ago.

14,606. Have you heard of any within the last five or six months?—There was a paragraph in the papers about some girders wanted for Sheffield, and they were scolding the contractor for not bringing them, and it was found that they were in a foreign port, and that they were coming from Belgium.

14,607. Are you aware whether there has been any recent rise in the price of Belgian iron or not?—I am not.

14,608. Are you aware of the state of the pits in Belgium, whether they are in a peaceable state, and whether the relations between master and men are in a sound condition?—I have noticed lately that there have been uproars in the country.

14,609. Do you know that the military have been called out?—Yes

14,610. With respect to the probable driving out of the iron trade from England, have you seen the returns showing the amount of English iron which has been exported during the past year?—I have not noticed that.

14,611. You have not noticed whether it was larger or smaller than in previous years?—No.

14,612. Last year and the year before were times of great slackness in the trade, were they not?—Yes.

14,613. Do not you think that that slackness may be accounted for to a considerable extent by the very large prices that were made, and the great rises that took place so suddenly in the prosperous years just previous?—No doubt it has arisen from that, but then it has been driven up by the demand for it in this country.

14,614. Is it not true that the price of iron often, at any rate once or twice, rose in a very few months as much as 20 or 30 per cent. during those years?—I am not quite prepared to say that, but it has risen very rapidly.

14,615. Can you give us at all the figures. Of course, I do not know the state of things practically,

but I have seen from statements in the papers and other sources, that there was a very large rise in the prices of iron, from 20 to 30, and even more per cent.?—The prices of iron rose very rapidly at one period. I remember that.

14,616. What period was that?—I should think that it would have been in 1865, probably.

14,617. I think that is the date to which I allude to. Do you remember what rise took place in the wages proportionately at that time?—The wages invariably went up whenever there was a rise in iron.

14,618. In anything like that proportion, do you mean?—I think so.

14,619. And do you think that they would have gone up if there had been no combination amongst the men?—Well, they would have gone up in some proportion to the price of iron, but very likely would not have been driven up so far.

14,620. Is it your experience that the wages have always been advanced by the masters in the same proportion as the price of iron has varied?—Not always.

14,621. (*Sir D. Gooch.*) If iron were to rise 25 per cent. now, would it make the market price more than a fair profit to the maker?—Well, I do not think it would.

14,622. (*Mr. Hughes.*) What do you call a fair profit?—First of all I want 5 per cent. for my capital invested, then I want it recouping in a certain number of years. I have laid down the capital, and put it into a trade, and I want it back at a certain period when that trade is exhausted. And I want a profit besides, or it is not worth while going into trade.

14,623. And you think that a rise of 25 per cent. now would not be more than a fair profit to the master, wages remaining at the present price?—I think it would not.

14,624. (*Sir D. Gooch.*) If the present market price of iron were to rise 25 per cent., would a rise of 25 per cent. make it so high that the manufacturer would get more than a reasonable profit. Is he not in fact now working his establishment at a loss, because, if he is not getting 5 per cent. on his money and getting his capital recouped, he is working at a loss?—I believe that there are only very few iron-masters in the country but what are losing money now and have been for the last twelve months.

14,625. (*Mr. Mathews.*) You know the iron trade pretty well, and have had long experience in it?—Yes.

14,626. And know all the large establishments in England and Wales?—Yes, most of them.

14,627. Do you believe that there is any iron-worker in Great Britain at the present time not losing money?—No.

14,628. (*Earl of Lichfield.*) I have been told that the exportation of iron from this country has been larger during the last year than in any previous year. Do you know that fact?—I do not know it.

14,629. Just now you said, I think, that at the time of the concession of the 5 per cent. being made, you entered into an arrangement with the delegates from the union to prevent your men from being interfered with on their way to work. Did I rightly understand that?—No.

14,630. I thought you said that at the time that that concession of 5 per cent. was made, part of the arrangement was that your men should be protected on their way to work, that is, that they should not be interfered with. That was part of the arrangement, was it not?—Yes, that was part of the arrangement.

14,631. With whom?—With Mr. Normansell and Mr. Casey.

14,632. At the time that you made that arrangement with Mr. Normansell, were you under the impression that that arrangement on his part amounted to an admission that the union could have prevented that interference with your men previously if they had been so disposed?—Well, I do not know that, because I do not believe that they have full control over the men. There are many unruly men that will not be controlled, and that do things contrary to their own rules; but the whole of our workmen, or at least the bulk of our workmen, were present with Mr. Normansell and with Casey at the time I made that arrangement. So that it was with the men and with those two persons acting on their behalf that it was made.

14,633. (*Mr. Roebuck.*) I should like to ask you if you could inform me, taking a piece of bar iron, what are the elements which constitute its price, what you have to calculate in your own mind, and from what the price should arise—so much labour, so much of this, so much of the other. Could you give me the items that enter into its price?—It is a matter of memory, and I have not the figures.

14,634. Do you think that you could upon reflection give me all the elements that enter into the price of a piece of iron?—Yes. I could get them easily, and should be very glad to furnish it.

14,635. (*Mr. Mathews.*) You were asked about Belgian iron. I think you stated that you had been offered Belgian bar iron at 10*s.* a ton less than the English iron?—Yes.

14,636. Are you aware that the Belgian iron-masters buy considerable quantities of pig iron from the Middlesboro' district?—Yes, I believe so.

14,637. And they send that iron manufactured into bar iron into this country at a less price than the English manufacturer can make it at?—Yes, but they mix with it their own iron.

14,638. Are you aware that an English contractor has contracted to put up the girders of the Kensington Museum, and has brought them ready made from Belgium at a less price than he could make them for himself in this country?—I was not aware of that.

14,639. You were asked about the violence of the union men in preventing your importing labour from other districts into your colliery. I suppose that there is a great variety of ways of intimidating these men without having recourse to actual violence?—Yes.

14,640. It is only in case of actual violence that the civil force can take the cognizance of it?—Yes.

14,641. In case of your summoning men before the magistrates, is it not the custom of the magistrates to ascertain whether actual violence is committed?—Yes.

14,642. And they do not take cognizance of cases where there is hooting, and noise, and bullying?—No, they do not. If a non-union man was to go into a pit full of union men they would obstruct him in every possible way, they would steal his tools, they would cut off his matties (the name for his token that goes along with the corve to represent his earnings), and in a hundred ways they would annoy him.

14,643. In fact the means of annoyance, short of actual violence, are quite enough to preclude the possibility of introducing other men from other districts in case of a strike?—Yes, where you have a large number of union men.

14,644. (*Mr. Roebuck.*) Now, as a legislator, I would ask your advice—how could the law be so framed as to prevent that sort of intimidation and obstruction?—I must think about that. I have not thought sufficiently about the law to answer that question. I suppose that the House of Commons will be prepared to take the right steps if I tell them what I want.

14,645. But I want to know if it would be possible to prevent the mischief, and you say that if a non-union man were to go into a pit full of union men, they would do certain things to them?—Yes.

14,646. All those things are at this present moment contrary to law. I want to know how I can reach them?—I want to know how I am to find them out.

14,647. That is not the business of the legislature?—No, that is not, of course.

14,648. I would have you fully understand that the law of conspiracy is a very wide law, and if you can put it into force, it is so large a net that you can

Mr. J. Chambers.

8 April 1868.

catch almost any fish in it?—The difficulty is to find them out.

14,649. (*Mr. Mathews.*) Are the masters at all aware what the forms of proceeding are for an action of conspiracy against the men?—I think not.

14,650 Is it usual for them to have recourse to that mode of prosecution?—No.

14,651. And when you have got 500 hundred men making a noise and bullying others, is it not a great difficulty to put you hand upon the particular individual guilty of that?—Yes, there is considerable difficulty.

14,652. So that these various obstructions invalidate the action of the law?—Yes.

14,653. Are not the women often a considerable element in these demonstrations?—Yes, the women and children.

14,654. They are often more formidable than the men, as far as making noises go, are they not?—Yes, they use awfully bad language.

14,655. Although they do not fight themselves, they blow the trumpets for those who do?—Yes, I may say that a hornblower gets all the people up through the village on any such occasion; he goes round at 5 o'clock in the morning and they come at his bidding.

14,656. He does not confess that he is blowing his horn for the purpose of intimidation, I suppose?—No.

14,657. (*Mr. Booth.*) Do you know who pays the hornblower?—I do not know, it is a voluntary action, he gets his union pay in the usual way.

14,658. (*Earl of Lichfield.*) With reference to the question I asked you just now about Mr. Normansell, I want to know whether this arrangement was made between you and him and the rest of the men that your men were no longer to be interfered with, and did Normansell come over and arrange that your workmen were not to be interfered with?—He did.

14,659. (*Mr. Mathews.*) Is Mr. Normansell a man who exercises an authority over your section of the union as well as the general union?—Yes.

14,660. And he, in point of fact, is the organ of the union for paying the expenses of the men and giving directions what the men are to do?—Yes.

14,661. You were asked about the price of coal. Do you send coal to London?—Yes.

14,662. In the event of your being obliged to raise the wages to your men, you recoup yourself by raising the price of coal?—Yes.

14,663. But when you have raised the price, do you not find in London and elsewhere that you are met by cheaper coals from other collieries where they have not the action of the unions?—Yes.

14,664. So that you are shut out in that way from a very considerable extent of that market?—Yes, and I can give you just the facts with reference to South Yorkshire coal in London. Ten years ago we sent 400,000 tons through the Great Northern Railway to London, the Great Northern carrying 525,000 tons. London was then consuming by railway 1,250,000 tons. In 1867 from South Yorkshire, there were only 300,000 tons sent to London, and the Great Northern Company carried 1,044,000 tons, and London was consuming 3,250,000 tons by rails.

14,665. So that whenever you raised the price, from whatever cause, of coals from your district in the London market, you were met by the seaborne coals and coals coming into London by means of other railways?—Yes.

14,666. And that is a strict limitation of your control over the price?—Yes.

14,667. And the same thing applies to other markets?—Yes.

14,668. So that although you may raise the price under the pressure of your men that rise is necessarily only temporary?—Yes, the South Yorkshire district now only sending 300,000 tons (whereas they sent 400,000 ten years ago), and the Great Northern carrying 1,000,000 tons to London, we are losing that.

14,669. Now the price of coals has fallen?—Yes, 2*s.* a ton in London.

14,670. Then if you send any considerable quantity of your coal to London it will involve a necessity of a further reduction in the wages paid to the men, would it not?—We ought to have had 10 per cent. certainly.

14,671. And if you do not have 10 per cent. reduction you will be obliged to restrict your trade and employ less men?—That will be the effect unless we can find other markets. Then there is another point in South Yorkshire in which we are restrained, and that is that we dare not make contracts.

14,672. If it became known to the union that you made a contract for a given quantity weekly, for a large quantity of coals, would the union immediately suggest an advance of wages to the men?—I do not know that, but supposing that there is a brisk winter, or a brisk trade they always take that opportunity of putting up our price.

14,673. (*Mr. Hughes.*) Well do you think that unreasonable?—I think so.

14,674. Why?—Because we dare not make contracts.

14,675. When you say "brisk trade" is it not natural that they should wish for some advantage as well as you from that?—They should have a reasonable advantage, no doubt of it, and if labour has risen in the market we are willing to pay for it, but we are not willing to pay them more than the labour is worth.

14,676. But how are they to know what their share is unless they really know what the state of your trade is?—I can only tell you that the other day I had an opportunity of taking a contract for from 20,000 to 30,000 tons and I dared only take half of it, and I dared not have taken that if the trade had not been depressed.

14,677. (*Mr. Roebuck.*) Still does not the question put to you by the honourable Commissioner prove that those are just the men that ought not to determine the price?—Just so.

14,678. (*Mr. Hughes.*) But might not they know better if you were open with them, and if they knew what the state of your business was?—I remember having a delegate of my own men and reasoning with him in that way, and the fellow shook his head at me as a stag would if he were going to attack me. "That may be all right," he said, "but we will have the money."

14,679. Do you think that Mr. Normansell would do that?—I do not think it. He would do it in a quieter way.

14,680. You have found the leaders of the union reasonable and intelligent men, I understand you?—More reasonable than some of the men.

14,681. Do not you think that if the state of matters were fairly put before them, and not concealed, as it is in the present state of the relations between masters and men, they would very likely come to reasonable conclusions?—I think not. They have their own business to manage, and they have to keep faith with the unions that they have to govern, and those men are unreasonable men, in many instances, so that they cannot control them; therefore it is not a tribunal which I should prefer to settle these matters.

14,682. But is not the present state of things this, that they have to take their policy by a guess, and that they know nothing about your books and your business, because secrecy is the fundamental principle of your business. I do not say that it is wrong or right, but still they cannot know the exact state of your business at present, can they; have they any means at present of knowing exactly how your trade stands?—They know the public market and they know the state of trade generally.

14,683. And then they act upon that when there is a brisk time and endeavour to get a rise?—Yes.

14,684. (*Sir Daniel Gooch.*) Do they come to you in a slack time, when trade is very bad, to be reduced?—No, we are obliged to go to them then.

14,685. (*Mr. Mathews.*) If they see by the public papers that the coal trade is very brisk, and that you are getting better prices, I suppose they very soon

give you an intimation that they expect higher wages?—That is so.

14,686. On the other hand, if they see that the trade is bad and prices falling, do they ever come and volunteer a reduction of wages?—No. There is this feature, that since the last settlement they have not disturbed the matter of wages. I believe that the men wanted to push wages up and the delegates kept them down.

14,687. But even when there is a necessity for reducing wages, owing to a fall in the price of coal, the union have always resisted?—As a rule. We have asked them for 5 per cent. reduction this time and they have granted it.

14,688. Five per cent. being less than the average of reduction throughout the country?—Yes, 5 per cent. less than the average.

14,689. If you had attempted to reduce them to the same extent as the men in Wales and Lancashire, do you think that the unions would have consented to that?—They would have resisted it.

14,690. Although it is reasonable to lower the wages of colliers in accordance with the market price of coals?—No doubt they would have resisted it.

14,691. (*Mr. Harrison.*) Are most of the men in your colliery members of the union?—The great bulk of them are.

14,692. Still there are a section of them that are not?—Yes.

14,693. Then we are not to understand from your answer just now that when things are going on in the ordinary way non-members find it impossible to work with those in the union?—Those not in the union are distinct, and working by themselves.

14,694. Not working in the same pit?—No. We have very few non-union men in the pits at all.

14,695. Still you have some?—I question whether we have any undertakers.

14,696. What do you mean by "undertakers?"—Men working by the piece.

14,697. Do you find that the fact that you employ union men makes it usually difficult for you to keep up the discipline of the pit, and the safe working of it?—Well, it has this tendency, no doubt, among the young men, they think that they are very important men, being members of the union, and they will not submit to discipline as a rule, and we have great difficulty in managing them.

14,698. Do you find that the union authorities, Mr. Normansell, for instance, would interfere with you if you were to find it necessary to dismiss a man who was notoriously incompetent or endangering the good working of the pit?—Well, I do not suppose that he would.

14,699. Have you not found by experience that when the men working in the pit themselves would have perhaps unreasonably taken offence at the dismissal of an incompetent workman, Mr. Normansell has come in and recognised that it was a necessity, and persuaded them to give up their demand?—I do not know that that has occurred to me. It is not a part of my experience with him. I have not had so much communication as that comes to with him, but I have no doubt that he would be disposed to recommend them to be quiet.

14,700. (*Mr. Mathews.*) If there were to be some non-union men working in the same pit with the union men, and the union men were to be very disagreeable to them, and molest them in the way you have previously described, do you think that Mr. Normansell would have any power to prevent that?—I think they hold this sentiment, that there ought not to be any non-union men.

14,701. I am putting the case that there are non-union men. You say that non-union men, though not molested personally, are annoyed in various ways that make their working in the pit almost impracticable. Do you think that Mr. Normansell's influence would be powerful enough to prevent that?—I do not think he could prevent it. I think that if he recommended them to stop it they would not be disposed to take his advice.

14,702. You stated that Mr. Normansell is an officer of the union with whom you have had communication?—Yes.

14,703. Is there any other officer of the union you have had communication with?—Mr. Casey.

14,704. Anybody else?—No.

14,705. Mr. Normansell and Mr. Casey are the two parties with whom you have had personal communication in your negotiation with the union?—Yes.

The witness withdrew.

Mr. James Wilson examined.

14,706. (*Chairman.*) Are you a proprietor of coal and iron works at Barnsley?—I am a viewer at Darfield main.

14,707. Are they extensive works; how many men are employed?—We employ about 400.

14,708. How long have you been viewer?—Three and a half years at the Darfield main.

14,709. During that time have you had strikes?—Yes.

14,710. And strikes in which unions have taken a part?—Yes, I believe so.

14,711. Would you name the most material strike, what was the question raised in it, and how long it lasted?—In 1831, in the north of England, we had a strike.

14,712. (*Mr. Hughes.*) Can you remember that?—Yes I remember it.

14,713. You must have been a very young man then?—Yes, I was. I had been in the pit then a good while too.

14,714. (*Chairman.*) What was the cause of the strike?—It was to get the hours shortened for the men and boys generally.

14,715. What were the hours before?—From 12 to 16 hours per day for boys.

14,716. And what were they shortened to?—To 12 for boys and eight for men.

14,717. (*Mr. Roebuck.*) So that the boys worked longer than the men?—Yes, and we are on that principle yet.

14,718. (*Chairman.*) How is it made reasonable; I suppose it must be owing to some necessity?—The coal getters are divided into two sets; one goes in at 2 o'clock in the morning and comes out at 10, and another set relieves them at 10 o'clock and comes out at six in the afternoon. Then they are getting their stuff ready up to 6 o'clock in the morning, and then the boys go in at six and continue till six at night in a general way.

14,719. (*Mr. Roebuck.*) So that in fact the boys wait upon two sets of men?—Yes.

14,720. (*Mr. Hughes.*) What was the result of that strike; that the hours were shortened by three or four hours for the boys, and by four hours for the men?—The men were not tied exactly; they stopped ten hours perhaps, according to the time in which they could do their work.

14,721. The result was a shortening of the hours?—Yes.

14,722. And a strike was necessary to get that?—Yes.

14,723. And the masters resisted that shortening of hours, I suppose?—Yes.

14,724. Do you consider that demand on the part of the men to have been reasonable?—Yes.

14,725. And to have been beneficial in its results?—Yes.

14,726. Was that a strike organized by the union as far as you know?—There was a union at that time, and it was rather extensive. I believe that there were somewhere about 30,000 men in the union at that time.

14,727. In your opinion, would that shortening of hours have been given voluntarily by the masters?—

Mr. J. Wilson.

28 April 1868.

I do not think so; the masters had a chance of giving it previously to that strike if they had liked.

14,728. (*Mr. Mathews.*) How long had the custom existed for working this number of hours which you speak of?—That I cannot say. I had been in the pit only about two and a half years then. I was about 10 years of age.

14,729. The custom may have existed long previously to your experience?—Yes, I believe it had.

14,730. (*Chairman.*) That strike ended in the men obtaining what you thought reasonable. Did the employers and the men go on upon terms of goodwill afterwards?—The next year, that is 1832, there was another strike that took place. The colliers made another demand for an advance of wages, and I believe they were off some 14 or 20 weeks in that case.

14,731. And how many were out?—I think somewhere about 30,000 were out.

14,732. What is the district over which these 30,000 men were spread?—Durham and Northumberland.

14,733. (*Mr. Hughes.*) What was the result of that strike?—The men went in for less, I believe, than they turned out at. Their wages were reduced, I believe, at that time.

14,734. So that that strike failed?—Yes.

14,735. (*Chairman.*) Do you know the principle upon which the men acted; was there a rise in the price of coals, or on what principle did they found their demand other than that they should like to have more money?—At that time the coal owners generally used to bind the men for 12 months, and as they bound them for 12 months, of course they were tied at so much wage per fortnight. They guaranteed them that. In some cases it was 30*s.* and in some cases 20*s.*, according to the terms that the men were under. At a certain stage, when they got a certain quantity of coal, what we call the vend, the pits stood perhaps three weeks at Christmas time, to keep the coals up in the London market, and the men had to play these three weeks and subsist on what they got out of the guarantee of 30*s.* a fortnight.

14,736. (*Sir D. Gooch.*) That was a guarantee on the part of the masters?—Yes.

14,737. (*Chairman.*) Did the men strike against that system?—I believe the strike was really for an advance of wages again, and the masters resisted it.

14,738. (*Mr. Hughes.*) Were you involved in that strike?—Yes.

14,739. Is uppose you were too young to form any judgment as to whether it was reasonabble or not?—My memory does not carry me so far as that.

14,740. (*Chairman.*) Were you guided by your father or anybody who could influence you?—Yes, my father.

14,741. Was he in the pit?—Yes.

14,742. (*Mr. Hughes.*) Which way did he go?—Of course he struck the 20 weeks.

14,743. I mean which way did he go in his opinions?—I do not remember that. I suppose, unless his opinion had been for the advance, he would not have stood out so long.

14,744. (*Chairman.*) Now we will come to those strike cases where you were an active agent yourself?—The first occurred at Castle Eden Colliery, in the county of Durham, in 1855.

14,745. Were you a miner then?—No, I had the management then.

14,746. Was it under a private proprietor or under a company?—It was under a company, and I was the underground viewer.

14,747. What was the question that arose then?—There had been many strikes that year. I believe something like twelve strikes for a demand of one thing or another.

14,748. Did the demand originate in the mine of which you were the viewer or rise up in some other mine and then the district take it up?—There was not any district society at all; there was not a union formed at that place.

14,749. This was a question raised by the working men upon their own knowledge and at their own risk in the matter, not a union?—They formed something like a combination just among themselves at that identical place.

14,750. I will only ask as to that; did they succeed or fail?—They failed.

14,751. Have you had a case of a strike where the union was in activity as an efficient cause?—Yes, on November the 13th, 1865. That is in the South Yorkshire district, at Darfield main.

14,752. (*Mr. Hughes.*) You were viewer there too, were you not?—Yes.

14,753. (*Chairman.*) Did the strike originate in the mine of which you were viewer?—Yes.

14,754. What was the question raised?—It was not exactly a strike; it was a demand for five per cent.

14,755. The men originated that, did they?—Yes.

14,756. And originated it under the advice of the union, I gather from what you said?—I presume they did.

14,757. There was a union prevading the district, was there, to a great extent; most of the men were in it?—Yes.

14,758. They asked five per cent. rise you say?—Yes.

14,759. How long did they stay out?—They did not stay out at all; if the five per cent. was not given they said that they would restrict themselves after the 21st, to 3*s.* and 3*s.* 6*d.* a day; that would be doing something like half-work.

14,760. So that the coal proprietors would have all the expenses of the colliery, and there would be only half the quantity of coal raised?—Yes.

14,761. What was the result of that?—We gave them the five per cent.

14,762. Had that increase of five per cent. any relation to a rise in the value of coal in the market?—I believe that coals had risen in the market.

14,763. And then the men demanded a rise in proportion and it was given to them?—We granted it to them after four weeks' restriction.

14,764. Was that, if I may so say, all in reasonable course?—We had only one little dispute at the time. One of the men, who was a union man, would not restrict his labour until the time appointed by the district, and about 200 of the roughs in the mine went in and brought him out, although he was one of their own class of men, because he would not restrict himself before the time appointed.

14,765. Was that a spontanious action of the men or was it dictated to them by a delegate and secretary?—Our delegate, I believe, sanctioned it; that is the delegate belonging to the lodge.

14,766. Every one of these unions acts in the first instance by the lodge belonging to the district, does it not?—Yes.

14,767. And that lodge accounts to the central committee?—Yes.

14,768. They fetched this man down you say?—They went into his hole to the number of about 200 men, more or less, and I tried to prevent them from doing so, but I was obliged to leave or otherwise they would have broken out upon me. They put him in a corve and hurried him along the road, and ill-treated him in various ways. They then took him on the top and took him round the village with a rope round him that he might be well exhibited, and then the delegate went up to him and made him promise that he would do as other people did, and of course they let him go then.

14,769. (*Mr. Mathews.*) Is it the practice of the union to compel people to act as the union dictates rather than let them follow their own inclinations?—I do not think it is the practice of the union, but there are some roughs in connexion with it that it scarcely has any control over.

14,770. The delegates have not any control over them?—No.

14,771. (*Chairman.*) Was there anything of ill-

will between the employers and the men created by this strike?—Only this little affray that took place.

14,772. And that concerned the man that was ill-treated?—Of course it concerned him more than us. And he summoned some five or six of them.

14,773. All that would be what I should call a private quarrel. But as to the effect of the unions upon the employers or the working men, that would result when it was a mere money demand. "We stand for five per cent. more" the men said. "We will not give it," you said at first, but some time afterwards you said, "We will give it to you." Then all went on just as before?—Yes.

14,774. No other violence occurred that you remember?—Not in that case.

14,775. (*Mr. Hughes.*) I should like to ask the result of those summonses?—Of course they made the matter up among themselves.

14,776. Do you know which side the union took as to the summouses?—I do not know that, but, of course, I knew that the union discountenanced it at the time.

14,777. (*Mr. Booth.*) But the delegate that met this man in the village, and made him promise that in future he would do as the rest, countenanced what they had been doing?—Yes, of course.

14,778. And he was an officer of the union?—Yes.

14,779. (*Mr. Roebuck.*) By what means do you judge the union generally discountenanced that?—Because the whole of the officers, the decenter part of the officers whom we have about the works, when I talked to them about it always said that it was a thing contrary to their wish.

14,780. They said that to you?—Yes.

14,781. Did they say that to the men?—I believe so.

14,782. (*Chairman.*) Did they speak as if they were sincere?—Yes.

14,783. (*Mr. Mathews.*) How was this quarrel made up with the man who was illtreated?—I believe they paid the man's expenses.

14,784. Who paid the expenses of Pannels?—I do not know who paid the expenses, but of course either the men or the society would have to do it.

14,785. You have no knowledge whether the union found the funds for it?—Only what we suppose.

14,786. Your impression is that the union found the funds for making up the compromise and prevent the men being prosecuted?—Yes.

14,787. (*Chairman*) Has there been a strike since?—We put on the 5 per cent. after that, and there was not any more just at that time.

14,788. (*Mr. Roebuck.*) When was the next?—On August the 17th, 1866, our men stopped out a day.

14,789. Was it a demand for a rise or a refusal for a reduction?—No, it was to request us to advise our colliers all to pay to the union, so that they might go on peaceably. They were headed by this same delegate.

14,790. What did you do?—We told them that we should not interfere, that we had nothing at all to do with it, and we should leave them to do as they liked.

14,791. (*Chairman.*) What made them stay out a day, was it for the men to talk it over?—They came to the pit at the time when the pit should have commenced to pull coal, and instead of going down they all stopped on the pit bank and made that request that we would advise all our men to pay to the union, so that things might go on quietly. There was some unpleasantness between the men that did pay and those that did not pay.

14,792. (*Mr. Mathews.*) So that they wanted you to exercise your authority to compel those who did not pay into the union to pay into it?—Yes.

14,793. And you declined to exercise it?—Yes.

14,794. (*Chairman.*) And you went on well after that?—Yes, until September 1866.

14,795. What was it that happened then?—We had a meeting at Barnsley. They apprised us of it, and the pit only stopped that day for them to have that day amongst themselves as a public demonstration.

14,796. It was settled agreeably to the opinion of both employers and employed?—It was to us. On October the 8th the boys all stopped out for an advance of wages, and the same delegate told them all to go home and meet him at such a time of the day, and he would see about getting their wages put right.

14,797. (*Mr. Roebuck.*) Did you grant it?—No, we had made a little concession just on that point at that time.

14,798. And what they asked you did not grant?—We did not grant it at that time.

14,799. What took place?—Of course the pit went on the next day.

14,800. (*Mr. Hughes.*) The boys went in?—Yes.

14,801. Do you suppose that the delegate persuaded them to go in?—This man that we had was regular in doing things of this kind, in fact he took a day or two every week for something of the kind.

14,802. (*Mr. Roebuck.*) Supposing you had sent that man away, what would have been the result?—I do not know. I am afraid at that time it would have been considered that we were not doing what was right to him.

14,803. And what would have been the consequence of that?—I am afraid that they would have stopped just at that moment.

14,804. So that though you thought the man an ill-conditioned fellow you did not dare discharge him?—No, we had not any cause; I mean not anything in connexion with his work, for doing so.

14,805. But you said just now that every week pretty nearly he took a holiday of this sort?—Yes.

14,806. That he took a holiday for creating a disturbance in the pit?—Not in the pit, previous to going to the pit.

14,807. And when you saw all this you would have been very glad to get rid of him I suppose?—Yes.

14,808. Add in spite of this you did not dare discharge him?—No.

14,809. Because of the union?—Yes, at that time.

14,810. (*Mr. Mathews.*) If you had done so would the union have called their men out?—I would not say that they would, but I was afraid of that.

14,811. And in consequence of that apprehension you continued to employ him, although an unsatisfactory servant?—Yes.

14,812. (*Mr. Hughes.*) You did not say that his work was unsatisfactory?—He was a very inferior workman at the same time.

14,813. (*Chairman.*) What would be the loss to the employer if all the men came out; would your pit fill with water?—Yes, part of the works would. But the pit daily has an action of that sort, and the timber is decaying and the roads wanting repair, and we perhaps send 20 or 30 men in at night, and they make the roads all ready for the next morning; it may cost us in some cases 10*l.*, 15*l.*, or 20*l.*

14,814. (*Mr. Mathews.*) That is if they played one day?—Yes.

14,815. If they were to play two days a week there would be a still further disadvantage?—Yes.

14,816. And if for three days a week, would the colliery be worth carrying on?—It depends on how they are to keep, there is such a difference in the maintaining of them; some will stand 12 months and take very little harm.

14,817. Take an average colliery in your neighbourhood. If the colliery were restricted to three days a week, would the colliery answer to carry on?—I should scarcely think so.

14,818. So that in order to carry on a colliery in the most economical form, to pay the men good wages, you must keep the colliery steadily at work every day?—Yes.

14,819. (*Mr. Roebuck.*) Will you go on to the next strike?—In May 1867, the horse boys stopped out again; they stopped out five days, and we took five of them before the magistrates at that time.

14,820. (*Chairman.*) Were those boys under a contract?—Yes.

14,821. And broke their contract?—Yes.

14,822. What did you do?—We stated to the

Mr. J. Wilson.
28 April 1868.

magistrates that if they would promise to go back and attend to their work, we should have no objection to their allowing them to do so, and they went back after paying expenses.

14,823. (*Mr. Booth.*) What was the ground of their stopping?—For an advance of wages, and also a shortening of the time. Sometimes we had run 10½ hours or 11 hours a day, and they wanted to be paid overtime.

14,824. And they did not succeed in getting those objects?—Yes, we made a concession with some of them; raised their wages a little, and paid them for all time after 4 o'clock.

14,825. (*Mr. Hughes.*) You paid them overtime?—Overtime according to the average of time they stopped.

14,826. Then the boys got what they wanted?—Yes. These boys were not in the society at all.

14,827. These boys got what they wanted, and a reprimand?—Yes.

14,828. (*Chairman.*) The unions appear to have interfered ostensibly very little indeed with your works?—Since that time we have had very little interference.

14,829. Had that man you have spoken of (I do not know his name, I will call him the mischief maker), anything to do with the union do you know, or was he a spontaneous servant of evil?—He was a delegate; of course, therefore, he was a union man.

14,830. (*Mr. Hughes.*) Your pit it seems has unionists and non-unionists working together?—Yes.

14,831. Do they get on pretty well?—Yes, at present.

14,832. Then, as far as your pit goes, you think that the unions do not drive out or coerce all who do not belong to them; your experience is that they get on pretty comfortably together, when they have worked together, and it is only on the introduction of new hands that there is any difficulty I suppose?—They never interfere with them now; they have not done so for more than 12 months.

14,833. (*Mr. Mathews.*) Have you had any reduction in wages lately?—No.

14,834. Do you contemplate any reduction in wages?—No. We have made a request now for 5 per cent. reduction, and the men have agreed to submit to it.

14,835. What reduction has taken place in the price of coals?—From 1*s.* 6*d.* to 2*s.* a ton, I believe.

14,836. And 5 per cent. reduction in wages will not compensate you for that reduction in the price of coals?—No.

14,837. Then with the reduction in the price of coals of 2*s.* per ton, and a reduction only of 5 per cent. on your wages, is your colliery carried on to a profit or a loss?—I hope to a profit.

14,838. (*Mr. Hughes.*) You think so?—Yes.

14,839. You are sure of it?—Yes, I think it will go on at a profit.

14,840. (*Mr. Mathews.*) How is it with other collieries situated in your neighbourhood; are you all getting a profit with a reduction of 2*s.* a ton, and only 5 per cent. in the wages?—I do not know about the commercial department, the selling and the buying, but I think they will scarcely get a profit at 2*s.* a ton reduction.

14,841. So that although you are a viewer, and understand the working of a pit very well, as I have no doubt you do, you do not know much about the commercial part of it?—No.

14,842. So that the colliery may lose or gain and you not know it?—Yes.

14,843. (*Chairman.*) Have you taught your eyes sometimes to see and sometimes not to see?—I have not anything to do with the commercial department.

14,844. There is no risk about the profit to yourself?—No.

14,845. You see that the mine is well worked?—I see that the mine is well worked and safe, and that is the principal part in connexion with me.

14,846. (*Mr. Hughes.*) As far as you are concerned you think there is still a living to be made out of coal mining?—Yes.

14,847. (*Mr. Mathews.*) Although you said that you are not commercially acquainted with it?—No.

14,848. And men who are may think the other way?—Yes.

14,849. (*Mr. Harrison.*) Do you find practically any difficulty in dealing with union men who are working in the pit, as compared with others who are not members of the union?—No.

14,850. I mean do you find that they are less ready to obey the orders which are established for the safety of the mine, and things of that kind?—No. I should take a different course if they refused to allow the discipline of the colliery to be carried out. I should then bring them before the magistrates, that is my system.

14,851. But you do not practically find that it makes a difference, do you?—Not at all, I would not allow it to be so, not for one minute.

14,852. We had before us some time ago a gentleman who gave it as his opinion that a pit in which there were many members of the union at work was hardly safe, and he said that in the South Yorkshire district the frequency of accidents was to be attributed to that. That is not your view at all?—That is not my view at all, and I believe that the frequency of accidents in the South Yorkshire district is not equal to that in other districts.

14,853. But the pits in themselves are of a dangerous kind about Barnsley, are they not?—Yes, they yield large quantities of fire-damp, and take a little more looking after, and if they are not looked after of course they will be dangerous.

14,854. (*Mr. Roebuck.*) I will put the case to you thus: Suppose the Trades Union through their delegate were to interfere with your management of a pit, would that interference go to disturb the discipline of the pit?—Not at all, we would not allow that.

14,855. But supposing they were to interfere would they disturb the discipline of the pit, supposing that you were overpowered by them?—I have never found it to be so.

14,856. You would not allow them to interfere?—No.

14,857. But supposing you were to allow them to interfere, do you think that that interference would be for the benefit of the discipline of the pit?—Not at all; it would be my fault then.

14,858. (*Sir Daniel Gooch.*) Were you not appointed an arbitrator in some dispute lately?—Yes, at a place called Snydale, in the West Yorkshire district.

14,859. What was the result of that arbitration?—The men called me in to arbitrate for them, and the prices were reduced a little.

14,860. It was a question of wages then?—Yes.

14,861. (*Mr. Roebuck.*) They asked for an increase?—They did not ask for an increase, there had been a dispute among the master and men, about some little things in connection with the weighing of the coal, and after he had locked the men out he would not let them go in until the prices were lowered so as to be the same as at the other places round about.

14,862. (*Mr. Hughes.*) And did the men abide by your arbitration?—Yes.

14,863. They have kept to it since?—Yes, as far as I know.

14,864. And you were called in by the union?—By the union.

14,865. From your knowledge of the union in South Yorkshire, do you believe that the better class of workmen belong to it?—I daresay a great many of them do.

14,866. And I suppose that the better class of workmen are the most intelligent men?—Yes.

14,867. Do you know whether they have great confidence in the action and working of the union?—Well, I have heard some express themselves so.

14,868. Do you think that they have cause for that, that on the whole the action of the union since it has been organized in that district has been beneficial

for the men, I do not say for the masters, but for the men, from the men's point of view?—Well, that is rather a difficult question for me to answer.

14,869. (*Mr. Harrison.*) They do from time to time direct their attention to resist anything like an extension of the hours, and as far as they can to reduce the hours of labour in the pit?—Yes.

14,870. But have you found practically that quite apart from that there is any disposition to limit the amount of get which each workman can himself make within those hours?—Only that one time that I mentioned in connection with the 5 per cent.

14,871. I mean as between the individual workmen, do you consider that the influence of the union is to prevent an extremely skilful getter of coal from getting the most for his day's labour?—Not at all; I do not find it so.

14,872. You do not find any tendency whatever to check him?—Not at all with us.

14,873. And, as a matter of fact, the wages that the men actually receive do differ considerably at the end of the week; I do not mean the rates, but the wages?—Yes, there is a great difference in the places for working in, as much as three shillings or a couple shillings in the day.

14,874. Then they differ in both ways; they differ in rates and in the quantity got at those rates?—Yes, there may be a difference of 2*s.* in the working of two individual working men.

14,875. Do you mean in the rate or the bulk of what they get?—In the bulk.

14,876. What would be the difference in the rate?—There is not any limit in the rate.

14,877. (*Mr. Roebuck.*) Who determines where a man shall work, because you say that some places are more beneficial than others. Supposing that three men were before you, would you determine where they would work?—Yes.

14,878. So that it depends very much upon you whether a man shall make a larger wage or a less wage?—Not generally; but it depends upon the skill of the man. I have had instances of that kind since I came to Darfield. I have put one man into a hole where he cannot make a living or will not do it; I have put another in, and he has made 10*s.* or 15*s.* a-day, and the other has actually struck for more wages and could not work it.

14,879. (*Mr. Harrison.*) A good deal depends upon the discretion of the manager?—There is little difference in that respect; you can give a place sometimes to anybody you like.

14,880. (*Mr. Matthews.*) A good place to-day may be bad to-morrow?—Yes.

14,881. So that it is haphazard whether a place is bad or not?—Yes, a place might be bad for a week or a fortnight, and a good skilful workman going into it would make a good place of it in course of time.

14,882. There is no complaint against the viewers generally for partiality as to the place they put the different men in?—No, I have not heard any.

14,883. (*Mr. Roebuck.*) But the viewer could show partiality?—He could if he liked.

14,884. (*Chairman.*) Do you take a certain length of coal in a bed of coal and allot it to one man?—No, from eight to 10 or 20 yards.

14,885. Then he makes a fresh contract?—No, his contract is fixed for so much per score, 11*s.* 8d. per score, and if his coal should turn out to work very well it is all the better for him. If it should turn out to work very indifferently, he will perhaps come and ask you for a little advance.

14,886. (*Mr. Roebuck.*) But how long does the contract last for; a man comes to you and makes a certain contract with you; he does not contract for so many years or so many years or so many months, but he says, "I will work this piece of the mine so many yards," does he not?—Yes, so many yards in width, and perhaps it will run up half a mile in length.

14,887. Then it is dependent upon how the mine turns out?—It depends altogether upon the system.

14,888. If it continues as it began, your contract continues?—Yes.

14,889. But if it gets very much better you look to the interests of your master, and you say to the man, "Now you should have a little less wage;" but if it gets so much worse he comes to you and says, "You ought to make me an advance?"—No, it is not exactly that way. It is a stipulated price, and if the hole does really turn out so that it is a question whether we are giving enough, we are not bound to alter, although it is a general thing with us to give a little allowance if the man's place is not a fair day's wage.

14,890. (*Mr. Mathews.*) It is open to both parties to revise the contract after a certain time?—No.

14,891. You can say to him, "I give you notice "that I will not give you so much for working this "coal," and he on the other hand may say, "I will not work for the same as before?"—Yes.

14,892. You were asked whether they were not the most intelligent colliers that belonged to the union. Are there not as many intelligent colliers out of the union as in it?—I could not answer that.

14,893. You know a good many intelligent men not in the union?—I know some on each side.

The witness withdrew.

Mr. William Rowe examined.

Mr. W. Rowe.

14,894. (*Chairman.*) Are you a collier employed in one of the Wigan coal mines?—Yes.

14,895. What mine is that?—Lindsay Cannel pit.

14,896. Are they large works?—Yes.

14,897. How many men are employed under the same company?—I cannot say, but there are a great number.

14,898. 10,000 or 12,000?—Yes, I daresay, or more than that perhaps.

14,899. And how long have you been employed there?—Four years.

14,900. Have you taken part in this strike which is now going on?—No.

14,901. Have you continued to work?—Yes.

14,902. (*Mr. Mathews.*) You have a union at Wigan I think?—Yes.

14,903. Are the men employed in the Wigan collieries pretty generally in the union?—Yes.

14,904. And what are the names of the officers of the union there?—There are many of them that are officers. I do not know them all.

14,905. Do you know the names of any of them?—Yes, there is William Pickard; he is the leader of them.

14,906, Does the union act under his advice generally?—Yes.

14,907. There has been a strike there recently, I think?—Yes.

14,908. The strike was to assist a reduction of wages?—Yes.

14,909. I suppose the reduction of wages was necessary in consequence of the reduced price of coal?—Yes, I believe so.

14,910. The union, I suppose, under the direction of Mr. Pickard resisted the reduction?—I do not know whether it was his view to resist it, but the men resisted it.

14,911. Was the resistance at the instigation of the union?—Yes, at the lodge that I was at, and most of the lodges, as far as I can learn, they were to stand against it.

14,912. Are there many men employed in the Wigan collieries not in the union?—A good many.

14,913. As to the men not in the union, were they

Mr. W. Rowe.

28 April 1868.

willing to accept a reduction or otherwise?—I cannot say that.

14,914. What steps were taken by the men out on strike to resist a reduction of wages?—They agreed to stop, and to stop all that would not stop.

14,915. They agreed to stop themselves, and they agreed to stop all those who were willing to work?—Yes.

14,916. Were there many that were willing to work that they have succeeded in stopping?—Yes.

14,917. Were there many acts of violence?—Yes, a good number.

14,918. What steps were taken to repress acts of violence; were the police called out?—Well, the police promised to come at various times, but they never came up to their appointment; they came after the thing was gone over.

14,919. The proprietors of the Wigan collieries were not able to get sufficient police to protect the men willing to work from the men on strike?—Well, we had not protection. I do not know whose fault it was.

14,920. Was much violence done to the men willing to work?—Yes, a few were beaten, and windows broken, and many threatened.

14,921. Have any been brought before the magistrates and punished?—They have been bound over. I do not know that any were sent to prison. There are three committed to trial that will be tried at quarter sessions to-morrow.

14,922. Do the men in the union interfere at all with the work of the men not in the union in pits?—Yes.

14,923. How do they interfere with them?—They have tried to persuade them at various times to come into the union and they have said that it is not right that they should not be in the union.

14,924. And if they are not in the union what steps have they taken to compel them to go in?—I do not know that they have taken any steps of violence before they turn out, not to my knowledge.

14,925. You work in some of the pits yourself?—Yes.

14,926. Are there any union men in the pits that you work in?—Yes; I have been in the union myself.

14,927. How long?—I was in the union till the present strike.

14,928. What was your reason for leaving the union?—Because I reasoned with them and said that it was better to work at this present reduction till the trade got better and then ask for an advance, and I said I had not the least doubt that they would get it then, but they would not hear of my reasoning, they were determined to stand, and I asked them the question in the lodge room, "Did they think that they "could beat the masters if they stood under present "circumstances?" Some said they thought they could not. "Then why will you strike?" I said. They did not "like to give in soft" they answered, "Well," said I, "you will give in soft if you stand till you are beaten." So I told them that I should work if they stood, and after that I heard that if I did they would take my life.

14,929. Did you leave the union in consequence of those threats?—Yes.

14,930. You told them that you would not belong to the union?—I told them I would pay no more if they were going to use such language as that.

14,931. What was the object of your paying to the union, was it in the shape of a benefit payment or a trade payment?—I was persuaded that the union would keep up the wages.

14,932. And when you found that the union could not keep up wages you thought that there was no use any longer in belonging to it?—I would have kept on if I had thought they were justified in striking.

14,933. There has been a considerable reduction in the price of coal, has there not?—I believe there has.

14,934. And in consequence of that reduction the colliery company at Wigan have found it necessary to reduce the wages?—Yes.

14,935. And you are convinced that that was a reasonable course?—As far as I read the paper I thought we would not get sufficient labour if we did not come down.

14,936. Was there any attempt to induce men from other districts to come into your district during the strike?—Yes, other men have been brought.

14,937. What was the conduct of the union?—They were determined to drive them away; they met in large quantities.

14,938. Did they assault them?—I cannot say what took place between them and the union men; I was confined to my house. I durst not come out.

14,939. You were in fear?—I had been assaulted too in previous times on going to my work. They have broken my windows too.

14,940. You say that Mr. Pickard was one of the leaders and advisers of the union; have you any evidence that Mr. Pickard took any active part in the conduct of these men on strike?—I am not aware that Mr. Pickard reasoned with these men to strike. I heard that he said it was better for them not to strike.

14,941. Does the union sanction the strike?—Yes, the union sanctions it.

14,942. In what way?—They had delegates sent from every lodge to a district meeting held, and the information I had was that they came to a determination that they must resist the reduction.

14,943. The delegates attended a meeting of the lodge and recommended the men to strike?—Yes, I know that William Pickard has done as far as this, that he is willing to back out anything that should occur during the strike.

14,944. Are there any law charges that have been incurred during a strike?—Yes, the union pays the lawyer.

14,945. So that all the cost to which the men are put by these proceedings the union have paid?—Yes.

14,946. So that in fact the proceedings of the men have been sanctioned by the union by means of these payments?—They are backing them out in all they do.

14,947. (*Mr. Roebuck.*) Do you know the name of the lawyer they employ?—Mr. Forshaw, from Preston.

14,948. (*Mr. Mathews.*) Has Mr. Roberts of Manchester been employed at Wigan?—Not on this strike that I am aware of.

14,949. Has he on former occasions?—Yes.

14,950. Who paid Mr. Roberts?—He has been paid from the union.

14,951. The union have paid all the legal expenses in defending men prosecuted for outrageous conduct?—Yes.

14,952. In your experience, since you have been a member of the union, do you think that if the men had gone to their masters and said that understanding there had been an advance in the price of coal they thought there ought to have been an advance in wages, the masters would have been indisposed to listen to them?—They never have been with me, I have been sent to them several times.

14,953. Do you think that in the case of a fall in the value of coals, any acts of unions could keep wages up against the fall?—It has been thought by many that they could compel the masters to do with less profits and give higher wages.

14,954. What in your experience has been the result; do you think that the men have got in the long run better wages by means of the unions than they would have done by communication with their masters?—The union has kept wages up to a greater extent.

14,955. Longer than they would otherwise have been kept up if there had been no union?—Yes, I think they have.

14,956. (*Mr. Roebuck.*) How have they done it?—By combining together.

14,957. But supposing that a man stood out against them and said, "I intend to take lower wages," what would be the consequence of that?—He would be in danger then.

14,958. You say that they threatened to take your life?—Yes.

14,959. Will you tell me what they said, and who said it?—Well, they have chiefly been strangers from other parts, and I did not know them; they have come to my door, and some came into the house, and told me if I did not give up my work I should not live long, and others have come and shouted in at my window that if I turned out any more they would lie in wait and kill me, and if they did not do it at one time they would wait for their opportunity at another.

14,960. Was that done by daylight?—Both by daylight and in the dark.

14,961. Did you see the people who did it?—Yes.

14,962. Could you swear to them if you saw them again?—Yes.

14,963. Have you ever seen them again?—Yes, before the magistrates.

14,964. Were they taken before the magistrates for threatening you?—They were taken before the magistrates for breaking my windows and committing acts of violence in the streets.

14,965. What did the magistrates do?—They bound them over.

14,966. Merely bound them over to keep the peace?—Yes.

14,967. After it was proved that they had broken your windows?—Yes, I believe there were some who paid the expenses of the court. I am not sure of that.

14,968. Was there anything said about offering a price for you dead or alive, or anything of that sort?—They put a label up at the end of the lane I live in, and said that they would give 100*l.* to the man that would kill or slay William or James Rowe.

14,969. In what shape was that, was it printed?—No, in handwriting.

14,970. Did you know at all whose handwriting it was?—No, I did not.

14,971. (*Mr. Harrison.*) It is a fact, is it not, that a large meeting of miners was held before things got to this pitch some fortnight ago?—Yes.

14,972. Mr. Pickard spoke at that, did he not?—I believe he did.

14,973. He recommended the men to agree to a reduction of 10 per cent. ?—I believe he did.

14,974. Then you have no reason to suppose that his opinion personally was ever in favour of striking rather than submitting to a reduction?—No, I heard that he was against the strke.

14,975. The opinion, it seems, of some other delegates of the local lodge with which you were connected was in favour of continuing the strike?—Yes.

14,976. It was in point of fact the men on the spot at the pit themselves who insisted on the strike, and the influence of the central authority was in favour of submitting to the reduction?—Yes.

14,977. But the central authority was not strong enough to resist the pressure brought to bear by the men themselves?—Perhaps not; I cannot say.

14,978. (*Mr. Roebuck.*) Have you been witness of much of the violence committed during this strike, of the meetings of the people, and their threatening proceedings?—Yes, it is to my house they have chiefly come.

14,979. In large numbers?—In 400 or 500 perhaps, and sometimes 200.

14,980. During the night have they come?—The earliest period they have come was about four o'clock in the morning.

14,981. It was dark then, or just beginning to get light, I suppose?—Yes.

14,982. Had they no lights with them?—No.

14,983. (*Mr. Harrison.*) Have you any reason to suppose that these acts of violence which have been attempted against you and others have been in any way instigated by say Mr. Pickard or the authority he represents at Wigan?—No, I cannot say that, and I do not think they are.

14,984. But as you have hitherto been a member of the union, and consequently have had opportunities for seeing how it works, have you ever known that such a thing was at all likely, or that such a thing had happened before as that an obnoxious man had been designated and marked out for an act of violence by the secretary of the head society, or anything of that kind?—I cannot say that I ever knew any of the heads of the society to do that. I have known some of the delegates. There are delegates in this affair that have been amongst them.

14,985. Those are the representatives?—Of the various lodges.

14,986. Local men on the spot?—Yes, and they have been to my house.

14,987. But do you know that the society has officially in any way sanctioned these acts of violence?—I do not know that they have sanctioned them in any other way but paying the expenses of them.

14,988. Do you know that they have paid the expenses?—Yes.

14,989. What expenses?—They have paid the lawyers to back them out, and what fines have been incurred.

14,990. (*Mr. Roebuck.*) They have, in fact, found the defence?—Yes.

14,991. And you assume, I suppose, as I think any rational man would do, that taking upon themselves that defence, they justify the men in what they do?—It looks like it.

14,992. (*Mr. Harrison.*) How do you know this?—I have parties working with me (they were working yesterday) that have been in the lodge room at the time the lawyer was there and the delegates with him.

14,993. What delegates?—Samuel Rigby was one. He has been a delegate several times and has been a secretary too.

14,994. Of the lodge do you mean?—Yes, of the lodgethat he belongs to; in fact he belongs to two now, but this is the lodge belonging to Lindsay pits.

14,995. (*Mr. Mathews.*) Is it not a notorious fact that in all cases of prosecutions of men in the union, the union send professional assistance and pay all the fines they incur, not only in your lodge but in all the other lodges in the neighbourhood?—I believe it is.

14,996. Nobody contradicts that, or doubts it for a moment?—I do not suppose they do.

14,997. (*Mr. Hughes.*) Who was it that declared this strike, the men or the delegates?—The men generally.

14,998. The men drove the delegates, not the delegates the men?—I cannot say about driving either party.

14,999. The most active parties in the strike were the men working, were they not?—I believe so.

15,000. You think that the delegates rather followed the lead of the men than started the thing themselves?—I cannot speak much about the delegates, but I have heard Mr. Pickard himself say that he did not believe in a strike.

15,001. Mr. Pickard being the leading one of the delegates in your neighbourhood?—Yes.

15,002. (*Mr. Mathews.*) All the men out on strike are in the union I suppose?—No, some of them are non-union men.

15,003. But the strike, you say, is instigated by the union men?—Yes.

15,004. Whether it had the sanction of the head department of the union you cannot say?—No.

15,005. You only know the men in your neighbourhood were all encouraged in the strike?—Yes.

15,006. (*Mr. Booth.*) They had no other cause of animosity against you except that you refused to join the strike?—Not any other that I am aware of.

15,007. (*Mr. Mathews.*) They had men from Staffordshire brought into the district during the strike, I believe?—I believe they had.

15,008. Were they sent back?—Yes.

15,009. Why were they sent back?—I heard that they had not sufficient protection to give them at work, but that is merely hearsay.

15,010. Have you any apprehension that now when you go back you will be ill used by the union men?—

Mr. W. Rowe.

28 April 1868.

Yes; I shall have to be confined to my house for a considerable time yet.

15,011. And you will appeal to the employers, I suppose, to give you all the protection they can?—Yes.

15,012. And to the police?—I have been down to the police station and warned them, and they say they will watch as well as they can and keep a guard on the house; but the house where they have done the damage I have removed from; I durst not stay any longer in it.

15,013. (*Mr. Roebuck.*) Have you a family?—Yes, a wife and five children.

15,014. And to this house you say these people came and broke the windows?—Yes; and there would have been two children killed if we had not just drawn them out of the bed and pushed them under the bed. The bed was covered with stones immediately afterwards.

15,015. Are all these men chiefly Englishmen from Lancashire and Yorkshire?—Yes, from the neighbourhood I belong to.

15,016. Are there any Welsh or Irishmen working in the pit with you?—I do not know as to Welsh, there are Irish a good number.

15,017. (*Mr. Mathews.*) Are there Irish working colliers?—Yes.

15,018. And were the Irish who were working colliers part of those out on strike and using violence?—Yes.

15,019. (*Mr. Roebuck.*) But I suppose they were no worse than the Englishmen, were they?—No, I think they were about the same.

The witness withdrew.

Mr. Alexander McDonald examined.

Mr. A. McDonald.

15,020. (*Chairman.*) You have heard some part of the evidence given by Mr. Rowe which you wish to correct?—Yes, I have.

15,021. Will you be so good as to say what it is you particularly direct your contradiction to?—I want to explain that when the notice of 15 per cent. was given, Mr. Pickard consulted me on the matter. I gave Mr. Pickard the advice that it would be decidedly disastrous and foolish to attempt a resistance at the moment. I will explain my reasons for that to-morrow. Mr. Pickard, under the circumstances, asked me to accompany him to a delegate meeting consisting of over 250 persons representing the various lodges of Wigan; when there I found that every delegate had come with a written order from his men, "Strike!" a note to resist everything; I consulted with Mr. Pickard, and we asked the men to return, entreating them, beseeching them to return and consult the men and lay certain views before them, that the course was madness to strike. They returned again, and at a subsequent meeting they came again still prepared to strike. It was not the leaders of the union that they consulted. Mr. Pickard, the local agent, was averse to it. As the head of the society I was averse to it, the reasons I will explain to-morrow; and I wish just to explain to Mr. Rowe, who is under the impression that it was the union who did it, that it was either one of these benefits or one of those evils that arise from universal suffrage. Mr. Pickard can corroborate my statement if that is necessary.

The witness withdrew.

Mr. A. Hewlett.

Mr. Alfred Hewlett examined.

15,022. (*Mr. Mathews.*) You are one of the managing directors of the Wigan Coal and Iron Company?—I am.

15,023. Your undertaking there is of a very large and extensive character, I think?—It is.

15,024. What number of men do you employ altogether?—About 9,000.

15,025. How many of them are colliers and how many are in the ironworks?—The great bulk are colliers and men engaged in coal mining; perhaps about 400 of them are engaged in the iron works, which I should say are only smelting works, not bar ironworks.

15,026. So that the great bulk of these 8,000 or 9,000 men are employed in the collieries?—They are.

15,027. What number of tons of coal do you generally raise weekly?—About 38,000 to 40,000 tons a week.

15,028. Two million tons a year?—About 1,750,000 tons a year; 1,600,000, I think, was the output last year.

15,029. I suppose that the unions are pretty extensively in operation amongst your men?—I believe so.

15,030. How long have they been so?—The union has been actively at work since 1862. I believe about October 1862.

15,031. About the last six years?—About the last six years.

15,032. Previous to the establishment of the union, or the union being so influential as it has been for the last six years, how did you get on with your men?—We have not had any serious strike since 1853 till this time. There have been small turn outs but no serious strike from October 1853 till the present time.

15,033. Previous to the establishment of the unions was there any difficulty in your having the freeest intercourse with your men for the discussion of any question of wages?—Very much less than since.

15,034. You were always willing to listen to the representations of the men, and always accessible to the men, if there was any difference of opinion about wages or other matters?—Quite so.

15,035. Since the establishment of the unions what has been the effect of them upon the economy of your collieries?—The effect has been a great want of economy directly tending in every way to enhance the cost of production of coals by causing the men, I suppose acting under the counsel of their leaders, to perform their various operations not only in a sullen spirit, but to a much smaller extent than formerly.

15,036. I suppose you have a lodge or lodges at Wigan irrespective of the general Lancashire union?—I really do not know. I may say that I have never interfered with the action of the union. I have never said that I would not employ a man because he was a union man, and I may say that I know nothing of their lodges.

15,037. I suppose that in the local lodge there are delegates irrespective of Mr. Pickard, whose name we have had brought before us as the leader?—Quite so. I believe (but I speak under correction from the miners' agent) that each pit has a delegate or delegates, that they again report to lodges above them, and that the miners' agents as they are called are commanders in chief.

15,038. So that if any regulations were to be issued by the head lodge, of which Mr. Pickard may be considered the organ, all the subsidiary lodges would be bound to follow out that policy?—I take it so.

15,039. And occasionally these local lodges follow out a policy of their own, and disregard the head lodge?—I think so.

15,040. You recently have had a great deal of violence connected with a strike, I believe?—There has been an amount of violence such as I have never seen before. This is the third great strike I have seen, and I have never seen so bad a spirit or so many acts of violence before, or anything approaching it.

15,041. Were these acts of violence chiefly instigated by local leaders of the union?—I take it so certainly. I am not now speaking of the miners' agent. I cannot say as to him, but I take it that they are instigated by the union.

15,042. Although you have no strict legal evidence that they are instigated by the union, I mean such evidence as would be received by a court of justice, yet you have no moral doubt whatever that they have been

instigated by local leaders of the union?—I have not the slightest doubt of that, and I believe that in many cases which have been taken before the magistrates the perpetrators of the outrages were unionists. I am so informed by persons who ought to know, because they are also members of the union. In connexion with that I would say that in defence to our own men I have have had to take before the magistrates no less than 64 cases during the last nine weeks.

15,043. Have there been many fines inflicted by the magistrates on those men?—A great many have been fined, some bound over to keep the peace 12 months, and two people committed for the Liverpool assizes to-morrow, and some to the Wigan sessions.

15,044. What are those cases that were committed to the assizes?—Throwing a powder bottle with a lighted fuse attached at the window of a cottage to cause an explosion.

15,045. Was the man who lived in that cottage a union man or a non-union man?—I am not certain as to that. He was working, and that was the cause of the offence, no doubt.

15,046. They had recourse to these acts of violence to deter him from continuing to work?—Yes.

15,047. Was professional assistance given to the men before the magistrates?—Yes, it was.

15,048. Do you know who paid the expenses of the professional man?—I can only say that from hearsay. I was told that the union did, but I should not like to make it a charge against them.

15,049. Your impression is that the union did pay?—That is my impression.

15,050. You attempted to introduce men from other districts during the strike, I think, into the colliery?—We did; that is, after the strike had existed for seven weeks. We did not attempt it until seven weeks had elapsed.

15,051. What was the effect of this attempt on your part?—The immediate effect seemed to be a public meeting called by the miners' agents, at which it was said that Mr. Pickard, and Mr. Halliday, and some others, I think, would address the meeting. I may say that very violent speeches were uttered at that meeting. I shall be glad to put in a report of it. Mr. Pickard himself made a most violent attack against my principal underground officer, which had the effect on the following day of leading to an attack on him in the streets of Wigan, and if he had not shown that he was armed I believe he would have been killed.

15,052. (*Mr. Roebuck.*) Will you give us a specimen of Mr. Pickard's speech, which you have talked about?—The name of my underground officer is Mr. Samuel Lancaster. I will begin reading from the speech at the part referring to him. "Mr. Pickard "referred to the recent disturbances, and asked "whether it was the law of England that attempts "should be made to enrage the people. He spoke of "the presence of the soldiers, and this brought on the "name of Mr. Samuel Lancaster, whom he designated "as 'that whitewashed wall of the country,' a man "who came amongst them showing very largely "indeed, and saying he was the working man's "friend. He was a friend, but it was over the left "(derisive cheers). Mr. Samuel Lancaster could do "great things when he had his hand in somebody "else's purse, tickling the yellows, and he had "fetched some black sheep into the town. When he "worked the Birkett Bank Colliery why did he not "go to the market like another honourable trades-"man? No, he had to go somewhere else, and he "Mr. Pickard was told he got whitewashed. This "was more than a 15 per cent. question with such "as he, for many a poor man had got the sack for "12 months and a day for speaking for his rights and "privileges. (Mr. Pickard called for a show of hands "from those who had thus suffered, and a dozen were "held up; one man exclaiming, 'Here is one that "got it for life.' Voices: 'We'll keep him without "work.' Mr. Samuel Lancaster would not live for "ever, but he might do so for any harm he (Mr. "Pickard) would do him; but if Mr. Samuel Lan-"caster could give him an ingredient that day which "would quiet him he would do so. It was wrong "for Mr. Lancaster to practise robbery and con-"fiscation upon the poor men in his employ. Many "a poor man was punished for stealing a few pence, "but Mr. Samuel Lancaster thought nothing of "taking a hundred tubs a day." That is as far as the personal part goes. The rest is an attack upon the coal owners of Wigan (I do not think that it is worth while going into it). Saying that a lot of their money had been robbed from the men and put into railways. I make little complaint of that, but I do make a great complaint of the personal attack upon Mr. Lancaster.

15,053. (*Mr. Mathews.*) You judge from these speeches of Mr. Pickard that at all events Mr. Pickard as the organ of the union gave this movement his sanction?—If he did not give the movement for a strike his sanction, his speeches are singularly at variance with what he said in private.

15,054. His speeches had a tendency to induce the men to continue the strike?—Most undoubtedly.

15,055. Therefore, as Mr. Pickard was the organ of the union, we may infer that the union was instrumental in organizing or continuing the strike?—Yes.

15,056. The general tendency of Mr. Pickard's observations at this meeting went to encourage the strike rather than to discourage it?—Clearly so.

15,057. The price of coal has been reduced considerably in the Wigan district I believe?—Very considerably, and has been reducing ever since about August in last year.

15,058. How much per ton?—Varying according to the markets. In London the price has gone down as much as 3*s.* to 4*s.* per ton. In the local markets it varies from 2*s.* to 3*s.* a ton.

15,059. Taking the average at 2*s.* the ton, how much would that be annually on your total get?—Three million shillings, about 150,000*l.*

15,060. If your prices were curtailed to that extent then a reduction in wages was absolutely necessary?—Yes. Perhaps I had better now give you the history of the wages in our district. In December 1864 the prices of coal were rather higher than they are now. The wages at that time were 30 per cent. lower than they are now. An advance of 10 per cent. in wages was given in December 1864, and another advance of 10. per cent. was given in August 1865, both of which were entirely unasked for by the men. There was a reviving trade and the coal owners gave both those advances of 10 per cent. without any demand on the part of the men. In December 1866, I believe it was, there was a third advance of 10 per cent. There has been no alteration in wages from that time to the present. In August last, as I have said, the coal trade of the country began to be very dull. We had indeed hoped that it would improve in the winter. Our hopes were not verified, but we put off making any alteration in wages until about February of this year. A notice was given in February, but by good rights we ought to have made a reduction in August last. The reduction would have been 10 per cent. then, and probably another 10 per cent. reduction would have been made now. But instead of that we held on as long as we could, and gave notice in February of a reduction of 15 per cent., which led to the present strike. We should have been justified in serving notice of reduction to the extent of 30 per cent.

15,061. What is the average price of coal at the pit's mouth?—It depends very much on quality. The best coal is now, apart from contract, 9*s.* a ton.

15,062. You take all your coal and draw an average, I suppose?—We never take that average, for this reason, that a very large proportion of the out put is slack, which is not worth more than 3*s.* a ton, whereas the best coal is worth about 9*s.* a ton, and we separate the two entirely. Probably the average pit price of coal, as apart from slack, would be about 6*s.* 6*d.* a ton.

15,063. Taking the price of coal at 6*s.* 6*d.* a ton,

Mr. A. Hewlett.

28 April 1868.

what proportion of that would consist in wages?—About 60 per cent.

15,064. And the rest would consist in royalty, common charges, materials, working engines, and everything of that sort?—Quite so.

15,065. So that if you are to reduce coals something like 30 or 40 per cent., as you appear to have done, that 15 per cent. reduction in colliers wages is a very moderate approximation to what really should be taken off the wages?—It leaves us in a very much worse position than we were in before the lowering of prices; it would have been infinitely better for us to have kept up the prices and the wages.

15,066. It is always an advantage to the coal masters to raise the price of coals and raise wages with it?—Yes.

15,067. And always a disadvantage to have the price of coal lowered because you cannot reduce wages in proportion?—Just so.

15,068. Having those facts before you, you decided to reduce wages to 15 per cent., and the union decided to resist that reduction, and hence the battle which you have had with your men during the last few weeks?—Yes, nine weeks to-morrow.

15,069. Have the men gone to work now at the reduction?—No, they are still out.

15,070. (*Mr. Roebuck.*) What is the meaning of that paragraph in the "Times" stating that a large portion of men have gone to work?—I have seen the paragraph in the "Times," but I have had a telegram from the works this morning which does not notice that, and therefore to the best of my information that is incorrect.

15,071. (*Mr. Mathews.*) Whether it is incorrect or not it is absolutely impossible that you can carry on your collieries except at the reduction which you now propose?—Absolutely impossible.

15,072. It would be far preferable for you to stop your pits altogether?—We shall stop them until the men accept the reduction, however long it is.

15,073. So that if the men remain out and resist the reduction at the instigation of the unions, the unions will be doing a serious injustice to the men themselves?—I consider so.

15,074. Not only the gravest injustice to the masters, but serious injustice to the men themselves?—Quite so.

15,075. (*Mr. Roebuck.*) Could you give me anything like a description of the sort of violence employed on this occasion, because you said that there was greater violence than on any other occasion?—When the strike commenced I resolved to keep open the pits for those men who were willing to work. I thought it was a hardship upon the workmen generally to close the pits and say, "Well, nobody shall come to work." So I left the pits open for those who wished to come to work. The strike had not existed two days before I found that the men were prevented from coming to work. Numbers of persons congregated at the corners of the streets. Any person who wants to work at such a time is in Lancashire designated by the name of a "knobstick." The "turnouts" hooted and derided, and from derision they proceeded to throwing stones, and intimidated men in every possible way from coming to work. To meet that, I organised the whole of my staff, to the number of about 200, who went out every morning for the purpose of enabling those who were willing to come to their work. That was successful at any rate in getting 500 or 600 men to work altogether. After that had gone on two or three weeks the mob were not content with hooting, but proceeded to throw stones, and it was to the danger of their lives that these men went out in the morning. Mr. Pickard in one of his speeches said that there was no violence. "If there was where were the broken heads?" Well, I have seen a great many broken heads. Many of my men were met by these men, and without giving them any chance they have taken a pick-shaft and broken their heads. We have had no less than 64 cases of assault before the magistrates since the strike began. But farther on in the strike still, that is last Saturday week, the day but one after those speeches from which I have read extracts were uttered, a mob of about 1,500 came to prevent persons working at one of our pits called the Lindsay Pit, and I should say that we have never attempted to take any strange men down that pit; the pit was kept open only for the men of the district. This mob of 1,500 persons drove my staff entirely away from the pit, and they had possession of the pit and premises for about two hours, until emboldened by their success they advanced towards another pit, and then being met by the county police they were dispersed, but not until the superintendent of police had received a blow that has disabled him permanently, I think.

15,076. These acts of violence were known to all the world round about the pit, and therefore must have been known to Mr. Pickard?—Certainly; the local papers have been full of scarcely anything else since the strike began.

15,077. What I want to establish is this, that Mr. Pickard must have been cognizant of all that was going on at the time that he made these inflammatory speeches?—Most undoubtedly.

15,078. Did he know, for example, that men were struck down in the way you describe by some instrument that you mentioned, and that men had received very dangerous wounds? When he asked "Where are the broken heads?" must he have known of those facts?—It was impossible for it to have been otherwise.

15,079. (*Mr. Mathews.*) It has been reported in the papers that the magistrates with all the civil force at their disposal were unable to control the acts of these men?—The magistrates judged on last Friday week that the police force in Wigan, although there was a troop of soldiers stationed in the town, were not sufficient to go up and clear the way to our Lindsay pits. I differ from their opinion. However, that was their deliberate opinion, and the result was that they did not go up, and the mob took possession of our pit on the Friday morning; our own staff could not go near the pit.

15,080. Did they do any harm?—Very little damage to the works.

15,081. I think that a previous witness tated that applications were made often by the leaders of the unions to induce the masters to compel the men to go into the union; have you known that?—That has been so on more than one occasion in my experience, both at the company's works and at my own works. I have had notices sent to me that so-and-so did not subscribe to the union; that if they were not compelled to subscribe to the unions on such a day the whole pit would strike against them, to which I have invariably replied that every man may please himself, but so long as one man chooses to work, though not in the union, the pit shall be kept open for him.

15,082. (*Mr. Roebuck.*) Are those notices signed?—No.

15,083. You could not fix upon any man who has sent such a notice to you?—No.

15,084. Because I was going to suggest to you that if you ever should find one, that man is liable to indictment for conspiracy?—I take it that is so, but they are too knowing to sign it.

15,085. (*Mr. Mathews.*) When you have got men to come into your pit have the union men ever driven those men out of your pit?—Yes, they have tried that.

15,086. Have you any reason to believe that that was done by the authority of the union?—Yes.

15,087. Have you any legal evidence of it?—Not legal evidence of it, but I have not the slightest doubt of it in my own mind. I consider this to be real tyranny, because, as I said before, I have never attempted to keep the men out of the union. I have a great dislike to the union, and I do not disguise it, but I have never in the slightest degree interfered with the freedom of the men.

15,088. (*Mr. Booth.*) At all events you do not choose to be a party to constraining the men to come into it?—Certainly not. As I said just now, if there were one man in a pit not a union man, and he said that the

others were intending to force him to enter the union, I would keep the pit open for him.

15,089. (*Mr. Mathews.*) What is the state of your district now?—A state of mob law, at any rate it was so up to Saturday. Late last week, after an application had been made to the Home Secretary, a very large force of military was sent into the district, and it has been only by the presence of an overpowering force of military that anything like order has been restored.

15,090. So that the men still persist in their determination to remain out. They commit as many acts of violence as they can, and you have no idea at all of giving way?—I do not apprehend any actual immediate termination of the strike; but I can only say that I do not want those to go to work who do not wish to do so. Any person who has expressed his willingness has been allowed to come to the pit. Nobody has been asked.

15,091. Besides these material acts of violence which you speak of, I suppose there are a great many other modes of exhibiting hostility?—Yes, the men are threatened in their houses and through their families; they are threatened that if they go to work their children and wives will be injured.

15,092. So that all these threats which are not accessible to any legal process still act very prejudicially on the minds of the men, and deter them from going to work?—Yes. On Thursday week last, the day on which this meeting was held, I had 320 men working in the Lindsay pits, persons who belonged to the district. The day after that the whole of those were deterred from coming by the mob assembling and preventing them.

15,093. (*Mr. Roebuck.*) The whole of this state of things must be perfectly in the cognizance of the persons who guide the union?—Certainly.

15,094. Then any speeches of theirs justifiying the state of things are really justifying that state of violence?—I take it so, certainly.

15,095. Therefore, any soft talk here in this room or anywhere else is a matter of nonsense as compared with the statements which they make before the men whom they guide?—I take it to be quite so, because such speeches made to men of rough passions such as colliers are must have a great effect, whereas a speech made in a room to the delegates saying, "Do not strike," is not known outside, and the acts of violence are justified by these speeches from which I have read an extract as I take it. I certainly hold that speech responsible for all the acts of violence which followed it.

15,096. The mischief created by that speech cannot be wiped off by any soft talk in that chair?—By nothing whatever; the mischief is done.

15,097. (*Chairman.*) Who called the meeting?—The meeting was called, I believe, by a notice signed "By order of the miners' committee." The placard ran to this effect, That a public meeting of the colliers will be held in a certain place in Wigan at such a day and hour to consider how the 15 per cent. question can be brought to an amicable termination. The meeting will be addressed by Mr. Pickard and so-and-so, the miners' agents.

15,098. Mr. Pickard is the delegate for the lodge, is he not, at Wigan?—Mr. Pickard styles himself the miners' agent, that is, I take it, the chairman of the delegates.

15,099. Mr. Normansell is the chief of the whole of the district, and Mr. Pickard acts in the local lodge?—Yes, I think so.

(*Mr. Pickard.*) I am the agent for the Wigan district, comprising 130,000 or 140,000 persons.

15,100. (*Mr. Mathews to the witness.*) You say that there were some acts of violence towards one of your managing agents, Mr. Lancaster?—There were.

15,101. Was he hurt much?—No, not hurt, he was mobbed.

15,102. Was there any damage done to any part of the machinery at any of your pits?—There was a serious onslaught made on one of our pits, called the Gidlow pit, last Friday morning, at 2 o'clock, by a mob of 500 or 600 persons. They did get access to the machinery, and did their best to break it by overwinding; but fortunately they did not understand the engine and could not do it. They tried to get the steam out of the boilers afterwards. However, I had a body of special constables on the spot, or close to it, and they sent up some rockets as signals to the police, who came down in a short time, and they attacked the mob and dispersed them, and some of them on both sides received rather hard blows.

15,103. Have they interfered with your pumping engine at all?—We had a case the following night of a number of men trying to drive away persons in charge of the pumping engine and getting on the boilers with a view to injure the machinery. The men in charge gave a signal, however, which was answered in time.

15,104. So that if there has been no damage to the machinery it is no fault of the men on strike they have done their best?—Quite so. And we had another case early in the strike, in which one of our pumping engine-houses was set on fire. Had the fire not been discovered very early it would not only have burnt down the engine-house, but there would have been nothing left of that establishment but the two shafts in all probability, and the pits would have been filled with water and very likely lost for ever. I should say that while that fire was going on a number of colliers stood by and used expressions which I should not like to repeat, to the effect that they wished the place burnt down beyond the hope of redemption.

15,105. So that if no damage has been done to the machinery it is no fault of the men out on strike, it is owing to the protection, inefficient as that has been, which the civil force has afforded to you?—Yes. One of our underlooker's houses, however, last week was attacked, one of the windows was broken, and stones were thrown in by hundreds, and a dog left there for protection was killed. Fortunately the man and his family were gone, otherwise I have little doubt that he would have been killed.

15,106. You did not give notice of this reduction of 15 per cent. to your colliers until there was an absolute necessity for it from the reduction in the price of not coals, I suppose?—Certainly.

15,107. And there is nothing in the subsequent history of this strike to convince you that you can with safety to your own interests deviate from the policy which you have laid down?—Certainly not.

15,108. (*Mr. Roebuck.*) I want to ask you whether you think that you have received efficient protection from the magistrates of your district?—No, I do not; for I cannot say that the simple binding over to keep the peace, or any infliction of a fine of 10*s.* or 20*s.* and costs, or anything of that sort, is nearly a sufficient punishment for such acts as I have named.

15,109. During the time that this was going on there was some relaxation of protection, was there not? Did not the magistrates declare that the soldiers were not necessary, or something of that sort, which led to a serious outbreak on the Friday?—You refer perhaps now to the withdrawal of the foreigners, that is to say, men introduced from another district. I do not like to say much about the magistrates.

15,110. I do not want you to hide at all what you wish to say about the magistrates, because I want to know why they have been deficient in their duty, if they have been?—It was thus: last Monday week three of the magistrates met at one of our works, at which the Staffordshire men were quartered. There was a large mob assembled around the works. The magistrates said that the force at their disposal was utterly inadequate to maintain the peace, and they in fact put such pressure on me as to make me promise that I would send back these men, which I promised very unwillingly. Indeed, I said at the time that it would prolong the strike, that it would be considered a victory by the men, and have the effect, not of quieting them, but of inducing them to go to further acts of violence. I was overruled by the magistrates and all, but ordered to send the men back.

Mr. A. Hewlett.

28 April 1868.

15,111. Let me understand. The magistrates there for the protection of your property advised and almost compelled you to send back men whom you had a perfect right to employ if you pleased?—They did so.

15,112. And they did that upon the assertion that they were unable to protect you, because they had not a sufficient force at their command?—That was so.

15,113. What force had they at their command?—At the time they had about 90 county constabulary I believe on the spot, there was a troop of soldiers on the spot also, and I urged upon them that the force was adequate, and amply adequate, to protect the men. However, they held the opinion that if these men were sent back—and they said they had information to the effect that if these men were sent back—the strike would be over the following day.

15,114. Can you give me the names of those magistrates?—Mr. Eckersley, one of the members for Wigan, Mr. Henry Woodcock, his partner in a bank in the town, and Mr. Jonathan Lamb.

15,115. None of the three county magistrates are in business, I suppose?—The two first named are bankers, the last named is not in business.

15,116. (*Mr. Mathews.*) Not employers of labour? No.

15,117. (*Mr. Roebuck.*) And these gentlemen, conservators of the peace, suggested to you that the mode of preserving the peace was by sending back the men who had been sent there?—Yes.

15,118. And that was the mode that these sapient magistrates adopted to put down a violent mob?—Yes.

15,119. (*Mr. Mathews.*) Who was the chief constable in your district that had the command of the force?—The chief constable of the county is Colonel Bruce. He was present but did not endorse the recommendation of the magistrates at all. He simply said, "I have not sufficient force at my disposal."

15,120. Did he suggest to the magistrates that he had not force enough at his disposal?—He said so to them.

15,121. Did he suggest to them that they should augment his force by an addition of military?—No.

15,122. (*Mr. Roebuck.*) He had nothing to do with the military, I suppose?—No. He said, "So long as "these acts of violence were going on at your works "only, I could not manage, but now I have applica- "tions from six or eight other collieries which are "now opening their pits for work" (we had been the only works open up to that time,) "and they have as "much right to protection as you have," (which I quite agreed in,) "and if I divide my force it is quite "insufficient."

15,123. (*Mr. Mathews.*) What is the force of the county constabulary in the county of Lancaster?—About 800—in this particular district I think about 200.

15,124. Colonel Bruce as the chief constable of the county had at his disposal the whole of the police force of the county if he chose to exercise it, I suppose?—Yes.

15,125. And it was within his province to send for any additional force from any other part of the county if he had not enough in that part?—I take it that it was within his discretion and that of the magistrates.

15,126. He did not have recourse to withdrawing the police force from other districts?—A number of the police force had been withdrawn and concentrated upon this particular spot, but he said that he must remove a number of them in order to give protection to other collieries than our own.

15,127. But he had no more than 80 or 90 men?—No.

15,128. And the police force of the county consists of about 800?—Yes.

15,129. So that he had only a tenth part of the force at his disposal?—Yes.

15,130. (*Mr. Roebuck.*) You had military near?—Military within 200 yards of where we were sitting.

15,131. How many—one company?—I think 90 men.

15,132. The magistrates said that they had not sufficient power to prevent this mob?—They did; and I may say that the men who had been brought from Staffordshire were exceedingly unwilling to return, and it was only with the grave responsibility upon me that these men would be attacked if the protection were withdrawn that I agreed to send them back. I believed, and still believe, that some of them would have been killed without protection.

15,133. (*Mr. Mathews.*) You stated that some of the men had been brought up before the magistrates?—Yes.

15,134. Were they punished by fines, and being bound over to keep the peace, and having to pay certain expenses?—Yes.

15,135. Who paid the expenses?—I cannot say. I have been told the union did, but I should not like to bring it as a charge against them.

15,136. Was there any solicitor employed on their behalf?—There was a solicitor employed on their behalf.

15,137. Was he employed by the union?—I cannot say. It is my impression that that was the case.

15,138. (*Mr. Roebuck.*) But these men were charged with violence?—Yes.

15,139. Were any of them put in prison?—Two of the men were sent to be tried at the assizes. The only persons imprisoned were some men who could not find sureties.

15,140. That was the mode in which these gentlemen endeavoured to maintain the peace?—Yes.

15,141. (*Mr. Mathews.*) Can you tell when you brought these gentlemen before the magistrate, under a summons or warrant, whether there was a direct application for them to be tried as cases for sureties of the peace or as cases of riot and disorder?—Riot and disorderly conduct.

15,142. And did the magistrates upon their responsibility change the character of the crime and let them off on finding sureties for the peace?—We could not succeed in getting further punishment than that.

15,143. (*Chairman.*) Was there any instance in which the police were injured while acting in a body? You say that in one instance a man was injured?—In one instance a policeman was severely wounded by a stone. This man has certainly been unfortunate; he is a superintendent. He has been injured twice, last time very severely, and the first time a very nasty blow indeed, and other men have been hit by stones; but I am not aware that any other man has been so far injured as to incapacitate him for work.

The witness withdrew.

Mr. J. Evans.

Mr. JOSIAH EVANS examined.

15,144. (*Chairman.*) You are of the firm of Evans and Company, I believe?—Of Richard Evans and Company, of Haydock and Edge Green Colliery.

15,145. How long have you been proprietor of that colliery?—Rather more than 20 years. It has been carried on by my father since 1826, and is now carried on by my brother and myself.

15,146. During that time have you had any remarkable strike till the strike that is now going on?—I think I have known about four strikes altogether; but what I am here to speak of is the last strike.

15,147. In those strikes that you have known before has there been violence of the same degree as in the last strike?—Not so bad. There has been occasionally violence, but I think that this is the most severe strike I have known altogether.

15,148. I think Mr. Hewlett has told us that 15 per cent. reduction was proposed, and that the men refused that, and the strike so set in?—Just so.

15,149. The price of coal, according to Mr. Hewlett, had fallen so as in a commercial sense to have made it necessary that the wages should be reduced?—Yes.

15,150. Have you calculated whether the colliers' wages would be higher than the usual rate after the 15 per cent. was off—that is, taking the price of coal to be as it is now as compared with the price of coal at the time when that rate of wages was settled?—After a reduction of 15 per cent., they are still 23 per cent. above the rate of wages in 1845.

15,151. For a few weeks did some of your men come back to work?—We have had from 500 to 600 people at work the whole of the time.

15,152. Has there been a renewal of the strike?—We have had a great deal of disturbance; but we have had a large body of police there, about 8 police, for a month since. There were about 500 men from Wigan and St. Helen's who came into the neighbourhood and attacked the police. It was a most serious affray. They were driven away, and the next day they threatened to drive the police out of the neighbourhood. I was called up at midnight by the superintendent, stating that they were coming on all sides upon us, and after I got up I went out and heard a noise and shouting, just like at a racecourse. I went to Warrington by special train, accompanied by the superintendent, and got a body of soldiers. This was about 2 o'clock in the morning. We had not been half an hour back at the colliery when we heard a noise on the road about a quarter of a mile off, and we came on a body of 700 men, I should think, men armed with picks and pick-shafts and pieces of iron rope, and making a great noise. We stopped opposite to them, and the police told them not to throw stones. I walked forward and asked them what they wanted. They said, "We will not let those men work while we are on strike." I told them then that they had no right to interfere with any other workmen; that they might do what they liked themselves, but that they had no right to interfere with any other parties. They kept on the conversation, saying that they would beat them, and so on. I told them that the police were amply strong enough to take care of them, and that if the police were not sufficient there was a force of military behind us to support them. They immediately told us that they should fight the police and the military too, and before I could turn my back they called out, "Give it them," and a shower of paving stones were thrown amongst the police, immediately afterwards the police charged them, and sent them to the right and left across the fields. There were a great number of men injured, five or six of the police were invalided, and one superintendent had a most serious wound in his face.

15,153. (*Mr. Mathews.*) Did you succeed in apprehending any of the men?—No, it was quite dark; it was about 3 in the morning, and we could scarcely see three or four yards before us.

15,154. (*Chairman.*) Was that near the pit's mouth?—Near our colliery offices and near the barracks which we had prepared for the police. We had about 80 police at that time.

15,155. About how many police were they that resisted these men and scattered them?—There were about 70 out; they left 10 in the barracks to protect the building.

15,156. As far as your observation goes, 800 or 900 men were scattered by 70 police when they acted together?—Yes, seeing that the military were behind them.

15,157. How many military?—About 40 military.

15,158. Is it the case that the men had resumed their work, and then the Government withdrew the troops, and then the resistance became more violent?—After this affray a number of our men went to work, and from the number of 650 we increased up to 1,500 men on Tuesday the 21st. At that time there was a report that the Government had withdrawn the troops from Wigan, and it was rumoured amongst the men, that the magistrates had refused to escort the men by the police to their work.

15,159. (*Earl of Lichfield.*) When did the first affray take place?—About three weeks before.

15,160. Cannot you give us the day?—It was the Friday before Good Friday.

15,161. And upon that occasion there were military on the spot?—There were military, who followed the police. After that there was a meeting called in the neighbourhood; two of the Pickards were there, George and William Pickard, and several others of the delegates.

15,162. (*Mr. Mathews.*) Are those the Pickards referred to in Mr. Hewlett's evidence?—Yes.

15,163. (*Chairman.*) One of them is in some office?—Both are delegates, one is resident in our neighbourhood.

15,164. A meeting was called, you say?—A meeting was called of the men in the evening, and after that there was a midnight meeting in the neighbourhood, a very large midnight meeting. The next morning when the police went out through the district they found a great number of men in pit dresses, some carrying picks, and some safety lamps; they were all in disguise, were mixed amongst our men, and by persuasion or threat induced about 400 to leave their work.

15,165. Did you attend any of the evening meetings or midnight meetings?—No. That has been reported to me by men who have been at the meetings.

15,166. The result was that on the following morning a large number of men dressed and armed as you have described were there to obstruct the men going to their work?—They were; every pit was picketed, and every lane, by 10 or a dozen men, and this continued for three or four days.

15,167. (*Mr. Mathews.*) They were picketed to prevent other men from coming to work at the pit?—To approach the works at all.

15,168. Were there any acts of violence?—Not at that time.

15,169. (*Chairman.*) Was there any increase of power, were troops sent again afterwards, or was the arm of the law strengthened in any way?—On Thursday last there was a report of a large body of men coming towards the colliery, and we called the military out again and went in the morning at 4 o'clock with the police into the district. There was a large body seen walking four abreast about half a mile out. These men returned when they saw the police with the military, but still there were the same number of pickets as before.

15,170. (*Mr. Mathews to Mr. Hewlett.*) I forgot to ask you whether the yeomanry have been called out?—No.

15,171. (*Chairman to the witness.*) Will you describe any violent proceedings that have taken place?—There had been several previous attacks on the police; some of them were severely stoned and injured. Many cottage windows were broken, and some of our men had their windows broken twice over; we had repaired them, and they had them broken again.

15,172. (*Mr. Mathews.*) Do you think that these acts proceed from members of the union?—We think so; we cannot prove it, but we think that it was by union influence.

15,173. That part of your men who were willing to go to work are not in the union, I suppose?—No.

15,174. What proportion of your men are not in the union?—I should think that one half are out of the union.

15,174. And that half who are out of the union are willing to go to work at the proposed reduction?—Yes.

15,175. I suppose that the reduction which you proposed was incidental to a reduction in the price of coals?—Yes.

15,176. What is the reduction in the price of coals?—The price of coals has been reduced 20 per cent.

Mr. J. Evans.

28 April 1868.

15,177. So that what sold previously for 10*s.* is now sold for 8*s.* ?—Yes.

15,178–9. And the reduction of 15 per cent. in the wages would not be an equivalent for that ?—No.

15,180. You have never attempted to reduce colliers wages, except on a reduction in the price of coal ?—No.

15,181. And a reduction in the price of coal is always more than an equivalent for any reduction in the rate of wages that you can get ?—Yes.

15,182. On the contrary, when there is any rise in coal, you are always ready to advance the wages of your men ?—Yes.

15,183. There were no unions previously to the same extent as now, were there ?—They were in existence when we commenced, but not to the same extent as now.

15,184. There is not any obstacle I suppose in the way of your men coming to you to discuss any question of wages ?—Certainly not. We have refused to recognize the authority of the union, but we have always offered to see our own workmen.

15,185. You are ready to discuss any question with them ?—Certainly.

15,186. (*Earl of Lichfield.*) Did you see them upon this occasion when you first proposed the reduction of 15 per cent. ?—Six or eight of our men waited upon me, and I asked them whether it was not the case that when the last two advances of 10 per cent. were given it was clearly understood on their part that when a reduction of price took place their wages should be reduced also, and they admitted that it was so.

15,187. (*Mr. Mathews.*) What is the average price of the marketable coal ?—6*s.* 6*d.*

15,188. What proportion of that is constituted of colliers' wages and various other wages in the colliery ?—I should think that the colliers' labour would be about 1*s.* 6*d.* of that ; then there is all the other labour as well.

15,189. (*Earl of Lichfield.*) When you saw these half a dozen of your own men and reasoned with them on this subject, what was the view which they took at that time ?—They gave me no answer, only that they did not like a reduction of 15 per cent.

15,190. (*Chairman.*) Had there been attacks made on the coal proprietors for some time past in speeches or in the local papers ?—There have been many inflammatory speeches and very serious charges made against me.

15,191. But can you trace them to union delegates, that is our business ?—Yes. George Pickard is the one who resides in our neighbourhood, and by the local papers I see that he charges me with robbing the men ; that I employ men to go round to rob the men of their wages.

15,192. (*Mr. Mathews.*) What is Mr. George Pickard ; has he any other occupation than that of a delegate ?—He is only a delegate.

15,193. Paid by the union ?—Paid by the union.

15,194. Had you any cases before the magistrates ?—No.

15,195. (*Mr. Roebuck.*) What was his meaning in saying that you robbed the men ?—He meant that I sent men round to different pits to take their tubs or tallies from them, and that if they did not take sufficient I sent the men off and put other men on.

15,196. What is the meaning of "taking tubs from the men"?—If they are not sufficiently filled they are forfeited.

15,197. And he charged you with employing men to take these tubs from the working men, and that if they did not take enough to suit you, you would turn that man off and put another man on ?—Yes.

15,198. Therefore, it was charging you in fact with taking away from the working man that which he had produced ?—Yes.

15,199. And by that means doing what he called "robbing the men"?—Yes.

15,200. And was there any truth in that assertion ?—Certainly not.

15,201. (*Mr. Mathews.*) Is it the custom in your colliery to forfeit the tubs which are not sufficiently full ?—If one man persists in sending his tubs short of weight, there is an occasional tub taken from him ; but there are hundreds of men in our employ who never have a tub taken from one year's end to the other.

15,202. And the men whom you engage as colliers understand perfectly well that it is one of the regulations of your colliery that if the tubs are insufficiently filled they are forfeited ?—Yes.

15,203. And they go to work with that understanding ?—Yes, it is one of the rules.

15,204. So that if they do not fill their tubs it is an attempt on the part of the men to defraud their employers ?—It is.

15,205. (*Mr. Roebuck.*) What sort of evidence do you suppose Mr. Pickard spoke upon when he charged you with robbing the men ?—I do not know. He had no grounds for the charge.

15,206. Who could have given him any evidence of it ?—I do not know that anyone could.

15,207. Would you not assume from that that he spoke at random ?—Yes.

15,208. That he made a grave charge upon you merely at random ?—I should take it so.

15,209. He would call his neighbour a thief upon no evidence whatever ?—Yes.

15,210. (*Mr. Mathews.*) Would he not get information from some of these men whose tubs you had forfeited ?—He might do so.

15,211. And that is the probable solution of his charge ?—Very likely.

15,212. (*Chairman.*) Had there been any charges made about your colliery being dangerous from neglect of duty on the part of the coal owners ?—He has mentioned in one of the St. Helen's papers that two of our pits are full of fire-damp, he called them "slaughter pits," and a few days afterwards the Government inspector went through every working in these pits. I asked him if he had found any fire-damp, and he said No, he had not. From that I infer that Pickard reported to the Government that our pits were unsafe.

15,213. (*Mr. Roebuck.*) You suppose that George Pickard reported that to the Government, and then they sent down their inspector ?—Yes.

15,214. The Government have got the answer from the inspector that those pits have no fire-damp in them ?—No doubt they have.

15,215. (*Earl of Lichfield.*) Are you referring to the Mr. Pickard present here ?—No, a brother of his.

15,216. (*Mr. Mathews.*) Have you not had a resident Government inspector in your neighbourhood ?—Yes. He takes a large district, the Wigan district.

15,217. Then it was his duty to visit your pits without being sent for, either by the men or anybody else ?—Certainly. He is constantly in the neighbourhood.

15,218. And when he made his inspection of it, did he find any ground for the charge made by Mr. Pickard that yours were "slaughter pits ?"—No, he could not find any fire-damp.

15,219. (*Chairman.*) Has this state of things produced any difficulty in managing the pit and obtaining managers to control the men ?—All this excitement has caused quarrelling among the men, and when the overlookers are measuring up they are frequently insulted. In fact it is difficult to find underground managers now in consequence of the insulting manner in which the men treat them.

15,220. Are you aware of any harm that you have done to bring upon you these calamities ?—I think I may truly say, without boasting, that there are no masters in Lancashire or in England who have done more for the benefit of the men than my brother and myself.

15,221. (*Mr. Mathews.*) Have you had any applications made to you to induce your men to go into the union ?—No.

15,222. Were there no threats held out to you, that

if you did not induce your men to go into the union they would strike your pit?—No.

15,223. (*Chairman.*) A man that does a great deal of good need not look for his reward around him, but I do not know that he need look for his property to be destroyed or his good name injured. How is it that they have set upon you and given you a shower of bounty in that shape?—I cannot understand it.

15,224. Is it not that you have employed more non-union men than some of your neighbours? If you do nothing but radiate good, as you describe, more than most other people, how is it that you have such an extra allowance of evil?—We can explain it in this way, that we have a number of non-union men and have determined to keep these men at work and not allow them to be intimidated. There is a neighbouring colliery to ours, where about four days ago they picketed the works seized the underlooker, fireman, and engineer, and beat them severely, burnt all the tools at the place, and they have injured the boilers very much.

15,225. You know no other reason to account for these acts of hostility, except that probably you have employed more non-union men than some of the other masters?—None except that. The only time I have ever seen one of the union delegates was about six years ago, when I saw Mr. William Pickard, who is here at the present time. At that time the union wished to restrict the get of the men in our pits, and they issued an order that every pit was to stop at 2 o'clock. We were determined that we would not just work our pits half a day, and we told the men that they were not to come up till 4. At one of our pits they seized the man having charge of the signals going up and down the shaft, knocked him over, took possession of the signals, and came up the pit. Four of the men I convicted of this, and turned them off. Then the men came in a body and told us that if we would not take these men on again they would not go down the pit, and for that simple thing we had a strike of, I think, about six weeks. After the six weeks, Pickard came to me and asked me if I would yield some small point so as to settle this question. I told him what had taken place. He said, "Will you yield half an hour, or anything just to show signs of giving in?" I said, "Mr. Pickard, if you were in my place would you do so?" He said, "No." He then went out of our office and went to the men and tried to induce them to go to work. I believe that they abused him very much, and told him that he had been bribed by me to take this step. The strike continued about a week after and then the men went in. These men I have spoken of were turned off, but I think that they were all taken on again afterwards.

15,226. (*Mr. Mathews.*) What state is the strike in at your collieries now?—I should think that we have perhaps two-thirds of our men in at the present time.

15,227. Are those union men or non-union men?—Mixed. After the Government sent down the troops we had an increase of men the very next day.

15,228. At the reduction of 15 per cent.?—At the reduction of 15 per cent.

15,229. So that you have no idea that it will be necessary for you to deviate from the proposal which you have suggested?—No, we are so satisfied that we have done what is fair and reasonable in the matter, that if the strike were to last six months we should not yield one iota after what has transpired. There are a number of threatening letters here which have been sent to me.

15,230. Will you read one of them?—"Sir, I suppose you will not sell coal for money, but if you do not I will set your house on fire and blow your brains out, and we will watch for you, so you must look out. We will get a revolver and put you down to the grave with a bit of cold lead, and to hell with you; so you had better sell us your coal or we will have your life. You have not long to live, so you had better make your will. We will do it. I remain yours, A Bit of Cold Lead."

15,231. (*Mr. Booth.*) What does that reference to your refusal to let them have coal mean?—I cannot understand that at all. I am quite at a loss to know what they mean. Of course we were getting a very small quantity of coal, and we sent it all to our customers. But I may say that many hundreds of tons have been stolen during the strike, which we have taken no notice of.

15,232. (*Mr. Roebuck.*) I suppose that the rest of the letters are pretty much in that tone?—Much in that tone.

15,233. (*Chairman.*) Were you with the magistrates when the Staffordshire men were sent back?—No, we are about seven miles from Wigan in a different district, the Saint Helen's district.

15,234. (*Earl of Lichfield.*) You say that the first affray took place between the police and the men on the Friday before Good Friday, and on that day you went to Warrington and got the assistance of some of the military. What steps did you take to procure that assistance?—I took the superintendent of police with me, and called on two magistrates, with our solicitor, in order to be perfectly safe; the superintendent of police made an affidavit that he had not sufficient force, and the two magistrates ordered the military to be sent up.

15,235. Did you obtain the military in any other way?—Since that they have been stationed in the neighbourhood. Mr. Legh, of Lyme, has given the use of the stand on the racecourse, and they have made their barracks there.

15,236. Then the magistrates in your district have made no difficulty in providing a sufficient force to protect the persons working in your pits?—Certainly not, and at the quarter sessions on Friday last I was present, when the chairman took steps on receipt of a letter from the Home Secretary to send troops to Saint Helen's as well as Wigan as they were apprehending a riot there.

The witness withdrew.

Adjourned to to-morrow at 11 o'clock.

1, Park Prospect, Westminster, Wednesday, 29th April 1868.

PRESENT:

The Right Hon. SIR WILLIAM ERLE.	JAMES BOOTH, Esq., C.B.
The Right Hon. the EARL of LICHFIELD.	WILLIAM MATHEWS, Esq.
Lord ELCHO, M.P.	

THE RIGHT HON. SIR WILLIAM ERLE IN THE CHAIR.

Mr. A. McDonald.

29 April 1868.

Mr. ALEXANDER MCDONALD further examined.

15,237. (*Lord Elcho.*) You are, are you not, president of the Miners' Association?—I am president of the Miners' National Association.

15,238. How long have you been president of that association?—Since 1863.

15,239. How were you chosen to be president of it?—I was chosen by a meeting of delegates from various parts of the United Kingdom, some 50 or 60 in number. I do not at the moment remember the number, but they were from various parts of the United Kingdom.

15,240. When you say "delegates" do you mean delegates from other miners' unions?—From separate miners' unions existing at that time.

15,241. What were you previously to being chosen to this position?—I was acting as the agent of the miners of Scotland.

15,242. Were you a member of the union?—I was a member of a union in Scotland.

15,243. Of a general Scotch union or of a particular union?—The unions in Scotland are not of a general character; their interests are one, but they are purely local in their character.

15,244. Before you were chosen president you say that you were a member of a union, that you were what you call a miners' agent?—Yes.

15,245. What do you mean by that term?—Advising them in particular matters, such as rates of wages, in matters affecting their social welfare, in regard to statutory enactments that have been proposed from time to time, and also in matters affecting legal questions that came up between the employers and the employed.

15,246. Previous to being a miners' agent what were you, had you worked yourself with your own hands in the pit?—Yes.

15,247. Have you worked from an early period of your life?—I was in the mines before I was eight years of age, or about eight years of age.

15,248. And you have worked continuously from that time as a working miner how many years?—16 years.

15,249. You were 16 years from eight years old in the pits as a working miner?—Yes.

15,250. You have therefore had considerable experience of mining operations and the state of the pits, and the feeling of the miners on all these questions?—Yes.

15,251. Can you state comparatively the state of the mining population now as compared with what it was when you were a lad, has it improved?—With the permission of the Commission, I should like to state what it was when I entered the mine, and then I shall better be able to put the contrast by stating what I think it is now.

15,252. What year was it in which you entered the mines?—About the year 1835 I think; I could not fix the year. When I entered the mines at eight years of age or so, at that time workings were not so large, for we had not sunk in Scotland to the thicker seams which are now being worked.

15,253. What mine did you enter?—A mine called the Dyke Head Ironstone Mine.

15,254. Not a coal mine?—Not a coal mine at first.

15,255. Where is that mine?—In Lanarkshire.

15,256. Does that mine still exist?—It does not exist now, it has long since been closed. The condition of the miner's boy then was to be raised about 1 o'clock or 2 o'clock in the morning if the distance was very far to travel, and I at that time had to travel a considerable distance, more than three miles; I was raised at that time at 2 o'clock, and never later than 3 o'clock.

15,257. Do you mean that someone went round the place to call the boys?—No. The men lived more then in their own cottages in that part of the country. We got up in the morning, I being called by my father at 1, or very often at 2 o'clock. We remained then in the mine till 5 and 6 at night. It was an ironstone mine, very low, working about 18 inches, and in some instances not quite so high.

15,258. That is you remained 16 or 17 hours in the pit?—Yes, as a rule.

15,259. Was the work constant for a boy of that age for that time?—The work was perfectly constant.

15,260. No break?—No break. Then I removed to coal mines after that. There we had low seams also, very low seams. There we had no rails to draw upon, that is, tramways laid like rails now for our tubs, or corves, or whirllies as we call them to run upon. We had leather belts for our shoulders. One was before and another behind, and the wheels were cutting the pavements or floor (we called it pavement), and we had to keep dragging the coal with these ropes over our shoulders, and sometimes round the middle, and a chain through between the legs. Then there was always another behind pushing with his head.

15,261. That work was done by children?—That work was done by boys, such as I was, from 10 or 11 down to eight, and I have known them as low as seven years old. In the mines at that time the state of ventilation was frightful.

15,262. (*Mr. Mathews.*) Are you now speaking of ironstone mines or coal mines?—Of coal and ironstone mines together. The gases pervading the mines at that time in Scotland were, for the most part, carbonic acid gas, not carburetted hydrogen; and I remember well often having three or four lamps put together for the purpose of keeping so much light as to enable us to see by. A very great deal of our drawing, as we call it, was performed in the dark in consequence of the want of ventilation in the mines.

15,263. (*Lord Elcho.*) Did that want of ventilation at that time lead to frequent accidents?—It did not lead to frequent accidents; but it led to premature death.

15,264. Not to explosion?—No; carbonic acid gas in no case leads to explosion. There was no explosive gas in those mines I was in, or scarcely any. I may state incidentally here that in the first ironstone mine that I was in there were some 20 or more boys besides myself, and I am not aware at this moment that one is alive excepting myself.

15,265. (*Chairman.*) Are you aware that they are dead?—I am aware that they are dead. I have made every inquiry, and have ascertained as far as I can that they are dead.

15,266. (*Lord Elcho.*) Have they died as miners?—They have died as miners. Not one of them rose from the grade of a miner that I am aware of. In the second mine that I was in I think that there were

from 20 to 30 boys and a number of girls. I think that with exception of my brother who is now in America, I am the only one who is alive of all of those that were there. Their deaths were caused, I am satisfied, from the noxious gas, carbonic acid gas, that we then worked in, and the degrading kind of labour which we were subject to, and the long hours, 16 to 17 hours every day.

15,267. What were the hours that the men worked there?—The men worked as long as the boys, and so did the females.

15,268. (*Chairman.*) You say that you worked in the dark. Do you mean that there was not air enough to support flame?—Not air enough to support flame. They managed not unfrequently to have the flame at the face of the working, for the individual roadways were in such a condition that the result was that state of things which I have referred to.

15,269. (*Lord Elcho.*) You have spoken now of what came under your own experience in the mines at which you actually worked. Have you reason to believe that that is a pretty truthful account of the adjoining mines, and of the mines generally in Scotland at that time?—I have perfect reason to believe that that was pretty generally the condition of the mines at that time in Scotland in that locality.

15,270. (*Chairman.*) Iron and coal?—Iron and coal.

15,271. (*Lord Elcho.*) Was it better or worse in other localities in Scotland?—In answering that I may say that I was rather inquisitive as a boy, and when I had a moment to spare I generally liked to go somewhere else to see what was going on, and I had a knowledge of the entire district. From that and from communication with others before, at the time, and since, I have reason to believe that that was the general condition of the mines in Scotland.

15,272. Have you any knowledge as to the comparative state at that time of the mines in England or Wales?—No, unless by reports.

15,273. By "reports" do you mean verbal reports or parliamentary reports?—Some of the parliamentary reports certainly give a very bad description of them.

15,274. (*Mr. Mathews.*) With regard to these ironstone mines which you speak of in Scotland, were they common clay band ironstones?—The common black hand ironstones.

15,275. (*Lord Elcho.*) You say that those who were young at that time have been short-lived in consequence of the state of the pits; do you believe that amongst grown up miners too there was a premature mortality?—I am perfectly certain of that, and I feel convinced that had the condition of the miner been continued as it was then the mining population could not have sustained itself. It was sustained entirely by the fact of importation from other causes into the mine.

15,276. You say that you have worked as a boy at eight years old 16 or 17 hours without a break; was there no pause for the dinner hour?—Yes, the ordinary pauses, half an hour or so to take your bread.

15,277. What were the wages received at that time?—I worked with my father, and I had no wages at all. But the wages of the miners at that time were a little above what they are now.

15,278. You say that you worked for your father, do you mean that your father was paid for bringing you, or that boys were not at all separately paid except as aids to their parents?—Where boys were kept for throwing water or anything of that kind they got about 9*d.* a day or from that to a shilling. Little boys from seven to eleven would get about 9*d.* a day.

15,279. (*Mr. Mathews.*) Were you paid by your father?—We do not know paying in Scotland by the father to the child; we live in families.

15,280. Still your father was paid for your labour?—Yes, my father was paid for my labour.

15,281. (*Chairman.*) Did he take a certain length of seam and get so much for working it as they do in Cornwall?—He took the coal and worked at piece work at so much per hutch or per corve. The miners in Scotland are entirely piece workers as a rule. They are now and were then.

15,282. (*Mr. Mathews.*) Are they paid by the corve?—In some instances they work by the corve In a great many instances of late years (that is one of the matters that I shall refer to again), the practice has been worked of paying by the ton.

15,283. (*Mr. Booth.*) Do I rightly understand you to say that their earnings were then something higher than they are at present?—Yes.

15,284. (*Lord Elcho.*) What were the wages of a grown miner then?—3*s.* 6*d.*, 4*s.* 0*d.* and 5*s.* 0*d.* At the present moment the wages of the miners in Scotland are lower than they were in 1837 by 2*s.* per day. They were 5*s.* in 1837, and they are only 3*s.* and 3*s.* 6*d.* now.

15,285. (*Mr. Mathews.*) For the same hours of work?—The hours of work are much less now than they were then.

15,286. (*Lord Elcho.*) You say that when you yourself were eight years old the wages of a boy of that age were 9*d.* When you left work after 16 years (that would make you 24 years old) what were you receiving?—As much as I could make.

15,287. What did you make then?—Well, latterly after I grew up I became a foreman and had charge of men, but I gave that up. Before entering upon that, I followed a class of work which we call stonework, that is working all wet hard work, not only working coal or ironstone. I took that class of work because I had an object in view, and in that way I could make more money than I could have done in working coal or iron.

15,288. Was that the hardest and most disagreeable description of mining work, and consequently the best paid?—Yes.

15,289. What sort of work was that?—Driving what we call wet levels.

15,290. (*Chairman.*) You said that wages were 2*s.* a day less now than at the time you were speaking of, but supposing that a man worked for the same number of hours and produced as much what would be the sum which he would receive now as compared with the sum that he would have received then?—Well, the manner of working now is very different from the manner of working then.

15,291. Will you put it upon the quantity of coal?—The quantity of coal is not diminished, in a number of instances in fact it is increased.

15,292. When the owner pays upon the quantity of coal does he pay about the same now as then?—Just about the same now.

15,293. (*Earl of Lichfield.*) Will you explain to us the difference in the system of working now and then?—You will observe as I have stated that we did not pursue working then in that active way in which it is done now. Now rails are carried in; now there are appliances which are of such a nature as to allow a man to work continuously, and he works now much harder, with greater severity, than he did at that period. It was a long fatiguing labour arising from the nature of the circumstances, and men continued at that long fatiguing work, and boys too often continued at that long fatiguing work. A boy will do now six times the work he could do then.

15,294. (*Lord Elcho.*) Take your own description of work—you said it was the hardest and most disagreeable work in the pit, namely, running these levels in a wet part of the pit, and consequently the best paid work. What was the highest sum you could make in a day then?—I have made 10*s.* a day then.

15,295. (*Mr. Mathews.*) Working by the day?—By the yard and ton.

15,296. (*Lord Elcho.*) How many hours had you to work for that?—I was never inclined to work more than eight hours a day, and any good workman can tire himself in eight hours; he is a worthless miner that cannot fatigue himself in eight hours.

15,297. Is the same description of work done now in the mine as that which you are describing?—Yes.

Mr. A.M cDonald.

29 April 1868.

15,298. What would a man working as hard as you worked then make now?—The class of work that I did was entirely special contract, it was out of the ordinary working. To give you an instance of the kind of contract I had once, I drove a wet level once of 40 fathoms down, going under water. It was wet in the bottom and there was wet pouring from the roof. This was an ironstone mine, and water was coming out of the cutters or joints of the iron, and in the morning when I entered the first thing that I always did was to roll myself all over right in the water and wet every part of the body, for the express purpose that the water falling from the roof should not create the very unpleasant sensation which water does to one who has gone recently from his bed into the mine that is wet.

15,299. (*Mr. Mathews.*) You took it in one dose instead of a variety of doses?—Yes; I preferred the plunge instead of the shower-bath.

15,300. (*Lord Elcho*). You took this work by contract?—Yes.

15,301. Is there no such thing as taking it by contract now?—Yes, there is.

15,302. Now-a-days, if a man worked for eight hours as hard as you did at the same description of work, you having made 10*s.* a day, what would that man make now, or what would you yourself make now?—I should not work at that class of work if I were working now under 10*s.* a day. Every man judges of course of his capabilities as he likes, but when a workman I was one of those workmen that would not be satisfied with any small wage, because I always felt that my labour was worth more than any other man's not in wet work.

15,303. (*Mr. Mathews.*) Are there plenty of men working contract now that would get 10*s.* a day at that work?—I know men getting 6*s.* and 7*s.*, but not any getting 10*s.*

15,304. If I were to tell you that I know men getting 10*s.* a day at that work you would not discredit it?—Certainly not.

15,305. (*Lord Elcho.*) I suppose that now if men gain less it is because they do not work so hard as you did?—Yes, or they may not estimate their services at the same rate as I did.

15,306. (*Earl of Lichfield*). You say that you worked by the yard at that time; that is, you cut a yard of ironstone and were paid so much for it?—Yes.

15,307. What is paid now for that yard of ironstone?—That field of iron that I refer to is entirely exhausted, and that being so there is such a variety of fields that there is nothing in common so as to make the comparison.

15,308. Take the case of a coal mine at that time; I suppose it was worked by the yard at that time, was it not?—Yes.

15,309. What was paid in a coal mine for working coal by the yard at that time?—From 12*s.* to 13*s.* and 14*s.* (according to the rate of wages) per fathom.

15,310. And what is paid now?—At the present moment it is under those rates.

15,311. (*Mr. Mathews.*) All that would be influenced by the greater or less degree of hardness of the seam?—Yes, the varieties of seam; there is no rule. Unfortunately for our part of the country that seam of the black band of Lanarkshire is to a nearness all exhausted.

15,312. (*Lord Elcho.*) Did you work in the pit in the way you have described all the year round, summer and winter?—Up till three years before I left the mines; I did not work then in the winter season.

15,313. What did you do in the winter season?—I went to college three sessions in the winter season?—

15,314 You attended the Glasgow University, I believe?—I attended the Glasgow University.

15,315. With the savings which you had effected by your work in the summer?—With the savings which I had effected previously, and with those savings which I had effected in the summer as well.

15,316. In the summer, was it the habit of men to work every day in the week, or was there a great deal of play then in the mines?—Well, the system would vary. In the ironstone district we generally had regular work, and that was where I worked at the time when I attended the University.

15,317. Do you think that men worked harder then than now?—No; I think there was less work done then, though the hours were longer, than what is done now; but the appliances have considerably changed the circumstances.

15,318. You say that with the savings you effected through your summer work, and other savings for three years, you attended the Glasgow classes. Are those classes very expensive?—Yes, they are very expensive.

15,319. May I ask what your attendance at those classes would cost you?—Class fees, and books, and maintenance cost me always about 55*l.* to 60*l.*

15,320. That is books, attendance at the college, college fees, and living, during the winter?—Yes, and lodging.

15,321. (*Mr. Mathews.*) For a year?—For six months.

15,322. (*Lord Elcho.*) What was the course you attended?—I attended the humanity classes, as we call them, that is, Latin, the Greek classes, and the logic classes, and mathematics.

15,323. When you went to the university, what had your previous education been; had you been educated before at a parish school?—When a child I attended at the parish school.

15,324. Before you were eight years old?—Before I was eight years old; you can see, therefore, that I could not have had much education.

15,325. At what age did you first go to the parish school?—I could read the Bible before I was five years old.

15,326. And were at a parish school till you went into the pit?—I was at a parish school till I went into the pit.

15,327. Was there any provision for your education whilst in the pit?—No.

15,328. No schools were then attached to the pit?—No; and the habit of my brother and myself was to travel from three to four miles after we came out of the pit at 7 or 8 o'clock in the evening to a little village school for the children of farmers' labourers engaged in agricultural pursuits during the day.

15,329. You said that there were 20 children employed in one pit in our coal mine where you worked, and 30 or 40 in another. What was the state of education in those cases?—There was none.

15,330. They had been to their parish school, but there was no provision for them at the pit?—Nine out of ten had never been to the parish school at all.

15,331. (*Mr. Mathews.*) There was no encouragement given then to education, unless there was an inclination on the part of the boys leading them to desire it?—There was rather a discouragement given to it.

15,332. (*Lord Elcho.*) Are there schools attached now to the pits?—Yes.

15,333. That is to say, the masters have shown now an interest in providing the means of education for them which they did not show when you first went in the pit?—I am not quite prepared to say that that is the origin of the improvement.

15,334. Do you mean that it is not the masters who have established those schools now?—The masters did establish the schools, but in 1835 there were certain inquiries made by the Government on various matters, which I shall refer to; and in 1842 there was a very long commission which reported as to the entire kingdom on the state of mines, and that brought the hideous condition of the mining population before the public so strongly that then mine owners' schools began to be adopted very generally. There were some previous to that, but generally they began to be adopted after public opinion came out so strongly on

the social and particularly the educational condition of that class.

15,335. Without going into the causes now, the state of education was low then at the pits, and it is better now?—Very much better now.

15,336. At the time of your attendance on these classes at Glasgow was there any class for anything like technical education? Did you direct yourself in your education at all to the speciality of your work?—No, nothing of that sort.

15,337. What Latin and Greek authors were you reading at the university when you went there?—I may state that during a considerable number of years previous to my going to the university I attended evening classes. I removed from home to a town in our neighbourhood called Airdrie for the purpose of attending evening classes, going to them privately at night to get a knowledge of Latin and Greek.

15,338. Still working in the pit in the neighbourhood of Airdrie?—Still working. For seven or eight years I did so.

15,339. What did you read at the university?—The first book we read was extracts from Ovid and Tibullus by the late Professor Ramsay, perhaps one of the most able teachers that ever lived. That was for our junior year, and in the senior year we read from Cicero's Orations, and Tacitus, and from a number of extracts again, but chiefly from Cicero.

15,340. Did you read Greek at all?—Yes, we read a number of Greek authors under Professor Lushington.

15,341. You say that there is a great improvement socially and educationally in the state of the miners? I want to go farther, if you will allow me to do so, and state some of the social conditions of the mines there at that time. The terms of pays were one month, two months, and three months long; that is to say, between the settlements, and in some instances much longer. In all the older collieries of Scotland belonging to the landowners the pays were shorter, but in the trading district, the mining district which was rising, the pays were designedly made that long, and with no other object in view, undoubtedly, than this which I will explain. Attached to every work the owner, even if he had only 20 men, had a truck-shop, and generally attached to that truck-shop he had a public-house. The truck-shop was designed for the men spending all their money, and it was generally contrived that the men should be paid about 6 or 8 in the evening, or perhaps 10 or 12 in the evening in the public-house, and the poor man had literally got rid of all the little savings which he had not eaten up in the truck-shop during the month, or two months, or fortnight (but in very few instances was it only a fortnight), by 2 or 3 o'clock in the morning. I have often seen them returning home. He had nearly eaten every thing up at the truck-shop, and then he drunk the rest.

15,342. You have drawn a distinction just now between the mines of landowners and of others?—Yes.

15,343. Do you mean by that the mines which were worked by the owners of the mines, and the mines which were let by these owners to others?—Yes.

15,344. Was there a different system as regarded truck and wages, and payment at the public-house followed by those who worked their own mines?—The system was pursued in the counties of Mid and East Lothian, in the county of Fife, in the county of Clackmannan, and in Linlithgow. The truck shops sprang up in Lanarkshire and Ayrshire when the small men began to lease mines, and they began to raise their capital from the leasing of the mines from the owners.

15,345. Truck is now illegal by Act of Parliament, is it not?—Yes, but unfortunately it is practised.

15,346. That Act you think is evaded?—Yes, I shall refer to that subject again.

15,347. As to wages, instead of being paid by the month how are they paid now?—Generally by the fortnight, but wherever the truck shops are as a rule they are paid by the month.

15,348. Is there any other social point connected with the state of the miners at that time which you wish to bring before the Commission?—The social condition of the women (they worked in the mines) was very fearful indeed. When I was a boy I did not know a woman that worked in the mine that did not smoke tobacco, and a large number of them took strong drink. That smoking of tobacco I am glad to say has entirely disappeared among the females of the mining population.

15,349. As to drink, do you think that there is a greater sobriety now among the mining population than there was at that time?—Yes, very much greater. In fact I have known cases where men never left the house with money remaining over. What we used to call the old collier stock never left the house so long as they had any money remaining, because they could just draw money again the first day they worked, and therefore they continued to drink on until all was consumed, if all was not consumed on the Saturday night.

15,350. Is there much providence now in the mining class of Scotland—do men rise now as you yourself have risen from the grade of a working miner?—Yes. If they do not rise here they rise elsewhere; they leave the country.

15,351. Is there a tendency to save money with a view to emigrating on the part of the mining population?—Yes, in Scotland very largely.

15,352. To what do you attribute this beneficial change in the condition of the mining class in Scotland; do you attribute it to the ordinary progress of civilization and the improvement that has taken place in so many things in the last 30 years, or to any more direct cause?—The progress of civilization has had a great deal to do with it, but the combinations of the men from time to time have had much more to do with it. That state of things which I have described has brought about strikes innumerable. They have come before the public, and generally the public press of Scotland has come down upon proprietors when anything wrong of that kind has been done, and the very powerful influence, first of these combinations among the workmen, and secondly of the public press which is now so strong in our country, and happily over the world, has led to those changes. I would just add that many of the masters who began 30 or 35 years ago to make their fortunes, after they had acquired very large fortunes as the public gives them credit for, relaxed their rigour and ceased to do things that they had been in the habit of doing. Thus, the Messrs. Baird, a very large firm, at one time had truck shops to all their works. The enlightenment of the age, the strong expression of public opinion, and the bringing of their name frequently before the House of Commons in connexion with that system, has had the tendency (I know it to be true that it has had the tendency) to get them to give up that truck system entirely, and they have abandoned it and established co-operative stores. And the same principle has governed a large number of those who then accumulated fortunes in the country through the means of mining, that as they grew and seemed to become more wealthy they became less grasping in their character, and attended more to the social comforts of the men, educationally and otherwise.

15,353. You say that you attribute this improved state of things partly to the progress of civilization, and partly to the influence of the press, but mainly or in great measure to combinations and strikes. When you talk of combinations do you mean haphazard combinations of men dissatisfied and meeting together and striking, or do you refer to an organized system such as we are now inquiring into, the system of trades union combination?—Perhaps it might be proper for me now just to go into the subject historically.

15,354. Will you answer that question first?—In many of the instances a strike upon individual employers for particular grievances led to the alterations, and that I presume is what you designate haphazard combinations. In a large number of instances since

Mr. A. McDonald.

29 April 1868.

1825, in fact since 1800, the general combinations of the workmen have had more effect.

15,355. By a general combination you mean an organized combination?—An organized combination.

15,356. And a system of union?—And a system of union.

15,357. You have mentioned 1800. Is that the date of the first union of which you have any cognizance?—No, unions are prior to that. The condition of the miners in Scotland (as proofs of this I have brought copies of the statutes in force in Scotland, which if it is desired I can hand in for insertion) up to the year 1779 was this, that the Scottish miner was a serf. He was bought and sold with the land. If he refused to obey his master's orders he was taken to the public market place and whipped, or a common custom was to take him and attach him to a gin (engines were not common then) and drag him round for a couple of hours or perhaps a whole day with his face to the horse.

15,358. (*Mr. Mathews.*) You are speaking of Scotland now?—Of Scotland exclusively.

15,359. (*Chairman.*) And historically. You did not see this in 1779?—No.

15,360. (*Lord Elcho.*) Can you put in the Acts you refer to?—Yes.

15,361. (*Chairman.*) When you picture to us a man dragged round, where do you quote from?—I found it in a very old book, and I find it again repeated in the report by the Commissioners in 1842. I have met with men who at a later period, as late as 1790, were flogged for disobeying their master's orders and under the statute which I allude to.

15,362. (*Lord Elcho.*) Could you give us a reference to these statutes?—The statute is the 56th of the first parliament of Charles II. That state of things led to a secret combination among the men (I am speaking now historically), and a very strong agitation led to a change of that in the year 1799, in the 39th of George III., chapter 56. The coal owners and mine owners of Scotland at that time did not like the idea of giving the men their liberty.

15,363. Was a union formed at that time?—There were unions, and very powerful unions, secret unions.

15,364. (*Mr. Mathews.*) These Acts of which you are speaking were Acts applicable to Scotland alone?—Yes.

15,365. (*Lord Elcho.*) When you speak of unions do you mean that they had subscriptions, and secretaries, and so on, just as a trades union now?—No, the unions at that time were secret societies.

15,366. How long did they continue as secret societies?—I will advert to that again soon.

15,367. (*Chairman.*) The statute of the 56th of Charles II. is a statute for labourers I see?—Colliers.

15,368. It says that they are in the habit of lying about during a part of the week, and the mine gets back, and they must work six days in the week, and so on. It was a special Act of Parliament to make the labourers labour?—Yes, but they were then serfs.

15,369. These were free labourers then because Parliament intervened to give the masters some power over them?—I see that I have omitted to mention the first statute, which is one of the reign of James II. of Scotland. I think that you will find that they are authorized to apprehend and put into the mine "all sturdy beggars."

15,370. They must have been perfectly free then, because the statute is mainly directed against rival masters seducing them away by higher wages; the man exercised his own free will?—But he is held guilty of theft of himself for going away.

15,371. The master who has been deserted may come and demand him, and then the statute says that the master who has hired him shall deliver him in 24 hours under a certain penalty,—"a hundred pounds " to be paid to the persons from whom they passed, " and that for every person and every time that they " or any of them shall happen to be challenged and " not delivered as is said. And the said colliers, coal- " bearers, and salters, to be esteemed, reputed, and " holden as thieves, and punished in their bodies, " namely, so many of them as shall receive of ore " wages and fees. And the said estates of this present " Parliament give power and commission to all masters " and owners of coal heughs and pans, to apprehend " all vagabonds and sturdy beggars to be put to " labour." That is, when a man had broken his contract, and went from his contract to another master, that man was liable to be punished in his body?—But he is held as a thief for doing it. In 1775 a statute was passed which explains thoroughly the position that they were in.

15,372. That law abolished slavery, you say?—That law abolished slavery, but the mine owners did not deem it right and evaded the law. A strong feeling took place among the men, and they had recourse to secret combinations, and tradition informs us that violent murders were committed. The matter was then taken up by a Mr. Dundas, of Arniston, and the impression made upon him by the men was such that a statute was brought in in 1797, which effectually abolished slavery in Scotland (that statute I can also produce), from that period, as I have already incidentally stated. The employers then began in the smaller collieries to devise those means whereby they should get most of the men's money; truck shops, public houses, and long pays, and very strong agitation ensued and combinations were formed.

15,373. (*Lord Elcho.*) When you say combinations, do you still refer to secret combinations?—Secret combinations. In 1825, in consequence of the violent acts of combinations among the miners in Scotland, as well as in other trades, a committee of the House of Commons sat and examined into the thing, and that brought out clearly the combination among the miners.

15,374. Mr. Hume's committee you mean?—Mr. Hume's committee, so called.

15,375. It was on combination laws?—It was on combination laws, and it brought out the combination among the miners, and that blue book shows what were the grievances they were complaining of,—this truck, and the unjust system of weighing, and so forth. Combinations amongst the men continued, and they impressed their views upon the various members of the House whom they could reach, among others, upon the then Lord Ashley, now the Earl of Shaftesbury. A Commission was appointed to inquire into the matter, and a report was made on the truck system, and the result was that his Lordship brought in a Bill which never would have been brought in or carried but for the unions, because the coalowners met us face to face, and others who were engaged in truck met us face to face in Parliament and contended by every means in their power against it. I now refer to the statute of William IV., chapter 37, in the year 1831.

15,376. You have described the state of things at the close of the last century, that there were strikes, murders, and so forth on the part of the men through secret societies and secret combinations. You now say that Mr. Hume and his committee effected a change in the combination laws. You refer also to Lord Shaftesbury's Act which effected a change in the truck system, and you say that that was effected likewise through the instrumentality of these combinations. But when these combinations effect these changes, they necessarily ceased to be secret combinations, and I want to get from you the date when they ceased to be secret combinations and exercised in a tangible form influence on the Legislature as you say they did?—I think that from the year 1826 or so we have little or nothing of secret combinations, they almost disappeared then.

15,377. When had you the first recognized trades union in Scotland as trades unions now exist?—Open trades unions were recognized and were in active existence, and there are records to show that they were in active existence in 1828 and 1829.

15,378. Take the miners, what is the first record you have of any miners union in Scotland, I mean not

a secret but an open trades union as it now exists?—In 1817 there was a public union.

15,379. Where was that union established?—In Lanarkshire and Ayrshire.

15,380. Was that a miners' union?—Yes.

15,381. Was that established very much on the footing of the present union?—No.

15,382. What was the difference?—It was chiefly at that period for trade alone. There were certain grievances that they had, but they contended with the employers by strike and so on.

15,383. There was no benefit fund attached to that union?—No.

15,384. (*Mr. Mathews.*) Was not that against the existing law at that time?—Yes, hence the secrecy.

15,385. I thought you said that the open unions began in 1817?—Yes, the open unions began in 1817, but the manner in which they conducted the union was not against the law; they met and held converse in public meetings, they did not meet with closed doors.

15,386. But it was a combination, and a combination at that period was against the existing law?—Their acts were tolerated at that period.

15,387. Generally?—That was tolerated in the West of Scotland and as far as my knowledge goes (speaking historically again) it was all over Lanarkshire and Ayrshire.

15,388. (*Mr. Booth.*) Had they at that time presidents, secretaries, and officers such as they have now?—They changed those at every meeting to evade the existence of an actual board of office bearers. They would have got within the meshes of the law if they had not changed them at every meeting.

15,389. They had no permanent officers?—Not at that period.

15,390. (*Mr. Mathews.*) But would they not have been equally within the meshes of the law by combination of any sort before the combination law was revised?—I presume that lawyers had advised them that that was the right thing to do.

15,391. You do not know whether it was right or otherwise?—I do not know whether it was right or otherwise; I have not taken enough notice of the question as yet, but I will.

15,392. (*Chairman.*) I believe it came out in the Parliamentary inquiry in 1834, that there was a secret Committee choosing certain members bound to execute the decrees of the Committee, that was in the weaving and spinning combinations?—I am referring to a period previous to that. In 1835 the combinations of workmen again caused a Committee which made a very lengthened report, which I have read; I also knew one of the gentlemen who appeared before it. Mr. Gemmill, of Glasgow, and a number of others appeared before that Committee and showed clearly the nature of the combination that existed then. The miners were not spoken of then and their combinations were not brought out so clearly as they were in 1825. Then from 1830 the miners, union assumed another shape, complaining of the want of ventilation which I have been referring to now. In 1834 a Committee of the House sat on the representations of the workmen regarding the safety of the miner. It was a combination among the workmen that led to that Committee. It resulted in nothing however. There were certain recommendations and these recommendations led to nothing until later. The workmen continued to represent their views on these matters from 1834 and 1835 and on through 1842, and then another statute was got in 1842 regarding the putting children out of the mines, and putting females out of the mines. I contend again that that was a thing arising solely from the representations of the workmen, because at every point it was met by the determined opposition of the coal owners and mine owners.

15,393. (*Mr. Mathews.*) Do you mean to say that the Act of Parliament that prohibited the employment of women in mines was met by the determined opposition of the coal owners?—Many of them, and unitedly.

15,394. Are you not aware that the bulk of the coalowners in England cordially co-operated in that Act?—I am aware that some of them did, but not the bulk.

15,395. Are you speaking of England or Scotland?—Of both; I am speaking from reports in my possession.

15,396. Can you point any coal owner who objected to the Act being passed?—I deem that invidious; but if that is desired I shall put in a list of them taken from the Commissioners' report.

15,397. Your list will refer to those who employed women?—Not only those who employed women, but those who made opposition to the statute being passed

15,398. The Commissioners' report, I suppose, was published but previous to the Act being passed?—I am aware of that. I have had access, and can have access to the records of the House for the petitions that were made by coalowners. I shall also insert that evidence if desirable, to show how far the opposition went.

15,399. You are speaking now of Lord Ashley's Commission?—I am speaking of Lord Ashley's Commission. From 1842 representations were made again by the combinations both in England and Scotland extensively, by those in Northumberland and in Barnsley, (then the South Yorkshire district was only a rising district), regarding the safety of the workmen, that they were not cared for. Petitions were presented to the House again and again from the unions, the result of which was a Committee of the House of Lords, Lord Wharncliffe being the Chairman. The result of that report, which is here, (and all the other reports which I refer to are in my possession) was that that Committee reported in favour of an Inspection Act, and in 1850 that Act was passed. That Act met with the determined opposition of the coal and iron-masters.

15,400. Do you say that deliberately?—Deliberatey.

15,401. (*Chairman.*) The colour of the object, you see, often depends upon the colour of the glass which you look through. I dare say some masters were opposed to it, and there were among the coalowners perhaps some who desired it to do good to their fellow creatures?—My remarks were not meant to convey for one moment the idea that there were not and are not among the coalowners of England and Scotland men as generous in heart and sympathy as are to be found in the world.

15,402. Some are good and some are bad?—Certainly.

15,403. (*Lord Elcho*). But you wish the Commission to understand that your view of these questions is, that as to some of these measures they were opposed by masters as a body?—*In cumulo.*

15,404. I do not go into the question whether that is or is not the case, but that is your view from experience, of the origin of these measures?—That is so; the working miners of this country were dissatisfied with the Act of 1850. They conceived that it did not give them sufficient safety. In 1851 the union in England and Scotland petitioned again and urged on the Government the necessity of further protection.

15,405. (*Mr. Mathews.*) How long was the Act passed for? was it passed for a limited period?—It was passed for five years. In 1852 another Committee sat, and in 1853 another Committee sat. Workmen were examined from all parts of the country, and strong representations were made, and in 1855 another Bill was brought into the House; and now I can speak with perfect clearness. The Coalowners or the Mineowners Association, at the head of which was Mr. Nicholas Wood, at that period gave to all the views of the workmen their most stern opposition. We asked at that time for education. A Bill was passed in 1855, and we were dissatisfied that there was no educational clause in the measure, and that there was not that amount of safety provided which we deemed sufficient. In 1856, 1857, and 1858, we again peti-

Mr. A. McDonald.

Mr. A. McDonald.

29 April 1868.

tioned, by thousands, the House of Commons. We waited through the Earl of Shaftesbury, and also Lord Kinnaird, and a large number of members of the Lower House upon the late Lord Palmerston, and in 1860 his Lordship's Government brought in a Bill. Again I speak confidently. In 1860, when we were contending for education, it met with the most determined opposition, and probably no man knows better than Mr. Mathews how far that was carried. In 1860 we were still dissatisfied, and we petitioned again, and the result has been that we got a Committee of the House to inquire into the matter. That Committee has reported, and their report was tendered last year, and has gone a good way as far as we believe towards being right. That is the position that the combination has taken up. I have been thus specific, as witnesses have sat in this chair from time to time who have stated, either incidentally or freely, that the miners have taken no interest in anything but in wages. Now, I contend that we have taken interest in other questions, for any change of any moment that has been effected has been effected on the representations of the men. It has not only been the representations of the men, but the help of their friends, and Government in the House of Commons and in the House of Lords; and uniformly in regard to education, in regard to safety, and in regard to other matters, we have met (I speak now confidently) for 15 years with the determined opposition of the coalowners to every improvement which we have had. I mean the opposition of the Mineowners Association of Great Britain.

15,406. (*Lord Elcho.*) Then you wish the Commission to understand with regard to the statement which you have just made of the different measures passed by Parliament with reference to the education, safety, and social improvement of the miners, that those measures are due chiefly to combinations, organized unions, such as those which this Commission has to inquire into?—That is the impression I wish to convey, and I assert that the Mineowners Association has never presented a petition for a single improvement that I am aware of.

15,407. What proof do you adduce of the direct action of these unions, through, I suppose, their representatives, upon members of Parliament, which action has resulted in the measures to which you have referred?—Members have appeared from those unions from 1832 from time to time up till now.

15,408. Where have they appeared?—At the House of Commons, and with those gentlemen in the House, and in the House of Lords, because we have ever been kindly dealt with by a very large number in that House also.

15,409. Do you mean that they have appeared officially in evidence before Committees, or in what form?—They have appeared officially in evidence before Committees. They have appeared there, and gone about the House for months and months together, urging the necessity of those changes. In 1852 and 1853 there were a number of them examined, and there were others whose expenses here were paid by the men in Scotland, and Northumberland, and Lancashire, and Yorkshire, in the separate unions, for the purpose of urging on the Government and the members the necessity of those changes to which I refer.

15,410. Have you any records which you could put in from the books of the different unions to show that persons were despatched from these unions to communicate with members of Parliament on any or on all of those measures, and can you corroborate that by payments made to those persons of their expenses here from the funds of those unions?—I think that I have a better record than union records, namely, Mr. Tremenheere's report, presented in July 1854 to Lord Palmerston, then the Secretary of State for the Home Department. That report contains this passage: "The delegates" (they were here on the question of education at the time) "sought an interview with me again yesterday" (this is in a letter of the 27th May) "after an interval of about three weeks, and "stated to me the following conclusions, which are "so satisfactory that I think myself justified in com- "municating them to you, and through you, if you "should think proper, to the Committee. There were "present Mr. David Swallow and Mr. Allen Tetlow, "delegates from Lancashire and Cheshire; Mr. "Martin Jude and Mr. Edmund Gray, delegates from "Durham and Northumberland; and Mr. Thomas "Philip, delegate from Scotland. They stated to me as "follows: 'After communication with the men in "'our respective districts, we find they are unanimous "'on this point, namely, that they are all willing "'that a certain sum, say not exceeding 2*d.* per "'week, should be stopped out of their wages for "'school purposes, provided that the men are fairly "'represented on the committee which manages the "'particular school to which their contributions are "'applied.'" That report again is referred to a number of times in other reports. These delegates stated not merely the willingness of the men, but the absolute desire of the men for education. And their reason and my reason was this: The abounding ignorance when I was young, and the abounding ignorance when I grew up led me to see that the men were neither useful to themselves, to their employers, nor to society. Those delegates joined with me in that opinion, or rather I joined with them, because they were older than I was. Then again, when there was no education put in in the bill of 1855, we determined to make most strenuous exertions to have it in, and the result was that education, as far as it went, was put in in 1860. But we deemed it insufficient. We felt annoyance at this. Every accident that occurred to a miner's life, and every disturbance was attributed to ignorance. Those that have been acting with me for 15 years have a strong desire to have that ignorance removed, and we are prosecuting the same object now.

15,411. That is the proof which you give of recognized action on the part of officers of the union, delegates or others, upon Parliament in order to effect these changes?—Yes.

15,412. What is the form of proceeding upon any of these questions which the unions wish to agitate in Parliament; the subject is discussed by the union, I suppose?—Yes.

15,413. If it is thought that such changes should be effected a deputation appointed, that deputation goes to Parliament, petitions are drawn up, those petitions are circulated among the class whom the matter interests, those petitions are presented or given perhaps to members from the different localities, and then the union, through the delegates, endeavours to get some member of Parliament, or some peer to take up the question; is that the course?—Yes.

15,414. Then comes the inquiry, and these men perhaps give evidence; is that the course which is taken?—Yes, that is the course.

15,415. (*Chairman.*) In the report you have quoted from Mr. Tremenheere records measures passed by the efforts made by the miners?—Yes.

15,416. I see it contains this passage: "Although "Wales was not represented in the Committees above "referred to, I believe as I stated in my report to the "Secretary of State for 1852, that the proposed "measure" (for compulsory education that is) "would "be carried into effect with the concurrence of nearly "all persons of leading influence as employers of "mining labour in Wales as well as in the above- "named districts of England and Scotland, as well as "in Yorkshire and the Midland counties. I believe "that some reluctance towards it has been expressed "in the small district of Somersetshire." Therefore, "all persons of leading influence as employers of "mining labour" in those places were in favour of that education?—It so happens that in that part Mr. Tremenheere was mistaken. I only last night asked Mr. Clive, who was at that time the Under-Secretary of State, about the matter, and he allowed me to refer the Commission to him. And I need not ask any man better than Mr. Mathews. In 1860 he took a most

active part against the educational clause at the head of the Mineowners' Association.

15,417. (*Mr. Mathews.*) I cannot allow that to go uncontradicted, because I took an active part the other way. I opposed the educational clause in the Mines Inspection Act unless the measure were made general all over England, and then, as I stated to Mr. Adderley, the Mineowners Association would give him every possible assistance. I told Mr. Adderley that the opposition to the education clause would come from his friends the landlords and not the mining interest, and that if he would bring in a Bill for general education the mining interest would give it every possible assistance; he did bring in a Bill, and the House of Commons threw it out on the second reading. That is the history of my opposition?—That proves what I stated; you opposed it on the ground that the miners should not be alone. The petitions are in the records of the House of Commons, and that is not a matter of dispute between Mr. Mathews and me.

15,418. (*Lord Elcho.*) The first time I think I saw you was in consequence of my being told that there was a miner that wanted to see me in the lobby of the House; I came out and saw you, and you introduced yourself to me as chairman of the Miners Union, and asked me to present a petition from the miners of your district with regard to certain changes in the mines to be effected by legislation. Those changes were with reference to weighing, to employing women at the pit's mouth, to education, and to the time of employing boys in the pit, is not that so?—Yes.

15,419. And you told me that Scotland had been divided into districts, and that petitions from the different districts had been presented by the different members, and I was asked as member for East Lothian to present a petition for my district?—That is so.

15,420. The result of that movement was that a member of Parliament, Mr. Ayrton, moved the appointment of a Select Committee which inquired into these very subjects, and that that committee met and reported I think last year, recommending certain changes which had been advocated in these petitions by the miners?—That is so.

15,421. That is what took place in one instance and that the most recent. Is that a correct statement of what occurred?—That is so.

15,422. May we from that recent instance conclude, according to your view and what you wish the Commission to understand, that that or something similar has been the course adopted by the unions in these other legislative changes, and that it is in that way that these unions take an active part in bringing about legislative changes by influencing members of Parliament and getting them to take these questions up?—That is so. My statement is made for the purpose of showing that it was quite incorrect to say that miners' unions had no other object than that of raising wages.

15,423. As far as those legislative changes are concerned, you maintain that in those respects they have been of great advantage, and have been a social, moral, and physical benefit to the persons they represent?—Yes.

15,424. You state that at the same time the masters have resisted these attempts at improvement?—I say so.

15,425. What proof can you give of that?—I can give the proof of the continual attendance in 1859 of Mr. Nicholas Wood and Mr. Day; I can give the proof of the continual attendance in 1860 of a large deputation, including Mr. Pease and Mr. Mathews (who appeared at the head of the association or was a member of the association, I cannot exactly say which, but he appeared at some of those periods), the representative of Earl Dudley, the representative of the Earl of Ellesmere, and the representative of the Mineowners' Union of Scotland; all those men appearing to advocate the view that certain things that were in the Bill should be removed. The Bill of 1860 was a very excellent Bill as we looked at it, drawn out by Sir George Cornewall Lewis. They appeared then in the strength I have referred to, and succeeded in mutilating the Bill to a large extent; and again they appeared in the House of Lords. Mr. Nicholas Wood stood side by side with me in the House of Lords, and I heard him and I heard others talking to members, enforcing their views as against my own views, and the other delegates accompanying me in the same way.

5,426. But the masters may have opposed some of these measures on the principle that Mr. Mathews did, that they thought them class legislation and unfair in particular, without offering any opposition to the principles of the measures themselves, which might be considered as principles which would benefit not merely the mining class and those with whom they were connected?—Very possibly. I do not mean to attribute to them that it was a desire to maintain ignorance. It may have been the class legislation they were opposed to.

15,427. (*Chairman*). The funds were to be taken by compulsion from the workmen, I understand?—That the workmen wanted.

15,428. The workmen at the head of the unions, the intelligent men, would be willing for that?—50,000 workmen, adult miners, within eight days, on one occasion, petitioned to that effect. In any other class in the community I am satisfied that you would not find in the same number men so unanimous.

15,429. (*Lord Elcho.*) I may take the most recent actual change in the law with reference to these matters of workman and master, because I do not think there has been any legislation as yet, has there, upon the report of that Mines Committee?—There has been none on the committee of 1866–67.

15,430. But to take the case of the law of master and servant, that change in the law of master and servant was in the main brought about, was it not, by the same means to which you have referred as having been brought to bear for the other legislative changes?—Our union, the Miners' National Association, were the first (a committee had been formed in Glasgow, but the Miners' National Association were the first as an associated body) to suggest a political course. From a resolution come to by us, it was resolved that a meeting of delegates from all trades who deemed the late Act oppressive should assemble in London, which they did, and an executive committee was appointed, the object of that committee being to get the late Act repealed.

15,431. I thought that the general committee was appointed at Sheffield?—No, it was appointed in London. Having met frequently with Mr. John Morgan Cobbett, then member for Oldham, personally, I solicited him to take the charge of a Bill on behalf of the miners and all the trades who were acting in connexion with us at the time. Mr. Cobbett consented to take charge of a Bill, and then it was deemed prudent by your Lordship and others that a Select Committee should be appointed, and Mr. Cobbett and yourself very kindly on our representations took the matter up, and that was another matter that we succeeded through your Lordship in having made law, that is, the abolishing of the penal portion of the law of contract. That is another instance clearly that the unions are not devoted exclusively to wages strikes and lock-outs.

15,432. Have you ever found on the part of men of either house of the Legislature the slightest objection or difficulty in the way of taking up questions severally affecting the working classes?—I think that there is not a body of 600 men in which more kind-hearted men are to be found, than are to be found in the House of Commons. I never had a difficulty, if I had a representation to make, in finding a man ready and willing in the House of Commons. I have not devoted my attention so much to the House of Lords; but in the House of Lords there are a few whom I can go to at any moment for a public favour, or anything of that kind, and in the House of Commons, at all times, I

Mr. A. McDonald.

29 April 1868.

can find any number of men to take up any grievances we have.

15,433. Then your experience, extending over many years in these respects, is this, that you have not only found no difficulty in obtaining members of either house, at any rate the House of Commons, to take up these questions for the benefit of the working class, but you have found an earnest desire and readiness to do so?—I have.

15,434. And the point you wish this Commission clearly to understand, as regards unions, is that your union generally, the miners' union, has not confined its operation to trade purposes, and to benefit purposes, to questions of strikes and wages; but that they have endeavoured by their actions to bring about an improved state of the law for the benefit of the mining working class, and that they have succeeded in so doing; and I suppose you wish the Commission from your evidence to draw this conclusion, that in these respects, at any rate, legislation has been facilitated and brought about, which otherwise might have been delayed, or possibly might never have occurred. Is that so?—Yes, I am satisfied of this, that even if without combinations of the workmen they might have been passed, yet it was on the representations of the workmen that the laws to destroy truck were passed, that it was on the representations of the workmen that the first Inspection Act was passed, that it was on the representations of the workmen that all the inspection Acts were passed, and that it is owing to the representations of the workmen that education is now a portion of the statutes of this country as far as children working in mines are concerned.

15,435. (*Mr. Mathews.*) I suppose then, from the expression of these opinions on your part, you think that the working classes are well represented in the present House of Commons?—That is not a part of the inquiry, with all deference to you. The people are represented fairly in the meantime, but it appears that the country does not think they are so well represented as they ought to have been.

15,436. But you state that in all cases of representations made on behalf of the men through the instrumentality of unions to members of the House of Commons, more especially to members like Lord Elcho, you have always found every possible desire to assist the working classes in their objects. I want to ask you whether you would not infer from that that the working classes are well represented in the House of Commons?—Some of the measures that have been asked have been very long delayed, and possibly, if there were a larger number of men in the House representing more varied interests than now, measures of that kind which we have been asking for would not have been so long delayed in the getting. But I must decline really at once to be questioned on those matters, I have peculiar views on them of my own.

15,437. (*Lord Elcho.*) Are there many measures for the improvement of the mining population which you still seek?—There are.

15,438. (*Chairman.*) The tendency of your remarks is that there has been a great deal of oppression, and that the efforts to get relief from that oppression have been opposed by the men of property; that is the line of your evidence is it not?—A certain class of the men of property. But the fact that these statutes have been passed proves that the bulk of the men of property are filled with feelings of humanity. The fact that the majority of the house have passed from time to time those statutes which I have referred to, which have in my mind brought very great benefit upon the working population, proves to me that the bulk of the capitalists are right at heart, and have at least the welfare of the working classes, and of the mining class to which I am referring now in view.

15,439. (*Lord Elcho.*) Take the case of the law to which you refer (that having come within my own notice), the law of master and servant; was there and real opposition raised to that change on the part of the master class?—Your Lordship is better able to know that than I am, I think there was opposition.

15,440. But not a really serious opposition was there?—There was opposition, and your Lordship knows best where it came from.

15,441. Was there any opposition to the principal of the change?—I think that there was this opposition, that there were gentlemen produced from the Mine-owners Association and from other associations of capitalists, who, as your lordship is aware as chairman of that Committee, decidedly opposed the change.

15,442. I am speaking of members of the House?—There were members of the House, a number of them, that opposed the change individually, but it proved that the great body of the House were in favour of it, for it passed without a division.

15,443. There was only one division practically in which there was a minority of seven who voted, not against the general principle but against a special part of the Bill?—That is so.

15,444. So that in that change there was a very great concurrence of opinion in favour of the change, in a house composed of all classes, masters, landowners, manufacturers, and others, that is so is it not?—That is so. In measures of humanity I have found very considerable delay, and perhaps it has been the benefit of our institutions, indeed I rather think it has been the benefit of our institutions that delays are made which prevent the passing of laws hastily where opposite interests are concerned. But in the end I have always found that the great bulk of the House of Commons and the fact of these changes proves that the great bulk of the House of Commons and of the House of Lords as well are in favour of everything that tends, as far as they see it, and as far as I see it as well, to the social improvement of the community and the particular class to which I belong.

15,445. You are aware that upon that very question Mr. Mathews himself, the chairman of that miners' association, was, in principle, favourable to the change?—I am aware of that; but I am aware also that members of the Committee belonging to the association were decidedly opposed to the change.

15,446. (*Mr. Mathews.*) Is it not the fact that every member of the association, or every member of the Committee, cordially agreed that the objectionable principle of which the workmen complained should be removed from the Act, and that what difference of opinion there was arose simply from the adjustment of matters of detail?—I am scarcely in a position to answer the question for this reason, that I do not know the members of the Committee.

15,447. You alluded to them?—I do not know them all. I know a number of them. Mr. Liddell is a gentleman that took a most active opposition, and Mr. Jackson, the member for Derbyshire. Those two gentlemen took the most active part they could to have the law stand as it was.

15,448. Are you aware that both Mr. Liddell and Mr. Jackson concurred with me in opinion that the objectionable part of the law should be removed, and that they cordially co-operated with me in that view?—No; I am not aware of the fact; but that Mr. Liddell, as far as I know, continued to stand out by himself. He was rather like Robinson Crusoe in the matter, and I appeal to his Lordship if it is not so.

15,449. Are you aware that Mr. Liddell's standing out by himself, as you call it, simply arose from some matter of detail, and not of very great moment, and that he cordially co-operated in the principle of the Bill, because when you make wide and sweeping changes of this kind I must remind you that I am familiar with these matters?—I am not aware of what Mr. Liddell may have said to you, or to the association; but I am aware, personally, that Mr. Liddell expressed his opinion to me personally against any alteration, because I have talked again and again to Mr. Liddell on the matter.

15,450. (*Lord Elcho.*) My impression is that a decision took place upon this point, whether there should be a power left in the law of issuing a warrant of apprehension in the first instance? That is so, is it not?—Yes; that is so; but there was considerable

negotiation previous to that which I think your Lordship is quite aware of.

15,451. The principle of the Bill being that in no case should a breach of contract be treated as a criminal offence, and that therefore a summons should issue in the first instance in all cases?—That is so.

15,452. In fact, the principle of the bill, you may say, rested upon that point in a great measure, whether a warrant or a summons should issue in the first instance?—Yes, that is so.

15,453. (*Mr. Mathews.*) Was not the great principle of the bill this, that magistrates should not have the power of committing to prison by a criminal process a man charged with the civil offence of a breach of contract?—That is so.

15,454. Are you aware that the Mineowners Association and all the coal and ironmasters cordially co-operated in that principle, and were actively engaged in trying to carry it out?—I am not aware of that.

15,455. I think you should have been aware of it. When you make a sweeping charge against capitalists generally, as well as the Mining Association, that they are inimical to improvements for the benefit of the workmen, I think it right to call to your mind the fact that you know, or ought to know, that the members of the Mining Association, as well as the capitalites generally, cordially co-operated in removing the objectionable form of the law which gave the magistrates the power to commit to prison, and that all the difference of opinion between Mr. Liddell and Lord Elcho was simply as to minor matters of details, not of much importance?—I will not discuss the matter, but I will put the whole Bill in if it is desired (because I have kept a record of it) to show that it was not a matter of detail. This I wish to say, that I cannot allow you to draw the conclusion which you have drawn from the premises you have stated. I have not stated that the capitalists are so inimical to improvements. I stated that the House of Commons being composed of capitalists to a large extent, and men representing property, have passed such laws as the Factory Act, that they have extended the Factory Act to other trades, and have given the Mines Inspection Act and a number of Acts to which I have adverted. That proves to my mind beyond a doubt, and I wish to be understood as saying so, that the great bulk of the capitalists of this country are not inimical to improvements, but favourable to them.

15,456. Do you mean to exclude from that category those capitalists that happen to be engaged in employing the population either in the cotton or other trades?—No, I mean only to express my opinion regarding the combinations that I have seen actively at work. There are plenty of capitalists that have no part nor lot in those combinations, and consequently to involve them in the category would be very far wrong.

15,457. (*Chairman.*) Are you aware of the history of the course of legislation from 1832 to 1868, as affecting society in general and the working classes especially, given in Mr. Ludlow's book on the "Progress of the Working Classes?"—I have not read the book.

15,458. He has collected a series of statutes, the Post Office Savings Banks Act for instance, and a variety of other examples of beneficent legislation since 1832. There is a collection of the statutes of benefit to society, the working classes having their statutes beneficial to them, and the rest of society their statutes beneficial to them; and a great deal of that has been from the spontaneous efforts of men of enlightened beneficence in Parliament. You are aware that it has not all originated from the action of those who represent trades unions; they have co-operated with the rest of society. Would you let me look at it from that point of view?—Yes, I am quite aware of those social changes that you represent.

15,459. Each class of society according to the view of some has the means of being heard, and whenever there is a grievance there are men of enlightened beneficence ready to attend to it and remove it, and each class gets heard upon the matter which it understands best, and the working men get relief from their grievances in the same way?—I am quite aware of that, and further, individually I speak my mind on this question when I say that I believe no body of men in the world but our House of Commons, such as it was and is, have in the same period passed so many beneficent laws.

15,460. And each class is benefited according as it has suffered under a grievance which has been either palliated or removed?—I have known and taken part with the bleachers who came up here and represented their particular grievance, the children being kept on stoves and degrading hours. I have taken part with them and I have taken part in other matters suggested in connexion with that, and I only repeat, that I think no body of men in the world could have passed so many beneficent laws as what the House of Commons has done within the last 30 years.

15,461. I suppose we may say that we have advanced the interests of the working men? There are at the head of the unions men of great experience and strong sense and great determination, and they have done great service in bringing about useful measures. I suppose that that is a description which, as far as it goes, you and I should agree in. All that we differ in is whether the working men have been the sole authors of these beneficent measures?—You misapprehend me I do not say that they have been the sole authors. But for those kind friends in the House we could have done nothing. The bleachers came there, the friends of factory children came there, and they found a ready and willing ear; the miners came there, and they found a ready and willing ear. They may have been delayed; and in regard to those legislative measures where more than one is concerned it is probably better that they should not be hurried. But in those 30 years, I again repeat, I think that no body of men in the world have passed so many beneficent laws. I trust that I have entirely removed any impression from the mind of the Commission that I am come here to speak against the great body of legislators.

15,462. (*Mr. Mathews.*) You spoke of the bleachers. Was there much opposition from the master bleachers to this alteration of the law?—There was from some, but I am happy to say I knew a number of bleachers in the house who gave it their most cordial co-operation, Mr. Crum-Ewing and the late Mr. Crook. I know that of the class of bleachers a number of them were most anxious that those improved laws should pass.

15,463. I only want to know whether the bleachers co-operated with you, and those whom you accompanied on your representation, in endeavouring to ameliorate the law?—They have done so.

15,464. May we infer that it is your opinion that every other class in the House of Commons would be equally desirous with the master bleachers to ameliorate any law injuriously affecting those in their employ?—Well, I have not found that readiness in the Mineowners Association.

15,465. Then you make an exception on the part of the Miners' Association to the general desire on the part of the manufacturers in the House of Commons to do anything that benefits their workpeople?—I do; that is my distinct experience.

15,466. I suppose we may infer from that that the coal and iron masters are a distinct class, standing out, in respect of their want of consideration for their workpeople, from all the other classes of capitalists?—That question leads me to impute motives, and I wish to be distinctly kept clear of imputing motives. They may not view those social measures as we do, and they may be perfectly conscientious and believe they are right in opposing them, but do not take me to impute a motive where I do not wish to impute one.

15,467. But if they differ from you in opinion you will give them credit for doing what, according to their light, is the best thing for the men?—Clearly.

15,468. And the only difference is that you think one mode of going to work the best and they another?—It may be so.

Mr. A. McDonald.

29 April 1868.

15,469. Does not that take them out of the category of being a class that stand alone as compared with all other classes of capitalists in their want of consideration for the working classes?—It takes them out of the category of intention, but it places them in the category of act. Thus I find, as I have said, in the case of the bleachers, Mr. Crum-Ewing taking an active part in favour of the bleachers' petition; I find Mr. Crook in favour of the bleachers' petition, and I find Mr. Dalgleish (who was also interested in the matter) in favor of the bleachers' petition; but I have not found a single member as far as I know of the Mine-owners' Association who ever came to our side to advocate one of these changes. So that while I say, "Do not ask me to impute a motive," I say that I have found a readiness in other classes to assist by doing everything they could, but that in the mine-owners' case there is a difference.

15,470. Does not that amount only to a difference in the *modus operandi*; you may think your mode better than theirs, and they may think their mode better than yours?—I cannot think that, for this particular reason, had they made a single movement in any direction for public statutes, then I could conceive that it was a difference in the *modus operandi*, but when they took no movement or made no effort for the change in the direction in which we were asking it, and which the enlightened House of Commons found we were right in, but threw every obstacle in the way, then I am bound to conclude that their acts are at variance with those of the other classes I have referred to.

15,471. You will not say, I apprehend, that they took no trouble in the matter. I think you admitted in the former part of your evidence that they took a great deal of trouble in the matter, though the trouble was taken in opposition to your views?—Yes.

15,472. May not that arise simply from their thinking that your views were wrong and their views right?—We never had a view from the Mineowners Association at all until either the Government or the House began to act, and then their views came into existence. It was the action of the combinations upon the members of the House and the consequent action of the Government that brought out any views that they had.

15,473. I suppose they could not act at all until they saw by a Bill, or something else, what the views propounded were?—Of course they could not, but they might have done as Mr. Crum-Ewing, who negociated, and entered into the Bleacher's Bill question, and took part in it. If it had been desired by the mineowners that the hours of children should be reduced from 16 or 17 hours, as they are in some of the coal mines, we should have found that they were bringing in some Bill, but that is not the case.

15,474. (*Mr. Booth.*) Is it not ordinarily the case that amendments in the law are brought about by persons feeling the inconvenieee of the existing law?—That is so.

15,475. And is not that the case here?—That is so.

15,476. They would naturally not originate with the masters in that case?—It has been reported to the House again and again that those are evils, and instead of their co-operating as the bleachers did, we found that when the Government brought in a Bill, a portion of the Mine-owner's Association opposed it.

15,477. They did not agree in thinking the measure had been introduced in its best form?—They did not agree in thinking that it had beeen introduced in its best form but they did not bring in another Bill to put it in a worse form or in a better form, they did not put it in any form at all; all they contented themselves with the last 15 years was fighting the form that was brought in, no matter what that was.

15,478. (*Lord Elcho.*) You were going on, I think, to state other measures that you have in view which these combinations have to effect; what are they?—For one thing, more protection from danger in the mines. At the present time, and it has been so for the last 15 years and more, we have had more than 1,000 men destroyed in the mines annually. We ask more protection. We believe that if more stringent laws were passed, and there were more responsibility on the part of the owners, it would have the effect of checking that.

15,479. That would be an instance of the working of these combinations in these matters. A Committee has sat upon that very subject and has reported. That Committee, as has been stated by you, was to a certain extent brought about by the action of the union men upon members?—Exclusively so.

15,480. Since that Committee reported has there been any action on the part of the Legislature or Government, or the representatives of these unions, with a view to amending the law in accordance with the report of the Committee?—Since the Committee reported we have been representing the matter again and again, and colleagues of mine who are now here have been frequently representing it this session.

15,481. (*Chairman.*) According to my experience, the workman who ought to use safety fuses in blasting, and the safety lamp, often acts contrary to the law and the regulations, preferring to run the risk, and that is how accidents have often occurred?—I am perfectly aware of the recklessness of working miners, and I am perfectly aware of the vast amount of ignorance that exists among them. My anxiety, and that of the association of which I am at the head, and our earnest endeavour has been for 15 years to have education spread that these men may have more knowledge, that every child should be educated to read and write, and to know the laws of the bodies by which he is surrounded before ever he enters the mine. These are our views, and then at the present moment, when men are so reckless, we contend that were even the statutory laws that now exist carried out by the coal-owners and mine-owners of this country, there could not be one explosion for every hundred that occur. The statutory law is perfectly clear. It says, that the mine shall be diluted and rendered harmless of gases under ordinary circumstances, not only in the working places but in the travelling places. If that condition was adopted and the law carried out, an explosion in a coal mine would be utterly impossible, as impossible as it is here in this room.

15,482. What is it that you desire?—We want more efficient inspection; the law is a dead letter. Until the law is altered (or rather carried out, you cannot alter that law, it is perfect), that will be a chronic cause of strikes. The moment that a dispute enters, all the recollection of the destruction of life goes into the dispute and continues it, and it is a chronic cause of strikes, and the earnest desire of myself and the friends who have co-operated with me in Yorkshire, in Lancashire, in Northumberland, and all over the country, has been for 15 years to get, among other causes, that chronic cause of strikes removed. And we believe, I at least believe, that of those strikes which are so frequent there would not happen one for every 20, if that were removed.

15,483. If you get the people to co-operate with the law, then no law is a dead letter; but if they will not, it must be so, must it not?—To what people do you refer, may I ask?

15,484. If you say that there ought to be ventilation in the mine, does it not rest with the miners themselves to give information of any want of it?—I want the present law carried out.

15,485. (*Mr. Mathews.*) Is it not optional with the miners to go into the pit?—Certainly, but it is also optional with them to starve if they do not go into the mines.

15,486. (*Chairman.*) You think that some interference is needed, so that that statute should be made effective?—If that statute had been effective we could not have have had the Lundhill accident. If the gas had been diluted and rendered harmless we could not have had the Oaks accident. If the gas had been diluted and rendered harmless we could not have had the Talk o'the Hill, the Risca, or the Cymouner

accident. In those collieries altogether more than 5,000 lives have been sacrificed, and if the statutory law that has been in existence since 1850 had been carried out, it was utterly impossible for them to occur, no recklessness of the workmen could have effected it.

15,487. (*Lord Elcho.*) I gather from you and others that the way in which you think that the statute law for the protection of life passed in 1850 could be made operative, it being now inoperative, is by increased inspection, that is to say, by appointing a greater number of pit inspectors and sub-inspectors?—Yes.

15,488. I have further heard that you do not wish or anticipate that these sub-inspectors should in any way interfere with the working of the mine at all; am I right in thinking that?—Yes.

15,489. But that they should at all times have full power and right of entry, and that if they saw anything at all suspicious in the ventilation, they should report that to the inspector who takes action himself, or reports to the Secretary of State; that is what you propose is it not?—That is our view, and I will only say this further in the matter of inspection with regard to ventilation that it does appear hard to us, a class, that every now and then for the interest of individual coal-owners or through their neglect several hundreds should be hurried into eternity, and their wives and families left destitute.

15,490. Is there any other point that you look to in Legislature to be obtained from the action of your union upon the Legislature?—Within my own knowledge for 25 years (and I find it in the records in the various blue books that I have already adverted to) we have complained bitterly, and to tell the number of strikes that have occurred through this cause which I am about to advert to, I believe would be utterly impossible. I allude to the want of a uniform system of weighing in Lancashire; and I would just state that I firmly believe that but for the heart-burning it has caused, and but for the continual source of annoyance and grievance it has been in that county to my personal knowledge for the last 10 years, very possibly this unfortunate strike would not have occurred that is now going on. But the state of the matter is this, that it is a chronic source of evil is in that county that the men's coals are condemned. It has been so in Scotland also.

15,491. (*Mr. Mathews.*) Are you speaking of Yorkshire now?—I am speaking of Lancashire at the present moment. The men's coals are condemned, when they come up at night they find a large quantity of their coal away for some whim of the employer. What we have been asking for (and we got a portion of what we asked in the statute of 1860, which was bitterly opposed), is a clause in the statute that there should be weights, and that it should be done, by weighing or measuring; that is the law but that is evaded, and at the present moment there is as the result a rankling feeling in nearly every mining district in the United Kingdom. And I tell the gentlemen around this table that nothing will prevent outbreaks, and nothing can prevent outbreaks while this chronic evil is existing, and what we want is that the Legislature shall make it a law, common to us as to other people, that when we are selling our commodity it shall be weighed atrly by the standardhi weights of the country, and tna the inspector of weights shall visit us as he does afy other portion of the community.

15,492. (*Lord Elcho.*) That is the recommendation of the Committee of the House of Commons is it not?—That is the recommendation of the Committee now.

15,493. (*Mr. Mathews.*) Is it not provided for already?—I drew out the clause in 1860, but it was mutilated. It permits the men to put on a justice-man, but the employer has the power of turning him off. And, therefore, the expedient adopted is this, to turn off the man the next day, and they keep turning the man off. And then they can weigh or measure under that statute, and of course those that do not want to measure have no standard, there are no standards ordered, and no inspection of weights. What we contend is that we sell our commodity, and in selling our commodity we are entitled to have the result of our labour fairly weighed in the same way as when the employer sells to his customer.

15,494. (*Chairman.*) I understand that that is so by the statute?—It is not so; clause 29 says, that "where the persons employed in any coal mine, "colliery, or ironstone mine are paid by the weight, "measure, or gauge of the coal, ironstone, or other "material gotten by them, such coal, ironstone, or "other material shall be truly weighed, measured, or "gauged accordingly." Well we have applied again and again, I have applied in every county of Scotland for inspectors of weights, but we have no power, there is no standard by which they are truly weighed. It has been interpreted again and again in the courts that "truly weighed" means according to the contract, and they may exact 45 cwt. for a ton, or 100 cwt. for a ton, or anything else they like. That is the reading of the courts, and unfortunately that is very largely the practice of some of the employers. They are not all alike.

15,495 (*Earl of Lichfield.*) What was the clause that you drew yourself?—I have not it here, but I will put it in.

15,496. Was it in the original bill?—It was a clause brought in by Mr. Ayrton, it is in the records of the house.

15,497. Would the clause that you proposed at that time be satisfactory to you now?—Yes, the same clause would be satisfactory now.

15,498. (*Mr. Mathews.*) Is it not competent to the workmen at these places where you say that they are not fairly dealt with to refuse to work with these masters?—Yes, and that is a strike.

15,499. So that if they decline to exercise the discretion that they are invested with you must not blame the masters for that?—No, but it is not competent for a grocer to have illegal weights, or for a tailor or clothier to have illegal measures. The grocer cannot ask a contract with illegal weights, nor the tailor with illegal measures.

15,500. (*Lord Elcho.*) That argument of the man leaving the employment because the clause is imperfect would apply equally if there were no clause at all would it not?—Yes.

15,501. You contend that for some cause or other the law is a dead letter in that respect?—Yes.

15,502. What is the next point in which you desire improvement?—Another cause of complaint among the miners is the truck system. In Scotland it is most obnoxious, in Wales it is also very obnoxious, and in Staffordshire it is obnoxious.

15,503. (*Chairman.*) Does our law as to truck extend to Scotland?—Yes, the law extends to Scotland, but the practices are obnoxious, and there are a number of things practised in addition to selling goods which are very obnoxious to the men, and in which the law evaded by the masters. I will refer to one which is a chronic matter of complaint. A colliery owner appoints a medical adviser; he makes the men pay for that medical adviser; and they have either to go to that man or to employ another. The men do not object to a law to require them to pay for a medical adviser, but they do object to the mode of appointment of that man who is perhaps the most sacred that enters a family in his character and his position.

15,504. Is he appointed by the votes of all the subscribers?—He is not. He is appointed very often for political purposes and other purposes, and the result is that there is distrust felt. I never found among the miners in Scotland or in England—and my friends here I believe will say the same—that there was any disposition to object to that the law requiring them to have a medical adviser, for they look upon it as a benefit; but they do think that they should have the power of appointing him.

15,505. The real grievance that you complain of there, is, that the employer, or somebody for him, appoints the medical adviser, and you think that all

Mr. A. McDonald.

29 April 1868.

the persons who contribute ought to vote?—Certainly. I contend—and not only I, but the men that I represent, contend—that if in a contract the mine owner has a right to make it a condition with the men that he shall appoint their medical adviser, the men on the other hand have just an equal right to say, We will not work till we appoint your medical adviser.

15,506. (*Lord Elcho.*) There is nothing to prevent their doing that now, is there?—There is nothing to prevent their doing it; but I think that if they were to take such a step there is not a man in the country but would call out with the loudest voice that it was impertinence, insolence, and actual outrage upon the liberty of the subject.

15,507. Do you mean that you want the Legislature to say in a matter of contract on such question as that who should be the medical adviser, that the master can only appoint a man one who is recommended by the men?—We say so. We think that no man should have the power of advising the medical adviser to our families.

15,508. The object of the master I suppose in appointing the doctor at all is to cure the men. He is desirous to get the best man he can; and probably he is able to get more information as to who is the fittest man than is open to the men themselves?—It is possibly so; but perhaps you would be surprised were I to tell you that it is a fact within my knowledge that there is traffic made in the medical men.

15,509. Do you mean by that that the medical man pays so much to the employer?—That the employer draws so much from the men, and pays the medical man so much less.

15,510. Can you put in any proof of that?—I have it from the authority of medical gentlemen themselves.

15,511. (*Mr. Mathews.*) Do your observations apply generally, or do you mean to confine them to particular collieries that have come under your observation?—My observations apply generally to Scotland and to England, where medical men are appointed by the employers, and they charge the men. As a matter of course, where a medical man (as happens in some cases in Northumberland and Durham) is appointed, but no charge is made, then the workman is at perfect liberty to call him in or not. But when a charge is made the case is different. Take for instance the Irish population, which forms a very large portion of the mining population of Scotland; they have very strong predilections for their own medical adviser.

15,512. (*Lord Elcho.*) Taking the 30 years since you have had experience of the mines of Scotland, what do you suppose was the proportion of Irish at the beginning of that time to what it is now?—It is 100 per cent. more I should think now.

15,513. Should you be surprised to hear that in a small town in the east of Scotland, of 4,000 inhabitants, where 30 years ago there was one Irish family, there are now 700 Irish people?—Not at all. I was saying that they have very strong views in favour of their own medical adviser, and the result is that among them that matter is a continual source of annoyance and grievance, and until it is removed I have no hesitation in saying that though it is one of those things that may be quite a trifle, yet it is a trifle so large that it will irritate their minds and keep them in a continual state of annoyance.

15,514. (*Earl of Lichfield.*) What legislation do you propose?—That the men should appoint their own medical adviser.

15,515. (*Lord Elcho.*) We have had the points of weighing and doctors. Is there anything else that you think needs legislative action?—Yes, there is poundage.

15,516. What is that?—That is a particular fault connected with Scotland (I am not aware that it extends to England); that is to say, they give men advances every day, and for which they charge a shilling a pound; and by giving a man an advance once a week, that is 250 per cent. that they charge for their money.

15,517. They charge a shilling per pound for paying wages to their men sooner than they otherwise would be paid. Is that what you mean?—They pay every fortnight. Supposing that I go this Saturday and lift 10*s.* from the employers, I pay for that 10*s.*, 6*d.*, or if it is a pound, 1*s.*

15,518. (*Mr. Mathews.*) Are you aware whether there is any Scotch law against a man going before the next magistrate and obtaining the whole of the money due to him without any reduction at all?—I am aware of the very opposite. I have been interested in cases where it was tried, and because it was a contract he could not recover.

15,519. (*Earl of Lichfield.*) I do not understand under what circumstance the advance is made. Is it by borrowing the money from the master?—No, not borrowing the money, but getting the money that the man has earned.

15,520. Supposing the usual time for payment is once a fortnight, he goes once a week, you mean?—Once a week.

15,521. And then he must accept the payment upon the master's terms?—Just so, and that is a bitter cause of complaint among the miners. My own impression is that these advances tend to improvidence and gross immorality, and that these advances should if possible be stopped by legislative enactment, on the ground of the practice tending to immorality and the destruction of the proper social habits of the people.

15,522. (*Mr. Mathews.*) Do you think that it is possible for any legislation to step in between the master and man and legislate on all these points. Are they not rather matters for determination between the masters and workmen themselves. If the masters are not satisfied they can discharge the workmen and employ others, and the workmen if they are not satisfied can leave the masters. Is it not a matter of social regulation rather than of legislative enactment, and how would you propose to meet it?—I was not speaking of the matter as at all affecting me. The miners have proposed that the payments should be made weekly, and have prayed in tens of thousands that they should, and in paying weekly we believe that no such system of advances will be possible. As far as I know, and as far as I am acquainted with them, all industrious intelligent miners look upon these advanced payments as a great evil, and if they were paid regularly it would get rid of this evil.

15,523. Do you represent to the Commission that it is a common practice in Scotland that if a man contracts to be paid at the end of a week he is charged with poundage?—I represented that in a large number of cases where there has been truck this is practised.

15,524. That does not apply to England?—No, it does not apply to England.

15,525. The Scotch practice and the English practice vary in that respect therefor?—Yes.

15,526. Is that a practice of large collieries and ironworks in Scotland?—With one exception the large ones have all truck shops, and one firm have 11 truck shops.

15,527. Are you aware that there have been four Acts of Parliament passed for the suppression of truck, and that the Legislature has gone as far as it can do to suppress it directly or indirectly?—I am aware that there have been four Acts of Parliament passed in reference to truck, but not that the Legislature has gone as far as it can go.

15,528. Was not there a committee since the passing of the last truck Act, and is it not the case that they declined to bring in a bill because they could not go further than the Legislature had already gone?—Yes. And I am aware, further, that the committee of last session recommended that a more stringent law should be passed.

15,529. Can you point out what it should be?—Yes. I submitted to Mr. Ayrton a copy of a bill which I can put in here, and which Mr. Ayrton took time to consider, but when the Committee was granted it was deferred till the report should be made, and now that Committee have reported favourably to the men's claim, and I am happy to say that that report

in respect to that point was cordially concurred in by a large portion of the mine-owners who were on that Committee.

15,530. What is the principle that they would distinctly recommend for the further suppression of truck?—They have not recommended a principle, but that further steps should be taken in reference to Scotland to make a more stringent Act.

15,531. But the law of England on this matter applies equally to Scotland, does it not?—Yes.

15,532. (*Chairman.*) What would you propose?—That in the case of any man having a truck shop directly or indirectly it should be held as a felony.

15,533. (*Mr. Mathews.*) Are not those the words of the Act of Parliament now, bating the felony, that they shall not directly or indirectly have a truck shop?—No, it says that they shall not directly or indirectly compel men to go there.

15,534. Is it not a fact that all the men are paid in money in Scotland?—There are instances where they are not paid in money, but where they are paid by loans.

15,535. If they are not paid in money, can they not go before the next magistrate and claim their wages?—Certainly they can.

15,536. What other steps can you devise in law, in order to prevent people paying in truck, when you say that the men can go before the next magistrate?—I have stated that I should make the law that it should be a felony for an employer either directly or indirectly to hold a truck shop, and I look upon the truck shop not only as being a serious evil to the workmen, but also to the mine-owners, who wish to deal justly with their workmen and honestly with the public.

15,537. (*Mr. Booth.*) Is there any other amendment of the law relating to the truck system that you recommend?—That is one, and all the other matters detail from that.

15,538. That is, then, the principle of the amendments?—That is the principle. I contend, and those that sympathize with me contend, that it is a direct injury to the owner as well as to the workman. Take for instance the case that I have given you, where there are 11 truck shops. That employer can produce his labour cheaper and out sell the men that have no truck shop.

15,539. (*Earl of Lichfield.*) Do you mean that those 11 truck shops all belong to the employer?—I do.

15,540. (*Mr. Mathews.*) Does the employer pay in truck then?—No, he pays in money, but the arrangement is such that all the money has to be spent there.

15,541. (*Lord Elcho.*) How is that done?—The pay is in money; you are paid monthly, and you get advances every day. It engenders a habit of improvidence, and the result is that a large number of the men go to the pay office in this way and receive the money. If they go away with the money there is a book which passes between the pay clerk and the storekeeper, and if the storekeeper's book does not tally with the money advanced to a certain party to-night, then if you go back to-morrow you do not get any money. And then in a large number of instances there are day warnings; if the storekeeper communicates with the overman, and the man is cautioned that he has taken away money, if he takes it away again he knows the consequence; and the result is, it being a daily or hourly warning, or no notice but that of the moment, the man is fettered.

15,542. (*Earl of Lichfield.*) That is what you call carrying on the practice of truck indirectly?—Indirectly.

15,543. Does not the present law meet the case of carrying on that practice indirectly?—No. I think that you will find them admitting, indeed stating before the Committee, many thousand pounds directly made out of the truck shops where they have 11 of them. And they have 11 public houses—there may be one or two less now, but that was so a short time ago; and singularly the spiritual interests are well attended to, because there is a missionary appointed to every public house in this work.

15,544. Surely the present law meets the case of carrying on the practice that you describe, does it not?—No, we have tried it; we have come to the House of Lords in the matter.

15,545. (*Lord Elcho.*) Have you anything else to suggest for legislative enactment?—No. Those are the principal points on that question.

15,546. You have stated the social objects, and the legislation which in your opinion have been brought about by the union, and you have told us that you have nothing else to propose beyond legislation as to inspection, truck, weighing, doctors, and poundage?—Those are the principal points.

15,547. Do you wish to bring any others before us?—No, I do not wish to bring any others before the Commission.

15,548. Unions have other objects; they have benefit purposes, have they not, and trade purposes?—Yes, in England they have all benefit purposes; in Scotland they have not benefit purposes, but exclusively trade purposes.

15,549. We have not got to that yet; you have never yet explained to us the constitution of your union; how many mining unions are there in Scotland?—There is a large number of mining unions in Scotland; each district governs its own affairs.

15,550. Is each district entirely separate from the other districts in the government of its affairs?—In its internal affairs each district has no connexion with the others.

15,551. That is locally?—That is so also in England.

15,552. What is the connexion which you represent here with these other local associations?—The Miners' National Association, that I represent here, is composed of distinct branches, each possessing a purely local government. Its objects are set forth in this paper in my hand. There has been a slight amendment of the rules, of which I have neglected to bring a copy with me, but wich I will put in.

15,553. When did this association originate?—In 1863.

15,554. There was no general union till then?—No general union; all those measures which arose from the action of the unions arose from communication without a general union. The various local associations when there was any matter affecting the law or anything of that kind, petitioned and sent deputies here.

15,555. You being then what you call a miner's agent?—Yes.

15,556. Were you appointed as their agent by all these separate unions in England and Scotland, or as the agent of any particular union?—I was appointed by the National Association.

15,557. But you were an agent before there was a National Association?—Yes, then I was agent for Scotland alone.

15,558. Appointed by the different unions in Scotland?—Yes.

15,559. And paid by them?—Yes, and paid by them.

15,560. Were there any other general officers and paid agents besides yourself?—None.

15,561. How were you appointed at that time?—By the vote of all the members over the entire district.

15,562. The votes were added up and resulted in your appointment?—Yes; I entered upon this and devoted myself entirely to this, at first I was requested to take the post. I have omitted to state that after I left college I became a teacher for some years, and during that time I was requested by the miners to take a part with them, and from that I became their acting agent in all these matters to which I have referred.

15,563. When you were the agent, how were you paid, by a rate levied upon the union?—Yes, by a rate levied upon the union.

15,564. In 1863 you became president of the Miners' Association, you say?—Yes.

15,565. How was that association brought about?

Mr. A. McDonald.

29 April 1868.

—It was as I have explained, by those delegates meeting.

15,566. Was it your own proposal that there should be a central association?—No, it was not my own proposal.

15,567. Who proposed it?—Communication took place between a number of districts; and it was the result of an intercommunication between a large number of districts in Wales, in Lancashire, in Yorkshire, and all over Staffordshire, and elsewhere.

15,568. And where was the meeting held?—At Leeds.

15,569. And there representatives appeared from the different districts?—Yes.

15,570. Do you know how many unions sent representatives there?—There is a book before you containing the history of the thing.

15,571. Does that general union embrace all the unions in Great Britain?—No, there are unions which do not amalgamate with that union; we believe so, but I am not quite sure.

15,572. Were you at that first meeting appointed president?—I was.

15,573. Were there other officers appointed then?—There were.

15,574. A secretary?—A secretary and a treasurer.

15,575. Those are salaried officers?—The secretary and the treasurer are.

15,576. Have you any objection to state what your salary is at present?—I have no salary expressly.

15,577. Have you any payment?—When I am at work such as this I have 11*s.* a day; that is what I ask. It is only when in London when I have that; when in the provinces I receive 8*s.* 3*d.* a day for my work.

15,578. And travelling expenses?—And travelling expenses.

15,579. Then what do you consider "work like this?" do you mean that you are only paid when before committees, or when you come to London, at that rate of 11*s.*?—Only then.

15,580. If you go down from where you reside to any local district for any purpose what are you paid then?—I am paid then at the rate of 8*s.* 3*d.* a day if I charge it, but sometimes I go, and do not charge it.

15,581. Then I presume that you have other means of living besides this 11*s.* when you are on business such as this?—Yes, I should rather think so, when I leave a couple of horses at home and a man to attend them, and sundry things of that kind. It is not 11*s.* a day that would cover that.

15,582. What other business have you?—I am not engaged in any business actually. I am now and then engaged in a business in which I have accumulated a little money, and I have chosen to devote myself to this matter from having felt the wrongs that the class which I have sprung from are, as I believe, enduring. I may state this, so far as Scotland is concerned, just in a word, during the last seven years I have kept a particular record of all the monies that I have received for travelling expenses and everything else from the miners of Scotland, and I find that during that time I have received from them 994*l.*, and I find that in travelling, postage, and so on, I had expended 1,232*l.* 0*s.* 0*d.* leaving me less than I received for all my labour 238*l.* 9*s.* 0*d.* I have attended during that time 1,600 meetings, advocating reduction of the hours of labour for the children, and the various other matters that I have now brought under your notice. I have written over 17,000 letters, and travelled over 230,000 miles. It has been asserted that I am one of those interested men who fatten on the miner's poverty and misery, and I assert that I have given to you a correct statement of every sixpence that I have received. It is simply because I believe that the work is a necessity that I have undertaken it. Seven years ago they proposed to give me 365*l.* a year. The proposition was very well intended. It so happened that I had to pay the Government income tax on the belief of 100*l.* of it, but I have never received the 100*l.* I state that I have expended out of my own pocket 238*l.* more than I have received for travelling expenses alone. All my labour has been for nothing; but I have been more than amply rewarded in the change made in the condition of those people whom I am interested in.

15,583. What is the number of the members in your general union at the present moment?—About 35,000.

15,584. And what are the national association objects?—First, "Legislation for the better manage- "ment of mines to protect the miner's lives, promote "their health, and to increase among them a higher "moral status in society. Second, to obtain com- "pensation for accidents where the employers are "liable. Third, to assist all districts and members "when unjustly dealt with by their employers in "point of law or legal rights." There has been a slight modification in those rules, and I will put that in; but I am giving now the general scope. "Fifth, "to make the hours of labour not more than eight in "the 24 for all miners in the United Kingdom. "Sixth, to assist all its members when permanently "injured in the mines, by which they are rendered "unable to follow any kind of employment. Seventh, "a weekly allowance permanently to aged and infirm "members" (I believe that has been removed); and "Eighth, to establish a national agency to carry out "the principles of the association." That has been removed also.

15,585. How are the funds raised?—By a penny per member per month.

15,586. That is to say, a penny from all members of this association?—From all members of this association.

15,587. Are all who are members of this association members of local associations, or are there any persons members of your association but not belonging to a local association?—Very few. I do not remember any at the moment. In regard to strikes, I had better explain in reference to this paper from which I have been reading that this association has nothing to do with strikes. There was a rule that if the members agreed to a levy to support a lock-out, after the opinion had been given, the executive would have power to ask that levy, but that, I think, has been removed also.

15,588. Then has there been any levy on the part of the association for strikes or lock-outs?—There were levies for lock-outs.

15,589. You say that that has been given up; has the rule been rescinded, or has there been no occasion for a levy?—The rule has been rescinded.

15,590. Though you say that that rule has been rescinded, I suppose that you do, as president of the association, take an interest in these questions of strike, and that where a local association is on strike, or a strike is likely to take place, you are in communication with that association on these matters?—The local association can communicate with the branch associations of which the national association is composed, and they can make levies to aid and support them as they like.

15,591. But is not your association referred to in questions of strike before the strike by the local associations?—No.

15,592. Have you yourself, as president, never been called to take any action one way or the other in a question of strike by a local association, or have you, as president, never volunteered to take action in these questions of local strikes?—In the year 1864 there was a very large number of members, very large branches, in Staffordshire. When they proposed to strike then, one of their delegates was with me in London here at the time. I advised him to return to Staffordshire at once, telling them that my opinion was that it was madness to strike at the moment.

15,593. On what was that opinion formed? When you say "madness," what do you mean? Do you mean that they had no justification for a strike, or that, if they strike, from the circumstances of the

trade, or what you knew of the masters, there was no chance of success?—I felt confident that there was no chance of success.

15,594. On what ground?—On the ground that there was at the time an accumulation, an over production in the Staffordshire districts, which made it to the advantage of some of the employers that the strike should have taken place, and I considered it madness on the part of the men to strike at that moment, and I had very serious doubts, though I have no data, whether the strike was not promoted by some of the owners.

15,595. (*Mr. Booth.*) What was the strike for?—Against a reduction of wages. As I say, I have no data, but I have very serious doubts whether the strike was not promoted by some of the owners in Staffordshire, that is not a matter to startle, it is a fact. I refer you to the inquiry into the combination laws in 1835. I could mention to you many instances, but I only refer you to that. You will find it there stated that strikes have been promoted by employers.

15,596. (*Earl of Lichfield.*) How was it brought about in the case of the Staffordshire strike of 1864?—The employers had accumulated stock.

15,597. The strike was for a reduction of wages?—Yes. If an employer has accumulated a large quantity of material, whether iron or coal, it is abundantly proved from the Report of 1835, that these employers have promoted strikes among the workmen, because if that material was raised at a cheap rate the price was enhanced to that extent and it paid the owner a comfortable sum for letting the work stand and promoting a strike.

15,598. You say "promoting a strike," I want to know how the master set about promoting this strike. As I understand, he offers reduced wages. Do you call that "promoting a strike?"—No, I do not call that promoting a strike; but he may pay for a man or men to inflame the minds of the men to resist the reduction.

15,599. (*Lord Elcho.*) Can you say that that was done?—I know this, that in 1864, on the occasion that I refer to, I gave my advice strenuously against the miners taking that course, as I looked upon it as madness. I do not say that it was done by the masters; but it looked to me extremely like it. That men had been guided with a full market and such material in hand to strike seems impossible.

15,600. Do you believe that in their strikes the men always consider the state of the market and consider whether the state of the market will justify their raising their terms, or whether the prices and the state of the market will justify them in resisting a fall?—No, I do not believe it is the case, and it is unfortunately the want of that true knowledge among the workmen that leads in many instances to those strikes.

15,601. You admit that, from your knowledge of workmen in strikes, as a rule that is not attended to?—I admit that it is frequently so; but I have known a great many more strikes successful than unsuccessful. I can remember the strike of 1837, that strike was manifestly wrong.

15,602. (*Mr. Booth.*) What was that strike for?—It was against a reduction of wages.

15,603. (*Lord Elcho.*) Was that a general strike?—It was a general strike in Scotland. The trade at that time was an opening trade. The result of the opening of iron trade was that a great many flew into the trade, a great many hands came upon the trade, and an over production took place. The over production led the employers rightly to demand a reduction of wages. The men resisted and they were unsuccessful. The same thing occurred in 1842. There was again a strike and it was against over production. The same thing occurred in 1856. We had a very large strike in 1856, and the men again were wrong. There was a very great expansion took place in trade from 1850 to 1856. The consequence was that a large number entered into the coal trade and a large number more took place in the iron trade. The prices remained buoyant until purchasers discovered that there was stock accumulating. The moment that took place as in every other thing purchasers refused to buy. The workmen thought that everything was right and they consequently went out and were defeated. These are the great strikes I remember in which it was a strike against over production.

15,604. All those three great strikes were cases in which the strike was unsuccessful?—Unsuccessful, and they were bound to be unsuccessful from the very nature of the circumstances. In reference to that I have to say that I am firmly convinced that even had those strikes not occurred, there would have been the same amount of want of work extended over a greater period, because in these periods there was over production, and the over production was bound to be removed either by a strike, or by the men getting only two or three days work in the week. And it is the want of the thorough knowledge of those laws among the men that leads to these collisions. I may be wrong in giving an opinion, it may be thought that I am again speaking wrong of the class, but I have a very strong conviction and believe firmly that if employers would take another course than the course that they have been in the habit of pursuing in these matters, strikes would be got rid of to a very great extent altogether.

15,605. What is the course which you think they ought to take?—I will state it.

15,606. (*Chairman.*) If all men were wise and good we should get on very amicably you think perhaps?—That is possible. But I will state what would have a tendency to soften strikes to a large extent. If employers instead of putting up a notice to this effect, "You shall receive a reduction on a certain date," would call a portion of their intelligent men to their office and point out that a change in the state of trade renders it necessary for them to make a reduction, and let the men think over it for a day or two and communicate with the rest of the men, I am satisfied that if that course were pursued in 99 cases out of 100 all those terrific things would be got over.

15,607. (*Lord Elcho.*) You advocate then something like what is called conciliation meetings of masters and men to talk over these subjects?—Yes.

15,608. (*Mr. Mathews.*) When you speak of a meeting between workmen and their employers, do you mean that the employers should have the intervention of the union delegates?—No, I am not speaking of the intervention of the union delegates at all, I am speaking of their own workmen.

15,609. Are you aware that there is any disinclination on the part of masters to have an interview with their own workmen?—I am aware of this, that it is not followed. If the course which I have indicated were followed, I believe it would have a tendency to get rid of the evil.

15,610. I am speaking of the masters, and I mean to state to you that the general course that the masters adopt is to try to get an interview with their men, that the intervention of the union prevents their having it, and they decline to have an interview with the union officers, and that thereupon the union officers advise the men to strike?—Then as a party who has for a long time taken a great part in connexion with the matter in Scotland at least, I assert without fear of contradiction, that union men or union delegates never attempt to interfere between employers and their workmen.

15,611. You confine your observation now to Scottand, and not to England?—That is what I state. There have been cases where a dispute has taken place.

15,612. (*Chairman.*) You have had nothing to do with strikes, I understand you?—Although I never had strike money, or things of that kind, and keep no accounts, I know what were the causes of the strikes, and I know everything about them, and that is the course that I think ought to be adopted.

15,613. Perhaps you have some idea, as some others have, that the workmen would like to see the books of the masters?—No.

Mr. A. McDonald.

29 April 1868.

15,614. If the masters would meet and make a declaration of the state of affairs, and appeal to the reason of the workmen, the workmen would agree, you think?—A very remarkable instance of that has occurred at the present time, in so far as the South Yorkshire district is concerned. The employers have come to the men and asked them for a 5 per cent. reduction. They stated that it is necessary; no notice has been given whatever, and there is a drop or a warning for a drop, and as I understand the men have on representation in that way accepted the drop without a word, and are going on voluntarily on the employers terms with a reduction.

15,615. (*Mr. Mathews.*) Let me take you into Lancashire. It is perfectly notorious that the price of coal is reduced in Lancashire 2*s.* a ton. That is known to all the world, and must be known to all the colliers, being as perfectly a matter of notoriety as that the sun shines. With that fact before them, what makes them resist the reduction of 15 per cent.?—When you say that it is well known to all the world and to the colliers, I have heard the colliers state that it was not known to them, and had the course that I have stated been adopted, it would have become known to them. The price of coal locally has as I understand suffered no such reduction. The collier does not carry his mind to London, and he does not carry his mind to Liverpool, but he inquiries merely in the local district around him, and when he finds that there is no material change in the price, then he comes to the conclusion that this is a trick and only a device for the purpose of getting him reduced.

15,616. But when all the world knows perfectly well that a reduction has taken place, and it is a matter of perfect notoriety, surely the collier cannot be ignorant of what all the world knows. Any person who reads the public papers can satisfy himself of it as well as the masters can. And with that fact before him, what makes the colliers resist the reduction of wages, and what makes him guilty of riots when the fact of the reduction of coals is before him?—It so happens that all the world does not know. In this very matter I found in the Daily News a few days ago a correspondent stating that it was fearful that there should be these riots and disputes, looking at them from his point of view in a public spirit, because there had been no change in the price of coal. Now if all the world had known it, a gentleman would not have come forward in a London newspaper and stated that there was no change. I found in America when I was there a short time ago a very excellent principle adopted and it is this. The employer causes his workmen to appoint three men who shall meet with him. At any moment that he wishes a change he shall send for these men and at any moment when the workmen wish a change these men shall wait upon him always after the hours of labour, or such other time as they may arrange mutually on any dispute occurring.

15,617. (*Lord Elcho.*) On questions of wages?—On all matters.

15,618. Including wages?—Including wages. The result is this, that these three men are not, as in too many instances, turned off for being meddlesome or troublesome. They are respected, treated by the employer as representing his workmen, and when he has a change to tender, he says, "I give you a week or "five days, or three days, or a fortnight," or whatever the exigencies of the case may require, and by that time the men are canvassed fully over, and either they come to agree or they come to reject. But I have been told by large employers that in 99 cases out of the 100 they are able to agree.

15,619. And you believe that good would come by such a system being introduced into this country?—I feel convinced of this, that if the men were raised to that standard of being instructed of the necessity of a change instead of being ordered to submit to a change without any instruction whatever, those disputes would not occur to the extent that they do.

15,620. (*Earl of Lichfield.*) Had you anything to do with the Wigan strike?—I had this to do with the Wigan strike: previous to the time that the strike took place I was here, and I talked over the matter with Mr. Pickard, that a strike in the circumstance was wrong. I was invited to go down. I went down and there were delegates present from all their lodges. I found that every man connected with that association had come by universal suffrage to vote for a strike. At that meeting I stated what my views of the country were, that the state of the trade in Wales, (I happen to take a little interest in these matters,) the state of the trade in Staffordshire, and the state of the trade in Scotland was such that the result, if they struck, would be inevitably that it would lead to disaster; that it would lead to the importation of men from other districts; that it would lead to a collision; and that it would lead to the importation of coal into the district, as all the circumstances were adverse; so that they should avoid a strike if possible.

15,621. In short you advised the men against the strike?—The men had come to declare a strike on that day. I asked the men to return to their lodges (and I was supported by Mr. Pickard), and they came back with a proposition to accept, with a provision, a drop of 10 per cent. instead of 15 per cent.

15,622. What advice did you give them?—To accept the reduction of 10 per cent., and again to go to their employers to ask them to receive that, to take only that.

15,623. Then you advised them not to accept the reduction of 15 per cent.?—Let me explain. I further advised them, in the event of the employers refusing to take anything less than 15 per cent. to ask the employers to submit the 5 per cent. to arbitration between any two men; and in the meantime they were to go on and work as if there was no dispute in existence.

15,624. At what rate?—To go on and work as if there were no dispute in existence, and if the employers would come to it, allow the 5 per cent. to be a matter of arbitration.

15,625. Then the masters had first to agree to allow them to go in at the 10 per cent. reduction?—Yes, the masters to allow them to agree to go in at the 10 per cent. reduction.

15,626. According to your advice it would have been necessary for the masters to allow the men to go in at the 10 although they had said 15 per cent.?—And a very large number of the masters agreed to that; 24 agreed to it.

15,627. (*Lord Elcho.*) Out of how many?—30 or 40 altogether.

15,628. (*Earl of Lichfield.*) Did the men go in in the case of those 24 employers?—Yes.

15,629. (*Lord Elcho.*) And was the five per cent. submitted to arbitration by those employers?—No; it never was asked.

15,630. Then have those men worked ever since?—Yes, since then.

15,631. Then the outbreak has not been in those pits?—No; but where the men played off.

15,632. You said that you recommended 10 per cent. when the masters proposed 15; why did you object to the reduction of 15 per cent.?—I thought it very strong. The men had only been advanced at the rate of 10 per cent. from time to time, and I thought it very strong to reduce them 15 per cent., and I believe this confidently, that if the masters had come and asked 10 per cent., or 5 per cent. from time to time, in three different sums, or two different sums, the men would never have hesitated at that, and I took that course of advising the men in order that the men might be appeased to prevent, if possible, their coming out. I believed that if they went on to work at the 10 per cent., submitting the five per cent. to arbitration, the men would resume work, and there would be no strike at all.

15,633. From your knowledge of the state of trade, irrespective of whether rises had been by 10 per cent. or reductions had been by 10 per cent. previously, did you consider that a fall of 15 per cent. in wages was

not justified by the state of trade at that time?—I did consider that it was not justified.

15,634. Do you think so still?—I think so still as far as my information goes.

15,635. (*Mr. Mathews.*) If the fact is admitted that a reduction of 2*s.* a ton has occurred in the Wigan district, do you think that 15 per cent. reduction in wages is too much?—The 2*s.* a ton has not been made manifest to me, and unless there are other lists of prices than those which I know and have the opportunity of seeing, I do not believe it.

15,636. Then you would not believe Mr. Hewlett's evidence yesterday, that there is a reduction of 2*s.* a ton in the price?—I am not going to say whether I believe Mr. Hewlett or not. I see the trade price manifest every day published, and I take a particular interest in it, and I have learnt privately, as far as I can, and I have not learnt that it has gone to the extent of 2*s.* a ton.

15,637. It may happen that Mr. Hewlett cannot get the trade price?—It may.

15,638. He is a very good authority as to what he can sell his coals at, and, stating as he does, that the price of coal is reduced 2*s.* a ton, do you think the 15 per cent. is too much reduction in wages?—Not if coals are reduced 2*s.* a ton.

15,639. I think you stated that trade is very bad in South Staffordshire, and that probably there will be a reduction of wages there? Do you know Mr. Kane?—I have known him, and met him some years ago.

15,640. You do not act with him?—I have seen him and acted with him on some matters.

15,641. If I were to say to you that Mr. Kane has been through South Staffordshire in the face of a falling market in iron, and advised the men to strike, do you think that a discreet course?—I am not a judge of Mr. Kane's acts, but I will tell you what I have done myself in Scotland. There was a proposal of a reduction in the commencement of this year. When I returned home I found the men all on notice for reduction. The notice had expired. At a very large public meeting I advised the men to accept the reduction. Since that again another fall has taken place. Wages have fallen in Scotland from 5*s.* to 3*s.* They are even not getting employment at 3*s.* or 3*s.* 6*d.* a day. I have advised the men to accept 2*s.* reduction. Mr. Kane may have motives for his conduct, which I do not know.

15,642. You would not endorse Mr. Kane's policy such as I have described it to you?—No; not as you have described it. I think it was sheer madness at the present moment on the part of the ironmaster's men to strike.

15,643. And they are out on strike in South Staffordshire under the advice of Mr. Kane?—I do not know how that is.

15,644. (*Lord Elcho.*) When you went to the Wigan district offering this advice, that the men should accept 10 per cent. reduction, submitting five per cent. beyond that to arbitration, what did you find that the local leaders had done? Had they given similar advice or anything approaching it?—Similar advice; and the local leaders in that matter have had no more power than the gentlemen sitting round this table.

15,645. (*Mr. Mathews.*) The men did not choose to listen to the advice of their local leaders?—That is so.

15,646. (*Lord Elcho.*) The result has been, has it not, an attempt to introduce foreign labour, that is labour from another country. What you said was likely to take place has taken place, and in consequence of violence and intimidation those men have had to leave?—It is so stated to me.

15,647. Have you any knowledge of that?—Only by report; I have not been there.

15,648. Seeing that, have you as president of the association taken any steps to go there to see the local leaders, and to try and prevent this intimidation and outrage?—I have communicated with Mr. Pickard two or three times a week on the matter constantly.

15,649. Do you as president of this general association approve of the course that has been taken by the Wigan miners?—Certainly not.

15,650. You do not approve of this intimidation?—Certainly not.

15,651. That you think ought to be suppressed by a strong hand if necessary?—Certainly I do not approve of it. I think that we ought to enjoy the most perfect freedom in making our compacts and bargains possible in regard to labour; that we have no right to interfere.

15,652. That every man should be left free to join the union or not join the union, or to work on what terms he chooses?—Yes.

15,653. Do you think that the law as it at present stands does give sufficient protection to free labour?—Quite sufficient, I think. I think as the law is carried out it is perfectly strong enough.

15,654. You think that the law is strong enough, but you would like to have seen the law firmly administered in this case in the interests of freedom?—I may state in regard to this matter that I believe that if a certain course had not been followed which has been followed those disgraceful scenes might not have taken place. Up to 1856, and in the year 1856, in Scotland, from as far back as I remember, the moment ever a dispute took place between the employers and the workmen (in 1837, in 1844, and in 1847 it was so), if it was only a single colliery, at once the high sheriff of our county, or the sheriff principal of our county, Sir Archibald Alison, was applied to and a body of policemen and troops were brought into the district. These paraded the district, and the effect of their presence was that of irritating the workmen, and very often collisions took place. In the year 1856, when the dispute was over (I only regret much that Sir Archibald Alison is now gone or he would have corroborated what I am about to state to you), I seeing the effect that the presence of troops had had upon the workmen wrote to Sir Archibald Alison.

15,655. What was the state of things when those troops were brought in?—The men resisted a reduction of wages.

15,656. What form did the resistance take?—They came out.

15,657. Was there any violence?—None.

15,658. There had been no violence offered?—No violence offered; that was the policy pursued. The moment that ever there was a strike or the notices terminated and there was a probability of a strike, troops were called into the locality. I wrote to Sir Archibald Alison and had an interview with him, and I stated my belief that the presence of these troops had been the cause in those disputes of irritating the men, and that I should be the very first person to give intimation that the thing should not be repeated if there was a necessity for their presence.

15,659. But I presume that when the magistrates themselves sent for the troops, they had some knowledge which you did not possess, which led them to believe that they were needed?—I apprehend that the coalmasters, whenever a strike occurred, went to him and asked him to send troops, and he was in the habit of sending them. From that day there have been a large number of disputes, strikes, and lock-outs, but from that hour to this there has not been an extra policeman or a soldier called out, and from that hour to this there has not been any outrage committed on life or property.

15,660. But that does not apply to Wigan in any way, for there there was outrage, there the police force is deficient, and it was not in consequence of the presence of that police force that these outrages took place. The police were put there, were they not, to protect men from these outrages?—The feeling that I have, and from what I have seen of working miners, is this, the moment ever that these men are brought the miners are of opinion that they are brought in the interests of the employers, and that the moment they are brought there they are brought there to intimidate; they are looked upon as so many men to

Mr. A. McDonald.

29 April 1868.

intimidate and awe, and therefore they at once get into a state of irritation that would never arise were they not there. And I state as a fact that we have had in Ayrshire and in Lanarkshire innumerable disputes in the last 10 years, and we have never had a soldier called out; and I ask respectfully, if you choose to inquire into the criminal records, if a single man has been brought up or a single employer has sustained a pennyworth of injury.

15,661. (*Mr. Booth.*) Do you mean to suggest that in the case of the Wigan strike, if the police had not been called out the Staffordshire men would have been allowed to go into the mines peaceably?—I fully believe that they would.

15,662. (*Lord Elcho.*) You yourself set your face against intimidation, and you think that labour ought to be protected in every way?—I am convinced that Mr. Pickard could have kept the peace if these men had not been there.

15,663. (*Earl of Lichfield.*) Do you know as a matter of fact that there was no outrage or violence of any kind committed before the police were called out?—I have been informed so, that no outrages had been committed; but I only wish to state most distinctly that which I have already stated, that in Scotland for these long number of years a policeman has not been called out, we have had strikes innumerable and there is not on the records of Scotland a single case of outrage.

15,664. (*Lord Elcho.*) You have visited Mr. Briggs's works, I believe?—Yes.

15,665. Did you go into the question of co-operation?—I did.

15,666. And what is your opinion of the system of co-operation as adopted in Mr. Briggs's works?—My opinion is, that it is a very excellent system, and that if it were adopted in whole or in part it would lead to a change of the relation between employers and employed, and lead to the disappearance of these heart burnings or whatever you may call them, in regard to price, altogether.

15,667. You have found, then, that the evidence given in favour of that system by those who appeared here was corroborated by inquiry on the spot?—I found they were corroborated by inquiry on the spot, and I found that a great many of the objections which the workmen made were frivolous, and were the result of distrust engendered by former disputes, and that there was no real cause for any workman remaining out of that co-operation and not taking a part and becoming a shareholder in it, and were I a workman to-day I would be a shareholder in it if I were in that locality, and I doubt if I do not become a shareholder in spite of not being a workman.

15,668. Are you aware whether the principle is extended to any collieries in Scotland?—I am not aware, but I have been conversing with numbers of owners on the matter in Scotland.

15,669. Since your visit to this work of Mr. Briggs's?—Not only since my visit there, but I have long entertained the opinion that co-operation is the true solution to all the disputes, and I have been favourably disposed to it for a number of years, and before and since that I have talked over the matter, and I think that there is a growing disposition for it, and I have no doubt that before many years go round we will find a large number of the works carried on on that principle. I should like to see them all carried on on that principle.

15,670. I do not wish to enter into the question with you whether it is or is not likely to succeed, but your impression is that it is a sound principle, and you are prepared to recommend it for adoption generally in mines?—In consequence of the communications made by Mr. Briggs before this Commission, Messrs. Normansell and myself laid the matter before our council meeting, and they deputed Mr. Normansell and myself to visit the Whitwood collieries to examine into the system and learn from the men their objections, and from the employers their advantages, and learn as far as we could the true nature of the case. We have prepared a report which we are going to lay before the members of the association after our next council meeting, and if it is desired I shall be most happy to furnish a copy of that report to the Commission. I am the more anxious to mention this as it has been stated that the National Association was adverse to the principle.

15,671. The council deputed you to visit this colliery which you and Mr. Normansell had been invited to do by Mr. Briggs?—Yes. I want to say one word as to conciliation. I am strongly in favour of the plan of boards being adopted for such a purpose.

15,672. Do you mean boards established by law?—Yes, and recognized.

15,673. (*Mr. Mathews.*) Is there not a Bill already passed for that purpose, Lord St. Leonards' Bill?—Yes, permissive.

15,674. (*Lord Elcho.*) Do you propose to make it compulsory?—It is a matter where mutual interests are so much involved that it is not a matter for hasty legislation, but I think that if the plan I have referred to was adopted it would lead ultimately to courts of conciliation and arbitration.

15,675. You have been to America you say. Can you give us any information as to the existence or action of trades unions there?—Yes, I found trades unions in America in almost every trade and occupation. They are not very powerful, because trades unions in America are for a large extent only of one class, that is for labour purposes only.

15,676. (*Earl of Lichfield.*) And is not the one which you represent for labour purposes only?—No, the Scotch unions are, but I am the president of the Miners' National Association, having the objects I have explained. The fact that the unions in America are not very powerful arises from this circumstances, that there is not a necessity for them.

15,677. (*Lord Elcho.*) That arises from what?—Wages being good and the condition of the labourer being also good.

15,678. (*Mr. Mathews.*) Does that prevent strikes?—It does not.

15,679. It does not prevent combinations?—No, combinations are recognized by the laws of the State, and I have an authorized copy of a statute in the State of New York, which I shall be glad to put in, authorizing a union which can sue, and be sued, and act in a corporate form of any other body.

15,680. (*Lord Elcho.*) Are the objects of that union the same as of trades unions here?—Yes, this is a benefit as well as a trades union society that I allude to.

15,681. (*Mr. Mathews.*) Does the American law forbid combinations to prevent people from free labour?—It does; the law is almost similar to that in this country.

15,682. Is there picketing there in case of a strike?—I did not hear of any picketing.

15,683. You do not know whether picketing would be illegal under the America law?—I presume that in America if the question were ever to come up it would be held to be illegal as in this country. I find that the words and the terms of their statutes, being nearly the same as ours, they follow the decisions, and have reference to the decisions that are given in English courts, as we are in the habit, in several cases at least, of referring to American judgments.

15,684. (*Lord Elcho.*) Have there been frequent strikes in America of late years?—Yes, very frequent.

15,685. Have they been strikes arising mostly out of grievances such as you have remedied in this country, as to ventilation and so on, or strikes on wages?—Entirely on wages as far as I know.

15,686. How have they generally resulted?—As far as I learn, in a number of instances, just as here, where they have struck against a falling market they have mistaken the course. On the other hand, where they have struck with a rising market they have been uniformly successful.

15,687. They have not been able in America any

more than here to interfere with the natural laws that govern the trade?—They can interfere with the natural laws which govern trade production and demand much more rapidly than here, and they interfere with it in such a way as very soon cures the evil they complain of. It is in this way hundreds of the workmen in America, indeed thousands of them, go out west, and pre-empt 120 acres of land. They build a cabin upon it, and then in some cases they return and work. If the wages given by the employer are sufficient, and they deem that they are better off working for him, they work. If on the other hand they find that they would be as well off living on their lands, they betake themselves to their lots, and the result is that in a very short time they make the inevitable law quite efficacious by lessening the quantity of the material.

15,688. Then the possession of this land makes them to a certain extent independent of their masters, and therefore they can exact terms which otherwise they would not be able to do?—To a large extent.

15,689. As to this lot they buy what do they pay for it?—A dollar an acre, and 75 cents an acre, and so on.

15,690. How do they cultivate it; do they reclaim it at all whilst working in the mine?—If they go to the state of Illinois, of Nebraska, of Michigan, or any of those immense plains and prairies, you only have to scratch the soil with a thorn bush and throw in a few grains of wheat or corn and it grows up.

15,691. Do their families reside on the land also?—Yes, I found thousands of young men who had left Scotland some years ago the owners of 40 or 100 acres acres of land, having a house of their own land of their own, and on some of those lands coal and everything got for a dollar an acre. In the Shenango valley, particularly, in Pennsylvania, the whole valley is occupied by the miners, and if they do not get the wages they think fit they betake themselves to the land. Hence they can command a fair price in the market. Almost every tradesman in the United States has an eye to the land as the last resort, and they betake themselves to it whenever there is a grievance or anything of that kind.

15,692. And they look eventually to settling on the land?—Yes, as a rule the American people look to the land as their home, and as I have told you large numbers of them go out, come back, and work at the puddling works; they go in the mines, and they have of their own. I found a very pleasant thing in Lower Illinois in particular, large numbers of mines being worked by co-operation. They hold the lands, and they have companies formed, and each man shares alike according to his proportion, and they go on amicably and make a very good thing of it.

15,693. Are they entirely the working men?—Coal miners.

15,694. No master as in Mr. Briggs's case?—No master.

15,695. Have any of those works been in operation any length of time?—Four, five, and six years.

15,696. And so far have succeeded?—So far have succeeded.

15,697. In the neighbourhood of the works themselves are these men lodged in cottages belonging to the owners of the works?—In several of the large works throughout the whole state of Pennsylvania and also in the State of Ohio they build cottages for the workmen, but the large majority of the miners and of all the workmen occupy their own houses. The first feeling of the emigrant is to be his own proprietor, as a rule.

15,698. Is there any land attached to their houses near the works?—Yes, always a bit of land.

15,699. A bit of garden?—I was very much pleased to find another thing. I will mention the name of Mr. Hewitt who gave evidence here. I found that he leaves in a number of his works large spaces and allows his workmen to use them. It was so different from the rules that we have in Scotland, where a man is not allowed to keep a pig or a fowl. There they are encouraged to have poultry, and cows, and cattle, and so on, and there is an open space for them to go out and live on for nothing.

15,700. There are the means, but in the densely peopled manufacturing districts of England, in Staffordshire for instance, would such a system be possible?—No.

15,701. It is physically impossible there, and you cannot reason from the analogy of America?—The mormal state of things here is against it.

15,702. Have the strikes that have taken place in America been accompanied by violence and outrage?—I learnt that a number of the strikes which have taken place in America have been accompanied by violence and outrage, but (and that is one point which I wished to state) I learnt that these were not the result of unions at all, they are national in their character and not the result of unions.

15,703. What do you mean by national?—I do not wish to state it invidiously, but large tracts are occupied by a certain nationality, and great crimes have been committed. Mr. Hewitt having stated here that it was in virtue of the unions that they were committed, I took very great care to inquire into the matter, and I have here a letter from a gentleman who went as a miner, and is being now one of the largest viewers, or mining engineers as they call them, in Pennsylvania, and he details those murders.

15,704. Does this refer to the outrages mentioned here by Mr. Hewitt?—Yes; this is a letter giving the detail of the circumstances under which they were committed, and also the names of the persons, and he states distinctly that it is the result of no combination, but a national organization of one nation and one people alone.

15,705. And what people is that, is it the American people?—I will only say this, as far as I know, I did out find an American miner.

15,706. Do you mean that all miners in America are immigrants?—Immigrants.

15,707. (*Mr. Booth.*) All these miners are from one country, is that so?—Where the outrages were committed there was the preponderance of a nationality.

15,708. (*Lord Elcho.*) And the nationality that was murdered was not the same as the nationality that murdered, I suppose? What nationality was it that was murdered?—Well, there were Scotch and English murdered. This letter contains the details of all the murders, and they are the most brutal deeds that have ever been committed.

15,709. You say that the union had nothing to do with that?—That gentleman of 30 years' experience states so.

15,710. Looking to the condition of the mining class there and in this country, do you think that the condition of the miners there is very much preferable to that of the miners here?—Yes; from the state of the country, that is, the advantages that are offered him of easy access to land and the easy access to mines.

15,711. By "easy access to land," do you mean the legal facilities that are offered in America for the purchase of land, or the existence of boundless tracts unoccupied by man?—The existence of boundless tracts unoccupied by man, that the condition of the workmen of every class is better than in this country.

15,712. And you attribute their better condition to that cause?—I attribute it to that cause. There are certain other conditions which I think are adverse, but I am not going to enter into those. I think, without saying anything of the Government of the country whatever, that politically we are a happier people.

15,713. That is the conclusion you have come to after travelling how many miles in the United States in the last year?—22,000 to 25,000 miles.

15,714. Do you think that America is likely to be, in the products of mines, a formidable competitor with this country?—I believe firmly that within 20 years British iron will not be carried across the Atlantic. I have seen the deposits of iron of such a nature, and deposits of coal of such a nature that I cannot conceive for one moment that they can be for more than 10 or 15 years dependent upon England; and it is the only competitor with England, as far as I know, in the world that we will require to fear.

Mr. A. McDonald.

29 April 1868.

15,715. (*Mr. Mathews.*) With the fact we have before us in evidence, that the wages of ironworkers in America are three times what they are in England, do you think that this opinion of yours is founded on sound reasoning?—I think so. The great cause of the high price of iron is not so much the labour. That is the mistake that has arisen in the public mind. When we speak of the labour we mean either the men engaged in manufacturing the iron or in getting it. The great cost of American produce is in its transportation. I will give you an instance. I have visited one work among many at Pitsburg belonging to Schœnberger, Blair, & Co., which is a furnace making malleable iron, and a large nailwork in addition. They were bringing one class of iron from Lake Superior, which is 1,156 miles. They were bringing iron also from Lake Superior, 1,180 miles. They were bringing iron from the iron mountains of Missouri, 1,260 miles. The nearest spot they were getting the iron from was New Jersey, and that was 370 miles ; and from the Marmora mine in Canada. You will see that the transportation there was the great matter; but in Pennsylvania they have now discovered immense deposits of black band lying immediately in connexion with the Mammoth vein.

15,716. If in the cost of iron something like eight-tenths is for labour, and labour costs three times as much in America as here, is it possible for them to compete with us?—I have a conviction that the Americans will not long have recourse to the same system of working as we have.

15,717. If they pay three times the amount for labour that we do what then?—They will not continue to pay three times the amount for labour, because when an increase of the population takes place they will not continue to pay those heavy prices.

15,718. (*Chairman.*) It is a long time before they will be peopled as thick as Bethnal Green, I suppose, and in the meantime wages will be high?—The wages are very sensibly diminishing ; they are not more than half what they were three years ago.

15,719. (*Mr. Mathews.*) Just three months ago the puddlers struck for 1*l.* 7*s.* 6*d.* per ton for making pig iron, and our puddlers have 8*s.* 6*d.*?—But there have been reductions since that period.

15,720. Allowing for a material reduction in the rate of wages of American labour, still the cost of producing iron, seeing to how large an extent labour enters into this cost, must be much greater there than it is in this country?—If I compare two crops, 10 years ago they were paying two dollars a barrel for flour, and they are paying now 14 dollars a barrel for flour. In two years the crops will be sufficient to reduce the price of food enormously, and there will be a corresponding reduction in the price of labour.

15,721. How can you expect a corresponding reduction in the price of labour in America, seeing that they have an unlimited extent of land to fall back upon, where they can get what they want for labour?—From the increase of the labourers they will not continue to betake themselves to the soil.

15,722. Why should they not, the same law will go on ; if they cannot get a certain amount of wages they will go on the land?—That is very true, but still I have a strong belief—I may be wrong—that the result will be a large diminution in the wages, and it will be to that extent that it will prevent competition from England. I am sorry for it, but I believe it.

15,723. If that is so, it will stop the emigration from Ireland to that country to a considerable extent, will it not?—No, I think not. The feeling is at the present moment to leave as quick as they can. They are going from our part at the present time at the rate of 300 to 600 a week.

15,724. (*Lord Elcho.*) From Scotland?—Yes.

15,725. Is it the case that in America you found that machinery was much more employed in the manufacturing than it is in this country?—Yes, much more.

15,726. For instance is it the case that, in Scotland nails are still made by hand?—It is so in all Scotland.

15,727. Is there such a thing as a nail in America made by hand?—Not that I am aware of.

15,728. (*Mr. Mathews.*) Is there no such thing as a cut nail manufactory in Scotland?—Not that I am aware of.

15,729. (*Lord Elcho.*) Is it true that iron has been exported from this country into America, manufactured there into locks, and brought back again to this country?—Yes, I have visited a lock factory at Buffalo, where the iron came from Lowmoor, and I saw a large order for London through. They are sending them back here after being manufactured over there ; the iron is carried out and back again.

15,730. Have there been any strikes or difficulties in the lock trade here?—I believe there have been.

15,731. (*Mr. Mathews.*) Were those locks made by machinery?—Made by machinery. It is quite astonishing to see it. From my observation there seemed to be two things that every American means to go at, the first is, that he shall take out a patent, and the second is that he will run for the president. Every native American seems to be imbued with those feelings. The patents were going into the Patent Office at Washington when I was there at the rate of 370 and 380 a week.

15,732. (*Mr. Mathews.*) Are you aware what the value of those patents is?—No, it would take any man a thousand years to examine them.

15,733. (*Lord Elcho.*) As to skill and physical strength, do you believe that the American workman is superior or inferior to the British?—I do not think that there is a man in the world superior to the British workman, and particularly not the American. I think, as far I saw, that the climate there has a tendency to develope more the intellectal qualities of the man and less the physical qualities. Hence they all take to some ingenious plan or another of devising a way of existence instead of following heavy work. All the heavy employment of the country is at the present moment being done by the emigrant, the foreigner, not by the people. The third or fourth generation attempt to get rid of work.

15,734. Have you any other point to mention?—Yes, there is one point. I have been astonished at seeing the statements made from time to time regarding the driving out of trade from this country to Belgium?—I have taken some care in looking up the returns, and I find the case to be thus : that if the trade has been driven out of the country, it is not the miner who is driving the trade out of the country, who is the raw producer of the material. I find that in 1865, the export of coal to Belgium was 17,809 tons ; in 1866, 61,486 tons ; but in 1867, while we have been hearing the cry that the miners are driving the trade from the country to Belgium, it rises to 169,089 tons. I cannot see how it is that we drive the trade from the country, when they are importing a larger quantity into that very country, Belgium. Then again in iron, Belgium imported from Britain in 1865, 23,422 tons ; in 1866, 28,451 tons ; and in 1867, 50,722 tons. I cannot see how we are driving the trade from the country, when we have increased the export trade in these two years and made it double to that country.

15,735. (*Mr. Mathews*). May not the case stand thus : If the quantity of iron goes from this country at a cheaper rate of labour, cannot they supply the customer with the manufactured work from Belgium instead of sending it from this country?—That is possible.

15,736. And is it not the fact that they are now taking Russian contracts for rails?—I do not think it is the fact. They may have one contract, but I find that as far as the trade in rails is concerned, in 1865, the export trade of this country was 434,300 tons. I find that in 1866 it was 498,021 tons ; and I find that in 1867 it was 582,420 tons, that is more than over 100,000 tons over the export in 1865. Consequently, in these times, in which we have had a cry of diminishing trade, we have really had an increasing trade.

15,737. But may not that be coincident with a large falling off in the home consumption?—Possibly so ; but the point I am calling attention to is that we are not being driven out of the trade.

15,738. Look at the fact from another point of view. If girders usually made in this country for building purposes are brought by contract from Belgium, and put up in a national establishment in this country cheaper than they could be bought here, would not that be a proof that in Belgium they were working cheaper than we could?—It would not be a proof that the coal and iron miners were working cheaper when they are coming to Britain for coal and pigs to make it into malleable iron.

15,739. But they make the malleable iron in Belgium, and they make the girders there to supersede the English workman, and an English contractor puts them up in the Kensington Museum?—I am aware of the fact; but I want to point out this, that it is not the wage that is given to the miner, the producer of the raw material, that has had any effect whatever, because from these facts which I have given, it would appear that there is an increase in the sales to this very country, Belgium. Now, it is a notorious fact that I have learnt in London, as far as the coal miner is concerned, that the man who carries any coal here into a private establishment, into any gentleman's house, has as much for carrying in the coal as the collier has per ton for working it.

15,740. That shows, I suppose, that wages are much higher in London than they are in the neighbourhood of coal mines?—It does.

15,741. Everything is dearer here, I suppose, than there?—Yes.

15,742. (*Lord Elcho.*) Do you want to say anything about the bearing of the union on the poor rates?—I think that the poor rates are becoming enormous in this country, and that, as in America, unions should be legalised with power to compel their members to pay to prevent the members from coming on the poor rate as the present moment.

15,743. By that American Act to which you have alluded, have they power to compel them?—They have.

15,744. The bearing of your point with reference to poor rates, as I understood from conversations with you before you were under examination, was that the effect of unions had been to keep men off the rates?—Certainly. I think that Mr. Normansell will be able to show you that the effect of unions in his district, and other districts, has been to keep men off the rates that otherwise would be on it. I should like to see the time when every man would, from 15 till he was unable to do any work, lay by something that he need not come on the rates. We give a reward to improvidence by our present laws, and put a tax on industry.

15,745. (*Earl of Lichfield.*) What guarantee would you give for the security of those societies before you compelled people to join them?—They should be formed on a proper basis so that they should be certain to be effective.

15,746. How would you secure that?—On the principle of Government annuities, or some such other principle. I should have every man contribute to a society the moment he is an adult, to have something for his old age. The result is inevitable, coming to this, that there is a large amount of money being raised in many parishes which is being carried away, and they are coming back upon the owner. A certain amount is being got in the royalty each year, and the owner will be left on the land shortly with all the poor to pay, and a great part of the wealth carried off.

15,747. (*Lord Elcho.*) Left with the poor with whom they have had nothing to do, you mean?—Yes, the poor have been created and maintained there for a particular class, and then it falls back on the landowner to maintain the poor.

15,748. And the class that made the poor may be in America?—They may be in America. They take their cash in their pockets and go to Germany, America, or anywhere else.

15,749. (*Earl of Lichfield.*) You say that it is desirable that men should be compelled to pay to societies of this description to keep them off the poor rates. When I ask you how you would guarantee the security of the societies which you compel people to belong to, you say that it might be done by Government annuities; but that is no argument in favour of making it compulsory to belong to ordinary friendly societies or trades union societies, is it?—I would make it compulsory in this way, that they should either belong to some public fund or to a voluntary association which would be solvent in its character.

15,750. How would you secure its solvency?—By proper laws for the purpose.

15,751. What do you call proper laws?—I have not made up my mind thoroughly on the details, but I am quite satisfied that we are going radically wrong.

15,752. In what respect?—In respect to an increase of poor and a destruction of human life.

15,753. As to your Scotch societies, as I understand you, there are no benefits attached to your Scotch societies. They do not contribute to any benefits—sick list, or payment at death, or anything of that kind?—Not as a rule. In all the collieries in Scotland there are connected with them private societies of their own, and hence they never, in forming unions, form them for those purposes.

15,754. The unions are purely for trade purposes?—For trade purposes.

15,755. Are there no unions in Scotland combining trade purposes and benefit purposes?—Yes, of the joiners and carpenters, but it is the miners that I refer to.

15,756. There are none among the miners?—In some places there is one, but not as a rule. The place of the benefit fund is supplied by the workmen of each colliery, having private societies of their own.

15,757. (*Lord Elcho.*) You have put in here what is called "An Act to incorporate the Operative Plasterers' Mutual Protective Benevolent Trade Society of New York"?—Yes.

15,758. I see that the second section states the objects. "The object and purpose of said corporation is for mutual protection, the burial of its "deceased members, the relief of the widows and "orphans of deceased members, and to promote harmony and co-operation of its members." With your knowledge of this Act (and this, I imagine, is only a specimen of other local Acts) existing in America, would it be possible under this Act, at New York, to have a union precisely the same as a union here, raising funds for trade purposes, that is, for the support of men on strike?—It is so, and they can compel man, by an order of court, to pay into the society.

15,759. That is to say, protection would be given to those funds by this Act, and a member of this trade society would be bound to contribute for those purposes, and it could be enforced by law if the registered directors thought it right that he should do so?—That is so, and the reason I brought that statute with me is to show that, if it is desired in New York, and I believe in other States of the Union, such a society can apply for a statute, and under that statute, as a joint stock company, you can sue your individual members, you can be sued by your individual members, and any other body or any other individual can sue you, and the trustees, when they have made a levy, can compel their levy by an order of court.

15,760. (*Chairman.*) That must depend on the deed of association. You have not put in the deed of association of the Plasterers' Society?—I have not the deed of association, but I can get it.

15,761. You will get one sample of the deed of association that accompanies this statute?—Yes, I will get it.

15,762. (*Earl of Lichfield.*) It does not mention in this Act that they will get relief from the society while out of employment?—No.

The witness withdrew.

Adjourned to Tuesday next at 11 o'clock.

INDEX OF WITNESSES	44

COMMISSION.

VICTORIA R.

Victoria, by the Grace of God of the United Kingdom of Great Britain and Ireland Queen, Defender of the Faith.

To Our right trusty and well-beloved Councillor Sir William Erle, Knight; Our right trusty and right well-beloved Cousin Thomas George Earl of Lichfield; Our trusty and well-beloved Francis Charteris, Esquire (commonly called Lord Elcho); Our right trusty and well-beloved Councillor Sir Edmund Walker Head, Baronet, Knight Commander of Our most Honourable Order of the Bath; Our trusty and well-beloved Sir Daniel Gooch, Baronet; Our trusty and well-beloved Herman Merivale, Esquire, Companion of Our most Honourable Order of the Bath; Our trusty and well-beloved James Booth, Esquire, Companion of Our most Honourable Order of the Bath; Our trusty and well-beloved John Arthur Roebuck, Esquire, one of Our Counsel learned in the Law; Our trusty and well-beloved Thomas Hughes, Esquire, and Frederic Harrison, Esquire, Barristers at Law; and Our trusty and well-beloved William Mathews, Esquire, greeting.

Whereas it has been represented unto Us that it is expedient that inquiry should be made into the several matters herein-after mentioned.

Now Know Ye, that We, reposing great trust and confidence in your ability and discretion, have nominated, constituted, and appointed, and do by these Presents nominate, constitute, and appoint, you, the said Sir William Erle, Thomas George Earl of Lichfield, Francis Charteris, Esquire (commonly called Lord Elcho), Sir Edmund Walker Head, Sir Daniel Gooch, Herman Merivale, James Booth, John Arthur Roebuck, Thomas Hughes, Frederic Harrison, and William Mathews, to be Our Commissioners for the purposes of the said inquiry.

And We do hereby enjoin you, or any Four of you, to inquire into and report on the Organization and Rules of Trades Unions and other Associations, whether of Workmen or Employers, and to inquire into and report on the effect produced by such Trades Unions and Associations on the Workmen and Employers respectively, and on the Relations between Workmen and Employers, and on the Trade and Industry of the Country; with power to investigate any recent acts of intimidation, outrage, or wrong alleged to have been promoted, encouraged, or connived at by such Trades Unions or other Associations, and also to suggest any improvements to be made in the law with respect to the matters aforesaid, or with respect to the relations between Workmen and their Employers, for the mutual benefit of both parties.

And for the better discovery of the truth in the premises, We do by these Presents give and grant unto you, or any Four of you, full power and authority to call before you, or any Four of you, such persons as you shall judge necessary, by whom you may be better informed of the truth in the premises, and to inquire of the premises and every part thereof by all other lawful ways and means whatsoever.

And Our further Will and Pleasure is that you, Our said Commissioners, do, with as little delay as may be consistent with a due discharge of the duties hereby imposed upon you, certify unto Us from time to time, under your hands and seals, your several proceedings in the premises.

And We do further will and command, and by these Presents ordain, that this Our Commission shall continue in full force and virtue, and that you, our said Commissioners, or any Four of you, shall and may from time to time proceed in the execution thereof, and of every matter or thing therein contained, although the same be not continued from time to time by adjournment.

And for your assistance in the execution of these Presents We do hereby authorize and empower you to appoint a Secretary to this Our Commission, to attend you, whose services and assistance We require you to use from time to time as occasion may require.

Given at Our Court at St. James, the Twelfth day of February 1867, in the Thirtieth Year of Our Reign.

By Her Majesty's Command.

S. H. WALPOLE.

REFORM CLUB
PALL MALL

EIGHTH REPORT.

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

We, Your Majesty's Commissioners appointed to inquire into and report on the Organization and Rules of Trades Unions and other Associations, whether of Workmen or Employers, and to inquire into and report on the effects produced by such Trades Unions and Associations on the Workmen and Employers respectively, and on the Relations between Workmen and Employers, and on the Trade and Industry of the Country; with power to investigate any recent acts of intimidation, outrage, or wrong alleged to have been promoted, encouraged, or connived at by such Trades Unions or other Associations, and also to suggest any improvements to be made in the law with respect to the matters aforesaid, or with respect to the relations between Workmen and their Employers, for the mutual benefit of both parties, have held several meetings, and humbly beg leave to submit to Your Majesty the evidence given before us at our meetings held upon the 5th and 12th days of May 1868.

(Signed) W. ERLE, Chairman.

MINUTES OF EVIDENCE

TAKEN BEFORE THE

ROYAL COMMISSION

APPOINTED TO INQUIRE INTO

TRADES UNIONS AND OTHER ASSOCIATIONS.

1, Park Prospect, Westminster, Tuesday, 5th May 1868.

PRESENT:

The Right Hon. Sir WILLIAM ERLE.	JAMES BOOTH, Esq.
The Right Hon. the EARL of LICHFIELD.	JOHN ARTHUR ROEBUCK, Esq., Q.C., M.P.
LORD ELCHO, M.P.	THOMAS HUGHES, Esq., M.P.
Sir DANIEL GOOCH, Bart., M.P.	FREDERIC HARRISON, Esq.

THE RIGHT HON. SIR WILLIAM ERLE IN THE CHAIR.

Mr. WILLIAM PICKARD examined.

Mr. W. Pickard.

5 May 1868.

15,763. (*Chairman.*) I believe that you are the agent for the Wigan District Association of Lancashire Miners?—I am.

15,764. How long has that association been formed?—Since 1862.

15,765. Of about how many members does it consist?—The number has varied; it is betwixt 6,000 and 7,000 now, or was previous to the strike.

15,766. And what is the subscription?—The subscription on the rule has been about 6*d.* a fortnight to what we call the district board.

15,767. And anything more?—They pay certain incidental expences in connection with the lodges, which amount in some cases to a 1*s.*, or 1*s.* 1½*d.*, on the fortnight.

15,768. What are the purposes for which the association is established; I presume it is for accidents and funerals, but is it for anything else?—Yes, besides those the labour and wage question, and social rights.

15,769. What labour and rights? Do you pay the men if they are out of employ by failure of trade?—No, not in the case of failure of trade.

15,770. If they are out of employ for a reason sanctioned by the association, then do you pay them their wages?—We pay them a certain allowance.

15,771. What is the allowance?—It has been 9*s.*, but of late it has been 10*s.* a week up to the time of the fund being exhausted, as far as the relief fund is concerned.

15,772. What other charges are there on the funds?—In case of the death of a man or his wife by accident or natural death, we all owe 5*l.* and 6*l.*

15,773. That is like other unions; but the allowances in the way of trade are the important matter, and you give 10*s.* a week if persons are out of employ for reasons sanctioned by the association, as I understand you?—Yes.

15,774. And the reasons sanctioned by the association bear for the most part on wages and hours, do they not?—Yes.

15,775. You said something about the social condition of the persons. Is there any regular expence incurred with a view to education, or any other outlay of that sort?—Yes; we contribute for the bringing about of matters for the education of the boys in the shape of securing shorter hours for the boys and more attendance at school.

15,776. Could you tell me any expence that is incurred for those objects? I can understand that you would attend meetings, and we have had an example of that in Mr. Macdonald, I think, who told us that he had made endeavours in various directions for what he considered the social improvement of the people by attending meetings and addressing them. Is there any regular outlay for schools, for instance?—No, we do not go directly for giving support to the schools.

15,777. Indirectly you lend your efforts to that?—Indirectly our social operations go towards that point.

15,778. If any of the members have suffered wrong in the way of trade the union supports them, I suppose?—Well, it has considered the right or the wrong of the case according to the rules laid down by the association.

15,779. And if it is a wrong according to the rules of the association, the association stand by the man, so that he has a friend at his back in the association?—Yes, if he has received any wrongs, any encroachments upon his privileges and his wages or his work, he society steps in.

15,780. Instead of being individual workmen unable to cope with a man of property, the members of the association are supported by a powerful body; that is the great object of the association?—Yes.

15,781. Have you had many strikes since you have been agent for them?—We have only had this unfortunate one.

15,782. The one now going on?—Now closed. I am thankful to say to the Board that it is closed.

15,783. Were you at the beginning of that, or were you aware of the beginning of that strike?—I was.

15,784. What was the point on which the parties fell abroad?—Because they were working together in union down to a certain point, and at that point they fell abroad.

15,785. What was the question in dispute?—The question was 15 per cent. reduction. The masters proposed taking 15 per cent. off, and the men had been accustomed from 1862 to 1868 to receiving the advances in the shape of 10 per cent. at a time.

Mr. W. Pickard.

5 May 1868.

15,786. When was it that the falling abroad or the difference began?—Some nine or ten weeks ago.

15,787. There was a proposed reduction of 15 per cent. by the masters?—Yes.

15,788. Is there a quarterly meeting of all the coal owners, or have they any periodical time of assembling?—Yes, I believe that there had been a meeting of the masters' association in Liverpool.

15,789. And then they had come to the resolution to reduce?—They came to the resolution to reduce 15 per cent. I have been informed that some of the proprietors wished to put it before the men in the shape of 10 per cent. reduction, and that some were for 15, and those who were for 15 per cent. reduction carried it in the association.

15,790. Have you any information about the fall in the price of coal?—I have not any further than the statements from certain proprietors that they had reduced their coals. I may instance Mr. Knowles, a gentleman that has received me on behalf of the men in matters of dispute sometimes, and he said that reduction had taken place, and also Mr. Crompton said so, but never to the amount stated here last week by Mr. Hewlett. I had no knowledge, nor have I had to this time any means to know that prices had been reduced to what he stated.

15,791. (*Mr. Roebuck.*). Have you ever taken pains to ascertain the price of coals?—Yes.

15,792. What sort of pains have you taken to do so?—I made enquiries from gentlemen in the interest of the proprietors, and I have received from their mouths the statement that they themselves cannot ascertain the prices. The reporters of the Colliery Guardian could not give me the prices of the market.

15,793. Do not you ascertain the price of an article by that which it sells for?—Well, if I must judge by the application to myself in the district, I must say that not a shilling a ton has come off, but I do not wish that to apply to the general trade.

15,794. Could you not apply to some large manufacturer of iron and ask whether he could buy his coal at a less price? Supposing you wanted to ascertain the price of coal at Dowlais Works for instance, could you not go to them and ask what they bought their coals for?—Yes, but I do not think that that would be a ground on which you could get satisfaction. I may take a specimen from Birmingham. I have been in the building trade before 1862, when I commenced to be the agent of the miners, and I have bought iron work from Birmingham at 5 per cent. reduction, and bought iron work from Birmingham at 5 per cent. reduction, so that you cannot at once see the operation as to the net prices.

15,795. That is peculiar to the iron trade?—Perhaps. It is to be feared that it is more or less so in the coal trade.

15,796. Of the great iron workers in your district, some I suppose buy with ready money, and some upon a certain degree of credit. Do not you think that by going to them you could have ascertained the price of coal, and that any gentleman would have told you what the price of coal was which he gave; and did you ever do that?—Well, I happen by marriage to belong to a family that are consumers in the iron trade of 20 tons a day when in full operation, and I cannot ascertain from them that there is any falling off.

15,796*a*. Did you ask those people the price they paid for coal?—I did.

15,797. Did you put down the price which they told you?—I did not put it down; it was something like 8*s*. and odd.

15,798. Supposing you had gone to the next iron worker and gone on in that way, and asked a dozen and struck the average, do not you think that that would have given you the price of coal in the market?—Well, my impression is that I should not be received, there would not be that confidence exercised in me to lead them to give me that information, except at that place which I have referred to.

15,799. You have never tried it?—No, but we have only one iron manufactory in the district.

15,800. I suppose that there are persons who bring large quantities of it together and supply the neighbourhood?—Not exactly in the neighbourhood of Wigan. The competition is so facilitated with the different proprietors that we have no coal merchants except just in connection with the collieries themselves.

15,801. (*Mr. Hughes.*) I suppose as far as your whole trade goes it is extremely difficult to find what the trade price is?—Yes.

15,802. (*Sir D. Gooch.*) You could find in the London market and in the Liverpool market the price of Wigan coal?—Yes.

15,803. (*Mr. Roebuck.*) Would not those prices in the London market and the Liverpool market guide the price of coal in your market?—I cannot answer that question.

15,804. You have not taken the pains to get the information requisite to know what the price of coal really is?—I have tried to get at such information, but I cannot get it.

15,805. Did you ever ask the gentlemen with whom you were in difference what the price was, as they stated it?—Well, in some cases they said, "We have reduced 1*s*.," and in some they said, "We have reduced 1*s*. 6*d*."

15,806. Did you ever strike the average amongst all those from the information that they gave you?—No.

15,807. Would not that have given you some means at least of knowing what they said the price of coal was?—I may say that our qualities vary very much and I know that in bad trade the common coal prices suffer more than better qualities. Therefore it is a difficult matter to ascertain.

15,808. You will see at once why I ask these questions. I want to know why you went out on strike, why you did not take all possible precaution to find out what was the price of coal, and then having really got at what you sincerely believed to be the price of coal, you could have made a rational determination? But going out on strike, a very deadly affair, on this sort of careless information which you have gathered together, does it not seem to you that that was a rather wild proceeding?—I may say that from the first it has been a most wild proceeding; and I stood upon my feet an hour showing that the trade was not good, and did not justify the men on strike, supposing that the masters did not reduce more than 10 per cent. The extreme of 15 per cent. I did not consider justifiable in the state of trade.

15,809. Then I gather from your evidence that in your opinion it was an unfortunate and unwise strike?—It was universal suffrage that brought its influence to bear against me, and I was strongly suspected of having been bribed by the proprietors.

15,810. (*Sir D. Gooch.*) How much did the 15 per cent. come to upon the ton?—It varies according to the nature of the working, in some cases 6*d*. or 7*d*.

15,811. (*Chairman, to Mr. Briggs.*) Can you confirm Mr. Pickard's statement as to the difficulty of ascertaining the price of coal?—It is easy to ascertain the variation in price in the retail trade, but the retail consumption is very small compared with the whole production of a large colliery. In a large colliery there must be contracts made which are generally private contracts, and those who make them do not like to divulge the prices at what they are made. Therefore it is very difficult for the colliers to ascertain the exact average price of the whole coal produced at any colliery. They may get the retail price, but that often misleads them as to the averag e price obtainable.

15,812. Is it more easy in the iron trade to know the rise and fall of the market?—I am not connected with the iron trade myself, but my impression is that it is more easy, because there are quarterly meetings at which the prices are fixed. The coal trade is more local; it is not so general all over the country, and

the prices cannot be reckoned to such a nicety as in the iron trade.

15,813. (*Sir D. Gooch.*) But is not the price of Wigan coal in London easily ascertained every morning in the market?—Yes, but the price in London is very variable, so that it is difficult to take a fair average.

15,814. (*Mr. Roebuck.*) But I suppose the coal proprietors do find out the rise to their cost very often, do not they, and they know when the price falls?—Yes; but I only wish to explain that it is difficult for the colliers to ascertain and judge just by the retail trade. They are very apt to be misled by that.

15,815. But the proprietors, the persons who took off the 15 per cent. upon the wages went upon some calculation?—I have no doubt that they did.

15,816. They know perfectly well what they were about?—Yes.

15,817. And if they were honest, that 15 per cent. reduction can be assumed to be the difference commanded by the price of coal?—It may be.

15,818. Mind my hypothesis, if they were honest in their statements, that 15 per cent. may be supposed to be a justifiable reduction in the wages of the men?—Yes.

15,819. (*Mr. Booth to the witness.*) I think that I understood you to say that you advised the men to strike rather than submit to the whole reduction of 15 per cent.?—No.

15,820. (*Chairman.*) Are you an adviser who sway the minds of the men? Some of the secretaries and agents are really in 9 cases out of 10 the persons that sway the community. Have you that authority and weight?—I am what is termed their leading man.

15,821. And during the last six years you have considered that you have been in a situation that authorizes you and makes it your duty to give them good information and advise them?—As well as lies in my power I do.

15,822. And you advised that they should not strike against the 15 per cent.?—Yes, I may say in confirmation of Mr. Briggs's statement that I had the most powerful influence brought against my argument by working men themselves bringing their tickets from the different collieries where they are served in the different parts of the district. They say, "I have paid so much for so many tubs," and this is the argument that they bring, and I try to get the men's minds disabused of that idea, and to show that our trade must be taken upon experience in London and other places, that it is not home consumption, and that our trade cannot be guided by that at all. There is the great difficulty.

15,823. (*Mr. Booth.*) Let me understand the advice that you gave to the men. I understood you to say that you advised the men not to go out if the masters would submit to 10 per cent. reduction?—Yes.

15,824. Does not that imply that if they would not submit to 10 per cent. they were to go out?—No, Mr. Macdonald and I were in council together upon this matter, and our views were one in the matter, and we asked the men to put the thing in its fairest form, namely, to accede to the 10 per cent., and for this there was strong disapprobation on the part of the men against Mr. Macdonald and myself.

15,825. But supposing that the masters did not accede to that proposal, what were the men to do?—The question was to be submitted to arbitration.

15,826. But supposing that the masters declined either arbitration or the 10 per cent. reduction, what were the men to do?—My advice was that supposing they would not agree to the proposal the men before coming to a strike should commence work at 15 per cent. reduction.

15,827. (*Mr. Harrison.*) You proposed an offer to accept the 10 per cent. at once and to submit the other 5 per cent. to arbitration, that was the offer which was to be proposed?—Yes.

15,828. And you could not induce the men to agree to make that offer?—Yes; they agreed to the 10 per cent. and put the other in arbitration.

15,829. (*Mr. Hughes.*) And the masters refused it?—And the masters refused it.

15,830. (*Mr. Booth.*) And then you still counselled them not to strike?—We still counselled them not to come into a strike.

15,831. (*Chairman.*) A majority being against you, it was your duty to accept the resolution of the majority?—Yes, being the servant of the men and not the master, I was obliged to submit.

15,832. And do the best you could?—I did, under the circumstances.

15,833. (*Mr. Booth.*) Then the strike has been entirely without your approbation down to the present time?—Yes; and I may say, as some unfortunately strong remarks were made by me as reported at a public meeting, that I there got a shew of hands from the thousands of men congregated, whether I brought them in the strike or whether they brought themselves into it. The reporters were there, and saw that the men admitted, by show of hands, that they brought themselves into it, and that it was not by my advice.

15,834. (*Mr. Roebuck.*) You gave the chairman an account of the monies that the men paid. I think, upon the whole, you said that was about 1*s.* in the fortnight or 1*s.* 1½*d.*?—1*s.* or 1*s.* 1½*d.* as far as the district goes. We have three funds, the accident fund, the funeral fund, and the relief fund—the labour wage fund.

15,835. (*Chairman.*) What is the difference between the relief and the labour wage fund?—None. I used that term that you might apprehend what I meant by it. There is a penny got out of the contributions of the fortnight to the funeral fund; that is retained in the lodge and paid once a quarter. There is 4½*d.* which goes to the accident fund; that is, if a man is hurt in following his lawful calling, he receives 5*s.* or 7*s.* a week, and in the relief case they receive 9*s.*; but a few months before the strike took place, it came on to 10*s.* a week.

15,836. (*Mr. Roebuck.*) You say that your society has been in existence how long?—Since 1862.

15,837. And that rate of subscription has been going on the whole time, or pretty nearly?—Yes.

15,838. Have you any notion of the aggregate sum subscribed by the men during the whole of this year?—Yes. I have some statements here from the secretary, which I have no objection to put in, stating the amounts of the different funds, and also I have balance sheets and reports from the commencement of the association.

15,839. Up to the present strike none of the monies that have been collected have been employed for any other than benefit purposes?—Not to my knowledge. That has been in accordance with the rules of the association.

15,840. You say that the association supported the men upon reasons sanctioned by them. You mean when they opposed the masters, I suppose?—Yes.

15,841. Will you tell me what were the sort of reasons that they sanctioned?—If a man is working in a bad place, and the master does not give him a sufficient remuneration, we, as an association, having a practical knowledge to judge upon the nature of things to a great extent, in some cases I have been received by the master, and have gone down the pit and have become the arbitrator between the master and man. In some cases I have had to give it for the master, and in some cases for the men, and where I have given it for the men, they have been supported by the association.

15,842. As a general rule have you found the masters fair in their dealings with you about the question of wage?—I have found some of them to be thoroughly so in every sense of the term.

15,843. But some not?—Some not.

15,844. Some who rather screwed the men?—Yes.

15,845. Generally what should you say of the character of the masters who employ their capital in that sort of work?—I may say this, that as a rule they are not the worst, there are worse in the country.

Mr. W. Pickard.

5 May 1868.

15,846. (*Sir D. Gooch.*) Your district is better than other districts?—I mean to say that they are not the worst; there are others that I see treat the men worse.

15,847. (*Mr. Roebuck.*) In your trade you mean?—In our trade. I speak of our trade exclusively.

15,848. (*Chairman.*) Are your proprietors private proprietors, or are any of the collieries worked by a company?—The principal part of them are worked by companies.

15,849. Is there any difference between the agent for a company and the agent for private proprietors in consideration for the feelings and interests of the working men?—I find this, that where there are companies it is a difficult matter to get adjustment of a man's wrongs, but where it is a private enterprise in some cases we find it easier to get grievances settled. There is such a staff of officers, and there are such varying motives in the oppressive actions towards the poor man, that it is a difficult matter to get an adjustment sometimes either for the master or for the man.

15,850. (*Mr. Roebuck.*) That I suppose is because responsibility divided amongst a great number of persons renders it so small that they do not care about it?—Yes, and there is such a disposition on the part of subordinate officers to excel and gain position.

15,851. And I suppose it really comes round to the old saying that a corporation has no conscience?—A great way towards it.

15,852. You talked about the influence you exercised on what you called the social condition of the workmen. In what way was that influence usually exercised! Did it usually go to the promotion of their education, and to improving the general habits of the men; did you give them any advice or establish any rules with that object?—Yes, I have both by precept and example tried to do so. I was a collier 16 years myself. I know what it is to do the hardest work either in sinking shafts or driving levels or tunnels, and having passed through many trials I acted then like too many and gave myself to habits of drink, but since then I have been a steady man, and while I have been their agent I have been a total abstainer, simply to show them an example, and have tried to get them to educate their children.

15,853. Do you think that the Association has had a beneficial influence in that line?—Yes, and it is often spoken of in commendation by the masters themselves.

15,854. Has there been of late years any diminution of drunkenness in the body generally?—We have been having good trade, and from 1863 to 1867, or a part of 1867, there has been a great influx of labour; and the demand was so great that the proprietors had to fetch in 2,000 or 3,000 men from Cornwall, and any sort of man in whose hand they could place a lamp they placed in the mine, and that has had a serious effect by getting into the district a class of men who are not steady in their habits, and I believe that it has had something to do with our serious explosions and accidents in the mines.

15,855. Then, generally speaking, in your belief the habits of the mining body have been improved?—Yes.

15,856. Will you tell me as a matter of curiosity on my part, whether the improvement has taken place more in a good state of wage or in a bad state of wage?—Well, the improvement has taken place with a good state of wage as a rule, but there are exceptions to that rule.

15,857. Should you say that in a good state of wage there has been less drunkenness than in a bad state?—Of course if a person has not the means he cannot have the same facilities for drunkenness.

15,858. Did you ever find that misery leads to that sort of vice, that men drink to drown care?—I am sorry to say that in some cases men do have resort to drink when they have means, even to the neglect of their social happiness and their domestic comfort.

15,859. This being the first strike that has happened since you have been in the command I may say of the mind of the miners, do you think that any good can be drawn from it for their future guidance by pointing out to them the mischief of the course that they have pursued?—Well, I have learnt such a lesson in my life in this matter, I believe that if men would be guided by sense and reason lasting good would come from combination.

15,860. Do you think then that combination of the men will give facilities for instructing them?—I do.

15,861. And that the combination in this case having led to mischief, combination may lead to good by giving facilities for instructing them. Is that your conclusion?—Yes.

15,862. (*Mr. Hughes.*) You said that you attribute some of the accidents that have happened to the importation of men from other districts?—Yes.

15,863. Has that been done by the masters to a large extent in your district?—Yes, we have had some thousands of strange men, and I think it is quite contrary to common sense and reason to take strange men ignorant of the nature of the gases. I can point out passages in the Government reports to that effect.

15,864. Did you ever remonstrate with the masters on that matter?—Yes, and the Government inspector, and we have been together at the colliery.

15,865. What has been their reply?—"We want labour and we must have it."

15,866. (*Mr. Roebuck.*) Could the masters have got the labour they wanted round about them?—No, the demand was so great that they could not get it.

15,867. Then they were driven to this by necessity?—They were driven to it by necessity.

15,868. So far there was no blame attributable to them; they only acted under necessity?—I think that a master ought to have consideration in placing a man in a dangerous mine, such as some of the mines are, where there are so many lives at stake, with a lamp in his hand.

15,869. (*Mr. Harrison.*) The necessity consisted only in the desire of making more money, I suppose?—Yes.

15,870. (*Sir D. Gooch.*) Do the men in your district limit the quantity of coal that each collier is allowed to send up to bank?—They do not, and that is one fruit of the evil that has been brought on. Over production has given the impulse to the proprietors, and has caused this unpleasant affair, in my opinion.

15,871. A larger amount of coal sent up by the men would have lessened the number of strangers imported into the district, would it not?—Well, in these days of mining operations the workings are so extensive that they open out east, west, north, and south, and they place all characters they can get in the mine, irrespective of whether it is a reasonable thing or not.

15,872. Do you not think that the master has as much interest in the safety of the mine as the miner; his loss is great in an accident, is it not?—I believe that the masters are disposed that way, and that is their motive, but when there are so many subordinate officers there are sometimes interested motives apart from the masters' interest and the men's interest.

15,873. What interest can the subordinate officers have apart from the master's interest, and doing his duty?—There is the interest of promotion in working, and economizing in certain expenditure in the mine.

15,874. (*Mr. Roebuck.*) Can you trace any of the accidents to that economy?—In some of the cases. I recollect being at an inquest where for the sake of leaving a little brattice cloth and two props there were four men burnt to death. I refer to the Garstang colliery. The colliery inspector and I inspected the mine, and we found that that was so.

15,875. Was it a case of economy?—It was supposed by the fireman to be matter for economy.

15,876. How much would they have saved by taking that away?—It was very trifling.

15,877. Could you have imagined that economy would have led to that?—There is a certain regulation

given to the firemen that they are to remove all that they consider proper, apart from the consideration of the higher manager. They take these steps and then the other manager comes and finds what they have done, and perhaps condemns it. It is a case of discipline with them, lest they should have disapprobation from the higher officers, they take these steps prematurely.

15,878. But if they took these steps prematurely, would not the higher officer find fault with them ?—Yes ; and in this case he did.

15,879. The higher officer finding fault, was not the tendency rather that the men should have left these two props and the piece of cloth ?—Yes ; but the motive actuating the younger man was a fear lest he should be complained of.

15,880. Would not the complaint in that case arise from doing that which led to economy ?—The head of the jury censured the man for his conduct as well as the manager.

15,881. (*Mr. Hughes.*) It is quite clear that men's lives are risked by carelessness in that way ?—Yes.

15,882. (*Chairman.*) Is there any way of ascertaining whether a man is competent to use a lamp in a mine, does he go through any inquiry before he is sent down ?—No ; I am sorry to say that there is not anything of that kind. I may just say that I was one that was sent down by the Miners' Association to watch the Farndale inquiry, when those 178 men were sacrificed, and there I found that men had a privilege, which is not only a privilege enjoyed in South Wales at the Farndale colliery, but at other collieries in Lancashire and in other places ; they can take a strange boy down a mine and give him a lamp, though he has never seen a mine before.

15,883. (*Mr. Roebuck.*) Could a person understand a lamp by looking at it without explanation ?—No, and he cannot tell the operation of the carburetted hydrogen upon it.

15,884. (*Sir D. Gooch.*) I suppose that a man not well acquainted with the lamp would not be sent to go far in the working by himself ?—Yes, he is sent in different parts. Of course the supposition is that the fireman has been round, but a mine is open to such sudden changes and fluctuations in the air courses that they may be right one hour and wrong the next five minutes.

15,885. (*Mr. Roebuck.*) Could any instruction guard against that ?—Yes, as to the use and the abuse of the safety lamp, but we have no such instruction given.

15,886. In what is the abuse of the safety lamp ?—If I were taking the safety lamp and were to travel above a certain speed I should endanger myself and other people in the mine, because if you go beyond a certain velocity with the lamp there is the liability of the pressure of the atmosphere forcing the light through the gauze and igniting the carburetted hydrogen outside.

15,887. (*Mr. Hughes*) I should like to know whether your association has made any representation as to the inspectorship of mines, that it is not perfect enough ?—Yes ; I may say that I have had communications with the Government inspector.

15,888. You have joined in representations as to the imperfection of the present system of inspection ?—Yes.

15,889. And do you agree with Mr. McDonald as to what is required to make the inspection efficient ?—Yes,

15,890. (*Chairman.*) What is required—more inspectors ?—More shafts, and more inspectors to see that the subterranean passages are properly ventilated.

15,891. (*Mr. Roebuck.*) You are pointing to two different things ; first of all an increase in the number of inspectors, and then an increase in the number of shafts ?—Yes.

15,892. One relates to inspection, and the other to the modes of preventing danger ?—I mean to say this, that if we have not sufficiency of shaft room ventilation cannot be. To give you a case in point, at the Farndale explosion, when I questioned Mr. Wales upon his inspection of that mine he had been two or three years in the district and had never been down the Farndale colliery, and there was evidence given there, and it now stands recorded, by the witnesses that there ought to have been 40 or 50 feet of area, and a man had to go on his belly not having more than two or three feet of area ; perhaps 100 or 200 men were depending upon that ventilation entirely.

15,893. (*Sir D. Gooch.*) Is not the inspector of mines bound to see to all that ?—Mr. Wales put himself right with the meeting ; his power was that he was only to go and examine a mine when he was sent for.

15,894. (*Lord Elcho.*) Is it not the case that the proportion of inspectors now to the mines in the district would render it physically impossible that they could inspect the mines thoroughly ?—Physically impossible.

15,895. It is in some districts something like the proportion of one inspector to 400 or 500 mines ?—Yes.

15,896. So that he would have to go down two or three mines a day if he wished to inspect the whole in a year ?—Yes. I may say this to the credit of Mr. Peter Hickson that when anything was reported to him he went with me night or day, and I have had him in as many as four pits on one day.

15,897. You propose that these inspectors should remain in their districts as at present, but that there should be sub-inspectors who should go down the mines constantly, and when they see cause report it to the inspectors for them to visit the mine, those sub-inspectors not interfering in the meantime with the management of the mine ?—Yes.

15,898. Those sub-inspectors would be men at a small salary ?—Yes, 100*l.* or 150*l.* a year.

15,899. (*Mr. Roebuck.*) Can you tell me whether for the last 10 years there have not been at Wigan classes for teaching the colliers the nature of mines and gases ?—There are, and a most honorable gentleman has lately died that was the teacher, Dr. Burton-head, and some of our men have made themselves very clever from their training in that institution.

15,900. The teaching is almost gratuitous, is it not ?—Yes, it may be said to be so.

15,901. Can you give me any idea of the number of persons among the mining men that within the last 10 years have attended classes of that sort ?—I may say that it has not been brought down to meet the capacity of the ordinary intelligence of the mining population. I find that the institution has been more set apart and fostered by the proprietors themselves ; for instance, they have sent their subordinate officers there. If I were to go and engage myself as a fireman, for instance, they would give me facilities of going there in order that I might be able to conduct myself well for their interest and for the safety of the mine.

15,902. But why have not the men themselves, seeing that they are the real sufferers by an explosion, gone there to be instructed ?—I may say this, that there is a sort of class feeling about it, and the men have stated to me that sometimes they have felt that they were a little reflected upon on account of manifesting a degree of ignorance which they felt sorry about, and that has caused some of them not to go.

15,903. Has that been done by the teachers ?—No ; but by certain parties who attended. I have done my best to aid the movement. In the commencement of the association, I got up a sort of entertainment, and got the Government inspector to take the chair, and tried to get the men to take an active part, and laid all its bearings before them ; but, I am sorry to say, that there have been difficulties. Those little class feelings, and interested feelings, might have been put aside, had the men taken the interest in it that they ought to have taken.

15,904. I take it that that feeling was rather an unwise touchiness, was it not, to care about the small sneer of some small man ? You came there to be

Mr. W. Pickard.

5 May 1868.

taught?—Human nature is very sensitive in those things.

15,905. I think that public lectures have been given at the collieries in Wigan?—Yes.

15,906. Have they been attended by the working men?—To some extent. Not so much as they ought to have been.

15,907. Then you see that the carelessness of life as regards an explosion in the colliery is not confined to the subordinates, but it is really shared by the men, because, if they, knowing the value of this instruction, will not go to hear it, they thereby show themselves careless of their own lives?—I wish to make a little explanation there. The men, as a rule, are physically incapable, from over fatiguing themselves, of attending those lectures. Having no restriction upon their hours of labour, working from 10 to 12 hours a day, they so fatigue themselves, that they will have a play-day in the fortnight, two or three play-days, I am sorry to say, some of them will have, and when they go to work they go at it as if life and death were at stake, and the result is that when they get home and get some refreshment there, they are asleep at once.

15,908. When you talk of play-day, what does play-day mean? Does it mean getting drunk?—No. The rule is, that about once a fortnight the men require a day to repair their tools, and the men generally take what we call the reckoning Monday for those repairs.

15,909. The day spent in repairing their tools, you would hardly call play-day, would you?—They would receive no remuneration for that. They do not do it for themselves. They go to a smith to do it.

15,910. On that day on which they do no work what do they do?—They play, the pits are laid idle.

15,911. I want to know what you mean by "play;" does not play in that case usually signify drinking, I will not say getting drunk?—They set themselves apart, and I am sorry to say that many go to the drinking places.

15,912. Could they not, on that play-day, attend a lecture of this sort I have been speaking of, because there is no paying for the lecture?—Yes; but you would find if you were coming to a lecture in Wigan to-night, or any time, that about seven or eight o'clock the men would get up and go out of the meeting. They have to rise early for their work, and that is one difficulty. I have tried to give lectures myself, and have got other gentlemen to come and give lectures upon matters affecting their interests, and as a rule they cannot get them on account of the early rising and the work being so fatiguing.

15,913. As to that play-day you talk of, how many hours does it consist of?—They never go near their work on the Monday morning as a rule.

15,914. Supposing that on that day the lecture was given at 12 o'clock. They would not go away then to go to bed, and supposing the lecture continued an hour, do you think that you would get an audience then?—I scarcely think so.

15,915. I want to know the reason why?—Because the physical exertions have blunted their minds, and they cannot see any beauty in those lectures you may give them.

15,916. (*Lord Elcho.*) What is the state of education of these men at present?—It is very indifferent.

15,917. Of the grown men, do you mean?—Yes, of the grown men. I should say that 15 out of 20 can neither read nor write.

15,918. That arises from deficient education, you think?—It arises from deficient education.

15,919. Is the position of the next generation likely to be better? Are the means better for education now than they were formerly?—Yes, there are greater facilities given, and the Sunday school operations are working an important effect in that respect.

15,920. Do you think that the rising generation, which has, as you say, better means of acquiring education than the former generation had, when it has grown up will have a greater appreciation of these subjects referred to by Mr. Roebuck, than the present generation, and that the lectures then are likely to be better attended by grown up men than they are now?—Yes; and I may say, arising from the influence of Sunday schools, we have a large number of lads of 16 and 17 that can stand to teach fathers of 60 or 70. Even as to this late dispute, I have boys in my thought who have got up in the dispute and taken sides with me, and helped me to show the reasonableness of this course and that course, and there is a wonderful improvement.

15,921. If there is a wonderful improvement in the means available for education, to what are those increased means attributable? to public schools open for all classes, or to special schools open for the miners? and, if the latter, are they schools established by private individuals or a company, or how?—I may say it is done jointly, but the greatest influence I should attribute to the Sunday schools and night schools. With regard to the day schools in the mining district of Wigan, I am thankful to say that we have very good schools erected by the proprietors, but the boy is so taxed that he has just become able to read and write his name (from 10 to 12 years of age) when he is taken to the pit, and the result is that the poor boy cannot develope his mind.

15,922. And as to these Sunday schools and night schools to which you refer, by whom are they instituted and supported, is it by the coal owners?—They are to a great extent.

15,923. Mostly by companies, or by private individuals?—Private individuals bring the most influence to bear.

15,924. Then you think that the private coal owner looks in the point of education more after the interests of those whom he employs than companies do?—My experience teaches me so.

15,925. Do you believe that experience to be general throughout the coal districts?—As far as the Wigan district is concerned, I think it will be borne out there.

15,926. So far, that education would tend to the increased safety of the men; but I apprehend that what you look to, do you not, is that, irrespective of that education, an improved system of inspection would do what you want?—Yes.

15,927. Because I have heard it stated here or elsewhere, that in the opinion of many miners a mine might be brought to that state of safety with reference to ventilation, that an explosion would be practically impossible?—It is the case within my experience and knowledge that that can be done.

15,928. It is your belief that that might be brought about?—Yes.

15,929. That would be by having sufficient shafts and clear air passages?—Yes.

15,930. Would that additional expence shut up many mines; are shafts very expensive?—Yes, they are expensive, but taking the sinking down to certain veins, and working them out, I believe that it will be found to be more economical. In sinking the shafts just take the area you are about to work, take the space and put your shafts in an angular form, two in-takes and one out-take, and let the out-take be on the rise of the mine. There is no difficulty whatever in giving safety and protection and health and comfort to the men while at work.

15,931. Your belief is with a judicious arrangement of the shafts it would be to the interest of the coal owners, not only in the safety of the men, but for the proper working of the pit, to have more shafts than they now have?—Yes.

15,932. In any case, you do not think that this increased expence would have the effect of shutting up the mines?—No.

15,933. (*Sir D. Gooch.*) It would depend on the depth, would it not?—Where you have deep mines, when you have so little shafting, you are obliged to have an additional staff of superintendents, and the result is you are spending more than you would in

sinking the shaft at first. That is my opinion of the matter.

15,934. (*Lord Elcho.*) I presume you would say from your knowledge not only of the mining class, but of human nature, that whatever system of education you might establish as regards mining operations, whatever number of lectures might be given, and however numerous the attendants at those lectures might be, you may always reckon that whenever 1,000 or 1,500 men are got together you will find some careless men among the number?—Yes.

15,935. And the carelessness of one man may blow up the pit?—Yes; I may say that from my own experience. I have had to do pump work and other work, and I have stood with the most perfect indifference when I have had 500 fathoms before me, and since I have had more intelligence I have shuddered at the very things that I have passed through myself; and such carelessness as I have manifested is the carelessness which others in the mines exhibit from want of education.

15,936. I will assume that everybody is educated and is aware of the indications of danger which a lamp may exhibit; might it not happen that with everybody educated and everybody careful, by accident, as the result of a chance stroke, a piece of coal might fall on the lamp and injure the lamp, and explode the mine, if it were in a dangerous state?—Yes.

15,937. Therefore education alone and carefulness alone would not be a sufficient protection for the miner without the mine itself being in a healthy condition?—No; I may say that if the first rule laid down in the Act, about the ventilation of the mine, were attended to nothing would happen to life or limb. If there is a sufficient amount of ventilation to render harmless all the noxious gases, it cannot by the carelessness of any man cause an explosion.

15,938. All you want is that Parliament should take means to carry out its own desire and law?—Yes.

15,939. (*Mr. Roebuck.*) I gather from what you say that still taking every precaution there must be some danger. For example, I have heard that in what you call fiery mines every now and then there will be a sudden outburst of gas that no human prudence can predict or guard against, and that no arrangement can prevent?—But those cases are so exceptional that they are scarcely worth being taken into account.

15,940. (*Lord Elcho.*) We will assume the case of a mine which is generally properly ventilated, and the normal state of which is a state which you wish to see all mines brought to, namely, such that a lamp if put in a dangerous part will not explode. But as Mr. Roebuck says there may be behind a certain amount of noxious gas undiluted, which by the fall of coal or earth, or stone, is liberated. I imagine you think that although there may be there an amount of gas which would explode, still there would never be such a liberation of gas, if the rest of the mine were healthy, as to effect such destruction as we read of in our day?—Just so.

15,941. One man might be burnt but no general explosion of the mine could occur?—No.

15,942. Can you say whether you are aware of any single accident in the whole number of these accidents that has been caused by what is called sudden outburst of gas?—I have not known one single instance. I may say for the information of the Commission that we had at the Wigan Company, previous to its becoming the Wigan Coal Company, a sudden outburst, and I know no sudden outburst that they have had apart from that, but that was attended with no fatality whatever; a boy, having a little knowledge of the state of the mine, ran to the authorities, and was the means of saving the men's lives by their getting them out before it went to the different workings.

15,943. (*Mr. Harrison.*) I will ask you a few questions about what has been going on at Wigan. You have just told us that you and your central association did what they could to dissuade the men from originally striking in this question?—I did.

15,944. I need hardly ask you whether you agree with what is the opinion of all the world, that the circumstances which have arisen at Wigan since, in the shape of rioting, and in the shape of personal outrages against individuals, are excessively disgraceful to the country, and to the trade in which they have occurred?—I feel myself very much humilitated by them.

15,945. You must feel that that is publicly stated against you and your association, and it is obvious that in any case there rests a serious obligation upon all of you to show that your association have done all that lay in their power to put a check to this state of things?—Yes.

15,946. Will you be good enough to bear out that statement by showing what you have done, and what your own conduct has been in the matter?—I may say in connexion with this matter that there have been certain outrages that have taken place, not in the immediate town of Wigan itself, but in the outskirts. I have had consultations with the mayor of the town, telling him that I disapproved of those things, and he asked me if I would go out and try to prevent those unpleasant assemblies in the morning. I said to the mayor, "Supposing that I go out and a breach of the "peace takes place, there is a disposition on the part "of some people to place that at my door, and under "present circumstances I should not feel myself safe "to go out." I said, "I have done all that I can in "the private meetings of the men to keep them from "assembling together," and the very day that we had our public meetings I went and was the means, I believe, of preventing a serious outbreak. I was persuaded by the men not to go, and I said, "I will go; if my life is at stake I will go," and I did go, and I believe it was the means of preventing a serious outbreak.

15,947. (*Chairman.*) Will you just particularize that? You went out and saw some man that was going to commit an act of violence. Is that what you mean?—We were having a procession through the town after we had appealed to the society men and the non-society men. We wished them to respectfully retire, and to be loyal subjects of the Queen. I did myself. After we had had the procession, and they had decided not to go to work (I was very sorry that they had come to that conclusion), they said that they would take a walk to the springs (that was where what we called the knobsticks or black sheep, or foreign labourers, were brought), and they did not wish me to go, and I said, "I will go. If you do not wish me that makes it more urgent for me to go." I went with them to the springs, and I got upon a wall while the staff of the constabulary were there, and the men were pressing very strongly, and I remonstrated with the men, and I said, "If you are loyal subjects and wish to respect your Queen and your country, follow me," and the men in thousands followed me after I got up in that way.

15,948. (*Mr. Hughes.*) On that occasion there was no outrage, was there?—There was no outrage then.

15,949. (*Mr. Harrison.*) Are you in a position to show us that as far as you have been able to discover no portion of the union funds has been paid for the purpose of committing these outrages which have taken place upon individuals?—I am. I have brought here our fortnightly balance sheets to show that not one penny piece has been paid from the society's funds to defend these people that have committed a breach of the law. I was very much pained indeed when I heard Mr. Hewlett make that statement that such a thing had been done. I vouch on my honour, and it is open to investigation, that I know of nothing of the kind, and that from the reports of the society's officers I cannot find one penny devoted to such a purpose. I have brought them here to submit them to you for examination.

15,950. (*Mr. Roebuck.*) Were the men defended?—They were defended.

15,951. Who was the professional man; the lawyer who defended them?—One Mr. Forshaw. But I may say that I have had no communication, either directly

Mr. W. Pickard.

5 May 1868.

or indirectly, through one person or another, as to the defence, or anything else.

15,952. And you, having no connexion or taking no part in this matter, could any other person connected with the society have done it?—I am positive of this, that no person in connexion with the society officially has had any connexion with it whatever.

15,953. In reality, either officially or in any other way, has any money belonging to the society been employed for that purpose?—It has not.

15,954. Have you consulted with the officers of the lodges which were more particularly implicated in this matter on the particular spot where it arose, or the members of which were suspected, for the purpose of discovering how these outrages were brought about, and seeing if they could trace the guilty parties?—I may say that I have asked amongst the men who those parties were. It was said that I must be cognizant of all that was going on. I vouched that I knew nothing of it, and this day I stand as an ignorant man before you, as to who were the men who committed the outrages. I was bent from the first to disapprove of the policy of assemblages of the men. I was bent from the first that I would not mix myself up with it in any way whatever.

15,955. (*Mr. Roebuck.*) There were combinations, large bodies of men gathered together, and I suppose that that could not have been done without somebody instigating them to do it?—Well, some parties are pleased to say that I have been the instigation through certain remarks which I made, but I wish the gentlemen round this board to allow me to make this statement here. I have stood associated with the men for six years. Previous to commencing being their agent I was contracting for building cottages, and they came to me and asked me to take their case up. Having been a miner I had strong feelings with them, more for social improvement and education, than I had for the wage question. That was my motive. There have been very strong things said of me through the public press, and through private interviews, that is to say, when working men have gone to receive or ask for work, persons have made statements to them that I was building out of the men's money, and that I had done this and done the other. Many strong things have been said of me, and on this occasion I was reiterating and just viewing these things over. One was that I had brought the men to the field and that I could not take them out of it. That was said by a Liverpool coal agent and circulated by the public press, and also that I had received a situation under Government of 600*l.* a year, to be an inspector, and had forsaken the men, that the society's funds had been misappropriated, and all this was through men going about and saying "Pickard has been cheating you of your money." I was just going through these statements in the meeting, and I expressed myself strongly, but it was because strong things, unjustifiable things, had been said against me.

15,956. You recollect, I have no doubt, that Mr. Hewlett said that you were reported to have made a certain speech to the working men assembled?—I do recollect it.

15,957. Can you call to mind what those words were that were laid to your charge, and tell us whether they were truly reported?—I cannot say that.

15,958. I read this in Mr. Hewlett's evidence: "I "will begin reading from the speech at the part "referring to Mr. Samuel Lancaster, 'Mr. Pickard "'referred to the recent disturbances and asked "'whether it was the law of England that attempts "'should be made to enrage the people. He spoke "'of the presence of the soldiers, and this brought "'on the name of Mr. Samuel Lancaster, whom he "'designated, that white-washed wall of the country, "'a man who came amongst them showing very "'largely indeed, and saying he was the working "'man's friend. He was a friend, but it was over "'the left (derisive cheers). Mr. Samuel Lancaster "'could do great things when he had his hand in "'somebody else's purse, tickling the yellows, and he "'had fetched some black sheep into the town, when "'he worked the Birkett Bank colliery, why did he "'not go to the market like another honorable "'tradesman? No, he had to go somewhere else, "'and he, Mr. Pickard, was told he got white-washed. "'This was more than a 15 per cent. question with "'such as he, for many a poor man had got the sack "'for 12 months and a day for speaking for his rights "'and privileges. Mr. Pickard called for a show of "'hands from those who had thus suffered, and a "'dozen were held up; one man exclaiming, 'Here "'is one that got it for life.' Voices, (Well, keep "'him without work). Mr. Samuel Lancaster would "'not live for ever, but he might do so for any harm "'he (Mr. Pickard) would do him; but if Mr. Samuel "'Lancaster could give him an ingredient that day "'which would quiet him he would do so.'" I do not quite understand that. You accuse Mr. Lancaster of desiring to poison you, I suppose?—No, it is not a question of poisoning; I will explain that, if you please.

15,959. "It was wrong for Mr. Lancaster to "practice robbery and confiscation upon the poor men "in his employ. Many a poor man was punished for "stealing a few pence, but Mr. Samuel Lancaster "thought nothing of taking a hundred tubs a-day." There are a good number of hard things in that speech, and I want to know how you (I have no doubt you can) explain that you being a man that wished to keep down the strike, and not to have the people excited, and in this very statement objected to enraging the people, thought that was likely to be the means of getting rid of that animus?—Well, I stand before you not a perfect man, but under those circumstances I gave expression to that which my life's action has not put forth. I do not mean to say that I have said such things as are hinted. I may have said some things that are strong, but I will not vouch that a verbatim statement has been taken by a public reporter. I may say further that I hold in my hand a notice to quit the house I live in immediately, and one of the coal proprietors has taken this house on lease. I saw the landlord himself and I told him that I was building myself a house, and that as soon as I could move I would do so. He was on very satisfactory terms, and since that this notice comes for me to "give up peace-"able possession of the house to George Gilroy, Esq., "on behalf of the Ince Hall Company." All these things combined together place me not a perfect man under like passions as my forefathers have been.

15,960. But I think that that notice was after this speech?—It was.

15,961. So that that notice could not have had any influence in placing you in this state of passion natural to man, that is evinced in this speech. You talk about Mr. Lancaster being "whitewashed," what did you mean by that, because, mind you, at this time you were a man who really guided, or were thought to be guiding, the minds of the men on strike? You have said that you are not a perfect man, and no man is, but being desirous that the strike should not be violent, and being yourself opposed to the strike, do you think that that attack upon Mr. Lancaster would have a beneficial effect?—Well, I am thankful to say that I believe the honourable board that I address to-day will not construe me to mean any personal violence by myself or those men that I was speaking to.

15,962. (*Mr. Hughes.*) What was Mr. Lancaster doing?—Mr. Lancaster was parading the streets with firearms, and William Rowe, who gave evidence last week, had shot pistols, and enraged the people, and the appearance of the police and soldiers had more to do with bringing about the violence than the disposition of the people had been to carry out the violence.

15,963. (*Mr. Roebuck.*) Did not violence take place before the soldiers were sent for?—I have no knowledge of any violence before that.

15,964. Can you say that no violence did take place?—I cannot say that there was or that there was not.

15,965. Why were the soldiers sent for?—Because

of the disposition that there was on the part of the men to meet together in the mornings, which I condemned as much as any coal proprietor in the district.

15,966. With regard to the effect of this speech of yours about Mr. Lancaster, was he not mobbed after this, was not there a general attack upon him?—There are other matters surrounding that circumstance. Mr. Lancaster had recourse, or the Wigan Coal Company through Mr. Lancaster had recourse, to bringing their engineers and all the workmen down to be sworn in. Some of them I have been given to understand were told that unless they were sworn in they would be discharged from the works, and there was an element of feeling apart from my speech which would have brought about such circumstances as surrounded Mr. Lancaster in King Street (I knew nothing of that, I was at home at the time), and those arrangements that he had made for the special constables to go and fetch the men, sending the men to work, and saying, "If you do not come to work there is no more for you." This is the course that Mr. Lancaster took, if not through himself through others, so I am told.

15,967. Speaking of the masters, as masters generally, is there any violence practised by the masters against the men?—If I must take the statements of the poor men, they got up from their houses and came in in the morning, and rushed up to see what was to be seen, and the result was that 60 or 70 of them were summoned; but the principal part of them were dismissed by the magistrates, having nothing against them.

15,968. That does not touch my question as to whether the masters were guilty of acts of violence against the men?—I cannot say that the masters were guilty of direct acts of violence against the men, but that such influence was brought to bear as led to the intimidations, coming from that side, not from the men, so I have understood it.

15,969. Were not all the things that the masters did, matters of precaution to protect their property and the lives of the persons employed by them; such, for example, as what you have now spoken of, and rather in a complaining tone, swearing in special constables, calling for the police, and calling for the military? Were not all those acts of precaution to protect the property of themselves, and the lives of the persons whom they employed?—I have no doubt that the motives of the authorities of the town may be looked at rightly as being to protect the property; but a great deal of this was more in excitement and alarm than in intention on the part of the men. Had the disposition of our men been for violence, I have no doubt that from the number of men that have been in this unfortunate strike, there could have been a thousand stand of arms at the place from their social relations with life in the shape of pleasure going, hunting, and shooting, and one thing and another. There has been no such disposition manifest. I have not heard among all the men that have been brought out of a firearm being found on any person or any other weapon beyond certain sticks, which I condemned with all my soul at the meeting.

15,970. I suppose that the use of firearms and deadly weapons is contrary to the habits and manners of the English people?—Yes.

15,971. That being so, was there not much more violence used on those occasions by the men out on strike than you would approve of?—Most decidedly.

15,972. That is exactly what I wanted you to feel. As you were really a man of peace on that occasion, I would ask simply, looking back to that as one of the acts of your life which you may not altogether approve of, do you think that it was a wise and prudent thing to have made a speech like that under those circumstances?—I may say that it was a little unfortunate, and if the case were to occur again I would not repeat it,

15,973. (*Mr. Hughes.*) Will you admit that all these measures of the masters were precautionary; do you call evictions of the men from their cottages precautionary measures?—No.

15,974. Were there several evictions?—Yes. I may say further that one cause of these sad effects which were produced was this; men had got work under certain 24 masters who had complied with the men's terms, and they got them discharged and would not allow them to work there. Other men close to where I am now living had got employment, and the Ince Hall Company had brought their influence to bear, and I saw myself those men discharged passing my house because they would not receive the masters' terms. Some of them received notice before any violence took place and some afterwards.

15,975. (*Mr. Roebuck.*) That goes to this, that the masters were in some cases guilty of the class of acts that the workmen were; that is to say, that they did try to get men driven out of the work who did not do exactly what they desired?—Yes.

15,976. That is what we complain of in the men, and I do not at all wonder at the same thing being done by the masters; you complain of it, but that is what I understand you to say, that you complain of the masters using that class of means, preventing men getting work who displeased them?—Yes.

15,977. Is not that exactly what the working men do when they agree to call a man a knobstick, and prevent him from going down a pit when he desires to go down?—The two things engender a bad feeling.

15,978. The two things are of the same class?—Yes.

15,979. And if the masters are guilty of that class of acts they have been as guilty to that extent as the working men?—Yes, and a good deal of this has led to violence by the men feeling an influence at work against them. They have come to me and asked me what they should do. I said, Bear it peaceably and patiently, and bear yourself with propriety.

15,980. Have you any experience of any former strike in any place?—I have.

15,981. Was any former strike in your recollection attended with so much violence as this one at Wigan?—Yes; I think we have had as bad a strike in 1853. There was a little unpleasantness then, but it arose not from the colliers alone but from the factory operatives also; there was a joint influence there.

15,982. I want to know whether you thought that any previous strike of which you had cognizance was as violent as the present one?—Yes, quite. As far as the expression of this violence is concerned upon the town of Wigan itself, I may respectfully say that there is a gentleman, a clergyman of the town of Wigan, from whom you will see in yesterday's paper, the "Star," a letter very impartially written, both as regards the rights and the wrongs of the thing.

15,983. (*Mr. Harrison.*) But as a matter of fact, a number of men who were brought from other counties were forcibly driven out of the town, notwithstanding all the efforts of the police and authorities to protect them?—I think I may say that the feeling and disposition was on the part of the masters. The men had simply come to deceive the masters, which is too often the case. They would not work, if I am rightly informed, but the men from Staffordshire that went down the Lindsay pits, themselves said that they had come not for the masters' purpose but for their own.

15,984. You mean that the masters sent them back finding it useless?—Yes, they found that they would be too expensive.

15,985. (*Mr. Roebuck.*) They did not send them back because of the violence used towards the men, and because the magistrates got frightened, and advised them to send them away?—Well, I believe that the feeling of some of the authorities was that it was rather an injudicious step to fetch these men under the circumstances, for they thought that the matter would have come to a close with my influence and that of others at work, because we should bring the men to a reasonable consideration, and I do believe

Mr. W. Pickard.

5 May 1868.

that the thing would have turned out differently had not those men been fetched; that gave the turning point in the feelings of the men over which I could get no control, and it led to the serious result that took place. The feelings became embittered, and I was very roughly handled myself in words.

15,986. As I understand you now, the feelings became embittered from these circumstances. First you say, answering Mr. Hughes, that men were evicted, next that the police were called upon to protect property, that special constables were sworn in, and that eventually soldiers were called in, and that all these things combined produced a portion of the violent acts, and that a large portion of the violent acts began before anything was done, except evicting the men?—No, not a large portion, a small portion as far as my knowledge is concerned.

15,987, Then, as far as your knowledge is concerned, the first step in aggravating the men's minds besides the lowering of their weekly wages was the eviction of these persons who had found work elsewhere?—Yes.

15,988. Then violence took place, then the police were called upon, and then the police were overpowered?—I do not think that it was the case that the police were overpowered. If I understand the thing right the matter was this—from what I can gather the proprietors were disposed to make use of the policemen to fetch men from the different localities, east, west, north and south, to the various works, and they had not a sufficiency. Our men very injudiciously would congregate together in a morning simply to persuade the men not to go to work, and this led to their coming in contact.

15,989. You use the word "persuade," and we have often heard the expression "moral suation." Moral suasion often has something at the back of it. "If you do not do so and so," was not that the tone?—I have no doubt expressions of that kind would be used, but I hope that I shall not be held answerable for such things.

15,990. (*Mr. Booth.*) You spoke, in that speech, of Mr. Lancaster having brought black sheep into the town. What do you mean by "black sheep?"—I mean foreign labour.

15,991. But an employer not having sufficient labour to work his own mines, was there anything wrong in his bringing in foreign labour?—I think that if Mr. Lancaster had seen and reasoned with the men the matter would have been settled without fetching foreign labour, because they were a sacrifice to the proprietors themselves, and were come to supplant a body of hard working and industrious men who are not equalled in the world.

15,992. (*Mr. Roebuck.*) But do not you think that it is the best as a general rule for the good of the whole community that a man should be at liberty to sell his labour where he likes?—Yes; I have nothing against that.

15,993. (*Mr. Booth.*) You had not the intention of stirring up the minds of these men against the black sheep?—No. God forbid.

15,994. But was not your using the expression calculated to do so?—I made use of the expression to convey my meaning. The "Times" itself makes use of the term. I had no more meaning further than to express myself in a way that should be understood.

15,995. (*Mr. Roebuck.*) I will read the sentence to you again. "Mr. Samuel Lancaster could do great "things when he had his hand in somebody else's "purse" (that is the first insinuation) "tickling the "yellows, and he had fetched some black sheep "into the town." Now all those things are put before an excited mob as a description of the conduct and character of Mr. Lancaster?—I may say as far as the men are concerned there was no violence meant, it was far from my thoughts.

15,996. (*Mr. Harrison.*) Was it previously or after that Mr. Lancaster appeared brandishing a revolver?—He had appeared, I believe, previously, and afterwards too, firing a revolver in the public streets.

15,997. Have you been able to satisfy yourself that neither directly nor indirectly out of the general funds, or out of the local funds, has money belonging to the union been paid in any way to the authors of outrage?—I have no knowledge whatever of anything of the kind having been done.

15,998. Have you been able to satisfy yourself that such is not the case?—I have brought here our minutes giving an account of the monies that we have paid to the men since the strike has commenced, and I cannot find one item of that kind. I may say that the transactions of the society when I am engaged on other business go on without me, and I have no knowledge.

15,999. Are those accounts made up to a recent date?—Yes, to yesterday fortnight.

16,000. Have you investigated with a special view to this point the accounts of those particular lodges, or of those secretaries who are generally suspected of being implicated in this matter?—Yes.

16,001. And you can find no irregularity?—I can find no irregularity as far as the association is concerned.

16,002. And would you, speaking for the association, pledge yourself that no such sum will hereafter be allowed if any such sum should be discovered?—Yes; I can vouch that if such be the case I will retire on that day that it is done.

16,003. (*Mr. Roebuck.*) You said that there were lawyers specially employed to defend the men. I suppose that they were paid; whom do you suppose that they were paid by?—Indeed I do not know.

16,004. Those poor men had no money to pay them with excepting they had got it before hand. They would not pay a lawyer his fees, would they?—Well, I can vouch that the association has not found those fees, neither directly or indirectly.

16,005. Now I will put to you a question that possibly is an indiscreet one. Could it be possible that rival masters should come into the market, and that one of those rival masters should pay the fees of the professional man who defended those men?—Indeed I cannot say, but I should say one thing, that one of the proprietors has sent *5l.* to the association in sympathy with the men, to be distributed in breadto them.

16,006. (*Mr. Harrison.*) The men who have taken part in these riotous assemblies in fact, and in fact in all the meetings which have been held, have not consisted exclusively of unionists, have they?—Not at all, the majority are out of the union.

16,007. All the men, in fact, that work the pits have been acting together independently of whether they were members of the union or not?—Yes.

16,008. They have been directed, I suppose, more or less formally by leaders or agents of their own on the spot, have they not?—Yes.

16,009. Have those men been in all cases officers or members of a union, or have they been selected for the purpose by the men at the pits mouth from time to time?—They have been selected by the men from spontaneous circumstances.

16,010. Out of a meeting?—Yes, out of a meeting. It sometimes takes place at the bottom of the pit and sometimes at the top of the pit before they go down.

16,011. They elect their own leaders in those cases without any reference to their being members of the union or not?—Yes, as is the case in South Wales now.

16,012. There is nothing that distinguishes what has been taking place at Wigan from what has taken place not very long ago in Wales, where there was no association whatever, and where there never had been one?—Just so.

16,013. So that, as far as you can see, the whole of the transactions that have occurred at Wigan recently, would have gone on, and probably in a much more aggravated form, supposing that there had been no association at all?—I believe candidly, let the results be what they may, that had there not been myself, with an honest straightforward purpose, and Mr. McDonald

and other gentlemen that I have consulted with, and had not the association's influence been brought to bear, the thing would have assumed a far worse feature.

16,014. In point of fact, there was a sudden and a very great reduction of wages, greater than what has taken place for a great number of years?—Yes.

16,015. The men in the separate pits became very much irritated at this, or indignant at it; they met together and elected their own leaders and representatives, and were addressed by men spontaneously springing out of their own body, and, as far as the association has acted, it has been with a view first to prevent them from striking, and when they had struck, with a view of restraining violent action?—Yes. I may say further that at this meeting that has been referred to so much the men's wish was to decide the question as to a continuance of the struggle; and I said, "Nay, the "position of affairs now is not a question for the asso- "ciation, seeing that we have more men not in the "society than in it, I think that there ought to be an "opportunity for them to express themselves whether "they are willing to go to work;" and I posted the willingness of the association up, to let the association with all its firmness, as they would show in the meeting, go and be at the threshold of the decision of the public meeting by the non-society men, and by a show of hands to go to work if they were willing. That is what took place at that meeting, and by show of hands it was unanimously carried that they should still continue the struggle.

16,016. You mean to say that you proposed that the conduct of the union men should be decided by the decision of the non-society men?—Yes.

16,017. (*Mr. Roebuck.*) I think that you were present when these questions, which I am about to read, were put by Mr. Mathews, and I wish you to pay attention to them and to tell me now what you say to them. Mr. Mathews said to Mr. Hewlett, "You "judge from these speeches (one of which I have just "now read to you) of Mr. Pickard, that at all events "Mr. Pickard, as the organ of the union, gave this "movement his sanction?" Now, this was the answer of Mr. Hewlett, "If he did not give the "movement for a strike his sanction, his speeches "are singularly at variance with what he said in "private." I suppose, from what you have said to us to-day, that you entirely deny that?—Yes, I do; I was never more cut in my life than when such strong statements were made.

16,018. Again, Mr. Mathews said, "His speeches "had a tendency to induce the men to continue the "strike?" The answer is, "Most undoubtedly." That, again, I suppose you deny?—Yes.

16,019. Then comes Mr. Mathews again, "There- "fore, as Mr. Pickard was the organ of the union, "we may infer that the union was instrumental in "organizing or continuing the strike?" The answer is "Yes." Now, from what I understand you to say to-day, you say that the union had nothing to do with the strike, and that you, as the organ of the union, recommended the men not to strike?—Yes.

16,020. Then Mr. Mathews says, "The general "tendency of Mr. Pickard's observations at this "meeting went to encourage the strike rather than to "discourage it?" and Mr. Hewlett answers, "Clearly so." From what I gather from your statement to-day, if that were the case it was not your intention that it should be the case?—It was not.

16,021. (*Mr. Hughes.*) Have you any miners' journal published by the men?—We have not, I am sorry to say.

16,022. What paper is that taken from?—The "Wigan Examiner," I think.

16,023. In these reports do you recognise any omissions of what you may have said on the other side?—Yes, there is plenty omitted.

16,024. In fact you do not admit the correctness of the report?—There is plenty that I have said which if it had appeared just as I said, it would revolutionize the feeling of this board about the speech.

16,025. Do you know anything of Mr. Briggs's plan of working collieries?—I have gathered certain information on that matter through my honourable colleague, Mr. McDonald.

16,026. What do you think of that?—I think that it is a very satisfactory thing, and I hope that it will gain influence with the working men and with the capitalists.

16,027. Do you think that the better organized unions and the best men in the mining trade will approve of it?—Yes, I believe they will.

16,028. (*Mr. Harrison.*) You said just now that you rather regretted—at least, I gathered from you that you rather regretted—that the practice of limiting the get of coal from the men had not been followed out in your district. Was I right in so understanding you?—Yes.

16,029. What is the nature of the limit which you are prepared to recommend?—My limit is this, that I think that a working man (I speak from experience) should be brought into the habit of working 11 days in a fortnight, and giving over each day with eight hours.

16,030. Yours is a limit of time; but you would make no limit as to the quantity which a man was to produce?—I would let that limit of time carry its bearings upon the men in the regulations with respect to the different nature of the workings. Such is the system that we have had in my time of mining in going by scales that in some cases a man would get 5*s.* where another only got 2*s.*

16,031. You are in favour of carrying out generally, for instance, the limit adopted in the South Yorkshire district, of working not more than eight hours?—Yes.

16,032. On what grounds do you advocate that?—Well, I believe that it would economise. It would check the excitement and impetuosity that gets over the men. From the habits that prevail now, there are two or three play days, and then a man goes to work and the master ties his hands to a certain extent, for a man to do that is an outrage upon his physical powers, checking his mental development, and the result is most disastrous to the man's domestic happiness and the master's interests.

16,033. You mean irregular work?—Yes. I may say that I had an interview with Mr. John Lancaster, of the Wigan Coal Company, and he said to me, "If "you could only bring your influence to bear on the "men to come to a system of regularity, it would be "a good thing. Three days out of the week we have "wagons on sidings, and we cannot get stuff to supply "our contracts," and it has been a part of my duty to get the men to regularity.

16,034. What should you say are the maximum hours of work in your district?—In Wigan I should say 10 and 11 hours, and in some cases 11 or 12. Some men are not less than 14 hours from home I should say.

16,035. Do you find that where a maximum day is the common practice the men are more regular in working day after day and less inclined to take what they call play days?—Yes.

16,036. (*Mr. Roebuck.*) I do not quite understand that. I suppose that by the eight hours a day the men would gain really as much wage in the week as they do now?—They would.

16,037. That being the case why should they not under the eight hours have a play day?—They would in that case. I am making the provision that 11 days in the fortnight they should work.

16,038. (*Mr. Harrison.*) They do not have more than one play day in that case?—Not more than one.

16,039. (*Mr. Roebuck.*) I want to know how this habit of play days arising from the present state of things may be altered by that plan. If the man gets as much under the eight hours' work as he does under the present plan, how would that conduce to doing away with the habit he now has of indulging in play days?—By the eight hours system, 11 days a fortnight, a man would give more time to the attention

Mr. V. Pickard.

May 1868.

and interests of his master and his own than he does now.

16,040. That is just what I want you to show me?—There is the attention for 11 days instead of as now for eight and nine and 10 days in a fortnight, as the system is amongst the men, which works most painful results to the proprietors and the men themselves.

16,041. Do you think that under the system of eight hours he could not just in the same way, have a large number of hours of play, and do double time in the other hours, and would he not gain just the same as now in that case?—His physical nature would not allow of that; it would go to destruction.

16,042. Do you mean to say that the eight hours would limit the output?—I believe that it would increase the output.

16,043. Why should he then not have his play hours just as now?—Because the regularity is to the master's interest and his own.

16,044. (*Mr. Harrison.*) Is it not the case that when a man has worked three days running for 13 or 14 hours, he will rest then for a day, whereas if he works eight hours a day he need not rest in that way?—Yes.

16,045. You have spoken about the system of forfeits in the Wigan district. Will you explain how far it is general, and what is the ordinary rule?—I may say that we had evidence given on that subject before the committee that inquired into the grievances of the coal miners, and I think you will find in that report that we have check-weighmen placed on the bank there; but that is only a nickname, for they will not allow us to have what we really want, and that is chronic evil.

16,046. You have a right to have it by law?—We have a right to have it by law, but it must be a mutual arrangement between master and servant, and the masters set their face against it in the Wigan district.

16,047. You mean that there the Act of Parliament is a dead letter?—Yes, and I see no help without Government assistance for a fearful strike coming on. I think that Mr. Morris, from the Ince Hall coal pits, the cannel pits, gave 1,000 in something like six thousand and some odd hundred tubs as being confiscated from the men.

16,048. What do you mean by confiscated?—Taken entirely from the men; they gave them no benefit for it.

16,049. On what ground?—Because they were supposed to be short of weight.

16,050. You mean that tubs which came to the surface short of weight are taken, and the coal not reckoned to the men?—Yes; I may say that Mr. Morris's evidence is in the blue book now, that tubs were taken from the men because they were supposed to be short of weight, that they were taken to the market and sold, and produced about 1½ cwt. more than the masters said it was, and they received the proper price for it, and the men have received nothing for it.

16,051. (*Mr. Roebuck.*) I believe the rule is, that the tub is confiscated when it is minus so much; there must be a defalcation of a certain quantity before the tub is liable to be confiscated?—It so happens with regard to the nature of our mines and the principles that we now work our mines upon, that there are serious operations going on with the pressure of the earth, so that the roof comes down. The result is that many of our poor boys get their fingers cut with the friction upon the surface, and it has now become a practice to find iron handles that the boys fingers shall not come in contact between the roof and the coal. When this has been the case the coal of the tub that the man put on at the far end of the place comes in contact with the brattice cloth and the roof, and the result is that it is swept off, and when that tub gets to the surface, though it is no fault of the man who has filled it, yet it is left to the approbation or disapprobation of a man that is paid about 3*s.* a day, and as a rule it is taken from him many a time when he cannot help it and has no knowledge whatever of it.

16,052. (*Mr. Harrison.*) What do you say is the greatest amount of forfeiture which has come to your notice, and been proved to your satisfaction?—I have had serious cases proved to me, and I am afraid that the bearing of my conduct in former actions with the Wigan Colliery Company has had something to do with the strong way in which Mr. Hewlett expresses himself. At the California pit we had occasion to place a check-weighman there on account of the men having sacrificed some days two, three, and as high as four tubs.

16,053. Out of how many?—In some cases 15 and in some cases 20 per day, varying according to the nature of the work they were in. This led the men to send for me to a special meeting, as they called it, of the colliery. They placed a man of the name of Savage on the pit bank. The law says that the men shall place a check-weighman there, and pay him at their own expense. He was carried off the pit's bank and seriously illused, and put in the highway by the banksmen by the master's authority, and told to come there no more. He did come again, and was ill-treated again. The society then took an action to Bolton, and Mr. Pease, the gentleman now present, defended the person, and the magistrates dismissed the case.

16,054. (*Mr. Roebuck.*) Can you give us any idea of the cause assigned by the magistrates for dismissing your case?—I cannot give you exactly the cause. According to the rendering of the law, as I will prove from a circumstance that arose since, the masters have not the power which they thought that they had. In this case they took the course to dismiss the man, and that was the reason it ended in that way.

16,055. (*Mr. Harrison.*) Was their right of dismissal questioned?—Yes, the right of dismissal was questioned.

16,056. (*To Mr. Briggs.*) Do you know whether the coal owner has the power of dismissing the weighman?—I believe that the coal owner has not the power to dismiss the weighman appointed by the men unless he interrupts the work, and if he interferes in any way or interrupts the work going on, he is entitled to dismiss him.

16,057. Is there not a clause in the Act that the man at the pit who is selected by the men must be be approved by the owner?—No, that he must be a workman employed in that colliery.

16,058. The owner can dismiss him from his work, is not that so?—No.

16,059. (*Mr. Hughes to the witness.*) Are the tubs always weighed when they are confiscated?—They are not weighed, they just lie at the discretion of the banksmen, they are taken from the men without any consideration whatever, they simply survey the tub, and when they see that there is a little dirt in it or slack they take it for that.

16,060. (*Mr. Harrison.*) You mean it is done by the eye?—Yes, at many of our pit brows a girl is placed, who cries out "This tub has a little dirt in it," and the result is, that the banksmen hangs up a forfeit on that man's peg.

16,061. (*Lord Elcho.*) You have said that you disapproved of violence, and that although you may have used words which you have since regretted, which might not have a beneficial effect, all your efforts were really directed to the maintenance of peace in this late strike?—It was so.

16,062. Then you said that that violence on the gatherings of the men, and the state of angry feeling, were to a certain extent caused by the presence of police and soldiers?—Yes.

16,063. Now in that Wigan district there are, are there not, magistrates and persons responsible for the peace of that district, properly constituted legal authorities?—Yes.

16,064. By their having police and soldiers, one may assume that in their opinion (it may be an error of judgment, but still in their opinion), the presence

of the police and those soldiers was necessary to the maintenance of the peace, and the performance of their duty as conservators of the peace, that is so, is it not?—Yes.

16,065. You say, however, that they should not have exercised that judgment on their part by calling out the police, and should not have had soldiers fetched, because you, at the head of this union, were using your influence, and Mr. McDonald and others were likewise at work using their influence, to calm the men, and get them to go to their work again?—Yes.

16,066. Do you think that that would be a right course for magistrates to take, if they have reason to believe that law and order is threatened by gatherings of large bodies of men, whether armed with guns or armed with sticks or not, and if they see that there is a need of protection to free labour? Do you think that, as responsible to the country for the maintenance of peace and order in the district which has been confided to them, they would be justified in not using the means which the law has placed at their disposal, but entrusting the peace of their district to the efforts of persons in the position that you and Mr. McDonald were in? As a general rule, do you think they would be justified in such a course?—I think that they were perfectly justified in that sense to have them in reserve, but the exposing and exhibiting of them led to strong irritation.

16,067. But as a general principle, if the magistrates were not to trust for the maintenance of order in their district to the means which law places at their disposal, but were to trust to the efforts of another body, or self-constituted body, a body not recognized by law, would not that be, to a great extent, an abrogation of the principle of civil government and regular authority?—Yes, I suppose it would.

16068. (*Mr. Hughes.*) Do you think that the ordinary police power at the disposal of the authorities would have been sufficient to keep the peace if properly used?—Yes, I think we have a most energetic gentleman as the chief constable for the county; I think that he is a man that would have been able to have competed with the matter, without having recourse to the soldiers.

16,069. In fact, admitting entirely Lord Elcho's principle, you think that the calling out of the military and showing of the military was premature?—Yes.

16,070. (*Lord Elcho.*) That would be a question of policy, and the other which I referred to was a question of general principle. Now reverting to that question of general principle, assuming that magistrates as a rule in such cases were not to trust to their own power and their own authority, but that they were to have recourse to another authority, such as the authority of the heads of unions, a self-constituted unrecognized authority, do not you think that such a system generally applied would be injurious to law and order in the state?—Yes, I should not like to see the country established upon that system.

16,071. Do you think that if there were not properly constituted law and order in a state, any persons would suffer in that state sooner than those who are dependent for their bread upon their daily wage, and who are consequently dependent above all things on the security of property?—I think that there is strong misrepresentation as to the motives actuating men meeting in trades unions, and my experience teaches me that the general bulk of them are as loyally disposed in their action and conduct as the authorities themselves.

16,072. I am not disputing that now, but I am merely asking whether, as a general principle, it is not so, that in a well-ordered state order should be maintained by the properly constituted authorities and no other authority, no matter how well disposed?—Yes, but not to give irritation to the public.

16,073. (*Mr. Booth.*) You have said that the police ought not to have shown themselves. They did not show themselves, did they, until groups of workmen had shown themselves in a hostile manner?—Well, I think that the police did not show themselves in numbers until the men began to assemble together, and then there were cross firings that began to spring up. I should just wish to say upon the question of the check weighman, that in connexion with the Wigan Coal Company we have now a man established on the pit bank, at what is called the Lindsay pit. I may say that this question was very much discussed by the society, and they thought it was right that they should have a man there. They placed one on in 1866, on the 31st of March. This man was taken and put in custody; I had an interview with Mr. Lancaster and our late town clerk, that was employed as the solicitor for us to take this matter up. We wished to know whether the law justified us in placing a man there or not, and we wished the thing to go into court.

16,074. (*Mr. Roebuck.*) You said that he was taken up. What was he charged with?—I will just read you a paragraph if you please from a newspaper about the circumstance on that date: "Charge of trespass "on a coalpit brow.—William Martindale was summoned for a trespass on the brow of the Lindsay pit. "The information was supported by George Peters, "the banksman, who said defendant was connected "with the society of colliers, and was sent on to the "bank with the errand to see to the interests of the "men with respect to the sending up of stuff. He "was ordered off the bank the day before, and refusing "to go was carried off. On the day now in question "he again refused. The bench did not hold that the "charge of trespass had been sustained and dismissed "the charge. Mr. Hilton appeared for the defendant."

16,075. Then there the case of the masters was beaten?—Yes.

16,076. He was charged with trespass?—Yes.

16,077. On what ground was he charged with trespass. If he were not the servant of the proprietors of the mine it would have been trespass?—Yes.

16,078. But I suppose the magistrates decided that he was a servant, and therefore it was no trespass?—That is so. I may say that about this matter Mr. Lancaster and I had interviews, and the matter was settled; the man was in prison two hours, and a certain compensation was given, and since that I am thankful to say that the understanding upon that question has been understood by the company and the association, and there is a man this day in that man's stead, and the thing is working since satisfactory, as far as I know.

16,079. Do you know whether in every case the man employed as check weighman is in the employ of the proprietor of the mine?—He is generally selected from the body of men.

(*Mr. McDonald.*) He was charged with assault, but it should have been with obstruction; that was where the case failed.

16,080. (*Lord Elcho.*) This question has been put into my hands to put to you. Is it true that Mr. Samuel Lancaster was seen brandishing a pistol and firing it in the streets of Wigan?—Yes, it has been communicated to me that such was the case.

16,081. (*Mr. Roebuck.*) You did not see it yourself?—No.

16,082. (*Mr. Harrison.*) I suppose that you have been occasionally called in to consider cases of men who consider themselves to have been wrongfully dismissed from their work upon insufficient grounds by viewers?—Yes.

16,083. You have from time to time interfered, I suppose, in such cases?—Yes.

16,084. On what ground has your interference been called for?—My interference in many cases has turned out to be satisfactory both to employers and employed, and I have received, both at the hands of employers and employed, compliments for my impartial dealings in the question.

16,085. A great number of witnesses have complained very seriously to us of the injury which is done to the discipline of the mine by the miner who

Mr. W. Pickard.

5 May 1868.

is dismissed going off to the secretary of the union and bringing the association to interfere?—There may be isolated cases of that sort, but as a rule it is to the contrary.

16,086. What advantages to the men do you find from that course? I mean do you find that there are cases in which underground viewers harshly and oppressively dismiss a man?—In some cases we find that there has been wrong action taken against a man, and in some cases we find that it has been justifiable. Where discipline has been neglected, or there has been insubordination, we have put that down.

16,087. (*Chairman.*) The union representative is at hand to be applied to in a case of hardship to see that the men are righted?—Yes.

16,088. (*Mr. Harrison.*) You have found that your advice has from time to time prevented a general spirit of insubordination from springing up amongst the men in consequence of these things, where you have shown that the man was in the wrong?—Yes. I will put an extinguisher, as far as my employers will allow me, upon any insubordination, because I know the serious results of it. I have had to deal with men and work with them, and have had to go and remonstrate with the men apart from unions altogether, that have been working in gas and going to fire shots, and one thing and another, so that I know that for a man to stand in my position and not to co-work with the authority of the master for good discipline would be most serious. It is our interest to work with the masters in that sense.

16,089. You have no special evidence with regard to the employment of women on the pit bank, which is common in the Wigan district? Your association has done what it can to resist it?—We have very much opposed it, and the proprietors of cheap labour have very much encouraged it. We know that a great many of these men that are ignorant have been committing this wrong, and so long as a large number of the 700 females that work on the pit's bank in Wigan become the wives of these men, we think that it demoralizes the men. We think that females would be far better not employed at all on the pit's bank, and that they should be dressed in their own attire, and not in a man's; but we have been opposed by masters on account of the interests of the cheap labour that it produces.

16,090. (*Mr. Hughes.*) You say that there are 700 women now working in the Wigan district on the pit's bank?—From 700 to 800. I may say that I have had two wives, and my first mistress worked with me in the mine in 1842 when that was stopped.

16,091. (*Lord Elcho.*) Do you wish to make any further statement?—Yes; upon the matter of advances. I may say that I have here minutes about the association of the Wigan miners, showing that with regard to the advances referred to by Mr. Hewlett, propositions were made, and solicitations asking the masters for those advances which he said were given without being solicited.

The witness withdrew.

Mr. J. Normansell.

Mr. JOHN NORMANSELL examined.

16,092. (*Mr. Hughes.*) Are you secretary to the South Yorkshire Miners' Association?—Yes.

16,093. How long have you been the secretary of it?—About four years.

16,094. Have you been secretary from the formation of the association?—I have been secretary since 1864, but I have been in connection with the management ever since it was formed.

16,095. When was it formed?—In 1858.

16,096. What was the cause of its formation?—The employers throughout the district gave notice for 15 per cent. reduction in wages in 1858. There was no union previous to 1858; but in 1858, about March, the employers gave notice for a 15 per cent. reduction enerally throughout the district, and the consequence was that the men met at the various collieries, and formed themselves into branches, and from branches they formed themselves into a general union, for the purpose of resisting the 15 per cent. reduction.

16,097. How many members were there on the original formation of the society?—Perhaps from 2,000 to 3,000.

16,098. And were they successful in resisting that reduction?—Yes. I may just state that, by the arrangements that were made by these various branches and the general union which was formed immediately, they agreed that they would make the best terms possible with their employers at each colliery; and some got off with 5 per cent., others got off without any reduction whatsoever, and others took 15 per cent. reduction. We left it to themselves to deal with the question the best way they could, with the understanding that one colliery, a very large one, was kept out; and the result was that in three weeks there was not a single colliery in the neighbourhood that was working upon the reduction. The owners began to differ among themselves, and found fault with each other for not sticking to their agreement; and it resulted in all the places resisting the reduction with the exception of one; that was the Oaks, which struck, and was kept out about 18 weeks.

16,099. (*Mr. Roebuck.*) At what reduction?—They did not commence work at any reduction at all.

16,100. (*Mr. Hughes.*) So that in the first instance the association was quite successful?—Yes.

16,101. How many members does it now consist of?—It contains about 7,000 members now. We have more on the books, but there are 7,000 who can claim benefits under all circumstances.

16,102. 7,000 paying members?—More. 7,000 financial members.

16,103. Why do you call them financial members?—Because they are within a certain rule. There are other members who are behind with their contributions.

16,104. (*Mr. Roebuck.*) Those 7,000 are men that have fully paid up?—Yes.

16,105. (*Mr. Hughes.*) What are the objects of your association?—It has many objects. First, to raise from time time by contributions among the members funds for the purpose of mutual support. Secondly, to assist its members in striving to obtain better legislation for the efficient management of mines, whereby the health and lives of the miners may be prolonged. Thirdly, compensation for accidents when the employers are liable. Fourthly, to assist all lodges and members when unjustly dealt with by their employers or agents. Fifthly, a weekly allowance to members locked out, or when driven into a strike. Sixthly, a weekly allowance to members when injured while following their employment. Seventhly, a grant of 8*l.* at the death of any member caused by accident while following his employment. Eighthly, to shorten the hours of labour, and to infuse steadier habits of working among all its members. Ninthly, to secure the true weight of the miners' material at the pit banks, thus giving to both employers and employed their legitimate due. Tenthly, to abolish all illegal stoppages at the pay offices, and to secure the prices and wages that the members may at all times bargain for. Eleventhly, to improve the miners' positions, morally, mentally and physically. Twelfthly, to extend the association's principles to our less fortunate brethren by aiding all other similar associations that have for their objects the rights of labour. Thirteenthly, a weekly allowance to the widows and orphans of members who lose their lives by accident while following their employment. These are the benefits of the general association. The benefits out of local lodges are, a weekly allowance to members when sick from natural causes, an allowance of 4*l.* at the natural death of any member, an allowance of 2*l.* at the death of a member's wife, an allowance

of 1*l.* at the death of a member's child if under 12 years of age.

16,106. What are your subscriptions to provide for those benefits; what, for instance, is your entrance fee to begin with?—Our entrance fee is now 10*s.* for a member.

16,107. Does it not vary according to the age?—No; we have two classes of members only, a first and second class. Boys under 16 years of age we charge 5*s.* entrance; they pay half contributions and receive half benefit.

16,108. (*Mr. Roebuck.*) How long do they do that?—Until they are 18.

16,109. (*Mr. Hughes.*) And then from that time to what age do you admit men on payment of 10*s.*?—Up to any age.

16,110. What is the amount of contribution that each member pays?—The amount of contribution to the association is about 9*d.* per week, the regular contribution. But for the past 12 months, with the levies that have come upon us for different things, there has been an average of 1*s.* a week paid into the association besides entrance fees.

16,111. During the last year how many levies have you made?—We have had one 3*d.* per week levy for perhaps about eight months.

16,112. (*Mr. Roebuck.*) What was that for?—It was chiefly for the Gresley miners who were being locked out.

16,113. (*Mr. Hughes.*) To assist the men of another district in a dispute, in fact?—Yes.

16,114. When your association was first established was it recognized by the coal owners of the district?—It was not recognized.

16,115. (*Mr. Roebuck.*) What do you mean by that?—They would not acknowledge any officer or any deputations that were deputed from the association. They would not treat with us as an association. They preferred treating with the men in their own local way.

16,116. That is to say, I suppose, that when the matter referred to their own pit entirely, they did not allow anyone to come in and interfere with them?—They did not allow anybody from the association to come in and interfere with them.

16,117. Not anybody at all from outside?—No.

16,118. And that was the ground of what you call the non-recognition of the union?—Yes.

16,119. (*Mr. Hughes.*) Do they recognize you now?—Yes, they have recognized us for the last three years; I may say, since about the middle of 1865.

16,120. Have you had any strikes during the time that the association has been formed?—We have had very many strikes since the year 1858, and lock-outs as well. I can give you a history of the strikes if you desire it.

16,121. Will you tell us shortly as to those strikes, when they broke out, and what was the result of them?—In the year 1858, which I have already alluded to, after the Oaks resumed work (that was the pit that was kept out on strike on the 15 per cent.), we went on till the year 1859, when the employers of the Wharncliffe Silkstone Colliery, Messrs. Jeffcock and Company, gave notice to a certain portion of their workmen to leave; and it was said during the time that those men were on notice, that if they preferred going on at so much per yard less price they could continue their work, and that if they would pay 1*s.* per fortnight for the use of their lamp (the oil that was consumed in it, and several other matters similar) they could continue their work. This the men refused, and attempted to find employment elsewhere in the district, but they were shut out; the rest of the owners said that they understood that there was a dispute at this colliery, and that they could not employ them. There were about 17 coal getters kept on who did not receive notice, and these men joined with those that the employers gave notice to, and the consequence was that the great bulk of them were locked out, and the other portion struck; and that dispute lasted about eight months. It resulted in their going back chiefly on the men's terms. I was working in this very same pit at the very time, and we had no means of checking our accounts—we had no check weighman, for there was no weighing clause then at all, and we had as many as 80 to 100 tubs of coal out of one pit confiscated in one day from some pretence or other, some for short weight. The tub should contain, by agreement, 5½ cwt., but if it came to bank 5¼ cwt. it was confiscated, and nothing at all was given to the men; and if there came rather too much slack in these tubs of coal there was a confiscation made then; and if so much rubbish and dirt came up there was a confiscation made on that account; and altogether the confiscations amounted to 20 or 25 tons daily.

16,122. (*Mr. Roebuck.*) Out of how many?—Perhaps the pit was drawing about 300 tons per day at that time.

16,123. (*Mr. Hughes.*) That would be between seven and eight per cent. on the whole get?—Yes, that was about the amount at that time; and there were these stoppages which they wished to bring on the men for oil and one thing and another which also caused them to strike. It resulted in the 1*s.* per fortnight demanded for oil being withdrawn, and it resulted also in placing a man on the pit bank to check the men's accounts

16,124. A person was appointed by the men as their weighman, you mean?—A person was appointed by the men as their weighman. That was the origin of the present clause in the Act of Parliament for the man to be so appointed.

16,125. (*Mr. Booth.*) Was the person so appointed one of the workmen from the mine?—Yes; I was the workman so appointed.

16,126. (*Mr. Roebuck.*) Had you in that strike anything to do with Mr. Dunn?—Not at that time, nor have I had anything to do with him since.

16,127. He is the manager of that pit, is he not?—No; his collieries are near Sheffield; he has nothing to do with this colliery; it is Jeffcock and Company's.

16,128. (*Mr. Booth.*) Under the system of forfeiture, does the forfeiture take place since the appointment of the weigher as it did before? Supposing that when the tub comes to the pit's mouth and is weighed, it is found to be under weight to such an extent as would justify confiscation, is it still forfeited?—There is no confiscation at all that takes place now where the weighing principle is introduced. If a tub of coal is supposed to contain 8 cwt. and only contains 6 cwt., they get 6 cwt.; if it contains 10 cwt. they get 10 cwt.; there is no confiscation under the plea of short weight. There are a few confiscations that take place because too much slack or shale comes up with the coal occasionally.

16,129. That remains as before?—That remains not as before, for this reason, that previously there was no check whatsoever on the man placed on the part of the employers on the pit's bank, but now there is a check. The check weighmen themselves, or the greater portion of the check weighmen, if it is a bad tub, at once condemn it as such, or say: "I cannot object to a sacrifice being made" according to the amount of waste in it.

16,130. That check weighman is in the nature of an an arbitrator?—Yes, and it requires a very reasonable man to be placed there in order to judge of those matters.

16,131. (*Mr. Hughes.*) I understood you to say that the association took part in this strike of 1859?—In 1859 it was supported. We received 8*s.* per week from the association for 28 weeks, and 1*s.* a head for each child under 12 years of age.

16,132. Do you consider that charge of a shilling for oil in a fortnight a fair charge? Would it have been fair otherwise, I mean, supposing you ought to have paid it at all?—We did not consider it a fair charge to charge 1*s.* a fortnight for the oil that is used, and we do not consider it fair now where it is charged. We contended against it then, and have not altered our conclusions on it. The lamp of course is introduced, and it is a great drawback to the men's

Mr. J. Normansell.

5 May 1868.

wages to work with the lamp. It affects him in many ways; it affects his eyesight; but it is more dangerous in many respects to work with what is termed the Davy lamp than what it was when we worked with naked lights or candles.

16,133. (*Mr. Roebuck.*) You say that from your experience?—Yes.

16,134. You say that workmen would rather depend upon the naked light than upon that which the world has been taught to consider a safety lamp?—I wish to qualify my last answer. If the safety lamp is a protection from danger in one way, it is perhaps dangerous in six other ways in bringing on injuries as well as loss of life.

16,135. Then the conclusion is that it is a mistake to call it the safety lamp?—It is a mistake, and a great mistake.

16,136. It is an unsafety lamp, according to you? I want to know if your experience tells you that what we outside have all been taught to consider as of great benefit to mankind, the Davy safety lamp, is a mistake, and that it is not a safety lamp, but an unsafety lamp?—Of course I have been brought up in and about the mines all my life, and my experience is that the Davy safety lamp is no safety lamp at all. I believe that what are termed safety lamps have destroyed more lives than they have saved really.

16,137. When I am told that it is injurious to admit into a pit uninstructed men who know nothing about the safety lamp, that must be a mistake according to you, because the less they know the better, and they may use the safety lamp the same as a naked light, and Mr. Pickard, who said that that was a great injury and mischief to the mining people, made a mistake. There can be no injury done by the improper use of the safety lamp, if I understand you?—There can be injury done by the improper use of the safety lamp, and very often the lamp being in existence is the very cause of the danger existing, because if there were no reliance placed upon the lamp probably there would be no need of it in those cases, because the danger would be removed. I have known scores of instances where the ventilation has been seriously neglected, and they have relied entirely upon the lamp. And not only that, but when we have got a locked Stephenson's lamp, which is considered the most safe lamp that we have in existence at the present time, it is put into the hands of an inexperienced workman, as Mr. Pickard has mentioned, and that is the channel which we are drifting into now under our mining engineers, and the different people who have the management of our mines. We are never safe now, according to the theory of the mining engineers. Eruptions may so suddenly come upon us that we are never safe in the best ventilated mines which we have in the country, because it has been frequently said in South Yorkshire (which is one of the most fiery districts in the country) that it is an outburst. If an explosion takes place, all the talent is brought to bear to trace it to an outburst, something that could not be really prevented and provided for. If that was so then we are never safe, we cannot be safe at all, because of the inexperience that is introduced into mines. It does not matter wherein it be, or how it may be; but if there is an inexperienced man who does not know when the gas comes into the mine and is about him, an explosion may occur even with the Davy lamp being it use.

16,138. I conclude from your experience that if you go with a naked light or go with a Stephenson's lamp the thing is the same, as much danger arises from the one as from the other?—No; I am not condemning the safety lamp, understand me, but what I say is that my opinion is that scores of accidents and explosions have taken place solely on account of depending on the safety lamp instead of depending on proper ventilation. I mean to say that the lamp is good in its place, and I mean to say this, that there are probably mines that would not be safe to be worked without the lamp. The lamps are all right in their place, but when we trust to them further than that, we are all wrong with them.

16,139. That means to say that people put too much faith in the protection of the safety lamp, that the safety lamp will not protect against all dangers, that there must be some ventilation and other means to prevent mischief? But now I gather from you that the safety lamp is a safeguard in many places?—It is a safeguard where there is gas, but even there there are other accidents that take place. I had a great mind to bring a safety lamp from Barnsley to show you the difficulty that there is in keeping the lamp in its place, and the fickleness of the light; it is like a glowworm. They will not allow a man to put the lamp on the floor, or to hang it on the tub by a hook, he must keep it on his thumb the day through. Perhaps for 400 or 500 yards he will have the rails jumping as they do jump, and chucking it up or down. Sometimes he may let it fall, and if he does he is fined for it.

16,140. Will you put it thus: If the safety lamp were not in existence it would be better for the miner?—No, I do not say that. I say that the safety lamp is all very well in its place, and that it never ought to be used except in its place.

16,141. What is its place?—Its place is in fiery mines, no mistake about that, and its place is for the purpose of going and examining places every morning before the workman commences work. Its place is to go in goafs, to go in places where the coal has been cut and examine all that.

16,142. Suppose the morning examination over, would you work then with a naked light. I suppose you do mean to say that the utility of the safety lamp ends there, and that then a man might as well work with a naked light as with the safety lamp?—No, I do not say that exactly, I say that there are mines where they are constantly and rapidly pushing at that rate that there may be such a quantity of gas given off that it may be quite requisite to work with one of these lamps at times. Then there is no doubt that these outbursts which they talk about are blowers of gas. If there is a mine that is given to a good deal of that, blowing off a good deal of gas in different places, it may be requisite there to work with a safety lamp, but it is never requisite to work with a safety lamp except to protect the miner against anything of that kind, and whenever there is gas seen anywhere in the pits, even if there are safety lamps, a man has no business there at all.

16,143. Supposing that you were the guide of the mine, would you say to the men generally, "Use safety lamps," or would you say to the men generally "Do not use them"?—If I had a fiery mine, I must say this, that I should be easier in my mind whether I was the proprietor or the manager if it were worked exclusively with Stephenson's lamp, providing that here was a good ventilation kept up, providing that there were an adequate amount of shafts and air passages and thorough ventilation.

16,144. But supposing it were the case that there was not a good ventilation, would you be more satisfied in your mind with the naked light?—Where there is not good ventilation a human being has no business at all.

16,145. Would you be more satisfied without the safety lamp supposing that the mine were not ventilated?—Not at all.

16,146. Then there is some good in the safety lamp?—There is this good in it; if I am working in a mine where there is not ventilation, the least accident to my lamp, or the least carelessness of a negligent person might bring on an explosion.

16,147. I want to know whether the safety lamp is of any value, you having set out with the statement that it was not. I want to know what sort of value is attributable to the safety lamp?—I must keep clear on this point, because my position and experience are rather important I think as an humble individual. I say that lamps have been relied upon too much, lamps have been placed in mines instead of more shafts and thorough ventilation. So long as a pit has been worked exclusively with safety lamps they

have been dependent on them, and hence the explosions that have occurred at so many of these pits.

16,148. Do not you think that it would be more correct to say that too much dependence had been placed on the safety lamp, that it does good, but that it will not exclude the necessity of thorough ventilation?—Yes, I will put it in that way if you like.

16,149. As you began you said that it was of no use whatever?—I said that the Davy lamp was not a safety lamp at all, no more is it. The Davy lamp will explode if you allow the gas to be in the lamp for a few seconds.

16,150. Then you think that the nation was mistaken when it gave its great approbation to Sir Humphrey Davy for his lamp?—Well, our managers of mines a great many of them prefer going round with one of the Davy lamps to examine the working places, as they can detect the gas much better with it than with the Stephenson lamp; but as to working with it, it is very dangerous to work with.

16,151. (*Mr. Hughes.*) Would not an experienced man working with an open candle detect the presence of gas almost immediately and before it became dangerous, while an inexperienced man would not have sufficient knowledge to do so?—Yes, just so. You can detect the gas from the candle, but I prefer detecting it with the lamp after all.

16,152. (*Mr. Roebuck.*) Would not a common candle blow you up much sooner?—It does not matter whether the gas blows you up with a lamp or a candle, the effect is the same.

16,153. But would it not blow you up sooner with a naked candle?—True, but when an accident happens with the lamp it is not less dangerous than with a naked light.

16,154. Would not that difficulty and danger arise much sooner by the naked light than by the Davy lamp?—Yes, if you work in gas; but the moment you go in the fire damp with the Davy lamp it explodes in it. The heat of the gas burning inside the gauze, the wire gauze gives way, and hence a burst and a naked flame, and hence explosion.

16,155. That is to say, then, the Davy lamp becomes simply a naked lamp, and then it becomes so terribly dangerous. Therefore would you not conclude that common sense tells you that the naked light is far more dangerous than the Davy lamp?—True, but I have worked with a lamp until it became red hot, before I had that experience that I ought to have had. We have had to carry them on our pick points. We have seen them tested frequently, and we have known explosions to take place where they have been working with lamps of that description, and they have taken place when the lamps have been locked, in consequence of the wires becoming so heated the gas has ignited.

16,156. (*Mr. Hughes.*) Are there many fiery mines and dangerous mines in your district?—They are mostly dangerous mines with us in South Yorkshire.

16,157. With proper attention to ventilation, do you believe that they are dangerous to human life in working?—When they depend upon the lamp they are.

16,158. But, given good ventilation, you do not believe that any of these fiery mines are dangerous to work in?—I believe that they will not be dangerous as far as gases are concerned. There is Messrs. Charlesworth's colliery—a colliery drawing about 1,000 tons a day the year round, two pits at Rawmarsh, and I was in them a week since, and I went back in the goaf about 12 feet high in the roof, and I did not find any gas. It is all worked with the naked lights.

16,159. My impression is that Mr. Briggs's men when I was down their colliery all worked with a naked light?—I believe so. They work with naked lights at Rawmarsh and the Barnsley Bed.

16,160. (*Mr. Roebuck.*) Is that a fiery mine?—Yes.

16,161. (*Mr. Hughes.*) Their ventilation is perfect, is it not?—Yes, their ventilation is perfect as far as I could see.

Mr. J. Normansell.

5 May 1868.

16,162. After 1859, when had you the next strike in which your association was concerned?—After 1859 we went on till 1860. There were several places then that were supposed to be underpaid, paid less than the neighbouring collieries in the district, and the association sanctioned a strike at one little place employing about 50 men for the purpose of bringing up the prices to those of the adjoining collieries. Then in the same year the new colliery of Smith, Carr, and Smith, of Strafford Main, was just commencing, and a dispute took place as to what should be the starting price of the new working, and they demanded the prices that were paid, or in fact rather higher than were paid at the adjoining collieries on the ground of their being more difficulties for the colliers. Those men struck in addition to the Men at the small place. Then we had another colliery employing some 200 men under Captain Clark, the Old Silkstone colliery. They were confiscating the men's coal there as they were at the place which I worked at in 1858, and they had a rule to suspend a man a day if he sent up a bad corve or a corve short of weight, or anything of that sort, and to confiscate his tub besides. They had got from that to suspending him three days and they took his corve as well. This the men objected to and they stopped. Then we had three collieries out—Sturges and Paley's, Strafford main, and the Old Silkstone—the two former places being supported by the association for a number of weeks, until at last the owners met and locked the men out of the district to cut off the support of these men on strike. We were locked out about a month; and it ended by the first place—Sturges and Paley's—being paid the same price as the adjoining colliery, and it ended in Smith and Carr's colliery being put to arbitration, and the other men at Old Silkstone turned round and demanded an advance before they would go to work, when the evil that they had struck for was removed.

16,163. Did you back them in that?—We did not.

16,164. The confiscation I understand was abolished, and the masters agreed that the coal should no longer be confiscated in No. 3 strike, but the 200 men said, "Besides that we demand an increase of wages"?—The strike was chiefly over being suspended three days instead of one; and it ended in no confiscation taking place, and that they should be suspended only one day, and then they turned round and wanted an advance; and it was arranged about a fortnight after the lock-out took place that these two places—Sturges and Paley's and Strafford Main—should commence work, as I have named, and when the owners found out that the men at Old Silkstone did not resume work they would not allow the other men in the district to resume work, and the consequence was that we did not give those men a penny from the association, but they stood out for about a fortnight and at last it ended in the old Silkstone men leaving the association altogether, and they were away from it something like four years. Then in 1862 we had another strike that took place at what is called Woolley Edge colliery. The proprietor, I believe, is the solicitor for the West Riding, Mr. Marsden. There was one part where the dirt between the coal and above the coal was of great thickness, and in the other part of the pit it became very thin, and the consequence was that the owner wished to reduce the price for getting this coal on account of the dirt going thinner. The men would agree to having the price reduced where it was thin, but he wanted to reduce the price all over the pit, and the men objected; they said that they would have the price reduced where the labour was gone from it—that is, where it was thin—and a strike ensued, until at last the association gave it up, and we lost that altogether. The result has been that those new men have never joined the association since then. The old hands gave up the strike on account of new hands being imported into the district from Staffordshire and other places, and we have never been near them or asked them to join our

Mr. J. Normansell.

5 May 1868.

association since that time, as we believe that we are better without them than with them.

16,165. What is the next strike after 1862?—In 1863. I myself was thrown out of a situation for seven months. I was locked out for seven months. I was a check weighman at this very place, where I was appointed in 1858, at Jeffcock's, and I was the local leading man, as they termed them with us, over this branch. There was a branch lodge belonging to the association at this colliery, and I was the secretary of it, and I was the check weighman at the pit called No. 1, and they removed the men out of the pit No. 1 to pit No. 2, and when I went to check their accounts at pit No. 2 I was ejected from the weigh-house on several mornings together.

16,166. (*Mr. Roebuck.*) On what ground?—On the ground of not being a person employed on the colliery for the time being. We took out a summons and brought the manager before the magistrates at Barnsley, and the result was that the magistrates decided that I was legally appointed. That was all they said. They charged the owners with the costs, and the decision was that I was legally appointed.

16,167. That you really were a person employed in the colliery?—That I was legally appointed. Those was the only words that they put to their decision. I went back again to commence my duties, and I was ejected again. And I went for five or six mornings together, and was thrown out of the place, and was called a scamp and vagabond for coming there to interrupt them, and all that sort of thing. We took out another summons, and the decision of the magistrates again was that I was legally appointed, but we could not get the costs paid. I should think that I went 17 or 18 times to this weigh-house during this process, and was put out every time. We took out a third time a summons, and took out a distress warrant for the costs. That was not executed, and it ended in the case being brought to the Court of Queen's Bench by a writ of certiorari. And there was nothing but delay after delay; it was put off from one term to another term, and the men were very impatient, and would have struck, but my advice was that they should not strike, and they went on during those seven months. Then it came before the three judges. Sir Fitzroy Kelly was one of our counsel; Mr. Cleasby was another, and Mr. Maule, I think, was another. We had several consultations, and they doubted the decision that would be given by the judges, and they wanted to know what would suit us the best. I said, "Well, we want two things; the men want me re-instated at their weighing-machine as their weighman; and the miners of the country generally want the law tested." "Well," Sir Fitzroy Kelly said, "we know what the law is without any test at all, and we had better not risk any test at all, but if we can get you back by a compromise, you will be much more comfortable to work than forcing yourself back—that is, you paying your own costs; they doing the same, and they recognizing your former privileges. If they do that, will you agree to it?" I said, "Well, we have employed you three legal advisers, and we must abide by that which you think will be the best, and I will take your decision, but the men will not be suited unless I get back again." It came on for hearing for an hour, and was then adjourned for a fortnight, and when it came on again this proposition was made, and the court accepted it. Mr. Baxter, the parliamentary solicitor, was one of the proprietors of the place. The judge asked what they had against me. Mr. Bovill, I think it was, said that I was the leading man of a powerful organization at the colliery, and they could not very well carry out any rules or regulations with reference to putting this Act into force with my interference, and they thought that they should be better without me than with me. He said, Well, if that was all that they had against me they had better let me go back on Sir Fitzroy Kelly's terms. I went back, and stopped for a short time, and was never more comfortable in my life. I had the privilege of adjusting all the three weighing machines at the colliery, and we have never had anything the matter since. We have had disputes since, but that seems to have settled the weiging question in South Yorkshire. We have never had another question arise out the principle. I was about the first check-weigh man who was attempted to be ejected, and about the first who was put on as a check-weigh man in 1859, and the principle has grown, until we have now 40 check-weigh men in the district, paid by the men, and we are working well upon that principle.

16,168. Was there any other strike?—In 1864 the Oaks Colliery men struck. They left the union in about two years after the strike in 1858. They kept their own money at home, and invested their own funds, and when they had got 100*l.* together they agreed to draw it out of the bank, and divide it. The result was that the men who were sent to draw it ran away with it, but they were caught. The men at that colliery then came back to the association, and the moment that they came back they had many grievances to complain about, and they wanted to strike. The association said, "You "have brought on your grievances through your own "carelessness, and must bear with them until we "think that the time has come for you to have them "set right." The result was that they struck themselves without the sanction of the union.

16,169. (*Mr. Booth.*) What for?—For an advance of wages, about 4*d.* per dozen advance, a little over a $\frac{1}{2}$*d.* a ton, and little odd matters besides. We had another little colliery in the district at which the association sanctioned a strike for an advance of wages, on account of being lower than their neighbours. These two places caused a lock-out again in 1864, and the owners locked out 3,000 of us, and there were only 1,000 of them that were connected with the union. The masters locked out their men because they were in the masters' association. This strike lasted 19 weeks, and I was one of them, and I and my family had not more than 5*s.* 6*d.* a week for 19 weeks; I was one of the leaders, but I just received equal pay with the others. We fought more against the principle of locking-out than against anything else; we thought that if we could kill the policy of locking-out we should do a good thing, and we did. They allowed us to resume work, and the Oaks strike ended in a compromise, and the men at the other colliery got their terms, and we have been at peace ever since that strike, with the exception of Mr. Chambers's place, which I will come to presently. I may say at this stage, that we went on till the year 1865, when there came on a general prosperity of the trade throughout the country. That occurred in the latter part of 1864 and the commencement of 1865, and the Lancashire men got twice 10 per cent., and other districts got similar advances; the trades generally of the country got a rise, and provisions rose, and everything suggested to the minds of our men that they ought to have a little advance. During this time the association had augmented in numbers considerably to what it had been before. We thought that we would make a general demand for an advance, and we sent offers to the employers throughout the district; at least we sent it to each branch, and each branch sent it on to the proprietors of their collieries. This was the offer:—

"Gentlemen,

"Your workmen after waiting a considerable "time in the expectation that an advance of wages "would be offered to them, and wishing such advance "to emanate from you, find themselves under the "necessity of making this application, having full "confidence that such request will be cheerfully "acceded to. The advance of wages that has taken "place in nearly all branches of labour during the "present season, and the advances that have taken "place (from time to time) in the article we produce, "together with the high price of provisions, renders "it necessary that an advance of wages should be

" granted, thereby allowing us to reap some share of " the increasing prosperity of the country. Under " these circumstances we ask that an advance of 10 " per cent. be given to all your workmen in or about " the mine or colliery, requesting the said advance to " be paid on the first pay-day in November 1865, and " awaiting your answer, for which a deputation will " wait upon you on Thursday, October 26th 1865,

" We remain, most respectfully,

" YOUR WORKMEN."

The owners met together and the only answer that we got from them was through the newspapers. It was merely a short paragraph that got into the newspaper. There was no official signature to it, and it was not even directed to the miners. After that this circular was sent in :—

" To the executive and members of the Barnsley " District Coal Masters Association.

" Gentlemen, Barnsley, November 16th.

" At a very numerous, unanimous, and important meeting of the miners' delegates, held at " Wombell, last evening, the present trade prosperity " and the social progress of this district was duly and " prominently represented. That the present relations " of supply and demand justifies the claim of a 10 per " cent. advance upon all wages, and that the working " miners ought to share in the prosperity, and should " be benefited proportionately to the growth of trade " and wealth of society, was not discussed at length. " It was affirmed as not needing discussion. With a " view, therefore, of harmonizing the present disturbed " relations of capital and labour, and of settling satisfactory the present contentions, the executives of " the operative miners have respectively to request an " interview with the masters' association, or their " executive, for the purpose of submitting propositions " and a course of action, what they hope will prove " alike and mutually advantageous.

" I am, gentlemen,

" Yours very respectfully,

" JOHN NORMANSELL,

" Secretary.

" P.S. Saturday or Monday next, at your own time " and place, will be convenient to us, and an early " intimation of a meeting will be duly attended to, " and greatly oblige.—J. N."

Then followed this : " To A copy of the above " circular having been forwarded to the Chairman and " Secretary of the late meeting of the Coal Masters' " Association, it is respectfully placed before you for " the object of speedy and especial information, in the " belief it may prove advantageous at the present " crisis.—Most respectfully, &c., John Normansell." —After the second circular a sufficient time elapsing, they did not meet the men nor the executive of the association either. Then we had a very large meeting after our local meetings, and the men were determined to fight for an advance, that they thought they ought to have, in some way or other, and the way of getting it was this : instead of striking we restricted the output which Mr. Chambers referred to in his evidence the other day. Instead of sending as much out as we could in eight hours per day, we reduced every man's output to 3*s.* a day ; they passed a resolution among themselves not to earn more than 3*s.* a day.

16,170. (*Lord Elcho.*) As an equivalent to how many hours' work ?—Some would have done it in three and some in four hours—some would have perhaps taken five, but they stopped in the whole of the hours.

16,171. They did not work hard you mean ?—They did not work hard—they took it easy, and only sent up so many corves. It operated in this way, that the output throughout the whole district was brought down to one-half, or nearly so. The owners outside the masters association give the men 5 per cent. and weekly payments on condition that if we got 10 per cent. in the district they would give it also. Well, it kept going on like this till the masters in the association began to give it, and then we kept on six weeks until it was all given, with the exception of Mr. John Chambers's colliery, 5 per cent. and weekly pays, instead of 10 per cent. and fortnightly pays, Mr. Chambers wished to give it in his own way, to those men and in those places he thought proper. The men objected to this, and the consequence was that instead of allowing them to make that restriction he shut up his pits. He stated that there was a strike here, but he merely shut up his pits because they restricted their labour for 3*s.* a day. This state of things went on for about 10 months. The men were all out. It cost the association 5,000*l.* to support them, and his reason for doing this was that he would not meet the association at all, and he did not meet it in the outset, and treated the men in the manner the employers of the district had treated these circulars. We could do nothing else than take the men's statements and act upon it, as he refused to meet the association. The result was that after spending all this money he put it on just as he was asked to put it on at the first. Some men were getting 7*s.*, some 5*s.*, and some 4*s.* per day. He said and he proposed putting as much as 12½ per cent. on the wages of some workmen and nothing on others, which we, as the association of the workmen, altogether considered was very unfair, because the man getting his 7*s.* a day might be in no better place than the man getting his 4*s.* a day, and we thought it wrong that all this ability and physical power must not reap any advantage in the country over those who were careless. So we asked it for the man who got 8*s.* as well as for the man who got 4*s.*

16,172. (*Mr. Hughes.*) So you have no jealousy of superior skill and strength, but you allow them to make the most they can ?—To make the most they can in their eight hours.

16,173. The result was that you obtained what you considered equivalent to your demand, in fact ?—Yes ; and I may say this—Mr. Chambers said many a time that he would neither meet me nor the association as long as he lived; and it was settled with the association—he did not settle with the men at all.

16,174. It was settled, you mean, with the officers of the association ?—Yes.

16,175. Have you told us all the grounds upon which you thought that the 10 per cent. rise was fair ? As near as I can ; the circular states the grounds.

16,176. (*Lord Elcho.*) The circular states the grounds, but how did you make it out that those grounds as stated by you were sound ?—All the wages of all the workmen all over the country were going up more or less in every district nearly. The Lancashire miners had gone up 20 per cent., and the West Yorkshire miners had also gone up, and most of the other trades, and the miners in most of the districts had gone up without much contention, and there was a great demand for labour and for the article that we produced and a general rise for provisions as well.

16,177. We have heard that in the Wigan district, though the retail price was easily ascertained, yet as to the wholesale price, there was a great difficulty in the workmen, even if they wished to ascertain it, finding out what it was. I wished to know whether in Yorkshire, in your district, there are any facilities for ascertaining that fact which do not exist in Lancashire ?—There were our own local consumers we applied to, and coals had been advanced to them as much as 2*s.* a ton.

16,178. In the retail trade ?—In the Barnsley trade. And in the London market the employers acknowledged that they had advanced 2*s.* or 3*s.* a ton.

16,179. Did you ascertain that ?—Yes ; I got the London papers, and wrote down to friends here who found that it was the fact.

16,180. You only made the demand for the advance when you had satisfied yourselves on what you considered sufficient and reliable information that those demands were justifiable under the circumstances ?—Yes, we satisfied ourselves before we made the demand.

16,181. (*Mr. Hughes.*) What restrictions does your association enforce on its members as to hours ?—All

Mr. J. Normansell.

5 May 1868.

the restriction we have is simply confined to the hours—eight hours per day. We have no rule in the association to say that a man shall not work longer than eight hours per day, but it is an understanding among us that eight hours is a recognized day's work, and we say to a man that he should leave at the eight hours whether he has done or not—whether he gets what he thinks he ought to get or not.

16,182. Is that generally accepted by the men?—Yes, generally, or some men would stop in 13 or 14 hours if it were not for that restriction.

16,183. Why do you think that a good arrangement?—Because it induces steadier habits among the men, and it causes them to get more money than if they were working longer hours. I may say this, that my experience has enabled me to know that we have more coals put out of the pits in eight hours in South Yorkshire than ever we had previously in 12 or 14 hours, and more money got, and better arrangements in every respect whatsoever. We have better winding gear, better roads, better discipline, better management, and better everything about the concern. As far as the wage question is concerned, I have seen men go to their work at five o'clock in the morning and half-past five, and I have seen them lie down until nine o'clock in the morning and doing nothing at all, and then they have got up, and when they have got themselves warm, wanted to get as much money as myself who commenced at six, and they have stayed in till five or six in the evening, and the consequence is that they are taxing the energies and time of other people. There are probably 50 boys in a pit, little boys from 10 to 12 or 14 years of age, driving horses, opening and shutting doors and so on, all paid by the day, and they have to work till all these men have done.

16,184. Do they work the same time as the men?—They have to work a little longer than the men, because they have to empty all the corves of the men. If these men were allowed to stop until four it would be six when these boys had finished, so that we ask them to give up earlier that they may liberate 50 people beside themselves. They have lain down in the pit perhaps three hours, and then began again when night comes on.

16,185. Do you think that this system which you advocate entails any serious additional expense upon the masters?—Very little. It amply repays it in other ways if it does entail any. There might be a little point that wants attending to such as an extra boy or or an extra man. But we always find that when a boy goes to his work at six in the morning and knows that he is to be liberated at two in the afternoon, he is willing; it is a short race, and every one is attentive.

16,186. You are sure that the system is thoroughly acceptable to the men in the district?—Yes; and to the masters too. I believe they are perfectly satisfied, every one of them that are in the association, on that point.

16,187. Can you speak as to the improvement of the men since the association has been formed on its present basis?—The men are much better in a social position than they were before, particularly for this last three or four years. You see a gradual change in them; so much so that last September it was a common remark by the inhabitants of Barnsley that there were rapid strides taking place among the miners. We brought 20,000 people into Barnsley, and there was not a single drunken case before the magistrates, and not a single robbery or report of any kind.

16,188. (*Lord Elcho.*) On what occasion did you bring these 20,000 people into the neighbourhood?—At a large demonstration of the miners.

16,189. A meeting of the association?—A meeting of the association; a procession of about 8,000 miners connected with the association. It was brought up to 20,000 by wives and sweethearts, and so on. I went to the superintendent of the police the next morning, and he told me that he had not had a single case before him.

16,190. (*Mr. Hughes.*) Did he employ an extra number of police?—We ourselves asked for about eight just to help us to keep out the crowd from the procession.

16,191. The authorities did not think any unusual police force necessary?—No.

16,192. (*Mr. Booth.*) Was the object of that demonstration to show your strength?—To bring our objects more prominently before the members of the association.

16,193. How are those objects displayed on such an occasion?—By myself and others. I read them the annual report and tell them what has been going on during the past year; and we support something like 140 widows; they are rather lessening now.

16,194. Do you mean that the report is read to the meeting?—Yes, and the principles of the association are laid before them by myself and other leading men of different associations throughout the country. We had one thing, for instance, brought before them on this last occasion. We had all the Oaks widows in the procession. Some men objected to contributing to the widows' fund generally, but when they saw that we could bring 140 widows, all respectable and not supported by the parish, it made them feel differently.

16,195. Had you a special levy to provide for the widows in the Oaks accident?—We had a special levy to meet the death claims. We levied 5*s.* per member to pay about 3,000*l.* in death claims.

16,196. In your opinion, the habits of sobriety and order which enabled you last year to have this gathering without a single case of drunkenness, or impropriety of any kind, have been materially fostered by the association?—Yes. The men in the local branches meet together regularly once a fortnight, or once a week if it is needed, and we always make it a point to get the most respectable men at the head of affairs at the local branches for local secretaries and treasurers and all those officials, and they have a great influence over the men in this direction, and out of 45 branches which we have got in the association, I do not think that there are three where beer is allowed to come into the room, or where any swearing is allowed, or anything of the kind during business hours.

16,197. What measures do you take to prevent fraud?—We have had two or three cases of fraud and embezzlement, and in one case the man got six months imprisonment, and that has had a great effect over them ever since. We have local treasurers, and each local treasurer signs the agreement which I hold in my hand, and which I will put in.

16,198. You have found that sufficient hitherto?—We have never had a case to the contrary since. Then in transferring the money from the local branches to the general association we have cheques, the man that signs this cheque takes the cheque with him. We have this form of cheque (*handing it in*) for the man to present.

16,199. Have you thought about the subject of any change of the laws as respects the rules or funds?—We have thought a good deal about the legalization of trades unions and all that sort of thing that has been talked about by other trades for this last twelvemonth or two years, but the only conclusion that we have come to as a miners' association in South Yorkshire is that if our funds are protected that is all we desire; that is to say that you should not allow them to be run away with by any fraudulent person.

16,200. (*Lord Elcho.*) Do you mean protection for the whole of your funds?—Yes.

16,201. Whether for trade purposes or for benefit purposes?—Yes, we ask for protection for these funds and we think that is all that is necessary.

16,202. (*Mr. Hughes.*) I suppose you would not consent to any division of your funds into trade funds and benefit funds; you would not consent to have your society broken up into a purely friendly society and a purely trade society?—I may say that now we have the sick and accident fund entirely apart from the labour fund.

16,203. Still the society is distinctly one?—The society is distinctly one.

16,204. And when you make a levy, supposing your funds fall low in the event of a trade dispute, you make

it upon subscribers to the accident fund and to the trade fund, alike upon every body?—Just so.

16,205. And you would not consent to have that privilege taken away from you?—No, I think that if the benevolent fund is protected the other funds ought to be protected as well, because we consider that one gives help to the other.

16,206. (*Mr. Booth.*) But you do not object to keeping distinct accounts of the expenditure for each of the two funds?—We have no objection to keep an account of every penny expended in its true colour.

16,207. (*Mr. Hughes.*) You do that at present?—Yes.

16,208. Is that done in other large societies?—Yes.

16,209. Have you seen the yearly report which has come out the last two or three days of the carpenters and joiners' society?—I have not seen it.

16,210. You are aware that there you can see how every penny has been expended?—Yes.

16,211. Are there any truck practices still in your district?—No, we have no truck practice at all.

16,212. How long has truck disappeared from the South Yorkshire district?—There was a little of it when the association commenced, but very little. We may say that there is one place where it is practised a little, but it is not within the borders of the association. We have a little colliery adjoining Barnsley that is on strike now. Out of about 40 men there are only nine connected with the association, and a manager has a shop there, and the last money that one of the men should have drawn the manager stopped it for provisions. He had 1*l.* 0*s.* 6*d.* to draw and the manager stopped it; that is about a fortnight ago.

16,213. You have lately agreed to a reduction in that district, have you not?—We have just agreed to five per cent. reduction.

16,214. That has been agreed to without any dispute whatever, or at least without any lock-out or strike?—Yes, I will state how that has been brought about. The first intimation we got of it was from Mr. John Chambers; he takes generally a leading place in the Masters' Association.

16,215. Is that the Mr. Chambers whom you named in the strike of 1864?—Yes, the same Mr. Chambers.

16,216. Which strike cost the association 5,000*l.*?—Yes. He takes a leading part in the Coal Owners' Association. He is generally the chairman, and he first wrote to me as the officer of the association about it some months ago. This is the correspondence that took place. On the 19th February Mr. Chambers wrote to me the following letter:—"Sir, The country through-
"out is, as you know, overtaken with an unprece-
"dented bad trade (*i.e.*, for several years past). We
"have been compelled to meet the difficulty by con-
"ceding from 10 to 20 per cent. in the price of
"coal and iron. We therefore ask the working
"men to concede 10 per cent. in wages, and to do it
"promptly and cheerfully. By so doing they will obtain
"the good opinion of both masters and the public and
"gain more money than by being short of employment.
"Iron has been going down for the past six months,
"and coal and coke has been settled from the first of
"January. With a reduction of 10 per cent. we will
"engage to give an average of four days per week
"except something happens that we cannot see nor
"control—I am sir, yours truly, JOHN CHAMBERS."
To that letter I sent the following reply on the 25th of February:—"Sir, Your letter of the 19th inst., requesting
"the workmen to submit to a reduction of 10 per cent.
"in their wages would have been answered sooner,
"but the importance of the subject and the great
"responsibility involved in the question have been
"such that I felt myself compelled to take the liberty
"of laying it before our executive previous to replying,
"which I have done this evening. 'Our executive do
"not for one moment call in question the accuracy of
"your statement regarding the slackness of trade, but
"at the same time cannot see the soundness of the
"policy in reducing wages to mend it. You will be
"aware that the miners' wages in South Yorkshire
"have seldom or never been ruled by the price of coals
"in the market. Two years ago when applying for an
"advance on that ground the greatest difficulty was
"experienced in obtaining it, and after a deal of
"unpleasantness the men only succeeded in getting
"5 per cent. Since that time the miners of Lanca-
"shire have been advanced on one or two occasions,
"and our executive have had the greatest difficulty
"in restraining the men from demanding advances in
"consequence. The advice given to the men was 'Stay
"'where you are; the markets will come down, and a
"'settled steady policy will be found better in the end.'
"We are sorry to see the markets have come down in
"some instances, but having remained stationary when
"they advanced, and when other districts were
"advancing, we are afraid it would disturb the
"harmony of the district to attempt to enforce a
"reduction, and could only tend to cause counter
"demands when trade became better and the price of
"coals advanced the least in the market. The
"executive therefore most earnestly recommend you
"not to press your request, but respectfully commend
"to your notice their desire to keep more on a
"stationary principle than the fluctuations in the
"market prices of coals, as they believe nothing is
"calculated to cause more jealousy, strife, and
"contention between the employers and workmen in
"this district. I am sir, yours respectfully, JOHN
"NORMANSELL."

16,217. (*Chairman.*) That proposal of Mr. Chambers's was not acceded to. What happened then?—They did not attempt anything further on that till about three weeks ago. The coal owners had several meetings, and at last it was arranged among them that they should call their men together, and tell them the state of the country generally, and ask them to submit to a 5 per cent. reduction, and they did so. The various branches brought it before the general association, and the delegates from the various branches passed a resolution recommending the members to accept it.

16,218. (*Mr. Hughes.*) Has it been accepted?—It has been accepted, and will commence on Thursday. This is the resolution agreeing to accept the reduction. "South Yorkshire Miners' Association. To the proprietors of the colliery. Gentlemen, With a view of preventing any misunderstanding between you and your workmen on the question of the 5 per cent. reduction, the council of the association, together with your own men, have agreed to lay the resolutions passed on the 27th April, before you, which is as follows:—'That the request of a large number of employers, for a reduction of 5 per cent. in the wages of the workmen, having been discussed by the delegates present, and the question having been considered in every possible way, it is the opinion of this council, that it would be against the true interest of the men and of the association in general to resist the same. The council, therefore, agree to accept the reduction at every place where asked for, being convinced by so doing, the interest of both employer and employed, in this important district, will be best served. And that the reduction commence on and after Thursday or Friday, the 7th or 8th days of May next, on either of which day the pay commences.' Your workmen in accepting the reduction have every confidence that it may be the means of continuing the present amicable relations between both parties for the benefit of all concerned, and respectfully desire to place before you the case of the boys now receiving 1*s.* per day, in the hope that you may be able to make an exception in their favour. By order of the miners' council, J. Normansell, April 27th, 1868. On behalf of your workmen."

16,219. Since you have been connected with the trade society, have you ever known an advance in wages given when there has been a rise in prices without a demand from the men?—Not generally. We have had demands made in local places for

Mr. J. Normansell.

5 May 1868.

advances on what we call bad work. I do not know that there is any branch of trade that has so many variations in it as the miners' trade. You have places sometimes in which you cannot get a living at the ordinary prices paid in the pit, and then you have to ask for a little addition, and then difficulties come in which you could not foresee. In those cases they have conceded a little, but never a general advance without the power of the association.

16,220. (*Mr. Booth.*) When you say "without the power of the association," how is that power shown?—It has been shown on one occasion which I have mentioned by restriction, reducing the out-put, as well as strikes.

16,221. Do you mean that there has never been an advance in wages without a strike?—That 5 per cent. and weekly pays is all the general advance we have obtained since the union was established.

16,222. And that you got by the power of the union?—Yes.

16,223. (*Mr. Hughes.*) Then it is not the case in your district, as we have heard it is elsewhere, that wages have risen within the last ten years from 20 per cent. to 30 per cent.?—The wages have risen, but the prices have not risen. You may have a good price per ton for your coal but it may give you very low wages, but we take means to secure the price that we bargain for by weighing the coal on the pit's bank, and wages have been made good by that means.

16,224. (*Lord Elcho.*) When you got that 5 per cent. rise in 1865, do you know if there was any corresponding rise in your district at collieries where the men did not belong to the union or generally throughout the country?—No, the men that do not belong to the union always wait for the association, and always have done so. For instance, here at Earl Fitzwilliam's colliery, at the time when we were agitating for 10 per cent. I saw scores of them; they said: "Go on, Normansell, do anything to restrict; we shall get it after you," and they did.

16,225. Have you known any case, where there was a brisk trade, of a rise taking place at non-union collieries before it was got through you?—Not in our district.

16,226. You heard Mr. Pickard say that in his district, where they were struggling for 10 per cent. in the union, non-union collieries gave a rise of 5 per cent., on the understanding that if the union subsequently succeeded in getting a rise of 10 per cent. another 5 per cent. should be given to the non-unionists also?—Yes, I heard that, but all the collieries in our district are guided by the union entirely, up or down.

16,227. (*Mr. Hughes.*) Will you explain to us the weighing system. You have your own men, I understand, to weigh at the pit's mouth for you?—Yes, when I came into this position I think we had about eight. We had no check weighman at all when the association was formed. After it was formed we began to agitate for those weighing machines and men to attend to them, and up to 1864 we only succeeded in getting eight men on. They had no power, but the result was that they were merely nonentities, and several of them went off again. We have gone on and gone on until now we have 40 check weighmen on the pit hills, and all paid by the men.

16,228. (*Lord Elcho.*) How many machines have you?—One weighing machine to each man; there are a few of the men that are satisfied without check weighmen.

16,229. (*Mr. Hughes.*) Do you have a separate weighing machine?—No, one weighing machine, and the employers have a man to attend to it and we have one.

16,230. Then, of course, the corve is considered sufficient unless the master's weighman objects?—All that he has to do when the corve comes on the machine is to weigh it, and if the check weighman thinks that he is not weighing it honestly he says, "Now oblige me by weighing it again." It is brought back if it has gone off the machine and is weighed again, and each of them enters it in his book, and the accounts are checked over every night.

16,231. (*Mr. Booth.*) Does it often happen that there are disputes about the weighing?—Very seldom now; it used to be so before we got the thing into the shape it is now. The law is very imperfect in this matter; it is not the law that gives us justice in this, it is our association that does it. The law says that it shall be "truly weighed," and that is all it does say, but it does not say how it shall be truly weighed. It says immediately after that the check weighman shall not be allowed to interfere, and they may construe anything into interference.

16,232. What alteration in the law would you suggest?—I would say, put it under the Weights and Measures Acts, the same as anything else bought or sold, and let inspectors be there to test the machines when called upon, or to decide upon any matters of dispute which arise without resorting to a strike.

16,233. (*Mr. Hughes.*) But if you had a Government officer there constantly as an inspector of weights and measures that would add to the expense immensely?—But if he were under the Government Act we should only have to bear a portion of that, the same as with the weights and measures now. You can have weighing machines now, but yet the coal may not be truly weighed.

16,234. The present inspectors can take a considerable district in their day's work, and go round, and go into the works and test weights and measures, and go out again when they have done their duty, but in your case, as a rule, the inspector will be in one place a whole day?—No; he might be called upon once in six months.

16,235. You mean only as an arbitrator?—The check weighman may see that it presses upon his his fellow-men. A weighing machine gets wrong, and we know that it is wrong, but we have no power to put it right.

16,236. You wish for right to appeal, whenever your check weighman thinks the scales are wrong, to the inspector of the district, that he may come and test the weighing machine as other scales and weights are tested?—Yes.

16,237. (*Mr. Booth.*) Who pays the expense of the weighing machine?—The owner places the weighing machine down.

16,238. You think there is no security that the machine shall be a fair one?—There is security by our own experience and knowledge. Then if there is anything disputed we have got a position, and we can at once depute some men to the owners and bring the fact before them that it is wrong, and before they will enter into a collision with the miners they will put it right.

16,239. You mean that there would be a strike if they did not?—Yes, if we thought the machine was wrong and could not get it right by any other means we should strike.

16,240. Have you any reason to suppose that the masters on any occasion have refused to put a machine right under those circumstances?—Yes, we have an instance now of a place where we had no machine at all about eight or nine months ago, and the men themselves locally appealed to their owner to have a weighing machine put down and get them paid by weight, and he kept saying that it was to his interest to have a weighing machine and he would have one. They went on in this way for four months and then they brought the case to our association. Our association sent me to him to say that it was the rule of the district and they hoped he would put it down. He tampered with it two months, and at last the men put in a month's notice to leave the place because he would not put down the weighing machine. They had six months of that moral suasion which Mr. Roebuck talks about, and then after their sending me still he did not do it. We sanctioned the men putting in the notice. When they had worked a fortnight on the notice the weighing machine came and was put on the pit's bank; so the men thought that there were

some signs of the machine being used. It was never touched at all, however, and the men went to him at the end of the month and said: "We do not want to "strike. If you will give us any definite time when "it shall be ready we will go on." "Well," he says, "in a fortnight from now I shall have it all ready for "you," and they went on another fortnight and it had never been touched or had only had some little thing done to it. They brought their tools out and were out four days, and then it was put down.

16,241–2. Can you tell us what colliery that was?—In that case we should never, without a strike, have had a weighing machine put down. Then Mr. Cooper referred to advances having been got at his place time after time. Well, as to all the advances got at Mr. Cooper's colliery, there the bad work would come in. We appealed to him frequently to know if they were to get compensation or allowances on this bad work. On one occasion we tampered with him, if I may call it so, that is to say, we tried for three months. He admitted that they ought to have something, but would not give what was asked for three months. We kept saying to the men, "Keep still now, do not "attempt to set the pit idle or strike." There was something belonging to the weight question as well. I went to him and said, "Now, Mr. Cooper, "our association have sent me once more, and we "hope that these matters complained of so long will "now be set right," and he began to search his wages book out to prove the scale of wages. "Now we can "do no more, we shall leave the men in your hands." The next morning the men played, and then he gave them all that they wanted, and they said, "Now, Normansell, we told you we must stop the pit to get a settlement." They had tried three months in vain; they stopped one day and they got all they asked for.

16,243. (*Mr. Hughes.*) However, that is an exceptional case now; you find that the masters are very reasonable in your district in doing what the association thinks right?—The great bulk of them are very reasonable, and I may say, it is through the association and meeting each other on one common platform as it were, and discussing the questions, and the great bulk of owners now say that they would rather treat with the association than the men; they find us more reasonable as an association. But we have spent hundreds and thousands of pounds over disputes that might have been prevented by proper negociation between the men and the association and the masters. Formerly we always had to fight on the men's statement alone; but now when the men come to us with a statement we always take means to ascertain the other side of the question, and try if we cannot meet and reconcile the matter in dispute in the best way possible. If the law on weighing were altered to-morrow, and made in the best way possible, I do not think it would do without our association, because it can be set at defiance if there is not some power and supervision on behalf of the men there.

16,244. (*Lord Elcho.*) In what way do you wish the law altered?—We want to have the weighman from where we think he will suit. We do not want to be confined to the pit for a check weighman. There is many a good man at 20*s.* a week that has had a good education or a moderate education that would suit to be a check weighman perhaps better than any man in the pit, but we cannot bring him at present if he does not belong to the pit.

16,245. (*Mr. Booth.*) Would you propose to allow the master to have any voice in the appointment of the check weighman?—There might be isolated instances. I am not prepared to say but there would where the men might attempt to put a man on. That perhaps would not be preferable for many reasons; for instance, where there are 50 or 60 men in the pit I have known an odd case or so where they have attempted to put on the man that would be most unreasonable and objectionable. We had a case not many weeks ago where I talked to the men frequently about it. I knew he was not a proper person when appointed, but he was the men's choice.

16,246. In case of dispute between the master and the men on the appointment of a check weighman, would there be any objection to allowing the matter in those contested cases to be decided by a magistrate?—It might be so. We should not care in whose hands the appointment was; if the owner could point out that he was a dishonest man we should have no objection then to put it to anyone. But the greatest objection the owners have is that they have been afraid of leaders coming from different parts of the country, or leaders out of the pit, prominent members in the union, becoming check weighmen.

16,247. Would it not be a reasonable thing on the part of the men to avoid such an appointment if they think it objectionable to the master?—The men naturally look to those who serve them the best. For instance, they thought that I served them the best, and all the owners had against me was that I was a leader of the trade union.

16,248. They did not object to your being appointed?—They objected as much as this, that they kept me out of the weigh box seven months and brought us to the Queen's Bench, and it cost us some hundreds of pounds besides the contention. Although we are bound to be employed for the time being to be eligible for check weighmen, the moment we have served a notice to leave we are out of his employ, and we cannot become check weighmen, and it is only by his consent now that we can have a man out of the pit. The master allows him to come without notice in many instances.

16,249. (*Lord Elcho.*) Who pays him?—The men pay him.

16,250. Do they pay him what he would earn naturally in the pit?—They go from 33*s.* a week down to about a pound. We have paid this last eleven months 2,500*l.* to check weighmen.

16,251. Out of the funds of your association?—Each pit subscribes for that purpose.

16,252. (*Mr. Hughes.*) The association funds are not devoted to that purpose?—It is a matter under the association.

16,253. (*Lord Elcho.*) How is the money raised for the check weighman?—It is attached to some of the other funds, and some of them have a local committee just to take that money alone.

16,254. When it is attached to other funds, what other funds is it attached to?—It is taken through the contribution books, where they pay 1*s.* 6*d.* a fortnight.

16,255. Where an association is divided for trade purposes and benefit purposes, does it appear under one of those heads or under a special head?—If I pay 1*s.* 6*d.* a fortnight, that is the regular contribution to the association for the accident fund as well as the general one; but if the coal miner has to pay his quota to support the weighman he has an additional 6*d.* per week to pay for the weighman's wages and books, which altogether amounts to 2*s.* 6*d.* per fortnight where the weighing principle is upheld. In the first place there is 6*d.* set apart for the local benefits per fortnight, 1*s.* for the general fund, and the third case is where the weighman has to be paid. Then there are cases where a man will consent to the weighman deducting from his week's coal one corve, a tub of coal amounting to about 6*d.*, and delivering in the money himself.

16,256. Is that done by the persons employed at the office of the colliery, or done by a committee or by somebody representing the miners' association working at that pit?—Each collier has a token to recognize his own corve and the amount he has sent, and if the check weighman requires 30*s.* per week he takes so many tubs of coal off each man in the pit for the week, and books him as though he got them himself to the number, and the employer pays the amount over to a small committee and treasurer to receive it; they prefer it, some of them, in that way. It is done with the entire sanction of the men. The owner does it to oblige them.

16,257. Are there any check weighmen at collieries

Mr. Normansell. 5 May 1868.

where there are no union men?—There are very few collieries in the neighbourhood where there are not union men. At Earl Fitzwilliam's colliery there are not union men.

16,258. Have they any check weighman there?—No.

16,259. (*Mr. Hughes.*) How is it that they are not in the union?—They joined us in 1858, a portion of them, when they got notice of a 5 per cent. reduction, and they struck, and the association took hundreds of them without paying a penny to the association. They supported them over six or nine weeks, and spent about 3,000*l.* over them, and they lost and had to submit, and they have never joined us since.

16,260. (*Lord Elcho.*) How many men are employed there?—Probably 1,000 altogether. His lordship's agent discourages the union. For instance, they give 5*s.* a week to the widows of all the members that get killed, and 1*s.* a head for each child under 12 years of age, and we have some few men at Earl Fitzwilliam's belonging to the association that have been in ever since 1858 and paid as private members. It so happens that two of the members have got killed within a few months, and they have come under this rule of ours, and it appears that his lordship gives 2*s.* 6*d.* to the widows of his miners if they lose their lives in his service and their home coals. One of these widows told me that she had applied for the 2*s.* 6*d.* a week the same as the other widows have got and his lordship's agent said he understood that her husband was in the miners' union and she was getting 8*s.* a week from it, and she would not have a single penny from his lordship's fund, and he would have discharged the man long ago, he said, if he had known it.

16,261. Was it a known rule at Lord Fitzwilliam's colliery that Lord Fitzwilliam did not employ union men, and that it was because he believed them to be non-union men that they were employed?—I do not know how far his lordship is responsible for this, but his agent has often said to the men that if they belonged to the union they would have to go away.

16,262. Whether it is Lord Fitzwilliam or his agent, is it known in Yorkshire that the system at those pits is that only non-union men are employed?—When they go to ask for a place there they do not introduce the union question to them at all, I believe. There are very few men in the union that go there.

16,263. Why do they not go there?—They prefer stopping when there are union men.

16,264. Then they show by not going there that they are aware that there are no union men employed?—They know there is no union, and that there are some very long hours in the pits, and confiscations.

16,265. (*Mr. Booth.*) Has Lord Fitzwilliam difficulty in getting men?—He has no difficulty in getting men, and very few of the owners have any difficulty in the district in getting men. No matter what the regulations and rules are they have no difficulty, but they do not stop long. They employ as many as 100 strange men in a week at some non-union pits. Many a hundred yards of our roads are driven by fresh comers at less price than the old hands will drive them at.

16,266. Notwithstanding that, he has no difficulty in getting the men that he requires?—Coal is coal, and it does not matter what sort of a man it is that gets it; any sort of man that can get coal is allowed to, and he is paid for nothing but what he does get. A non-union employer will take any sort of men on, no matter what sort they are, straight out of the farmyard, wherever they are from, if he can get them to do anything in the pit.

16,267. I suppose that the agents who act for him are satisfied that the men so taken on are capable of doing the work?—I must say that Earl Fitzwilliam's men are men that do not run about a great deal.

16,268. The agents are the proper persons to judge what men they should take?—They ought to be the proper persons to judge, but they want to set men on irrespective of what the man is; the Earl Fitzwilliam's men are more stationary than what they are at the place I referred to just now. For instance, he provides them with a very good house, and allows them a good deal of land very cheap, and they make up a nice living out of the land and one way and another. That keeps them at the place.

16,269. (*Lord Elcho.*) Have they lower wages than at other places?—I believe that they have lower wages than at other places; I am always told so when I go among them.

16,270. Still they remain there and do not join the union?—Still they remain there and do not join the union.

16,271. (*Mr. Booth.*) There is no difficulty in getting a sufficient supply of those men?—No difficulty that I am aware of.

16,272. (*Lord Elcho.*) Then how do they account for remaining at a place where their wages are low?—I have heard many of them say this, that if it were not for their house and garden they would go somewhere else to work.

16,273. That is part of their wages, I suppose? Having a better house and other circumstances in their favour, they think that on the whole they are as well off there as they would be anywhere else, and they remain?—That is so, they are located there and their domestic arrangements are fixed, and that is a great consideration, even for men doing badly, anywhere.

16,274. Are they as respectable a class as miners in other parts of the district?—I think they are; I know there is a good deal of grumbling among them on confiscation and long weights.

16,275. You said that you are in favour of legislation to give security to the funds of unions, and also that you are in favour of unions and combinations. Are you in favour of leaving those who, like Lord Fitzwilliam's men, do not choose to join unions, free to act as they choose and to employ their labour wherever they think they can employ it best?—As far as legislation is concerned, I think I should leave them alone. But there are moral considerations as well as others.

16,276. What do you call moral considerations?—I do not mean to say that Earl Fitzwilliam's men are right even with ourselves, because whatever the district is ruled by, they come in for it, they are always looking up to us and we keep the position at our own expense and trouble, and by our contentions, and all that sort of thing. We have all the work to do and they will not pay us a single farthing, and people who participate in any benefit got in that sort of manner ought to help in the payment.

16,277. That may be a moral consideration that ought to weigh with them; but supposing that as a rule trade funds are protected, do you think that it is desirable that the law should give full and sufficient protection to those who, whether morally right or morally wrong, do not wish in any trade to join the union but to have their labour free?—Well, I am not one of those that would compel men to join the union, and I am not one of those that talk so much about having their labour free, what they call free labour, but it is what I call labour free; for instance, if a body of men join with me, or I with them, to carry out such objects as an association like ours has, probably the objects are not all formed at the time the association is formed, but members join it and we keep growing, and as we grow in organization they feel the effects of certain benefits resulting from it. Then we add others on the strength of those men keeping with us that have joined us, and the numbers and the faith of these men joining us are the only standpoint that we have to keep the benefits. And if when the least thing goes wrong they withhold their support, that is very wrong.

16,278. Granted that you have a society which, in your opinion and in that of other people, has done good to the miners in enabling them to get the benefit of a rise in wages which otherwise would have been delayed or not got at all, and that in consequence

of this benefit clubs are attached to the association, you say that legislation ought to give protection to those funds. What I ask you is, whether you think on the other hand that if there are in this country working men who do not wish to join these associations, who wish to employ their labour as they think best, and as they think they can turn it to greatest advantage, then, in like manner, Parliament ought to give full protection to those persons in the free employment of their labour?—Just so. I should have no objection to that at all.

16,279. And if in any way it should appear that the law is non-efficient in that respect you think that as soon as you require protection for your funds, so you should give protection to free labour if it has not it now?—Yes, I think that in giving protection to the funds that I name, at the same time, though the Legislature ought to have an eye really to those objects that the association is formed for. I believe that there are trade rules in existence that are really detrimental not only to the members themselves but to the country.

16,280. Of course one assumes that the objects are considered not to be injurious to the State?—Not generally injurious.

16,281. And further, you probably consider as regards these funds and the association, that if they purport to give a certain benefit, it would be necessary before they have protection from the law that it should be clearly shown that they are in a position to fulfil the understanding which the subscribers have in joining the association, namely, that they are entitled to these benefits, and that the funds of the society are sufficient to provide them?—Yes. But whilst on the free labour question I would say there is a question that would arise similar to questions that might arise out of our own objects. I do not think altogether that a free labour society can be founded on sound principle; in fact, what I have been acquainted with have not been hitherto.

16,282. I am not talking of free labour societies, but the right of an individual man born in these islands to do what he likes with his labour without joining any society, whether that society is to make that labour free, or to restrict it as your society does. I merely ask whether the law ought to give that man individually a full amount of protection for his free labour if it fails to do so at present?—Well, on the principle of every man doing what he likes, the law might come in then. But I hold that a man has no right to do what he likes.

16,283. How do you mean that a man has not a right to do as he likes with his own labour?—By injuring me. If he can do as he likes with his own labour without injuring other people, then he ought to do it.

16,284. Supposing that I do not wish to join any of these associations, how should I injure other people by taking what wages I can get rather than joining a union?—We have scores of men that come and ask for work, and never ask anything about the list of prices paid at the place; all they want is a job, and I have known men to work at 2*d.* a ton less than myself. In fact, I have known three relays of men working at eight-hour shifts, and being paid with three different prices, and yet it was all one and the same work. I have known men come into an adjoining place to me, and take 3*d.* or 6*d.* less than I had, and the moment they have done that the owner has come to me, and said: "I have men doing it at so much less, and you must do it, or go about your business." Then we have agricultural men coming in, and getting a job at 2*s.* 6*d.* a day, and men that have been in the pit all their life will in consequence be pulled down to any figure, however low.

16,285. Do you mean to say that you would like that there should be any legislation to prevent a man coming from the country and becoming a labourer, and saying, "I am willing to serve for so much less than these men," or that there should be deficient protection from "moral suasion" or intimidation as regards that man? You cannot mean that surely?—I do not want any interference at all with the man.

16,286. All I asked was whether you did not think that if you can have your wish for legislation to protect your funds, it is necessary that free persons who do not join your society should be equally protected if occasion is proved to require it?—Protect a man if he likes to work there; I do not say otherwise; I would be sorry to say anything to the contrary: but I do not want the law to step in and construe anything I may have said to that man for the purpose of inducing him to act in the same way as myself as being intimidation; I want "moral suasion" defined a little more than it is.

16,287. How do you define "moral suasion"? If a man is inclined to go into my work, and I meet 50 men who come round him and try to persuade him not to go into it, should you call that "moral suasion"?—Well, the owners go into a strange locality, and they import men into the neighbourhood, and put them in such a position that they cannot get information from the men of the neighbourhood; they stop the trains opposite their collieries, away from stations altogether, build them barracks on the place, and keep them in total darkness; and the first opportunity I have to get near one of those men, and tell him the truth, it is called intimidation.

16,288. Let us take the case of a strike in South Yorkshire. There is a dispute about wages in South Yorkshire; the men, for reasons best known to themselves, think that the master ought not to reduce; the master, for reasons best known to himself, comes to the conclusion that he must reduce. The men strike and decline to work on the reduced terms. It so happens that in another part of England there is a surplus of labour, say in Cornwall, mining operations in that description of metals being at a standstill or nearly so. Do you mean to say that the law ought not to protect men who may be brought from that part of the country, and who are willing to work at this reduction in the colliery in South Yorkshire?—I think that the law ought to protect them, but the law ought not to indict me because I go on the road and speak to them, and tell them the consequences of working there. Why should not the law allow me to go and say, "Here you are injuring me and my family; I am "here located"?

16,289. The law allows that now, except for large bodies of men, does it not?—We have had many a man brought up that has gone by himself.

16,290. (*Mr. Booth.*) You do not propose that men should intimidate others?—I do not propose intimidation.

16,291. Those cases in which the law has interfered have been cases of intimidation, not cases of merely explaining the state of things to the men?—They have gone with the best of intentions, and they have never said anything wrong, only tried to induce the men away, and they have been indicted for conspiracy as well as for intimidation. Now we are extremely careful in sanctioning any place to strike ourselves. We always try to lay it on the men themselves to strike, and always do for fear of getting into the clutches of the law.

16,292. (*Lord Elcho.*) Let me put this case to you. For instance, lately we had a great strike in London, the tailor's strike, what did we see in that case? At the corner of every street where there was a tailor's shop at which the tailors were on strike, you saw sometimes 20 men, sometimes only three or four men, waiting till the non-union men came out of the shop, and then using what they called "moral suasion." That "moral suasion" took the form of pursuing these men to their homes and calling them names and hooting at them. Now do you consider that that is a satisfactory and justifiable state of things in a free country?—I do not.

16,293. And you would not defend anything of the kind?—Nothing of the kind.

16,294. And in that view of the question, you would say, I suppose, that the law should be sufficient

Mr. J. Normansell.

5 May 1868.

to give protection to those who did not wish to join the union. I am not saying whether the union is a good or a bad thing, I give no opinion upon that; I merely ask you whether if protection is to be given in the one case to the union funds, it is equally necessary that full protection should be given to what is called free labour?—Yes.

16,295. (*Mr. Booth.*) You think that every man ought to be allowed to make his own bargain?—If he can make it without injuring me.

16,296. How do you mean "without injuring you"?—So that I shall have to make the same bargain myself.

16,297. Do you mean that if you are standing out for 5*s.* and I am willing to work for 4*s.* I am not at liberty to do so?—Yes, you are, but I am at liberty to use all the "moral suasion" in my power to persuade you to take 5*s.*

16,298. (*Mr. Hughes.*) You only ask, in fact, for the opportunity of putting your case fairly before the other men?—That is all.

16,299. (*Lord Elcho.*) You know what we have ourselves seen happening here in the streets of London in the case of the tailor's strike, that which you yourself disapprove of?—Yes, but I say that now I am on dangerous ground by putting my side of the question before that strange man. I want the facilities of doing that.

16,300. (*Mr. Hughes.*) The fact is that the present law protects him unfairly by making what you believe to be quite proper "moral suasion" an indictable offence?—Yes.

16,301. (*Lord Elcho.*) Can you call this which I will put to you "moral suasion"? If there are 20 men, say, who have been brought from another part of the country, who are employed in a pit in Staffordshire, and if those men should on going to the pit, or leaving the pit, find themselves surrounded morning and evening by a large body of men who are waiting for them, and talk to them and try to prevent their working, do not you think that there is something more than "moral suasion" in great bodies of men acting in that way?—I do not like that. If they would allow myself and Mr. Pickard to go before a batch of strange men brought into any locality we should be satisfied. We are not afraid of good men like those in our own localities coming to take our places, but it is men such as we have had at Gresley, who boast of being in 22 different strikes and lock-outs in the last two years.

16,302. But the state of things that I have referred to does frequently arise in a strike, and indeed in this Wigan district, that was practically the state of things was it not?—I believe there has been.

16,303. The moral influence of countries in the world depends very much on the number of bayonets they have at their back. It is something like that, I suppose?—I do not call it "moral suasion" going in large crowds to a pit at 3 o'clock in the morning.

16,304. The "moral suasion" which is backed by hundreds of men who do not use their sticks, but who are armed with sticks and have good fists, is very much like the moral influence of nations, is it not?—I do not like it, I cannot say that I do. The first means that we take now is generally, if we can get to the house, to do so, and reason with the men, one or two of them, and if we cannot do it by that means, we leave them alone. In that restriction time there were one or two of the men that would not restrict, and the means adopted was this, we said to two of the most sensible men that we had in the pit, "You two go and talk to them," and they went, and the result was that about 20 followed and spoiled the thing. Instead of talking to the men, these men who followed got hold of them and put them into an empty corve.

16,305. That was hardly "moral suasion?"—That was not "moral suasion." Those that were going about the "moral suasion" were interrupted by the mob.

16,306. When they put them into the empty corves the "moral suasion" ceased then?—Yes; and these two men that were there were brought up for it, and we defended them, because they went with good intentions. There are lots of such cases that have come before us where we have not been ashamed of taking the union funds to defend the men.

16,307. (*Mr. Booth.*) Am I to understand you that acts of violence done with the best of intentions are defensible?—I do not say so.

16,308. There was some violence in this case?—Yes; but not committed by the men sent on purpose to effect the moral object that we wished to effect, but through the reckless fellows following and using this violence, or rather not violence—there was no violence at all used—it was force. Then the other two men that went with the moral object in view were made responsible. The few roughs who followed them used force, and they were implicated in it.

16,309. (*Lord Elcho.*) It was not the roughs who were taken up but your moral persuaders?—Yes; it happens so in many cases.

16,310. (*Mr. Booth.*) I suppose that the men who were taken up were taking an active part?—They were taking an active part, because they went to the men for the purpose of talking to them.

16,311. When these men were carried off by force, they were present and taking part, I suppose?—They were not taking part, the 19 or 20 that followed did it.

16,312. The magistrates said that they were taking part, I suppose?—The magistrates said so, because they said that they had not any right to go and talk to working men. We defended the men, and we defended the men out of the funds, and we supported their wives and families while they were in prison out of voluntary subscriptions, and the reason why we defended the men was that I and my other colleague Mr. Casey might have been sent by the men, and we should have thought it hard if we had been going in that way that no defence should be granted to us in such a case. We did not defend those that did the deed. We have had many cases where we have sent the most sensible men that we had got to effect a real good, and yet they have been brought up for intimidation or conspiracy, and the association has had nothing to do with anything of the kind.

16,313. (*Lord Elcho.*) Do you believe that much good would come from councils of conciliation, that is, the masters and men of a district, employed in the same description of work, whether the iron trade or collieries, meeting together and talking over questions?—Yes. If they were practical courts of conciliation.

16,314. I do not mean courts having any actual power, but merely recognized means in the district of communicating as to the rise and fall of wages?—We have that principle partly in operation now in that district, and it is the way that we have done our business since 1865, since that large dispute ended with Mr. Chambers, and we have never had a single case since, except that at Silkstone Hall. I referred to isolated little cases where the owners were rather obstinate. We do not find all the owners and managers altogether right any more than the men.

16,315. Have you anything else which you wish to state?—I wished to name to the Commissioners some facts to show that working men can manage their own affairs. I wished to show them the amount of money that has come in through our own association this last 11 months. Then Mr. Cooper or Mr. Woodhouse spoke about the discipline—that there was no discipline in the pits where unions are.

16,316. You do not agree in that statement?—I do not agree. I am at a loss to know where Mr. Woodhouse gets his information from.

16,317. I think he said that there was an insubordinate spirit?—Yes; Mr. Woodhouse has been connected with the Oaks pit he said since 1848, and when he came to the pit he said that there was neither rule nor order, nor any discipline whatever. They did not like the lamp, he said, for instance, but threw it on one side, and just bought one at Wakefield to suit their own

purpose. We had no union up to 1858, and as far as Mr. Woodhouse has been acquainted with the discipline of South Yorkshire, he knows nothing at all about it then. I believe that for some years previous to the explosion he had never been down the Oaks colliery, and his official under him had been nearly a month and never been into the pit. It was stated in evidence, at the Oaks inquiry, that there was not a better pit anywhere for discipline among the men. I have spoken to the managers frequently since then in our district, and they have said that they believe that there is not such a district elsewhere. In the report upon the Oaks colliery accident, the inspector, Mr. Dickinson, says this :—"In considering to what such a "state of things was attributable, I have first to "observe that there seemed to have been no want of "care or discipline in carrying on the work, and the "special rules duly established and enforced at the "colliery were of the most stringent kind, supplying "all that could be anticipated as a requisite for safety "as contemplated by the Act of Parliament."

16,318. You bring a direct contradiction against that statement of Mr. Woodhouse's ?—A direct contradiction.

16,319. And you confirm that contradiction by reference to Mr. Dickinson's report?—Yes ; and by my own knowledge, and by my own information that I got from the managers themselves. It all depends upon what is termed discipline. We do not submit to such discipline as they have got in Derbyshire : there they have been fighting all these months in Gresby. We mean by discipline a regard for the safe working of the mine and the protection of our lives and health. We back all that out because it is our interest to do so. When you know that we have paid this last 12 months something like 2,529*l.* for sick and accident purposes, that we have paid something between 2,000 and 3,000*l.* to widows and orphans in this last 11 months, that is sufficient for you to see that there is a proper discipline for the safety of the men's lives. But perhaps what they mean by discipline is, (and Mr. Cooper referred to it) that men will not be knocked about as they used to be. Here is a rule from one of the byelaws which they have got in Derbyshire, a master's byelaw which would never stand five minutes in our district. "Every stallman or labourer may from time to time, "without notice, be removed by the owner from his "pit or stall or other work, to any other pit or stall "or any other work necessary to be performed at "these collieries, and coal and iron mines and works, "and he shall not object to any such removal, but "shall perform the work required, and shall be paid "for such work after the current rates of payment at "these collieries, for such new work at the time of "every such removal." None of our men would submit to a rule like that without a great deal of contention. In fact, in the present state of the union they would not submit to it. I am engaged, say, to get coal at 3*s.* 6*d.* a day, but under this rule I can be brought to be a banksman at 2*s.* 6*d.* a day, on a wet day, when the banksman does not come, or to any other work, and must take the rate paid.

16,320. At totally different wages, you mean, from what you engage yourself now at?—Yes, if they require me ; and it is done frequently in Derbyshire now. Such things as those we do not submit to, and such things as those have caused strikes in South Yorkshire before.

Mr. J. Normansell.

5 May 1868.

16,321. Do you mean that they have done such a thing as bring a man who has been earning 3*s.* 6*d.* a day into the place of an inferior man, and that they transferred him from the 3*s.* 6*d.* to the 2*s.* 6*d.* work, and given him the 2*s.* 6*d.* a pay?—That is so. And there have been several of those cases in Derbyshire before the magistrates, and because it is part of the contract the magistrates have decided against the men.

16,322. I suppose that they entered into the contract knowing that they might have to be transferred from the 3*s.* 6*d.* to 2*s.* 6*d.* as the convenience of the master required?—They do not know that. Scarcely a dozen men in Derbyshire have had their eyes opened to this. All pits commence with a very few men, and all the new men are led into the contract that the other men have made. A man has a copy of the rules put into his hands after he is taken on.

16,323. But after he has looked at the rules and has seen how they work, he can leave if he likes?—Yes, by a month's notice.

16,324. (*Mr. Booth.*) I understand you to say that you and the men at your colliery would not accept work on those terms?—We should not work at those terms. We make it a point, whether we are right or wrong, if there is a rule like that in force at any of our collieries to get it abolished as soon as possible, so that strange people may not be brought under it.

16,325. But until it is abolished, if I were a workman and desirous to accept work on those terms, you would not prevent me?—No, we should not prevent you.

16,326. You would endeavour to make the rules more reasonable?—Yes, more reasonable. A similar rule caused Mr. John Chambers's men to be kept out in 1860, The men were out nine weeks longer than the rest, and he introduced a code of rules that they were not to be union men.

16,327. You do your best to introduce improvement in the rules?—Yes.

16,328. Have you any other observations to make?—With respect to Mr. Ely of Gresley, he said, after he had stated some sentences in which Mr. Brown had advocated the union, that I sanctioned it, and said that the coal owners of Derbyshire would have shown the same opposition had the union been put forth in the same spirit as it was put forth there. But what I said was this, that if all which Mr. Ely said about the inflamed speeches of Brown was true, there was no wonder at his speaking so strongly against Brown. Then, too, I believe Mr. Wilson stated that they had had a delegate there that had been very fast at one of their collieries, and he said that he believed that if he had discharged that delegate there might have been an interference by the union. It would have been well if Mr. Wilson had stated that that delegate has been discharged.

16,329. And the union has not interfered?—The union did not interfere, not in the slightest degree.

The witness withdrew.

Mr. Alexander McDonald further examined.

Mr. A. McDonald.

16,330. (*Lord Elcho.*) I think you want to add something to your former evidence?—What I want to say is this. A statement has been made repeatedly here by witnesses on the other side that advances come by the employers spontaneously. During the whole course of my life I have never known but one solitary instance in which the advance was not the result of a pressure by combination.

16,331. When you say "combination," do you mean by an organized union, or by two or three men, or a certain number of men, going to an employer and saying, "We want an advance?"—I mean by combination, the workmen in union, or the workmen of a locality making a demand upon their employers. Individual workmen might go for ever to their employers for an advance before they would get it.

16,332. You mean this, that wages are never raised by the employer unless he is asked to do so?—Not unless he is asked to do so. We hear very much at the present time about farm servants and others, and wages rising spontaneously, and of their own accord. I want to put this clearly, that in 33 years' experience I have never known the employers come voluntarily forward and state that they would raise wages unless on one single occasion, and that was merely following another locality where the wages had been raised

Mr. A. McDonald.

5 May 1868.

through combination. I want to make another statement, which is this, that taking all the strikes that I have known, nine out of every ten of them have been successful, and as a rule they were only unsuccessful on matters where they were resisting a fall of wages that was occasioned by an over production; but as I say, nine out of every ten have been successful.

16,333. That is to say, when it was for a rise?—Not when it was for a rise only but for other objects.

16,334. Out of these ten strikes, which in nine instances have been successful, how many of those strikes do you suppose have been on the matter of wages?—I think about one half have been on wages.

16,335. Can you specify what class of questions the other strikes have been about?—I have a case here within these last few years at a colliery in Ayrshire. They were paying the men there only every three months, and sometimes not even then; there was a truck shop, and everything was spent in the store. That was the cause of complaint, and the men after a sharp struggle of a few weeks (they had complained for more than twenty years) got weekly pays, regularly paid, and they are paid regularly now.

16,336. Was this before the Truck Act?—No, it was within the last five years.

16,337. How has the truck question been affected by the strike?—The employers ceased to make them follow the course that they did before.

16,338. They were following a course by which they evaded the Truck Act?—Yes. Then at Keppock and Knightwood's, another large place, they struck against monthly pays three years ago, and for an advance of wages, and they got the month's pay abolished and an advance of wages granted. At Mossend, another large place, employing 1,000 men, —the men struck against monthly pays, and got them abolished. Then again, at the Portland ironworks, they struck for an advance of wages and gained it. At Stevenston they struck for an advance of wages, and they gained it. And at Inkerman, a large work belonging to Mr. Merry, employing 1,000 men, they struck respecting their prop wood. He wanted them to cut their own prop wood.

16,339. Do you mean to say that he wanted them to go into the wood?—No, to saw it and take it down with them. They struck for a fortnight and got it abolished. And I could go on with strikes almost innumerable in which the men have been successful in nine cases out of every ten when the question is on these private matters. But I wish distinctly to be understood, that I have not known, in thirty-three years, a single case but one, where voluntarily an offer of a rise of wages has been made by the masters. It has been combination, either local combination of the workmen, or a general combination, that has produced these advances of wages.

16,340. A demand is made, you mean?—A demand is made.

16,341. And the success of that demand depends very much upon the state of trade?—Entirely upon the time.

16,342. So that no combination could really be successful if the state of trade did not justify it?——As our friends in Wigan have unfortunately proved by the action they have taken now.

16,343. And the probability is that you have come to the conclusion, looking generally and broadly at this question, that the effect of the union as regards wages is simply this, that in prosperous times it anticipates a rise, and that in bad times it may perhaps check a fall, is that so?—That is so. I think that the true vocation of a working men's union is to direct its attention to see when an advance of wages canbe got advantageously to the workmen, and at the same time not to injure the employers, by the demands they make upon them.

16,344. Because injuring the employer would be injuring the men in the long run?—Killing the goose that lays the golden egg. The next duty of a trade union is to watch the time that a reduction takes place and, as has been wisely done in the case of South Yorkshire, to accept the reduction when necessary; to fence it off as long as possible, but to receive it without a collision at last.

16,345. There is no doubt that, looking generally at strikes (I do not confine it to your own occupation, the coal-mining trade), a great many strikes have been accompanied by very great suffering and distress, by long periods of suffering, by the selling off of everything, by perhaps evictions and great privations entailed on families, on wives and children, and that in many cases they do fail?—Yes.

16,346. Setting cases where strikes have been successful in anticipating a rise or checking a fall, against these privations and sufferings that I have detailed, do you think on the whole that they have been in the matter of wages a benefit to the working man?—I am satisfied upon the whole, and am able to show on the whole, that strikes, although in those periods to which I have referred they have proved disastrous, yet as a whole they have been a gain to the men in wages. I will put it thus: I am satisfied upon the whole that combinations have given more to the workmen by an advance of wages than the loss has been on the other side in the way of privations or in the way of destitution caused by them.

16,347. But if you hold the opinion (which I gathered you did by your assenting to that question of mine,) that looking broadly at these questions of combination in regard to wages, their only effect is to anticipate a rise in prosperous times, and to check a fall in bad times, you can hardly say that practically they have had much influence upon the course of trade? By the course of trade I mean, of course, the rate of wages in the country?—No; but then again with regard to those long periods of want which have taken place, I feel convinced that in 1844, and in 1837, the men would have had the same amount of time off supposing that there had been no strike. The privation by lower wages would have extended over a longer period because it would have been putting surplus labour into the market where the demand is limited; whenever more is put into the market, the consequence is that it is brought to that point that it makes a longer period of suffering.

16,348. You have been acquainted for a great many years with these matters, and looking on these questions of labour and capital broadly, are you not rather coming to the conclusion that there having been formerly, before the repeal of the combination laws, and also since the repeal of those laws, which some people think favoured the workmen rather at the expense of the capitalists, this state of war between these two parties, the time has come when it is possible there should be peace between them?—Yes.

16,349. Do you see any way in which these questions can be brought to a more peaceful issue than hitherto they have been?—Yes, only by adopting the principles that I mentioned on the last day here. First, by the employers coming down from treating the men simply as so much material in the market that they can deal with, and instead treating them like men; and secondly, by the adoption, as far as possible, of the principle of co-operation or limited partnership, giving the men a share in the concern, and to that I feel convinced these strikes are inevitably tending.

16,350. And putting questions of union aside, and union men being spokesmen (for some masters perhaps very naturally object to union officers coming to interfere between themselves and their men) do you think that if there was a regularly recognized system of the masters and men in a district meeting talking over these questions, there is that good sense on the part of the men that they would submit to a fall in wages when the circumstances of the trade had shown them, and experience had led them to believe, that such a fall was necessary?—I feel convinced that

if the workmen were polled to-morrow (there may be an exception where ignorance prevails), and I feel convinced of it as one that has taken part largely in working men's affairs, that there is not a rational, intelligent workman in the United Kingdom that will not go in for boards of arbitration to settle those disputes, and that the fault is not on the workmen's side in that matter.

16,351. We will take a case which rather shakes one's faith in the good results which one would hope would follow from such a system, I mean the case which Mr. Pickard has put before us to-day. Mr. Pickard, who is evidently a man most anxious for peace, thought that the men at Wigan lately were not justified in holding out, but counselled them to yield. But in spite of Mr. Pickard, an officer in whom they have great confidence, giving them that advice, they declined it, did they not?—But Mr. Pickard gave them this advice, to submit the matter between them and their employers to arbitration, and there was not a dissenting voice against that.

Mr. McDonald.

5 May 1868.

16,352. But after the masters had declined arbitration, they did not yield from a knowledge of the circumstances, but they still held out. That looks unreasonable, does it not, on their part?—It looks unreasonable so far.

16,353. It looks as if one might find them on these conciliation boards or arbitration boards not so reasonable as you expect, and as I hope?—My conviction is that the men are in favour of arbitration, and without hesitation I say that 12,000 of them agreed without a single dissenting voice to submit the matter to arbitration; and if a show of accepting arbitration had been made on the part of their employers, I am convinced that there never would have been a word about it—that was before the men came out at all.

16,353. Then your hope for the future rests in arbitration, conciliation, and co-operation?—Yes.

The witness withdrew.

Adjourned to Tuesday next at 11 o'clock.

1, Park Prospect, Westminster, Tuesday, 12th May 1868.

PRESENT:

The Right Hon. Sir WILLIAM ERLE.	JOHN ARTHUR ROEBUCK, Esq., Q.C., M.P.
LORD ELCHO, M.P.	FREDERIC HARRISON, Esq.

THE RIGHT HON. SIR WILLIAM ERLE IN THE CHAIR.

Mr. WILLIAM BROWN examined.

Mr. W. Brown

12 May 1868.

16,354. (*Chairman.*) I believe you have some statements which you wish to make to the Commission. You are a miners' agent, are you not?—I have been a working miner 25 years, and our family has worked for Fentons 70 years. I was in a strike in 1844, I had nothing to do with it as the miners' agent, but was simply on strike. We were out 17 weeks; we had no union pay except 7½*d.* during the whole of the time. That strike was against the men, and they had to go in, I believe, on worse terms than those on which they came out.

16,355. (*Lord Elcho.*) Do you mean that you received then 7½*d.* a day?—No, 7½*d.* the whole of the time.

16,356. (*Chairman.*) You had no union pay?—We had no union pay, only 7½*d.* during the whole of the time. I got mine by three instalments of 2½*d.* at a time.

16,357. Did the union pay that?—The union paid it, at least I got it from the union board. I then went to work for Mr. Fenton after that, and we had no union whatever till 1858, when every man got 28 day's notice to leave, and there was no reason given for it.

16,358. (*Mr. Roebuck.*) Will you be kind enough to tell us where Mr. Fenton's is?—Thorp Hall colliery near Leeds, about 2½ miles from Leeds. When we were working the last week in the four, it was thought expedient to send a deputation to Mr. Fenton to get to know the reason why we had got 28 days notice. He told us that he wished or that he proposed to reduce our wages about 6*d.* per day.

16,359. (*Chairman.*) On what amount?—Then it would be on 4*s.* 4½*d.* We used to get 3*s.* 4½*d.*, but after 1852 the coal trade was very good, and Mr. Fenton voluntarily without our asking advanced our wages three times, altogether a shilling a day, and it was 6*d.* a day, that was proposed to be taken off from 4*s.* 4½*d.* per day. I told Mr. Fenton that I thought that the reduction was uncalled for. Mr. Fenton made this reply, "William, if all the men of this colliery "were like you, and did the work as efficiently, "instead of reducing 6*d.* per day, I could raise every "man a shilling a day."

16,360. If they are paid by the quantity of coal raised, I want to know how the coal proprietor gains or loses by the muscular activity of any one miner more than another. That other would raise the same quantity of coal in a little longer time would he not?—There are some men who do not mind their work. Some men do not attend their work more than three days a week even when trade is good, and the men that do attend their work every day have to suffer with those who do not attend their work.

16,361. (*Mr. Roebuck.*) Is not this what you mean, that there is an expenditure going on all the same?—Just the same.

16,362. And, therefore, if coal is not raised, the proprietor is put to expense, and does not get his remuneration by the coal that he expected?—Just the same expense is incurred as if the pits were working full time and every man attended to his duty.

16,363. (*Chairman.*) You mean that it is the same as in the case of a railway train, the cost of which is so much?—Just so. I thought that this was very hard; but Mr. Fenton said that he could not help himself, and he would be glad if he could. For the first three weeks I did everything I could to prevent the strike being prolonged. Then at the three weeks' end Mr. Fenton joined the Coalowners' Association, and instead of reducing our wages then 6*d.* a day, he was determined to reduce them 9*d.* He told me that he had become the chairman of the Coalowners Assotion which was held at the White Horse in Boar Lane, Leeds, and he was determined to enforce the reduction. Of course there was no alternative, as we thought, but prolonging the strike. I was living under Mr. Fenton at the time at Waterloo Houses. Of course I got seven days' notice to leave my house. My wife was confined at the time, and, notwithstanding that, I was obliged to leave at the time appointed. I chose that rather than have any difference with my employer. I had not the means to get my wife to Hunslet, where I then went to reside; but a kind

Mr. W. Brown.

12 May 1868.

friend that attended the same place of worship that I did had very kindly ordered a coach and sent for her and the little ones to Hunslet. I had no inclination to be on strike at all. In May I went and got work at Mr. Bower's, Pepper Lane Colliery, Hunslet. I worked there 10 weeks, and in the 10 weeks I had three notices to leave. I mean three different times in the 10 weeks.

16,364. (*Mr. Roebuck.*) From whom?—From the steward, and I suppose that he acted for Mr. Bower. Mr. Brookbanks was the steward at the time, and he used to call at my house occasionally, and the first time that I had notice, when I had two days to serve, he came and said, "Well, Brown, I have not heard "anything more about your leaving; I think it has "blown over. If I can manage it you shall stop on. "I am very much pleased with your work, and have "not heard anything more, and I should like to keep "you in my employ." When I had worked a day over the fortnight, he then came to me again, and, of course, he had had a great reprimand for not making me leave at the time. I worked that fortnight out, but still I was under notice. He had not heard anything, and I went on another fortnight. He was determined to keep me if he could. When I had worked 10 weeks, Mr. Brookbanks came to me the last day and said, "Well, William, I am very sorry to tell "you that this is the last day on which you will have "to work here this time." I said, "Well, it is hard "work. I had got 28 days to leave Mr. Fenton. I "honestly served my notice. I have a wife and five "children, and try to keep them respectably, and I "think it is hard that I have to leave because I am "Mr. Fenton's man, when I have a notice to show "that he has discharged me." Mr. Bower was giving a great dinner to some five or six hundred men at his glassworks, and he sent me a ticket. I was the leading singer at his place of worship. After the dinner he called me on the platform and said, "Well, "Brown, I am exceedingly sorry at what has taken "place to-day." I said, "You feel it hard." He said, "I do." I said, "Hard as it is you can do it." He said, "Well, it is the Association which compels me to "do it. Whether right or wrong I am a member of the "Association, and I do not discharge you from choice, "but am obliged to it." After that I was obliged to "return to the men on strike. We were then getting 7*s.* a week each, and a shilling a week for each child.

16,635. (*Lord Elcho.*) Is Mr. Bower alive now?—Yes.

16,366. What is he?—He is a coal owner, one of the largest that we have in Yorkshire.

16,367. I assume that every man in trade is pursuing his monied interests unless the contrary is shown. I do not see how Mr. Bower had a monied interest in getting you to go off the work?—He had no monied interest at all. I beg to say that Mr. Bower and I after that were on the very best of terms, because I know that Mr. Bower did not discharge us from choice and I will explain it as I go along.

16,368. (*Lord Elcho.*) You were a knobstick in the eyes of the Coalowners' Association?—Yes, I was a perfect knobstick in the eyes of the Coalowners' Association. If you will allow me to digress a moment, I will tell you how it was. Mr. Bower is a very large coal owner: the Pepper Lane colliery was to sell in the year 1858, just a little before I commenced working there, and he did not enter that colliery into the association, and he made this his excuse, that the Pepper Lane colliery was Mrs. Bower's colliery, and that she would not join the Coalowner's Association, and he thought that by this means he could keep the Pepper Lane colliery going on and I could go and work there. But they would not have it; they said that Mr. Bower's name was on the picks, and the carts, and on everything, and they could not see how it was Mrs. Bower's colliery.

16,369. (*Mr. Harrison.*) Was this action directed against you at this time alone or were there others? There were 21 of us. Mr. Bower came to me once himself, and he said, "Now Brown, you are aware that I have purchased the Pepper Lane colliery," and I said, "Yes, I understand so." He said, "I am going "to work it on a larger scale; I understand that you "are out of work," and I said, "Yes." He said, "Can you get me 19 or 20 good men to drive some headings in the Pepper Lane pit; and I chose some of the best we had, and the result was that there were 19 men turned off besides myself for being obnoxious. We drove a good deal of the hardest work that some men either cannot or do not feel disposed to drive. After that I returned to the men on strike as I said before. I did not like 7*s.* a week and a shilling a week for each child. In fact, I did not like to live out of other men's money. I then took to teaching singing, and a little while after that the Town Hall was opened at Leeds. Her Majesty and Prince Albert came down, I was engaged to sing there for four days. I had a pound a day, and 12*s.* 6*d.* for an extra concert on the Saturday night. My salary was just due at the chapel at the time. I attended two concerts at Scarborough, and I put the money together which amounted to somewhere near 10*l.*, and then I began in a little business myself, and I withdrew from the strike again, and never had any more pay from the strike fund.

16,370. (*Mr. Roebuck.*) What business was it you began?—I began in the potatoe trade and fruit, and all that sort of thing. I took a shop next to Mr. Bower's glueworks, and I was going to say that it was a respectable shop. Mr. Bower did not think it beneath him to send for provisions or anything that they wanted from my shop. There was not the least ill-feeling between him and me. I did not think the least of his turning me off; in fact, I knew that he was compelled to do so. I will mention another circumstance and then go on with my story.

16,371. (*Lord Elcho.*) What chapel is it that you just referred to?—The New Connexion chapel: I had 10*l.* a year as singer there. When the strike was over in 1858 I then went to work at Mr. Fenton's again. I did not wish to get my living by singing or trade, or anything of this sort. It was a precarious living, and I felt that I would rather have something to depend on. I continued working from 1858 up to the 10th of March 1863. The coal trade was then very bad. I had a distance of two miles to walk, and I went many a week three mornings in succession and never earned a penny. I then began a little business again for myself. My living depended on the coal miners at Methley and other places. When I had just got nicely going again there were notices issued at Messrs. Briggs's, Mr. Bower's, Pope and Pearson's, Lock and Warrington's, and Wood and Rayner's, for 15 per cent. reduction. That was in 1863. The notice terminated on the 10th of July. I had been a miner previously, and as I was going round with my provisions to sell, the men asked me my advice; at least they asked me what I thought about the reduction. I said, "Well, "now you have a little trade in the district, and trade "is very bad, other employers in other counties would "be glad to get the little that you have. I should "send a deputation to every master in the district "and see if they will not agree to let you work at "7½ per cent. reduction. I think that they have "asked a little to bate on." They sent a deputation to every master as I advised them, and they agreed to go to work at 7½ per cent. reduction. I thought then that the district was going on comfortably, as it had done heretofore, but when they had worked a single day Mr. Bower was determined to introduce the riddles. The men then asked me my opinion about that matter. They said it was very dangerous. Several men had had their legs broken with falls from the roof, and I know that riddling and shovelling together made a great deal more noise than shovelling alone. I said, "You can take your own course about "it; I am not a miner, and you can do as you "please." The men served their 14 days' notice, and they resisted the riddles.

16,372. (*Mr. Harrison.*) Can you explain a little more completely what was the danger in the use of the riddles or the objection to it?—I only know this from hearsay, as I have never been on Mr. Bower's pit at Allerton. I understand that above the coal

before it gets to the rock top there are about two feet of bind that is very loose. I know one man that got killed, and several that got their legs broken. It is a bind that is apt to fall, and the men considered that it was not safe to riddle.

16,373. (*Mr. Roebuck.*) It agitates the air, I suppose? — The men said that with shovelling and riddling it caused a deal more noise at the time, and it was very often cracking, and especially when they were getting near borrowing, and the men considered that there was danger with the riddles.

16,374. They could not hear the cracks?—They could not hear the cracks. Supposing that we had a puncheon set here, and that the top was very merly, as we call it, that is, not sound, of course we should have to listen very minutely, or else it might come down, because the top really would not stand wooding.

16,375. (*Lord Elcho.*) What warning does it give you when it comes down?—It is not like a rock-top which will give warning hours before it falls. In this case it comes as suddenly as possible,

16,376. But what warning does it give you?—The puncheons will not fasten where it is so merly, and even the striking of a riddle will make a puncheon come down directly; in fact, you might almost take it with your hands, when if it was allowed to stay there it would remain a certain time. This statement was made to Mr. Bower, and he abandoned the riddles, and the riddles have never been in the colliery up to this time.

16,377. (*Chairman.*) What good does the coalowners get by the riddles? Is it that the small coals are riddled out?—Well, when trade is very bad the coalowners find a difficulty in getting rid of it, and sometimes they find a great difficulty in getting rid of the slack. Mr. Bower abandoned the riddles; but I may say that because Mr. Bower's men refused to riddle, though they had agreed at the other four collieries to work at 7½ per cent. reduction. The other four colliery proprietors all locked their men out, thus causing 1,500 men and boys to be locked out in one day. Hundreds of them were not union men, nor ever had been, but no matter they locked them all out. Of course, when all the miners were locked out I was as good as locked out. I could do no business among them, and I attended several of their meetings. I asked gentlemen that I was acquainted with to go to Mr. Bower to get the riddles abandoned, hoping that when the riddles were abandoned, seeing that they had locked out on Mr. Bower's account, the lock-out would be at an end, and the men would resume work again. But after Mr. Bower's men went to work, Briggs & Co., Pope and Pearson, and Lock and Warrington were determined if possible to supplant all their old hands, and introduce men from Staffordshire, Derbyshire, and other places. Mr. Briggs ejected, I believe, every man out of the Junction Row, and every man that was locked out was ejected out of the Common Row. This caused a great deal of suffering.

16,378. Can you tell us what interest he had in doing this?—No, I never could see it; I considered it at the time nothing at all but spite.

16,379. You have lived long enough in the world perhaps, to know that when commercial interests are at stake, people will not lose money for spite?—But sometimes men of capital will spend a good deal of money to try to beat a poor man.

16,380. That is the meaning of it as far as your knowledge of human nature goes?—Yes, I think that is the meaning of it. It terminated in favour of the men, instead of the men being pulled down 7½ per cent. at Messrs. Briggs. I have been told that when they went in to work they went in at 10 per cent. better than they came out, besides the 7½ per cent.

16,381. (*Mr. Roebuck.*) When they went back was the state of trade altered much for the better?—Of course the season of the year would alter the state of trade. It was the season of July when the lock-out took place, and it was in October when they went in again, and of course after the strike they would have all their wharfs empty. I do not know whether this would be relevant to the question or not, but there was a riot that took place at Messrs. Briggs's, they wished to make me into the aider and abettor of the riot, and they served me with a warrant and took me to Wakefield and locked me up three days and three nights. I was examined before the magistrates. Of course the coalowners were not prepared to go on with the trial on the Monday. I got bail and went home until Thursday, then I was taken before the magistrates. I was eight hours there that day and was committed to York for conspiracy and intimidation and I cannot tell what. I thought that I had done then until the assizes came on. However Pope and Pearson had something against me; I had to go on the Monday following and had to spend eight hours there again, and was committed for conspiracy and intimidation and other things again.

16,382. (*Mr. Harrison.*) What was the result at the assizes?—When the assizes came on my trial lasted two days or pretty nearly. For the first indictment (that was for the riot), I was acquitted, Mr. Justice Byles was the judge. For the second indictment he wished them to read over their depositions or the evidence before he went on with the trial, and when they had read what they had against me he considered that there was nothing to convict me, and I was acquitted altogether. I expected to go on with my work as I had done in business, but I had no stabling in connection with the house I resided in. Charles Day and I were pretty good friends, and he allowed me to put my pony into his stable for 8*d.* a week rent. Mr. Bower was the owner of the inn that Charles Day kept, and I do not know how it was that we had got so far out then, but Mr. Bower told Charles Day that if he did not make me take my pony out of that stable he would give him notice to leave the house.

16,383. (*Chairman.*) Do you know that Mr. Bower did do that?—Day told me so. Then I was obliged to sell my pony and cart and everything in connexion with my business. I could not get a stable, and this was a serious sacrifice to me, for all my things were new when I bought them, and I lost 13*l.* that day, which I considered was a little fortune for a poor man like me.

16,384. Was the pony wanted by you as a greengrocer?—Yes, I went six or seven miles from home with my cart. The miners then were very desirous that I should become their agent, and at their repeated request I agreed to become miners' agent.

16,385. With regard to all this that led to the trial at York, I presume that having the fatal gift of eloquence, you had poured out some dangerous ideas, as people thought? You were a gifted man capable of leading the minds of a large body, and they thought that you had led them towards dangerous courses, and so the prosecution came. I take that to be the meaning of it?—On the very night that the riot took place I was addressing a meeting at a place called Newton-in-the-Willows, about six miles from Whitwood, and I do not know that I had ever been more in earnest than I had the afternoon previous in advising the men to keep quiet. And I am sorry to bring this out which I am going to state, but I am obliged to do it. On the Common Row (it is a roadside, there is a garden on this side and a brook runs down at the end of the garden, and a gentleman, I do not know his name, allowed us to have our meeting in a field), I am sorry to say that that afternoon there were barrels of ale placed, and there were new hands and they were challenging us to fight, and every provocation was given that could be given to the men that were locked out.

16,386. (*Mr. Roebuck.*) What does "miners' agent" mean?—I was engaged to do this: to take a copy of the association rules in my hand, get up meetings in various places (a schoolroom if we could get one, if we could not get a schoolroom a lodge room adjoining a publichouse), just lay before the men the rules of the association, and explain to them to the best of my ability the benefits that would accrue to them from

Mr. W. Brown.

12 May 1868.

being in the association; for I was convinced from past experience that the men could not act individually, that there was no other way if the men intended to be in a position to defend their rights, but to be combined together. Then of course we gave 10*s.* a week at that time for accidents and 5*l.* for deaths, and this I reckoned was a very good thing for miners. That was my work. I had nothing else to do. I was appointed by a committee, and wherever they told me to go I was obliged to go, and I acknowledge that if I could get 50, or 60, or 100 men to join the association on one night I did it. I was engaged to do it. It was my duty to do it and I did it.

16,387. (*Lord Elcho.*) What salary did you receive?—4*s.* a day, and 6*d.* a day expenses, and third-class railway fare when the journey exceeded five miles.

16,388. (*Chairman.*) What did the committee consist of?—The committee were four or five or nine men selected from various pits.

16,389. What district was this in?—The Leeds and Methely district.

16,390. (*Lord Elcho.*) Were you the sole agent?—Yes, for nearly two years.

16,391. How many men belonged to the union when you began?—Above 2,000.

16,392. Are you still agent for that union?—I am not agent at all now.

16,393. When did you cease to be so?—At the back end of last April.

16,394. Had the numbers increased greatly before that time?—Yes, in the West Yorkshire district the numbers got up to nearly 4,000 before I left them.

16,395. Under your agency?—Under my agency.

16,396. (*Chairman.*) I understand fully that you enlightened the men, as you believed, as to their power of resisting wrongful oppression, if they combined for the purpose. That I take it was fully explained to them; but I was going to ask if you gave powerful descriptions of what you supposed to be an unjust oppression. Did you try to do that?—This was principally what I dealt in. I tried to teach the men or persuade the men to do their duty, because it is my belief that if miners would do their duty they would not have much difficulty in getting their rights. That is my opinion.

16,397. (*Mr. Roebuck.*) But what do you mean by "doing their duty?"—The first thing is to have a good substantial association, then a good understanding one with another; and when the coal proprietors want to make any difference either in the working in the mine or in the way of proposing a reduction of wages, if there is a good organization and they select a deputation to wait on the master, the men can go without fear to the master, and not as if they were going individually; for I am sorry to say that it is as much as a man's bread is worth to go to his master in many cases, but when the men feel that they have a a little power at their back, they can speak more plainly and they are not afraid of advantage being taken of them.

16,398. (*Chairman.*) Then if they have got a sensible leader, some good comes from that combination, you think?—Yes. I will just name here four circumstances that have come under my own notice. In 1863 Captain Sparks, of Darlington, and his men were likely to have a dispute. The men at Newton-in-the-Willows, near Pontefract, had not a man that they could send as a deputation. I am sorry to say that there were not above two men that could read their own names except with difficulty, and they asked Captain Sparks if he would allow me to go along with the deputation, and he said he would. I went to Darlington along with the deputation. I found Captain Sparks a reasonable gentleman. Of course he had been misled by his agent. I heard what the men had to say and what he had to say. Then he asked me if my name was Brown; I said, "Yes." He said, "What do you think of this affair?" I said, "Well, the men in some things have been unreasonable, but I fear you have been misinformed. I think "you have been very unreasonable." He asked me why. I told him that they had 6*s.* a dozen or a score, and the men had their own putters or drawers (we called them hurriers), and if a man was 400 yards from the pit's bottom he had only 6*s.* a score just the same as a man 200 yards from it. This was against the men, and I explained it to him; and he said, "I "see that clearly, and it shall be put an end to;" and he gave the men 7½ per cent. advance throughout the pit and altered the mode of payment for putting, and he said that he was extremely obliged to me for giving him the statements I had. He said, "I assure you, "that you have prevented a strike in my colliery, for "I had made up my mind to set it down before I "should go any further." I have been at Captain Sparks's at Darlington, since then, that was on another occasion. At the Pontefract Main Colliery (it is also called Waterloo Colliery), near Leeds, Thomas Pickersgill is the general agent, all the under viewers and deputies and so on are under him; and for 16 or 17 years that I worked at Waterloo Colliery Thomas Pickersgill was my master. He had heard I was a miners' agent. He sent a letter and asked me to go over. He told me that the men seemed very much disturbed about something. He said, "You and I "always did agree when you worked at Waterloo, "and for anything I know we are friends yet." I said, "Just the same, as far as I am concerned." He said, "I wish something could be done." I said, "What is the matter?" We agreed that I should go with a deputation to the Pontefract Main Colliery, and Mr. Pickersgill agreed that he and I should sit and hear what the stewards and the men had to say, and when we had done that we found that in many cases the men were in the right. There were several grievances they complained of. Those things were put right. The grievances were amicably settled, and I believe the men have gone on well since. That was three years since. We were going to have a social tea in the Temperance Hall at Spitalfields, near Leeds, and he gave us 1*l.* towards the expenses. Now I will mention another case. There was a disturbance at Balaklava Colliery, about 4½ miles from Leeds. I met Mr. Whitehead Derbyshire, an underviewer at Balaklava Colliery, and asked him if something could not be done, and another gentleman that was the salesman for the same firm. He said, "Well, Brown, we have "a deal of trade, and I am sure something ought to "be done." We went into an hotel and in 25 minutes or half an hour we agreed, and the men went to work next morning. There has been very little dispute at that place since. I may say, that wherever I have been allowed to go with a deputation I have never failed in getting a settlement without a strike.

16,399. Were these deputations that you went with men you had known before, men of sound mind and fair feeling, or men you had met by chance?—Some of them were men I had known two or three years before, and some of them were strangers to me. The next that I was engaged on was a strike that took place at Allerton Bywater colliery. On the 4th of July I went to see Mr. Carter. Two of the miners came to me at my residence at Hunslet and asked me to go as a deputation to Mr. Carter. I objected to go at the outset. They asked me why. I said, "I never "like to go and thrust myself ostensibly into a colliery "office, for I am sorry to say from some misunder-"standing that many of the stewards look upon me as "their enemy, but if Mr. Carter will send down a note "to say that he will agree for me to go as a deputation "I have no objection to do so." He sent two men to say that he would be glad to see me along with the deputation on the Monday morning (that was the 4th of July). When we got down to the colliery office I saw Mr. Carter, and he began to tell me that the men were complaining, and he thought that there was no occasion for them to do so. I said, "Well, I am only "an agent; I wish to have a deputation of the men "here and then we can hear both sides, and we can "judge accordingly." I went to the men and the men objected to send a deputation. This led me to be rather suspicious. I may say that the men blamed me very much, in fact some abused me, and they

threatened to throw stones at me, and some threatened at the lodge room to throw me out of the window, saying that I was their agent and must do what they wanted. I said, "I have a right to speak as far as "my conscience dictates to me, but as soon as ever "you want to overstep the bounds of right, I am no "more your agent." I then went to Mr. Carter again. The deputation did not go with me. He asked me why. Of course I did not like to find fault with the men more than I could help, but I said, "The "grievance that exists between you seems to be "rather a great one; there is a great space between "you; if you will meet a little I will meet a little;" though I had no power from the association, and Mr. Carter at that time advanced the men somewhere about 10*d.* a-day on the 4th of July. He frankly told me when I came out of the office that if anyone had told him that morning he would have given the men so much he would not have believed it, but he said, "Brown, you have overcome me. I hope we shall work "comfortably on." I found him to be a decent man, and I saw that he wanted the colliery to work, and I am sure I did, and I believe that some of the men who do not care whether they work or not were not so very particular about striking. I soon found that out, and was determined that it should be prevented if possible.

16,400. Did they go to work at 10*d.* a day extra?—They went to work and have worked without any dispute ever since. I told Mr. Carter at that time, "Now whether I am the agent in this district or not, "if you will just communicate with me when any "grievance arises, I will try to put it right or else "send for a deputation of your men." He wanted to reduce their wages 7½ per cent. since Christmas, and he very wisely sent for a deputation of his men and told them that trade was very bad, and that in order to keep his trade he would be obliged to reduce them. The men agreed to it. They never stopped an hour and they are going on comfortably now, working nearly full time. I believe that was the last I had to do with in Yorkshire. On the 4th of July 1866 I went on to be the agent up to October 22nd. I had addressed several meetings in Derbyshire during that summer from July up to October, and the Derbyshire men gave me an invitation to go into Derbyshire. On the 10th of November the Derbyshire miners sent a delegate to our conference which was held in Newcastle in the year 1865. He went back and told them how the conference was conducted.

16,401. (*Lord Elcho.*) Was that the conference of the General Miners' Association?—The General Miners' Association.

16,402. Embracing Scotland as well?—Yes, part of Scotland; and the Derbyshire miners made a subscription among themselves and sent a person of the name of Joseph Edwards to that conference. He went back again and told them the state of affairs and took the resolutions and so on that were passed, and they thought it was a very good thing, and agreed to commence an association. They commenced an association on December the 23d, 1865, at Eckington, George Inn, Southgate. The president was William Ball; treasurer, John Hatfield; secretary, John Catchpole; agent, Joseph Edwards. Joseph Edwards and I got rather intimate at the Newcastle conference, and he sent me three very pressing invitations to go into Derbyshire to hold a meeting. On Easter eve, in 1866, I went to speak at a meeting at a place called Woodhouse, near Handsworth, Sheffield. On the Monday following we held another miners' meeting at the Corn Exchange, Chesterfield. When that meeting was over I said, "Now Joseph, it is time I should "return to Yorkshire, or my employers will give me "a blowing up." He said, "I should like you to "go to Cinder Hill, I promised them faithfully that I "would take you over there." I said, "Well, I have "never been to Cinder Hill, and our men object to "my going away because I have plenty of work at "home." He said, "Well I never dare go to Cinder "Hill again if you do not go;" so I agreed to go, and we went and held a meeting on Easter Tuesday 1866 in Napoleon Square. We had a very large meeting; of course they got a cart for me to stand in. I do not know whether there had ever been a meeting there before, but the friends seemed to be rather curious about it. However, when that meeting was over they went and had another in Old Basford.

16,403. (*Mr. Harrison.*) What did you say when you addressed the meeting?—I told them that I had had an invitation from their agent Joseph Edwards to just come over and speak at the meeting, and I said, "You will think I daresay that I am a curious fellow, "but if you will just come to the meeting you can "hear what I have to say, and of course if it suits "you you can heed, and if not of course you can let "it alone." They had not much union there then. I explained to them the rules of the association. There were many women there, and I told them that it was every woman's duty to advise her husband to be in the association. I considered that an institution that allowed 10*s.* for accidents and 5*l.* for deaths was an institution that ought to be encouraged, and of course the men and the women agreed to it and we went and held another meeting. After that meeting at Old Basford I went home. When I had been at home three days I received two or three letters from other parties to go to Cinder Hill again.

16,404. (*Lord Elcho.*) Were your expenses paid?—The Derbyshire men paid my expenses when I went into Derbyshire.

16,405. Not your own union?—Those who invited me paid. They paid me third class fare and 5*s.* 6*d.* a day, and first one friend and then another asked me to go and spend the evening and stop the night with them. Two or three days after I had been at Old Basford I had two or three very pressing invitations to go again. I durst not go without bringing it before our own committee, and I told them that the men complained very much. Some of them said that they were getting 120 lbs. to the cwt. and confiscations without limit.

16,406. When you were first invited to Derbyshire did you bring that invitation before the committee?—Yes, I had always to acquaint them with it; but I may say this, that Saturday was my own night—we never held any meeting on the Saturday night without it were a social tea meeting or gathering. I could go where I had a mind on the Saturday, but was obliged to be back again to my appointment on the Monday. This was Easter, and the men at Methley had agreed to have no meetings in the Easter week, and I had a day or two of leisure, but I durst not go into Derbyshire without bringing it before our committee. I read over those letters inviting me to go into Derbyshire to the committee. They asked me what the state of Derbyshire was. I said I had been to Cinder Hill, and I said I did not wonder at the men coming into Yorkshire, seeing that they were getting 120 lbs. to the cwt., 27 cwt., or 29 cwt. to the ton (they reckoned it equal with 29 cwt.), and they said that they had check weighmen, but they were of no more use on the pit bank than dolls; there was no organisation at their back, and the masters were determined to have what weight they demanded.

16,407. (*Chairman.*) 120 lbs. to the hundredweight is the local hundredweight, I suppose?—I do not know what is the local hundredweight. I do not know what is a hundredweight in Derbyshire, but I know that 112 lbs. is in Yorkshire.

16,408. Do you take it that if a man, capable of managing for himself, makes his contract, his weight is limited by his contract?—I say that if a man makes a contract (and I have said it repeatedly to the Derbyshire men) to get one hundred hundredweights to the ton, you are under obligations to get them, and you must abide by it without you give a proper notice for it to be altered.

16,409. (*Mr. Harrison.*) What was the kind of confiscation they were complaining of; to what extent was it carried?—The confiscation was taking away a man's tubs altogether.

16,410. (*Chairman.*) They did not take away a

Mr. W. Brown.

12 May 1868.

man's tubs that were filled according to the understanding of the usage of the colliery? They took away certain tubs, you mean?—I will first tell you the facts of the case. If we can understand it here it is more than the judge could at the county court at Nottingham; but I understand that the tubs there weigh when filled about 15 hundredweight, and the coal comes out in lumps four times as big, some of them, as this box here (*pointing to a box*), and there are two men that have to watch the tubs, and they have picks, and keep chipping dirt off, or anything that they think will be an impediment to the sale of the coal, and if there be any slack or small left in the tub bottom the men have to lose it, and it is impossible to have this chipping without slack being left in the tub, and the men were just left at the mercy of those at the top whether they had a tub all day or not.

16,411. (*Mr. Harrison.*) Do you mean to say that the practice was this, that if at the top of the pit's mouth they found slack in the tub the man was not paid for it at all?—He was not paid for it at all.

16,412. (*Chairman.*) I understand you to say that a man with a pick picks off the slack and dirt, and if he pricks that off there must be so much lost when it comes to be weighed?—The tub is weighed before it gets to the men that have to chip it, but then they have somebody to look after it after it is weighed, and if there be any dirt in the tub bottom after it is chipped and emptied, it is left simply with those that are at the top under the masters—the agents, or the persons appointed to look after the working of the top—whether the men get it or not.

16,413. (*Mr. Harrison.*) Do you mean to say it is this, that the tub comes up the full weight. The tub is emptied of these large masses of coal, there remains in the tub a small portion of slack or small coal, and the man who has sent up that tub is paid nothing for it?—Paid nothing for it in many instances; it is left to the mercy of the man who has to decide it.

16,414. (*Chairman.*) There is a ratio, I suppose?—I beg to say that when the men got united, and they had a little money, in one fortnight there were 200 tons of coal taken from the men. The masters' man pronounced them to be good and fit for sale. The check weighman had his sheets and made out the notes for the men, and the sheets tallied with the weighman for the masters, and when they got their wages on the Saturday afternoon or Saturday night, it was found one fortnight that they were 200 tons short. The men were determined that they would not stand it; they went and got legal advice about it, and they were told, "Well, you have nothing better than to get the wage." They knew what agreement they had made, and of course they summoned Mr. North to the county court for the balance of the money stopped for the 200 tons. When they got to the county court (Mr. Shaw was the barrister for them, and Mr. Cave for Mr. North), and when the case was laid before the judge he said, Well he did not know what the bargain had been between the men and the master, but he alleged that there was small in the bottom of the tub, and the men had agreed to send them up clear of dirt. Of course the gentleman said he could not see how in the world 15 cwt. of coal could be dressed, and yet there be no slack in the tub. I saw that the men had been taken aback at the time.

16,415. 200 tons had been stopped out of how many?—I think six or eight stalls had the 200 tons taken off. There were some stalls that had 20 tons short in a fortnight; two men in a stall.

16,416. (*Mr. Harrison.*) How much could two men in a stall send up in the fortnight?—I understand that two men take the stall and they have holers and loaders, and the stall men are responsible for the coal, and they have to pay the loaders so much a day, and the holers so much a stint, whether they get anything out of it or not. It might be 20 tons of 100 or 150, I cannot say how many tons come out of a stall, but I think about that.

16,417. It would be 10 per cent. you think that was stopped?—I think more than that.

16,418. I suppose that when you went into Derbyshire you in substance told them that if they would set up a union there as you had done in Yorkshire, the union would guarantee them against confiscation?—Not in those words, I said that if they had a good substantial association, such as they had in Yorkshire, they would guarantee the men fair wages. The judge could not decide the case, and it was left over for another month, and the men sent for me to know what I thought about it. I said, "You are working "nicely now; see Mr. North and Mr. Barber, and try "if you cannot come to something like an agreement." However, Mr. North agreed to pay the whole of the tonnage that he had stopped, and one half of the expences that the men had incurred. After I commenced being agent in Derbyshire (that was on the 22d of October, if I remember rightly), the first dispute that occurred in Derbyshire was at Bennerly Colliery, the owner of which was Mr. Parker. I did not know anything about the men striking in anyway whatever, and I was very desirous to get to the root of it, and I got a friend of mine to see Mr. Parker personally and ask him if he would allow me to go with a deputation to him, for I really did not want to begin to have any disturbance. He agreed that I should, we met at Ilkeston, and I think that there were nine in the deputation. When we had shaken hands and so on, he said, "Now, Brown, what do you think of this affair?" I said, "I do not understand it, sir, we will hear what the men have to say." And the men laid their statement down, and I found that the men were wrong in every sense of the word, and I considered that Mr. Parker was ill-treated. He seemed a man not very wealthy, and they thought that because they had joined the association they could trample him under the association. I said that the association never intended to do that. When the men were right it would defend them, and when in the wrong it would censure them, I said. I went back to the committee and told them that there was no sense at all in the steps they had taken, and of course the men did not then have any more pay. I told Mr. Parker that he was at liberty to go and discharge any that he liked. I detested it as much as anybody, because I saw that he was an ill-treated gentleman.

16,419. (*Chairman.*) Is it your experience that if the coalowner appears to be defenceless and poor, there are men ready to set their foot upon his neck?—I am sorry to say that I think there are hundreds of men who, if they think their employer has not a good amount of money (they want their wage whether they work for it or not), and is not wealthy enough to resist them, will take both him and the pit.

16,420. You gave judgment, if I may use my own language, against the men in that case?—Against the men.

16,421. Did they acquiesce in it, or think that it was unjust?—There were many men that said that they would never speak to me any more. They said if that was my agency, they would pay no more to a fellow like me. I find that I have made a little mistake here. The Hucknall Colliery was before Bennerly. The men at Hucknall Colliery (I think it is in Nottinghamshire), thought that when they had paid three or four times to the association, they ought to be having something, and they laid a curious statement before the delegates at a place called Hill Top, and they stopped without giving any notice at all. I can assure you that I felt curious on their account, because I knew that if the master knew anything about the Masters and Servant Act, he could put every man of them in prison. I asked them to get me a copy of the colliery byelaws, and they got me a copy, and I met them at Bulwell Forest. I said, "Now it is not me that is going to speak this morning, "but your own rules. There is a rule that says distinctly that there must be 28 days' notice given on "your part before an advance takes place, or a "reduction, or you leave work, and the master must "do the same to you. You have given no notice at "all, and the master is lenient to you, or he would

" have taken you before the magistrates. Whatever " you do go to your work, and if you have any " grievances, send a deputation to your master and " lay those grievances before him, and then if you " determine to strike and think that you are ill-dealt " with, when you have served your notice you will be " at liberty." The men went to work ; they gave a month's notice, and when the notice was up, on the Monday before the notice expired, I am sure I worked two hours at the delegate meeting to oppose that strike. Nothing would do but they would come out. I said, " Well, I will never advocate it. I do not believe in it," and I may say that the men were out 16 weeks before I ever went near the Hucknall men at all.

16,422. If a considerable number of men act much against their interest, there is almost always a servant of evil at the bottom of it spreading mischief I suppose ? Did you find out in this case who was the centre of mischief ?—I did. The case was misrepresented in every sense of the word. The Hucknall men were making very fair wages. Of course they were working 12 hours a day, which I considered was the evil ; but still I thought that if the men had given a little time and remonstrated with their employer, they might have done a good deal better with him than come out on strike.

16,423. What was the motive of the man that misrepresented and misled them ? Was it vanity, or money, or what ?—It could not be for money, because he was not a miner's agent, and never has been. There are some men that like to be popular for the sake of being popular, to make themselves large. I think it has been for that as much as anything.

16,424. You must have had great insight into the minds of a number of men whom you have swayed ; and vanity, you think, is a considerable power ?—I think it was with several of the men. The men were out 16 weeks. I never went to advocate the strike. I was often asked by the committee to do so, but I said, " No ; when you plan me to go to Hucknall to " tell those men that they are right, I will play that " day and go my wage short," and did not go. When they had been out 16 weeks Mr. Walker called the men together in the National School at Hucknall, and I saw it in the paper the day after, the " Nottingham Express," that he said this : " Now, you will see, " men, that the very delegate that has led you into " the error is just the man to leave you in the lurch." Of course I considered that his remarks applied to me, for I was generally the man that they shot at, and I did just go over to Hucknall to say that I had not led them into the error. I had a large meeting then, for perhaps the men thought that I was going to sympathize with them. I said, " I am just of the same " opinion as I was 16 weeks ago. You were in the " wrong then, and you are in the wrong now." I never did believe in the Hucknall strike. It was wrong then, I thought, and I believe to-day that it was wrong. The next affair that took place in Derbyshire was at Staveley. On the 3rd of September they were determined to have a demonstration meeting at Chesterfield. Mr. Catchpole, the secretary that wrote the minutes I have in my hand, sent me a letter to Hunslet to ask me if I would address that meeting. I sent back to say that I could not, as I was engaged to be at Barnsley the same day, and my name was on the bills. He then sent another letter, and said that Barnsley would be able to get on without me, that Mr. Macdonald, Mr. Holmes, and others would be there, and they would be able to manage. I wrote and said no doubt they would be able to get on without me, but I had much rather go to Barnsley. I should mention here that I have sold a few books among the miners. He then wrote a letter back to this effect : " I suppose you think that because you " are more respected in the Barnsley district you will " sell a few more books among the colliers there than " in the Staveley district, and that is the reason that " you cannot come." I could not stand that, and I wrote to John Normansell to know whether I could go, and he said I could take my own course, and rather than make myself enemies if I could do any good there they would give me up at Barnsley that day. After those three letters I agreed to go and address the meeting. It was held at Chesterfield on the 3rd of September. I think they said that there were 900 Staveley men that joined the association that day.

16,425. (*Mr. Harrison.*) What was the substance of your speech at Chesterfield ?—The substance of my speech at Chesterfield was simply this, I had the rules of the association in my hand. I explained the rules of the association. The men told me how they had been treated.

16,426. What was their complaint ?—Their complaint was that they had no weight at all, that they got the coals by lump.

16,427. Do you mean that the tubs were simply measured out by sight, not weight ?—They had a check weigh-man on the pit bank, and this was what the men said to me ; respectable men, I mean. When a man professes to be a local preacher among the Wesleyan body or Free Church, or any other institution, I consider that I ought to rely on his word, and one of them said to me, " I can assure you, Brown, that I " have lads that have to start off at half past 4 in the " morning, and do not get back till half past 7 at night, " and they have very little for it, and our tons are no " tons at all, and when we complain of it they tell us " that we get them below what we ought to."

16,428. Was each tub weighed as it came to the top ?—Yes, I believe every tub was said to be weighed when it came to the top.

16,429. But the men considered that it was not fairly weighed ?—They said that the check weigh-man had no power on the bank, but only to stand and see them weighed. He was not allowed to touch the tub or the beam, and had nothing at all to do with the machine.

16,430. The substance of it was that they considered that the coal was not fairly weighed ?—They told me deliberately that the men were cheated in their weight.

16,431. Was there a system of confiscation there ? —Yes ; they told me that there were scores of tons a fortnight taken off. Of course I do not believe all that I hear in those cases, but I may say that when I addressed the meeting, and I had those things given into my hand in a note, I denounced them with all the power that I could muster, and if there were any of the agents there I said before them, " Now I have been informed that this is the state of things at Staveley."

16,432. Did the men complain of the ventilation or inspection ?—No. I said, " If there is any agent here " I have been informed that this is the state of things " at Staveley, or if the masters themselves are here, " I have been informed that such and such things " exist, and if I have been misinformed, I beg that " you will put me right." But nobody ever came to put me right About 900 men joined the association that day.

16,433. (*Chairman.*) Some of the witnesses spoke of violence breaking out as the result of some of your words—was that so ?—No ; the only thing like violence that ever happened at Staveley was when they got their non-union meeting up on the free labour society. The Staveley company gave a bullock or two and 10 or 12 barrels of ale, and one poor lad got drunk and broke his leg, and that is the only thing that has ever happened at Staveley that I know of. The men joined the association, and it was given out at the close of the meeting that 900 had joined the association. Well, the next thing that I heard was this. When I got home I got a letter to Hunslet stating that they had locked a lot of men out for being at the meeting, or at least given them a month's notice, and they locked out at Staveley I think up to about 300. Of course they kept asking me my opinion about it. I had no power. I was not an agent there, only as I went over occasionally. They had their own council meeting and delegate meeting, and then they had a committee

Mr. W. Brown.
12 May 1868.

besides. When they asked me my opinion I said, "Well now, the Staveley Company are a powerful "company, they tell me that they are worth a million "of money. Just show then that you can have an "association without injuring the masters, and if "they be determined to lock out, you would be able "very likely to keep as many men as they can spare "this coming winter, and then I really think that "when the winter is over, and you do not offer any "resistance they will begin to see that you do not "mean fight and will permit the men to go to work." However, the men were determined to strike and resist it. I said, "Well now, if you strike you are "done. You cannot support your men. The "Staveley Company is wealthy and will beat you "with money and nothing else." In spite of all that I could do, when I went into the place I was lodging at they had got 500 or 600 notices printed, and they were filling them up, and I said, "Lads, you are done, "and if you will take my advice you will shove the "notices into the fire this minute." I said, "Keep "on the defensive and then you will be right, but if "you begin to resist them you are almost sure to "be defeated." Such was the case. The strike and lock-out was carried on in the first week of January, and Catchpole's cousin came to me at North Whittington and said, "What do you think to things now?" I said, "Just the same as I thought two months ago. "You may carry the strike on and make it cost "4,000*l.* more, but it will end in the same result."

16,434. (*Mr. Harrison.*) Who found the funds in that case?—There was a levy on the association.

16,435. (*Mr. Roebuck.*) Had the men help from the association?—The men got 4*s.* a week and 6*d.* a week for each child for several weeks.

16,436. (*Mr. Harrison.*) Were all the men locked out?—No; when the Stavely Company began to lock out there would be 7,000 men in association in Derbyshire.

16,437. Were you an officer of that association?—No.

16,438. None of the proceedings were conducted officially by you in that strike?—No; except getting up a social meeting.

16,439. None of the money went through your hands to pay it?—No, not at that time. I never touched a penny of money before the 3d of April in 1867. In fact I always had an objection to having to do with the miners' money. I never did like it.

16,440. (*Mr. Roebuck.*) Will you be kind enough to tell me what this means? All our doings are public, and therefore I do not think that I do wrong by reading this to you. It is in the evidence of Mr. Arthur Higginson. The question is No. 12,418, and it is put by the chairman: "Then delegates came down into "that district, such as have been described before?" And the answer is: "Yes, shortly after the Staveley "business was over, and the strike at Hucknall "colliery; the same men employed in that district "as delegates came into ours. I have here some "balance sheets sent to me showing the amounts "they received in the Derbyshire and Nottinghamshire Miners' Association, and the same men named "here, with some few exceptions, are the men who "have been troubling our district since. In that "union they give each member a book of this description (*handing in a book*) when he joins the union, "and the first date is January 1866. They did not "come into our district till February 1867. I produce that simply to show that it is a branch of the "same association; that these men who receive that "money are dependent for their livelihood upon continued agitation in some district or other. These are "fortnightly balance sheets. This is the balance "sheet for January 31st 1867 (*producing the same*), "in which I find these payments to agents: William "Ball, 3*l.* 19*s.* 1½*d.*; R. Bunting, 4*l.* 13*s.* 0*d.*; H. "Clark, 4*l.* 1*s.* 3*d.*; William Brown, 6*l.* 16*s.* 7½*d.*" Now that states that you received money at that time from that miners' association?—Yes; but that is after I engaged with the Derbyshire miners. I was coming to that. When I say that I received no money I had nothing to do with it officially. I only received a day's wage if I went to serve them a day, and railway fare, and so forth.

16,441. (*Mr. Harrison.*) How came you to go down into Derbyshire?—As I said before, it was because I had repeated invitations, and when I agreed to go to Derbyshire of course I had to bring it before the West Yorkshire district committee.

16,442. (*Chairman.*) Were the invitations from men of the working classes, or from ministers of religion?—The secretary, John Catchpole, was a check-weigh man at that time. He could not write for me without the committee ordering him to do so. He always wrote to me officially when he wrote, and the committee is chosen by the various men of the lodges themselves, and that was the reason that I went into Derbyshire.

16,443. Was the moving power in your knowledge a minister of religion?—No, he was not a minister of religion. I say that the reason that I ever engaged with the Derbyshire men at all was this. From the reports that were given to me, and the statements that were made to me every day, and many a time on a day, I considered that the men were very ill-treated in many respects. In fact to prove some things I put myself many a time to inconvenience. They said that they had to leave their homes at 5 o'clock in the morning and they did not get back till such and such times at night. I really thought that it was too inhuman to be true, but I got up myself in the morning and watched them go to work, and took care to be in the same road at night and saw the same boys come home at a quarter-past seven again.

16,444. (*Lord Elcho.*) What age would those boys be?—Twelve or 13 they might be. In fact I had had statements made to me that boys were working under 10 years of age, but I thought that this could not be true, because the inspector and other people ought to have looked after those things. I do not know that ever I saw any boy come home at that time or go at that time which I have mentioned, that I should consider to be under 10 or even 11, but I have thought that they were under 12.

16,445. The boys had been employed 15 hours?—Yes, and some of them are in Derbyshire now even. They have three or four miles to walk to their work, and they have by some of their rules to begin drawing coal at the pits at 6 o'clock in the morning, and as it will take 200 men half an hour to go down, they have to be at the pit at half-past five.

16,446. You do not mean that they are 15 hours under ground, but from the time that they leave home to the time that they get bock?—Many of them are 13 hours under ground, but 15 hours from home.

16,447. (*Mr. Roebuck.*) Can you tell me the circumstances that compel them to live three or four miles from the pit?—Yes, Derbyshire is a coal field that has been very much developed lately, they sink new pits, and of course the masters have not houses to accommodate their men, and when farmers and stockingers, and such like people that live in villages hear that more men are wanted in the pit and that they can make more money there they go to the pit, and there are men in Derbyshire now walking four miles every morning and night.

16,448. Can you tell me the name of the colliery where these things happen of men being down in the pit 12 hours?—I have the byelaws here of the Gresley Wood Colliery, and the first rule is: "That every "person employed in and about these collieries shall, "previously to entering on service, sign a contract to "obey, fulfil, and observe their rules, byelaws, and "conditions; and that each workman shall give or "receive 14 days' notice before leaving his work, "except in case of fraud, or for disobedience to the "orders of the manager or under-viewer, or for misconduct, when he shall be discharged without such "notice." Then the second is: "That the pits com-"mence work at 6 o'clock in the morning and cease "at six in the evening for a full day, and at half-past

" 12 for half a day. Half an hour to be allowed for " breakfast, and an hour for dinner."

16,449. (*Mr. Harrison.*) Does that mean that the men go into the pit at that hour, or that the coal begins to be brought up at that hour?—That the coal begins to be drawn. Unfortunately I let Mr. Normansell have my copy of the rules for the Church Gresley colliery, but there are persons in the room that will be able to put me right if I make a mistake. At the Church Gresley colliery it distinctly says that they must be there in the morning to begin to draw coal at 6 o'clock, and to cease at 6 in the evening, and at 1 for half a day, and they have half an hour for breakfast; but when they are going to work a full day they stop at half-past 12 till half-past 1 for dinner, and the men tell me (I do not know whether it is true or not) that at this time of the year pits make more half days than anything else. They set their engines on at full work and they pull as many coals as ever they can from 6 till 1 o'clock, and they call that half a day. If the men work a full day they work 11 hours; if they work half a day they work 6½ hours; that is what they tell me, and if I had the byelaws themselves of the Church Gresley colliery here they would prove it. And this I may say, seeing that 6 and 6 make 12, and two half hours make one, I call it 13 hours a day, in addition to the extra speed that they have to work at, and I have denounced it with all my power as an injustice for them to work 11 hours for a full day and 6½ for half a day.

16,450. (*Lord Elcho.*) Is the wage for half a day exactly half of what it is for a full day?—I believe it is.

16,451. (*Mr. Harrison.*) Then they work eight hours in Yorkshire do they not?—They commence at 6 o'clock in the morning and stop at 11 o'clock for what we call drinking, and come out at 2. We work seven hours for a full day, and in Derbyshire they work six and a half hours for half a day.

16,452. (*Chairman.*) Perhaps you have found that there is nothing so satisfactory when you hear of a grievance as to go down unknown and just see that it is real?—The way that I have done is to ask men on whose word I could rely. I have come out with this when Mr. Eley has been at the meetings. I have said: "The men tell me that they have to work six and a " half hours for half a day; the men tell me that they " get 25 cwt. to the ton, 5 cwt. is reckoned for smudge " and other things; but if any smudge comes up the " tub is confiscated, and they get nothing for it; the " men tell me that, and if it is not so, I wish to be " put right." When the agents themselves have been at the meeting I have said that.

16,453. Who is Mr. Eley?—Mr. Eley is a colliery manager. I wish it to be distinctly understood that I do not say that those things really are so, but I say that I have been informed so over and over again.

16,454. And you have ssked the men whose interest it is to contradict you, and they have not done it?—I have asked the men who have been at the meetings. I have said: "I have been told such and such things; " if they are not true, you that are here come and " put me right."

16,455. (*Mr. Harrison.*) Was the next case the Church Gresley case?—The next case was Church Gresley. I was not at the delegate meeting at the time. I had an appointment somewhere else. I got to Chesterfield on the Tuesday. They had held this delegate meeting on the Monday, and the committee informed me that a deputation had been over from Church Gresley, with a view to see if they would take 100 members into the association, and they brought their entrance money, 2*s.* 6*d.* each, but they objected to take their money. The council said, "We consider " that we should not be right in taking your money. " We do not know how things are going to turn out." And then the men said, "We have so many grievances;" but the council thought that in a week's time they might be on the funds if they took them, and they refused to take their money. There was nothing more about it at that time (that would be at the back end of January) and then we went over into February 1867, and there was a dispute at Mr. North's, and I went over to Old Basford to see how things were going on at North's; and the committee there, some of them came from Swadlincote or Church Gresley, somewhere there, and they said, "We are likely to have a longish job here, Brown." I said, "I am sorry for it." They said, "We want you to go over to Swadlincote and see " if we cannot get men to pay a little and help us to " get over that difficulty." I told them that I was almost tired of going into fresh districts, and I was poorly at the time and did not feel inclined to come down. William Ward was there at that time. They agreed that William Ward and I should just go over to the men and get them to subscribe for the Cinder Hill men if we could. We went over and called a meeting to be held in the beerhouse room, but there was not room there and it was held on the Dely as it is called. I simply told the men that a number of men were out, and that when they came round I hoped that they would do their best to help them; that I considered the men right and the masters wrong and that their case deserved commiseration. We had no inclination to begin an association at Swadlincote, but the men wrote for some one to go over again. Of course I was the man that had to go. When we had addressed three meetings there the men commenced a lodge, and when it got out that 70 or 80 men had joined the association, the secretary and treasurer got notice to leave. There were 11 I think in the first batch. They asked my opinion and I said, "It is just what I expected, it " is another Derbyshire touch; you must be prepared " for the worst, it just rests with you. I do not want " to plunge you into any difficulties, but my opinion " is, that they mean it in order to put the union " down." They said, "Well, it is time there was a " union here, because they stop so much for an acci- " dent, they can stop it just when they like." And one man told me, "Out of our stall only last week we had 10 tubs taken off in one day." I asked them where it was gone to, and they said, "deadbrief." That was at Hall and Boardman's colliery, where Mr. Ely is the manager. I do not say that this was so, but the men told me so.

16,456. (*Chairman.*) What were the matters that the men told you that they had to complain of in this district, that satisfied you that there was some cause of complaint?—I had then a little more experience in the Derbyshire district than I had when I first went in, and I could see myself boys going before 5 o'clock in the morning.

16,457. How many hours did you find them at work?—In the pit from 12½ to 13 hours at Church Gresley Colliery, at Swadlincote Colliery, at Gresley Wood Colliery, at Granville Colliery, and all the collieries. I have been on the road and watched them myself. This statement is not from anybody else, but it is what I have seen myself.

16,458. (*Mr. Roebuck.*) The men work by the piece, do they not?—The stall men are by the piece, and the holers are by the stint, but the loaders are by the day, and the boys also.

16,459. And they do not get more for staying in the number of hours that you talk of?—They tell me not a penny more.

16,460. (*Mr. Harrison.*) Was the system there confiscation generally, and to what per centage did you understand it was carried?—I could not say to what per centage, and I could not say how far it went, because there are little things that exist in collieries that do not exist in other places. A good deal goes by favour. I do not single any place out in this, but suppose a man becomes a secretary belonging to an association, if they do not feel disposed to lock him out and discharge him they can confiscate his tubs, and then of course he is obliged to leave, and that is next door to locking him out.

16,461. Was there a check weighman at Church Gresley?—No, no check weighman has ever been allowed in the Church Gresley neighbourhood.

16,462. Have the men made an attempt to appoint

Mr. W. Brown.

12 May 1868.

one?—I am not prepared to say whether they have or not. Some men say they have and some say they have not. The masters say that they would not object to a check weighman, but I say before this Commission, that if I worked at a pit (and this is my own mind) and there was a check weighman placed on the pit bank, and it only took 2*d.* a week out of my wage to pay him my share, and there was no organisation, I would not pay it.

16,463. You consider that the check weighman is of no use without a union to support him?—Not in the least; he is partly under the masters, and if he wants to fetch a corve back he is obnoxious, and said to be obstructing the workmen, and all that sort of thing, and if there is no organisation at his back they can discharge him immediately and the man has no power at all; and not only is it the case that they can, but they do it.

16,464. (*Chairman.*) There are some of your fellow-creatures good and some bad in all places, are there not?—There are some good and some bad in all places. I do not say that every collier that goes into a pit should not have a tub confiscated, because there are men who, if there were not some rule, would send their coals out in such a state that they would not be fit to be seen. Still, it is not always those men that suffer most from confiscation.

16,465. I meant to convey that a general outpouring upon the iniquity of mankind in general, and the employers at Church Gresley in particular, does not impress me with anything like the effect than an individual instance does?—I am very sorry to say that as far as I could hear from the men that it was pretty general in the neighbourhood.

16,466. (*Mr. Roebuck.*) Who are the proprietors of the Church Gresley Colliery?—Lord Chesterfield I think is the proprietor.

16,467. (*Mr. Harrison.*) The mine is leased, is it not, and is not worked by him?—I think he works his own, if I am not mistaken. I wish you could get to know and know fully the state of the case, because the men are of opinion that Lord Chesterfield knows nothing at all about a great number of those grievances.

16,468. What are the other grievances besides the confiscation and the hours?—There was confiscation and hours, and something else. I am extremely obliged that you have asked that question, because it brings something out that I should have forgotten. At first when I went to Swadlincote the men had their own timber to find, and men have told me that when they had worked a fortnight as hard as they could work for 11 days, when they have paid for the timber and every other thing, they have only had a very few shillings to take home, on account of there being so much timber broken. Then there is another objection which I raise to this system. Those men are only poor, and they are tempted sometimes, when they have their own timber to find, to do without a puncheon or two when they ought to be set up, and it is a serious temptation to them. I was informed when I got to Swadlincote that they had their own wood to find at Hall and Boardman's colliery.

16,469. (*Lord Elcho.*) Are you aware whether that subject, the men finding their own wood and props, has ever been brought before Parliament?—I do not know whether it has or has not.

16,470. You do not know that that has been brought before a Committee of the House, which has condemned the practice?—No, I am not aware of that. Then they locked out about a hundred men. Then it began to be rather a heavy burden, of course. I had made up my mind then, from hearing the grievances I had had stated to me, that I would do my best to establish an association there, and I really expected a good deal of opposition from the masters, because I knew that a great many of the employers in Derbyshire were against it, and I suppose that they would have communicated with the Church Gresley masters. Then this was put into my hand: "Miners' "Union League, Sandiacre, near Nottingham, March "21st, 1867. Dear sir,—Messrs. Hall and Boardman "(Swadlincote and Cadley Hill Collieries, Burton-on-"Trent) inform me that the miners' union is rapidly "extending in the Burton district, and they apprehend much difficulty from this source unless prompt "measures be immediately adopted. In conjunction "with the other coalowners in the district they have "determined to discharge every man who becomes in "any way connected with the union, and the men "whose names are given below, active members and "promoters of the same, are now under notice of "discharge from their works in consequence. It is "requested they may be *refused employment* at any "of the associated collieries, agreeably with the resolution of the general meeting, January 3d, 1867, "to which I beg particularly to direct your attention. "—I am, dear sir, yours most obediently, F. Peel." Now, I may say that I do not know that ever a wrong word or a hard word had escaped my lips, or a strong sentence. It is possible for a man to give vent to a strong sentence when he gets a little warm in a meeting, but I have been very careful up to this time. Therefore, when I saw this, of course I felt very indignant about it, and some of the men got work even on the highway after the notices had expired, and Mr. Eley, the gentleman that is in the room, interfered, and he was determined to have those men discharged from mending the highway, though they were locked out. They had joined the association, and when they got work, either at repairing the road or breaking stones, he was determined that he would have them discharged, and he succeeded. In addition to that, William Newbald and five or six other men got work in Staffordshire, and when they had just got their hands right and a little bit used to the work there was a note went after them, and he and the other five had to leave that place because they belonged to the masters in the Church Gresley district. That I considered was very hard.

16,471. (*Mr. Harrison.*) Can you tell us from what pit the men were discharged and from what quarter the notice came recommending their discharge?—I will begin with the highway. I heard that several men had been discharged from working on the highway and I said, "Well now, who do you think has been the instrument of this?" and they said, "Well, they tell me Mr. Eley." I said, "Surely not." But, however, I went to Mr. Adams, shoemaker, who is the overseer of the parish, and has to do with the highways as well, and is a large ratepayer, and I said, "Mr. Adams, is it true that Mr. Eley has interfered "with our men working on the highway?" and he said, "It is," and Mr. Adams is a respectable man.

16,472. (*Chairman.*) If you had said to him, "I "hear that some of the miners were out on strike, "got employment on the highway, and have been "put off by reason of the interference of Mr. Eley," that would be specific, but "interfered" is a wide word?—Well, through the instrumentality of Mr. Eley these men were forced off the highway. Mr. Eley is a road surveyor or was at that time; they told me so.

16,473. (*Mr. Harrison.*) Can you make the story of the men who were discharged from Staffordshire more specific?—William Newbald was one. Though I have been scores of times in Gresley I do not know 20 of the men's names, but I know William Newbald to be a very respectable man.

16,474. Where was he discharged from?—From some colliery in Staffordshire. I do not know the immediate colliery.

16,475. (*Lord Elcho.*) Did Mr. Adams distinctly tell you that Mr. Eley had been the means of getting these men discharged from their work on the road?—Mr. Adams distinctly told me that Mr. Eley had been the instrument of getting those men discharged from repairing the highway.

16,476. Did he tell you how he had got them discharged?—He did not tell me that.

16,477. Did he tell you that Mr. Eley was a road surveyor?—Yes.

16,478. (*Chairman.*) Was Newbald one that had been discharged?—He was a man that was locked out I think with a second or third batch of men.

16,479. Had he been on the highway?—No, he had not been on the highway.

16,480. (*Mr. Harrison.*) He told you that he had got his discharge from a colliery in Staffordshire?—Yes.

16,481. Under what circumstances?—He told me that he and other five men had been working at a certain colliery in Staffordshire, and they liked the work pretty well (and of course when a miner has been off two or three months he is not very fit to work in a mine till he has been at work two or three weeks) when they had got their hands nicely in, the steward went down and said, "I have received a note that you "are locked out at Gresley," and he said, "Under "those circumstances you will have to leave here." When Newbald came back I made it my business to see him, and he told me that the steward told him that a note had come from the neighbourhood of Church Gresley to say that they were locked out, and they were obliged to leave on that account.

16,482. (*Lord Elcho.*) Do you know the steward's name?—I do not know it. I could get to know it.

16,483. I suppose you are aware that there are trades unions which have black lists which they publish to prevent members of their union who have left their union or who have offended their union getting employment?—I am not aware that such a thing exists in our association.

16,484. I did not ask you that, but I suppose you are aware that amongst trades unions there are such things?—I have heard so.

16,485. That such lists have been produced at this table?—I think I have heard that.

16,486. To your knowledge do such lists exist among the miners' unions?—Not to my knowledge.

16,487. Can you speak positively?—I can speak positively, as far as the West and South Yorkshire districts are concerned, that no such lists do exist or ever did exist.

16,488. Did you ever hear of any anywhere else?—No.

16,489. (*Mr. Harrison.*) Have you ever seen any similar list of the Association of Coal Owners in your trade?—Yes, I have seen a printed list of every man's name employed in the colliery.

16,490. I mean have you seen a printed list of black sheep sent round for that purpose?—No, I have not seen a printed list of that sort, but there are so many ins and outs in trade. Suppose I was at the Church Gresley colliery under Mr. Eley, and Mr. Eley was making it, as we say in common terms, too hot for me, and I gave him 14 days' notice to leave, well I should get my clearance from Mr. Eley, and when I try to get a job at any other colliery I have to show my clearance, and that shows where I come from, and the manager there says, "Call in three or four days." Then he has time to write to Mr. Eley to know what sort of a fellow I am, and when I come back he says, "I am sorry for you," but I can do nothing for you.

16,491. (*Mr. Roebuck.*) Is that all the direct evidence you have?—That is all the direct evidence I have, and it is simply my own opinion.

16,492. (*Mr. Harrison.*) That letter which you have referred to purported to contain the opinion of the masters, but it had no signature I suppose?—We could not ask the steward to give us the name as it was a private thing. Seeing that there has been a good deal said about my strong language and abusive language, I think I ought to let the chairman look at that note and the circular that I got printed to call a meeting of union men and non-union men. There is the envelope (*handing it in*).

16,493. Was it sent to you anonymously?—Yes. I wish to be distinctly understood when I say this. I know as to the feelings of many gentlemen towards me, that it is only for want of knowing me better that they have those feelings. I am only a very poor man, but I will give 10*l.* to any charitable institution if six respectable men can be got that will prove or give evidence to say that ever I provoked a strike or wanted to provoke a strike since my name was William Brown, and I wish the chairman to read a letter that I got from Messrs. Briggs and Company (*handing in the same*).

Mr. W. Brown.

12 May 1868.

16,494. (*Chairman.*) This is a sensible and kindly peace-making letter, and you show it to us on that account?—Yes.

16,495. (*Mr. Harrison.*) Do you wish to say anything about Mr. Briggs's system?—Well, I believe that the scheme in itself is very good, and I believe that if it were generally adopted it would be a good thing for the miners. When the scheme was first broached or mooted I went with Mr. Henry Briggs and his father to the Methley Church school and I spoke at a meeting on the question, and of course on the face of it it looked a very good scheme and I agreed with it in every sense of the word. When I got to Methley the next time I had to go down, several of the men came to me and seemed very much annoyed that I had taken that step, and I said, "Well, "I have looked at the prospectus and it looked to me "a good thing, and I had had some talk with Henry "Briggs and I was proposed to go. At last there "came round one man who had worked 14 or 15 years there and said, "Well, William, the scheme in "itself is good, but it has come from Mr. Briggs, "and he has dodged us so many times that I have no "faith in him. I believe in the scheme, but not in "the man, and to say the least if I were you I "would say nothing for it." I said, "Well, I will "say nothing against it," and I never did say anything for it or against it. It is possible that not saying anything for it the men might think that I was against it, but if I give you my opinion I think it is a good thing, and I wish that every colliery would adopt the same system.

16,496. (*Mr. Roebuck.*) I want to know some things connected with your early career which will throw light upon what followed. It seems (I have no doubt from your ability) that you very soon made yourself a prominent man among your class, and I want to know, when 21 of you were locked out and became obnoxious to the masters, what you had done previously to make yourselves obnoxious?—Are you now referring to Pepper Lane colliery?

16,497. To the early part of your evidence when you said, "21 of us were out and we were obnoxious"?—We were only obnoxious so far as going to work at the Pepper Lane colliery was concerned. When Mr. Bower bought the Pepper Lane colliery he came to me at my house and said, "You have heard that I "have purchased the Pepper Lane colliery, the col-"liery has not hitherto paid, but I am determined to "push the business. Now, can you get me 20 men "belonging to Mr. Fenton?" and I said, "Yes, I will try." That was on Friday, so I saw several of our men on the Saturday and I said, "Now Mr. Bower "wants 20 men, I shall make one myself, and I shall "want other 19. We will pick him 20 of the best "men we have." Of course I made one myself and I got other 19 and we went to work at Pepper Lane colliery. Of course the coal masters' association got to know that we were working at the Pepper Lane colliery; there is always somebody ready to let them know. When they got to know it we got notice to leave; we were only obnoxious so far as working against the coalowners' interests goes, as they thought, by working at the Pepper Lane colliery.

16,498. I want to know why Mr. Fenton followed you with that sort of vindictiveness, had you said anything at any meeting charging the owners with oppressive conduct, calling them cruel, or using hard words of any sort or kind, which I take it you are quite capable of doing. Had you done that before they followed you in that way?—No, I had not.

Mr. W. Brown.
12 May 1868.

16,499. What I wanted to know was simply this, whether you were goaded on to this or whether you began that language, because of late years I am informed that you have used some very hard words concerning the masters. I was asked to put this question to you, whether you did not use very strong language as regards the masters?—Are we speaking now about 1858?

16,500. I asked you as to 1858, whether you did or did not, because I wanted to know whether you began in the way which of late years you have pursued, or whether you were driven to it by unfair conduct towards yourself. Did you begin by using hard language towards the masters?—For the first three weeks we were out in 1858 I went to Mr. Fenton repeatedly and reasoned with him, and I used every means I possibly could to try and prevent a strike, and I had no inclination for a strike, and I got work at the Pepper Lane colliery; and when I and those with me went from there, I went to Sir Peter Fairbairn, the mayor of Leeds, and I took my notice with me, and I asked him if he would allow me to hold a meeting in the Court-house as I thought we were ill-used men, seeing that we had had notice to leave, and he said, "With pleasure; you can have the Court-house." He said that in any public grievance he would be glad to assist us in any way he could. I took my notice and read it to the audience assembled, and of course it was the general opinion that we were ill-used men.

16,501. Upon that occasion did you say bitter things about masters in general?—No.

16,502. (*Lord Elcho.*) When you left Mr. Fenton and went to this Pepper Lane colliery, did you subsequently return to Mr. Fenton?—Yes, and worked there five years after that.

16,503. Did Mr. Fenton object to your leaving his service to go to work at this Pepper Lane colliery?—He only objected because we resisted the reduction, and I said I did not want to be on strike, but would rather be working, and of course Mr. Brooksbank said he could find us work, and Mr. Bower wanted us to work there, and he thought that he could get out of it because he reckoned that it was Mrs. Bower's colliery, but he could not. After that, as I said, I went to concerts and such like, and then I went to work again in December 1858, and worked on till the 10th of March in 1863, and then I became a miners' agent, and was taken to Wakefield and to York and put to all this inconvenience, whereas never any one of my family received a summons in the world except me.

16,504. (*Mr. Roebuck.*) Will you now direct your attention to 1867? Was there not in 1867 a certain degree of acrimony introduced into your language, and did you not in that year denounce the masters generally?—Well, I believe I did, because there was a circular issued, and the man signed himself Mr. Lightfoot, and I have been told that Mr. Eley has gone round with the man and said to the men, "Are you "going to keep up an idle man like Brown? He has "built a lot of houses and has got it all out of poor "colliers pence." The fact is that I had not a brick, and I wanted them to prove that I had those houses.

16,505. I merely want to bring out your state of mind, and I put questions to you for that purpose. Now, I want to know if you did not also in that same year tell the working men that they must have a share of the masters' capital?—No, not in that way. I said that the interests of labour and capital were identical, and I thought that when the coal trade was good and there was a brisk demand, and the profits were pretty large, the men had a right to share in the profits of a good trade, seeing that the masters always come on the men in the time of a bad trade. I have said as much as that. But I will tell you what I said too, and I think we ought to have both sides. I have told the men that if I were a colliery owner I should very likely be more tyrannical than some of the colliery owners were, because if a man would not work 11 days a fortnight for me if I had trade he should not work for me at all.

16,506. (*Mr. Harrison.*) Your policy is in favour of reducing the hours and working steadily?—Yes, I say this; that eight hours a day is plenty for any miner to work, and I am prepared to prove from practical experience that a man will get more coal in 12 months with eight hours a day than he will with 12 hours a day. I never worked more than seven hours a day since I became a man. And when I made rather a sweeping statement about the wages in the Town-hall, Mr. Fenton and the steward looked over the books to see what the wages were, and though the wages were only 4*s.* 4½*d.* on the average, my wages were 5*s.* 10½*d.* taking the whole year through.

16,507. (*Mr. Roebuck.*) You being an active man could do more work than others?—I always took good care of myself, went to bed in good time and lived pretty well, and I consider that when a man has worked well for seven hours he will go to his work cheerfully the next morning, but if you keep a man in 12 or 13 hours he cannot go to work next morning.

16,508. (*Lord Elcho.*) When you speak of eight hours' work in the pit, does that mean eight hours only in the pit, or eight hours actual labour plus an hour for dinner?—I generally stopped three times for dinner when I worked in the pit. I always used to get a little refreshment every two hours, and I found it very beneficial to my health.

16,509. Then what do you think the proper number of hours for a man to work to do justice to himself and to his employers; do you mean eight hours in the pit, or eight hours' work plus the stoppages?—I mean from 6 in the morning to 2, including stoppages for drinking or snap, but I do not mean that they stand an hour in the pit doing nothing. I mean that they just sit down during refreshment and then go on again. All the three times I stopped would not be more than 20 minutes.

16,510. (*Mr. Roebuck*) I want you to answer me one or two questions. You remember that trial of yours at Yorkshire?—Yes.

16,511. Grave charges were brought against you, and you were acquitted?—Yes.

16,512. Did the judge address you or say anything to you on that occasion?—Yes, he just said this: "Brown, you are acquitted by the jury, and, as far as "I can see, very properly acquitted, but if you intend "to become public instructor I should think it safer "for you to instruct the men in their duty rather than "in their rights." That was all he said.

16,513. Did he not say anything to you to this effect, that you had escaped by "the skin of your teeth?"—No such thing.

16,514. Have you ever read any report of the case?—I had my trial printed, and every word that the judge said.

16,515. Would you be kind enough to let us have a copy of that?—I am very sorry that I have not one with me, but I will send you a dozen.

16,516. (*Mr. Harrison.*) Perhaps you could send us, not too many, but one or two of your printed speeches upon these occasions; I mean those that are fair reports?—Yes. I am sorry to say that as to some reporters I have had occasion to think that they have been tipped to make me say what I never did.

16,517. You mean that they have represented you as saying things that you did not say?—Just so. There are sentences that have been reported that I never uttered in my life. If you say that you consider such and such things as reported dishonest, I have actually seen it printed that I said "I considered that so and so was all true."

The witness withdrew.

Mr. ALEXANDER MACDONALD further examined.

Mr. A. Macdonald

12 May 1868.

16,518. (*Chairman.*) I believe that you wish to say something upon what has passed?—I wish to say this, that one of the complaints of the miners for the last 10 or 12 years, including the miners of Derbyshire, on two different occasions has been this system of the men paying for their own prop wood. We brought it prominently under a Committe of the House of Commons, which sat (as I have stated here before) three sessions, and that Committee have condemned it (and nine of that Committee were coalowners), and said that it was wrong. So that Mr. Brown has proved his case already by a Committee of the House of Commons, the largest portion of that Committee being coalowners. Another of the complaints that Mr. Brown has spoken of here to-day was of this juggle I may call it in the contract with regard to weighing. We brought that very prominently as well before the Committee, many complaints having come from Derbyshire, and petitions as well; and that Select Committee of the House of Commons have recommended to the House that a statutory law be passed to make it law that at all pit banks shall be standard weights, and that these weights shall be inspected by the inspector of the district, again proving that the practice that Mr. Brown denounced has met with the condemnation of the House of Commons. A committee consisting, in the largest portion, of coalowners, have condemned it equally with Mr. Brown. Again Mr. Brown denounced in Derbyshire (I have read his speeches), very strongly and not more strongly than I would have done, the present state of inspection and regulation of mines. The Committee of the House of Commons has also declared that the present system of inspection is inadequate and ought to be improved. Mr. Brown has denounced in strong language (I have read his speeches) the practice of working boys in the mines 12 and 14 and 15 hours a day. I simply say that I have done the same thing, and will do the same so long as such an abhorrent practice is continued, and I am glad to say that the Committee to which I have referred have also declared that those long hours should be put an end to by legislative interference. That is all I wish to state.

16,519. (*Mr. Roebuck.*) Let me ask you one question. Have you ever found the House of Common averse to hearing, and averse to remedying a grievance complained of rationally and honestly before them?—I stated (and I was only sorry that you were not present the day on which I was examined in chief), but I will repeat it again, that I believe there is no legislative assembly, as far as my reading of the constitution of legislative assemblies goes, where a real grievance would be more readily heard than among many members of the House of Commons, and that as to our grievances we have complained of them long, and they have not been remedied so soon as we thought desirable, but possibly for the interests of all they were remedied at the proper time.

16,520. (*Lord Elcho.*) If the House of Commons were about to expire, and if you had to write its epitaph as regards that one class of whom you have spoken that epitaph would be of a laudatory character?—Yes. I believe that no other body of men would have passed so many measures for the safety and welfare of the working classes.

16,521. (*Mr. Harrison.*) But you say that they do not remedy your grievances?—They have remedied them.

16,522. Are you satisfied?—I am not satisfied.

16,523. (*Mr. Roebuck.*) Did you ever know anybody who was satisfied?—Not with sublunary things.

16,524. (*Mr. Harrison.*) The House of Commons takes its time about it, you think?—Yes; and I have said that perhaps that is the best thing that could be when more than one interest is concerned.

16,525. (*Lord Elcho.*) You gave us in your evidence in chief, did you not, a list of the grievances which you consider still unredressed?—Yes.

16,526. And those grievances have been already inquired into by a Committee of the House of last session, and in the main their recommendations meet your view, do they not?—Yes, they do; not in every point, if they did I would be sorry to think that they were all attached to my view of the case.

16,527. (*Chairman.*) You think that the general's occupation will last longer for you?—It will not be profitable to me at all events.

The witness withdrew.

Mr. ALFRED HEWLETT further examined.

Mr. A. Hewlett.

16,528. (*Chairman.*) You wish to make some observations to the Commission?—I do.

16,529. Will you be kind enough to favour the Commission with them?—With reference to the evidence which I gave last time, and some remarks which were made upon it, I wish to make a rejoinder. I stated, and it might be thought, perhaps, a little harshly, that I considered that the miners' agents had encouraged the strike which has just now terminated in the Wigan district, and I propose to put in before the Commissioners the local papers which have been published during the strike. I have collected extracts from the papers here.

16,530. What purpose is effected by the extracts from the papers that you wish to put before us?—My statement was contradicted that the delegates or the agents had in any way encouraged the strike.

16,531. (*Lord Elcho.*) You say that your evidence has been contradicted; by whom?—By Mr. Pickard.

16,532. And when you refer to these mining agents, do you refer to Mr. Pickard?—I am speaking now specially of the strike at Wigan.

16,533. And specially of Mr. Pickard?—And of Mr. Macdonald also, because Mr. Macdonald attended the first meeting at Wigan, and I have here the report of Mr. Macdonald's speech.

16,534. (*Chairman.*) Will you state what specific fact was stated, and what reply you wish to make?—It was stated that the delegates and miners' agents did distinctly discourage the strike from the beginning. I stated that the public speeches were entirely at variance with that, and I propose, if the Commission will accept them, to put in the printed statements; and it was stated also that the paper which I put in last week, and from which I read, was an incorrect report. I have a transcript of the short-hand writers' notes, and the two local papers which entirely bear out the printed statements that I have put in.

15,535. (*Mr. Harrison.*) Perhaps you could direct us to some particular speech?—They are all marked in red ink. There is one point which I should like specially to answer. Mr. Pickard, in his evidence, stated that my under-viewer, Mr. Samuel Lancaster, prior to any acts of violence, was seen brandishing fire-arms in the streets. I have asked him particularly about that, and he gives it his distinct denial. He says, in a letter to me, that he never showed any fire-arms until he was mobbed in the streets of Wigan, and he says, in his letter to me, that if he had not done so he believes that he would not have been alive at this moment, and I believe it too. Mr. Pickard also said that, as regards the importation of foreign labour, persons were brought without any discretion, indeed with a great want of discretion, from other districts; that they were put into mines, and lamps put into their hands when they were utterly unfit to use them; that they were an unsteady race of men who were imported, and that they brought in greater habits of drunkenness, and so on. He referred especially to some Cornishmen brought to the Wigan district some two or three years ago when labour was scarce. I

Mr. A. Hewlett. 12 May 1868.

must say that some of those men are very sober, steady men, and some are still staying with us, and as far as habits of steadiness go they are a great deal more steady than some natives; and as to the question of lamps, we are very careful in teaching the men the proper use of their lamps. We have at our colliery something like 7,000 lamps used every day, and I am happy to say (not in a boasting spirit) that we rarely have any accident, and our rules specially direct the men how to use the lamps in case of danger; and I should say in regard to some of the remarks made by Mr. Pickard and also by Mr. Normansell, that we do not use the lamps because they are absolutely needed, we use them simply as a precautionary measure or safeguard. We use the lamp not because of the presence of fire-damp but to guard against the sudden outburst of gas. I think it necessary to make those explanations. I do not wish to trouble the Commission further.

The witness withdrew.

Mr. W. Eley. 12 May 1868.

Mr. William Eley further examined.

16,536. (*Chairman.*) I believe you wish to make a further statement to the Commission?—I wish to make a remark upon one or two statements of Mr. Brown that he has made to-day. The first reason he assigned why a union should be established in a neighbourhood was, according to his evidence, that men should more regularly attend the work. During the last 12 months, as a practical man who has been a miner for 30 years, my attention has been turned to that subject, and also to comparisons bearing between districts where there is no union and where there is a union. In this respect I find that in the four counties, Warwickshire, Derbyshire, Leicestershire, and Nottinghamshire, as far as my observation reaches, persons can manage to work six days a week or 12 days in the fortnight, but when I go into a union district I find it is a practice (and I take it from the evidence I have heard given here) that they play always one day after the pay-day, and so far I think without a union that they generally have a preference for men attending work more regularly than where a union exists.

16,537. Where the union is the labour is confined to five days in the week, is it?—Where the union is, from their statements at any rate, they work only 11 days in the fortnight, or they play one day after the pay-day. That we never do, nor has it been the practice of any colliery that I have been connected with.

16,538. (*Mr. Roebuck.*) Is not the pay-day Saturday?—Yes.

16,539. They play on Sunday, do you mean?—On the Monday following. The next statement is in reference to the confiscation of tubs, and as Mr. Brown has been honourable enough to name Messrs. Hall and Boardman I will state that I am their manager, and I flatly deny that during the eight years I have been their manager there have been 10 tubs, or five, or three taken from any set of stallmen in the day. Mr. Brown's informant is one of the delegates and one of our men whom we discharged on account of his disaffection and causing a disturbance in our colliery, making it impracticable to carry it on. Mr. Plimsoll, I believe, was sent down at the direct request of some of these delegates to see if he could not settle matters amicably with the masters. He came to our office, and after ascertaining from him that he was not a paid agent (if he had been I should not have said anything to him, because we do not believe that they are beneficial to men or masters), I told him that I should be very glad if he would go down to our machine and examine the books there.

16,540. Is that Mr. Plimsoll of Sheffield?—Yes. He said that he was requested by the delegates to come down. I requested him to go to the machine and examine the books. Every tub is put down, and a tick is put over it if it is confiscated. I asked him to take that book and see how many tubs were confiscated, and I challenged him to find one a day, although at that one colliery we raised three tubs in two minutes. I stated that it did not average one a day during the year that had been confiscated. I was glad to hear that Mr. Brown had made one confession—that it was necessary that managers should have some control over whether it was dirt or coal sent up. Now, every practical collier knows that all coal should be dressed before it is put into the tub, and that if it is dressed after it is put into it it spoils a quantity. It is not the quantity of refuse that is in, but the quantity of slack that it spoils. And then from London, for instance, a customer would complain that such a truck of coal was valueless on account of the quantity of spoil mixed with it. One box of that small would destroy the five or six tons. There is a portion of spoil probably in each seam of coal which should be dressed off. In our seam there is a portion at the top which should be dressed off, and if any portion of it gets chipped into the tub it spoils all the coal. The reason why I have the tubs entered in the book is this, that I as manager should overlook and see what tubs have been confiscated, and if I see that more tubs than usual have been confiscated out of any one company, I immediately go and see the company, and the method I take is to stop the thing altogether. It is an unpleasant thing to confiscate tubs; it is not satisfactory to the master and unpleasant to the men, and I much prefer stopping the whole affair and not allowing them to send any up until they send it up in a saleable form.

16,541. (*Mr. Harrison.*) Did Mr. Plimsoll examine the books on that occasion?—I may say that he did, and I allowed him to ask any questions of the men without my being present; and he put this question when he came back, "Mr. Eley, will you vouch that all "the collieries in this district are carried on as syste- "matically and as fairly as yours?" The answer that I made to him was that unfortunately I have not so much time on hand as to be able to mind other people's business; that it took me all my time to mind our own collieries.

16,542. Do you know what he found to be the percentage?—I asked him if he had found one a day, and he said that he had not found it. Then in reference to the masters finding timber, or the men finding timber, I wish to inform this commission that that has been a matter that I have turned my attention to for two or three years, and I neither lean to one side nor the other, but I am testing the thing practically. I am working one-half of the colliery where the masters find timber, and the other where the men find it. I deduct from the men if I find timber a halfpenny a ton, that is to say, if I find timber on behalf of the master they have a halfpenny a ton less than if the men have to find it. I am testing the numbers of the accidents on the two systems, so that I shall be able to state it hereafter.

16,543. (*Lord Elcho.*) You have heard Mr. Macdonald state that this question was brought before a Committee of the House of Commons. Were you examined there?—No.

16,544. Are you aware that the decision of the committee was against the system of the men finding timber?—Yes, I am quite aware of what went on publicly, and I may state that there are collieries in the district where the masters find timber. In ours we are working one-half with the masters finding timber and the other half with the men in order to test which brings more accidents.

16,545. Would not it have been brought out before the Committee which system results in the fewest accidents?—I cannot say that; I think that if you treat it yourself you would easily test it.

16,546. (*Mr. Roebuck.*) Would it make any real difference to you at the end of the year whether you found the timber or let the men find the timber. You would take it off the men's wages if you found the timber, and you would put it on their wages if they

found the timber?—Where the masters find the timber it will cost them a halfpenny a ton more.

16,547. You mean to say that the men, having no personal interest in the matter, are then more lavish in the use of it?—Yes; in fact if it took less trouble to fetch a fresh prop than to fetch an old one, they would do it, irrespective of any cost, if the masters found the timber. Still if there were any saving of life or limb by the masters finding the timber, I should be the last to object to it.

16,548. (*Lord Elcho.*) Still, if the House of Commons has gone into this question, and come to the conclusion that there would be a saving of life and limb by the masters finding the timber and not the men, and if, while your experiments are going on, it occasionally happens that accidents occur in the parts where the men find the timber, would you not be responsible after the recommendation of the House of Commons?—I have not heard it officially recommended, or by the inspector.

16,549. There has been no change of the law yet on the subject, only the recommendation of the House of Commons you mean?—If I found by this experiment that there was a cut of a finger more by the men finding timber I should at once abandon it; but until then I think the thing might be placed on its own merits.

16,550. You do not accept the decision of the House of Commons, but are going to test it yourself?—I am bound to accept the decision of the House of Commons if I have it before me in a legal manner. But Mr. Brown has stated that in Derbyshire the men found the timber. I contradict that, and say that it is not so universally.

16,551. (*Mr. Harrison.*) Did you commence your experiment since the decision of the House of Commons?—I commenced it 18 months ago. I cannot say the date of that decision.

16,552. (*Mr. Roebuck.*) During the 18 months during which you have been carrying on your experiments, have you come to any conclusion either *pro* or *con* as to the benefit or non-benefit of the men finding their own timber?—I have not seen at present that we have had more accidents with men finding the timber than we have had with masters finding the timber; in fact, we have had more accidents in that part where the masters find it at present; but I should not attribute that to the masters finding the timber, but merely to circumstances over which we have no control.

16,553. (*Mr. Harrison.*) Are there pits at which men are paid for their work whilst setting their props and taking them out?—Yes; they all are.

16,554. Are they with you?—Yes.

16,555. With you the coal hewers put in the props. You have not a special set of men for the props?—We have always timberers, or if not timberers the stall men must do it.

16,556. There are not a regular set of timber men for the purpose?—In every stall there is a person qualified to timber, and expected to attend to that part of the business. So that a pick man never sets any timber with us. Passing to another matter, there has been a printed notice read here in reference to men discharged from our place. I may say that any understanding between employers in any shape or in any form never was entered into until Mr. Brown and his co-delegates entered in Derbyshire, and when they commenced at Clay Cross it was perfectly understood from the speeches made by the delegates that they were to take us by house row, and first put Hucknall down, then Bennerly, and so on. Never till then was there an understanding between proprietors in any shape to interfere with the free flow of labour until that statement was made; and that was their mode of defence. When they intended to fix upon one and take us piecemeal and put us down colliery by colliery, the masters conferred together and thought that they must put a stop to that kind of thing, and consequently that arrangement was entered into. Mr. Brown has also stated something about a notice. I have been a manager in that district for 20 years, and I may say that I have never written a clearance paper in my life, and I have never required one during the whole time, neither will I be a party in any shape to either requiring or giving one as long as I am an employer of labour. I contend that there ought to be free labour independent of any combination, and if the combination amongst masters is to that effect it is equally injurious as the combination amongst men to cripple the masters. I will defy anyone to show that I have given a clearance paper or asked for one. But if I have found a man that had left any colliery without notice I should not employ him, certainly if I knew that it was so.

16,557. (*Mr. Roebuck.*) But supposing the case of a man leaving your colliery by a lock-out (I do not say that it has been so, but supposing the case), and he goes to another colliery and finds work, would you think it just and proper that you should pursue that man and ask the proprietor of that colliery to turn him out?—No, but if the proprietor asked me if I thought that he was one of the lock-outs I should be bound as an honest man to tell him so.

16,558. You would not request that master to turn him off the work?—No, because there would not be any necessity to do that. I should only tell him that he is a union man in our district, and a colliery proprietor in our district would not employ a union man if he knew it.

16,559. (*Lord Elcho.*) But would that master to whom that man goes, if a member of the Coal Owners' Association, and if he knew that he was locked out by another master be bound to turn him off?—No; there is no arrangement or binding whatever to that effect.

16,560. (*Mr. Roebuck.*) Will you allow me to ask you if you have been at all in communication with Mr. Brown?—Not at all. I received an epistle from him, but I have always kept aloof from having anything to do with paid agents. He has just named my name, and said that I was present at one of his lectures. He took up my name and pointed me out as the greatest tyrant that ever existed in the district, and said that every man, woman, and child that wanted bread was tagged upon my coat, and vengeance would follow me. I do not know how peaceable that may sound. When you take colliers who are excitcable, if there has not been any outbreak I only put it down to their good sense. Vengeance would follow me, he said, but he would not hurt a hair of my head.

16,561. Do you mean to say that you heard Mr. Brown say that?—Yes, in one of his speeches. I have a word to say now upon the men in the road. It so happens that I am not a road surveyor.

16,562. Have you been?—In some past years I have.

16,563. During the time of this transaction were you?—In the time of this transaction I was not. The road surveyor is appointed by 16 parishes and they are thrown into a district. I mean that our roads are made by the new law, and they threw it into a district in which there are 16 parishes. I was way-warden for this Gresley parish, but the board appointed the surveyor.

16,564. (*Lord Elcho.*) Were you way warden at that time?—I was way warden at that time, and you gentlemen are no doubt aware that the powers of a way warden are nothing at all, he cannot discharge a man or place one on, he cannot set a contract, he has nothing to do with it, except with the board. But I do not wish to deny the real fact of the case; I never knew more than one man employed on the road, and this man was a very mischievous man, one who carried out Brown's teaching to the letter, and would not allow our men to pass up and down the road without annoyance, and I as a ratepayer, and our firm is a large ratepayer in that parish, did think that we ought to have men employed on the road that would allow our men to pass peaceably. Brown taught them to call us blacklegs, and then after they had worn that

Mr. W. Eley. 12 May 1868.

out, it was "funny eyes," and then it was to be "sneaks" and "snobs." This man was one of his sort and carried his teaching out to the letter, and I thought as a ratepayer I had a right to have a man employed that would allow men to pass peaceably on the road on either side of the question. I never knew but one man that was employed in that way, and that was one that made himself very conspicuous.

16,565. (*Chairman.*) Was he discharged because he was violating your right and insulting the passengers?—Yes, in a public point of view.

16,566. (*Mr. Harrison.*) Was he the only one?—I never knew more than one man who interfered, and I never knew more than one man connected with the union employed in that way.

16,567. Was this the only man that insulted the passers by?—I believe it was, I never noticed any other. I speak to facts as I saw them.

16,568. (*Chairman.*) Was he the man that Mr. Brown spoke of as the man for whom he had a strong feeling?—No, Newbold I know nothing of, I can only say that he was not our man and I had nothing to do with him, and I can only say that I never shall. Then as to speaking about the coal masters, Mr. Brown will bring to mind that at the third lecture which he gave at Swadlincote, before he knew any tyrannical acts of the masters, he called them "coal kings," and said they should be dethroned and lick the dust.

16,569. (*Lord Elcho.*) Did you hear that?—I heard him say that.

16,570. (*Chairman.*) Is there anything more that you wish to answer?—No.

The witness withdrew.

Mr. Higginson.

Mr. Arthur Higginson further examined.

16,571. (*Chairman.*) You are the secretary, I believe, for the Coal Owners' Association of Leicestershire and South Derbyshire?—Yes, honorary secretary.

16,572. And were you secretary at the time when these strikes were going on of which the last two witnesses have been speaking?—Yes.

16,573. Will you state what action the coal owners took, and on what principle they acted?—We acted simply and purely on the defensive. We determined to resist the introduction of the union into our district by every lawful means in our power. We took no action until after the arrival of the delegates in the district, and then we agreed amongst ourselves, as you have heard before, that we would not employ union men, simply on this ground, that as long as union men are employed in one colliery they pay towards the support of the men on strike at another colliery, and wear the master out in detail. We brought all our forces to bear upon them in a body, and so ended the matter satisfactorily. That was the only action that we took. I may say that the association, as regards strikes or anything of that sort, is virtually at an end.

16,574. (*Mr. Roebuck.*) Did you send round a black list from one colliery to another pointing out certain names of men not to be employed?—If our men gave notice, or I gave notice to any man who joined the union, we sent a list to the other collieries that they were union men. It was optional with them to employ them or not as they liked.

16,575. (*Lord Elcho.*) Do you mean that there was no understanding?—Yes, there was an understanding that we would not employ them amongst ourselves.

16,576. (*Mr. Harrison.*) Do you doubt the accuracy of this circular which Mr. Brown read from?—No, I believe that is correct. I have looked for it but cannot find it.

15,577. That says, "It is requested they may be "refused employment at any of the associated col-"lieries, agreeably with the resolution of the general "meeting, January 3rd 1867," so that it was hardly optional with them?—I have looked for the minute and cannot find anything of it, but that is signed by Mr. Peel, who is secretary of the general association. I should explain that we have two associations in the district, the general association and a small association in our own valley, comprising the five collieries that exist there.

16,578. Is what that letter states accurate?—Yes, I dare say.

16,579. From thence you gather not only that there was a general association, but an agreement that they would not employ union men, that they would prevent it, and request others not to employ them?—That was an understanding that we would not employ union men as long as one colliery in the district was attacked by them. There is one statement in Mr. Normansell's evidence that I want to contradict; in the answer to question 16,319 as to taking the pitmen and putting them to work on the bank at the banksman's rate of wages. We have no rules of that sort at our pit, and if they are taken out in consequence of the non-attendance of the banksman we pay them pitmen's wages. Then also we have no timber found by the men in our colliery, I think.

16,580. Are you not able to say what the fact is?—I am not able to speak positively as to all the portions, but generally we find it. Something was said about the language used. I have never heard Mr. Brown speak, but the impression over the district is that he has used these exceedingly strong observations as regards coal-owners, and incited the men to a great degree.

The witness withdrew.

Adjourned to Tuesday next at 11 o'clock.

COMMISSION.

VICTORIA R.

Victoria, by the Grace of God of the United Kingdom of Great Britain and Ireland Queen, Defender of the Faith.

To Our right trusty and well-beloved Councillor Sir William Erle, Knight; Our right trusty and right well-beloved Cousin Thomas George Earl of Lichfield; Our trusty and well-beloved Francis Charteris, Esquire (commonly called Lord Elcho); Our right trusty and well-beloved Councillor Sir Edmund Walker Head, Baronet, Knight Commander of Our most Honourable Order of the Bath; Our trusty and well-beloved Sir Daniel Gooch, Baronet; Our trusty and well-beloved Herman Merivale, Esquire, Companion of Our most Honourable Order of the Bath; Our trusty and well-beloved James Booth, Esquire, Companion of Our most Honourable Order of the Bath; Our trusty and well-beloved John Arthur Roebuck, Esquire, one of Our Counsel learned in the Law; Our trusty and well-beloved Thomas Hughes, Esquire, and Frederic Harrison, Esquire, Barristers at Law; and Our trusty and well-beloved William Mathews, Esquire, greeting.

Whereas it has been represented unto Us that it is expedient that inquiry should be made into the several matters herein-after mentioned.

Now Know Ye, that We, reposing great trust and confidence in your ability and discretion, have nominated, constituted, and appointed, and do by these Presents nominate, constitute, and appoint, you, the said Sir William Erle, Thomas George Earl of Lichfield, Francis Charteris, Esquire (commonly called Lord Elcho), Sir Edmund Walker Head, Sir Daniel Gooch, Herman Merivale, James Booth, John Arthur Roebuck, Thomas Hughes, Frederic Harrison, and William Mathews, to be Our Commissioners for the purposes of the said inquiry.

And We do hereby enjoin you, or any Four of you, to inquire into and report on the Organization and Rules of Trades Unions and other Associations, whether of Workmen or Employers, and to inquire into and report on the effect produced by such Trades Unions and Associations on the Workmen and Employers respectively, and on the Relations between Workmen and Employers, and on the Trade and Industry of the Country; with power to investigate any recent acts of intimidation, outrage, or wrong alleged to have been promoted, encouraged, or connived at by such Trades Unions or other Associations, and also to suggest any improvements to be made in the law with respect to the matters aforesaid, or with respect to the relations between Workmen and their Employers, for the mutual benefit of both parties.

And for the better discovery of the truth in the premises, We do by these Presents give and grant unto you, or any Four of you, full power and authority to call before you, or any Four of you, such persons as you shall judge necessary, by whom you may be better informed of the truth in the premises, and to inquire of the premises and every part thereof by all other lawful ways and means whatsoever.

And Our further Will and Pleasure is that you, Our said Commissioners, do, with as little delay as may be consistent with a due discharge of the duties hereby imposed upon you, certify unto Us from time to time, under your hands and seals, your several proceedings in the premises.

And We do further will and command, and by these Presents ordain, that this Our Commission shall continue in full force and virtue, and that you, our said Commissioners, or any Four of you, shall and may from time to time proceed in the execution thereof, and of every matter or thing therein contained, although the same be not continued from time to time by adjournment.

And for your assistance in the execution of these Presents We do hereby authorize and empower you to appoint a Secretary to this Our Commission, to attend you, whose services and assistance We require you to use from time to time as occasion may require.

Given at Our Court at St. James, the Twelfth day of February 1867, in the Thirtieth Year of Our Reign.

By Her Majesty's Command.

S. H. WALPOLE.

NINTH REPORT.

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

We, Your Majesty's Commissioners appointed to inquire into and report on the Organization and Rules of Trades Unions and other Associations, whether of Workmen or Employers, and to inquire into and report on the effects produced by such Trades Unions and Associations on the Workmen and Employers respectively, and on the Relations between Workmen and Employers, and on the Trade and Industry of the Country; with power to investigate any recent acts of intimidation, outrage, or wrong alleged to have been promoted, encouraged, or connived at by such Trades Unions or other Associations, and also to suggest any improvements to be made in the law with respect to the matters aforesaid, or with respect to the relations between Workmen and their Employers, for the mutual benefit of both parties, have held several meetings, and humbly beg leave to submit to Your Majesty the evidence given before us at our meetings held upon the 19th and 26th days of May, and the 9th day of June, 1868.

(Signed) W. ERLE, Chairman.

MINUTES OF EVIDENCE

TAKEN BEFORE THE

ROYAL COMMISSION

APPOINTED TO INQUIRE INTO

TRADES UNIONS AND OTHER ASSOCIATIONS.

1, Park Prospect, Westminster, Tuesday, 19th May 1868.

PRESENT:

The Right Hon. Sir WILLIAM ERLE.
The Right Hon. the EARL of LICHFIELD.
Sir DANIEL GOOCH, Bart., M.P.
JAMES BOOTH, Esq., C.B.
JOHN ARTHUR ROEBUCK, Esq., Q.C., M.P.
THOMAS HUGHES, Esq., M.P.
FREDERIC HARRISON, Esq.

THE RIGHT HON. SIR WILLIAM ERLE IN THE CHAIR.

Mr. CLIFFORD WIGRAM examined.

Mr. Clifford Wigram.

19 May 1868.

16,581. (*Chairman.*) I believe that you have a considerable shipbuilding yard on the Thames, opposite Greenwich, on the Isle of Dogs?—Yes. It is just below the Isle of Dogs, close to the East India Docks.

16,582. How many years has that been in the possession of you and your family?—I think my grandfather bought it somewhere before 1800.

16,583. And has it been an extensive yard, employing a large number of workmen at times?—Yes, at times.

16,584. To the extent of some thousands?–I should think that we never had above 1,000 or 1,200 men.

16,585. It is both for iron ships and for wooden ships, is it not?—Yes, at the present time.

16,586. The iron ships are of a later date?—Yes, since 1840, I think.

16,587. With regard to the terms existing between the employers and the workmen, have they been satisfactory during the whole of your time?—Yes, on the whole. We have little disputes now and then, but I think we generally manage to settle them satisfactorily to both parties.

16,588. You mean such as would be incidental to almost every business where a bargain has to be made, and persons of independence would stand out on each side for a little time?—Yes.

16,589. Have unions become established in your neighbourhood?—Yes, all the trades have a union. There is a shipwrights' union, a joiners' union, a blacksmiths' union, and a sawyers' union.

16,590. About how long ago was your attention drawn to the operation of unions among the working men?—I have known of them ever since I have been in business — since about 1849, the date, I think, when I went into the yard.

16,591. In the early part of that period what was the operation of the union—I mean was it chiefly in regard to benefit, or in regard to the rate of wages?—It always has been in operation with regard to wages. One of the earliest things of the sort that we always refer to is a great shipwrights' strike on the question of wages which took place in 1825.

16,592. (*Mr. Roebuck.*) That was before you were in that business?—That was long before I had anything to do with it.

16,593. (*Chairman.*) That is the line of information which we should be much obliged to you for, namely, the operation of the unions as bearing upon the rate of wages?—The shipwrights' strike, which was well known on the river by that term, was entirely on the question of wages; and at that time the rate book, as it is called, was established (I believe by a sort of compromise between the men and the employers), which is in operation at the present day.

16,594. What is the nature of that book?—It fixes the amount to be paid for different kinds of work.

16,595. (*Mr. Roebuck.*) Could you give us a list of prices previous to the strike, and a list of prices after the strike?—No, I do not think that I could find anything previous to the strike.

16,596. Could you tell us what was the immediate cause of the strike; what did they ask?—I believe that the real strike was to establish this rate book.

16,597. Not a particular rate of wage, but a rate book?—All our work is done as we call it by job and task, and this is a book which gives the wages to be paid for the different kinds of work, principally in repairing ships.

16,598. Was the book desired for the purpose of making it sure what they were to receive, or was it established with a view to raising their wages?—I cannot say.

16,599. (*Mr. Booth.*) When you say that the same book is still in operation, do you mean that the same rates of wages are now being paid that were paid then?—Yes, I believe so.

16,600. Then there has not been generally a rise of wages between 1825 and now?—No.

16,601. (*Earl of Lichfield.*) Is not the description of work very different now from what it was in 1825, inasmuch as they were wooden ships then, whereas they are iron now?—This book relates entirely to wooden ships, and almost entirely to what we call old work, namely, repairs of wooden ships.

16,602. (*Chairman.*) Will you explain a little more what is the meaning of "rate of wages"; was it paid by time or by the work done?—Paid by the work done.

16,603. For an old ship you would specify the work to be done; it would vary, I suppose, according to the history of the ship and the calamities that she had suffered?—The rates were this sort of thing. Taking out and putting in a plank of a certain thickness was paid so much a foot in length; taking out timber so much a foot cube.

16,604. All the parts of the ship being given, any accident which did damage to the ship must have damaged some one of those parts, and the repair of that part was to be paid for at a fixed rate, and the book contained that rate?—Yes.

16,605. Is there any interdependency between the shipwrights and the other workmen that work upon the ships? If a shipwright is paid so much is a joiner paid in proportion?—No, they are perfectly distinct bargains to be made with each.

16,606. (*Mr. Roebuck.*) But when the bargain with the joiner is made is there any reference made to the wages given to the shipwright?—No, none at all.

16,607. So that the rate given to the shipwright does not in any way affect the rate given to the other man?—No.

16,608. (*Chairman.*) Was there any element of calculation about the value which the ship builder would get paid? The shipbuilder charged what was

Mr. Clifford Wigram.

19 May 1868.

the fair price, and the fair price was a profit upon these wages probably?—Yes, he charges a per centage on the wages that he pays and the material that he supplies.

16,609. Did the same rate of shipwrights' wages prevail according to your knowledge in other shipbuilding places; was there any ratio between the Clyde and the Tyne, and the Mersey and the Thames?—I do not think that there was any ratio between them. I do not think that the rate of wages in one place was dependent on the rate of wages in the other in any way.

16,610. (*Mr. Roebuck.*) Or affected the rate of wages in the other?—No. I do not think that it did; communication was so difficult in those days.

16,611. (*Chairman.*) If a ship came damaged into the Thames, and could have been repaired much cheaper in the Clyde, the transport from the Thames to the Clyde more than made up the gain in the cheapness of the repair, so that perhaps you were obliged to take the prices of the Thames for repair?—Yes, I suppose you were. The Clyde was hardly a repairing port in those days.

16,612. The access was not so easy in those days?—The access was not so easy.

16,613. Had this rate book anything to do as a guide in building ships?—No; that is always a distinct bargain with the men when you begin to build a ship.

16,614. (*Mr. Roebuck.*) Have they any book for that?—No, none.

16,615. (*Chairman.*) And down to the present time has there been any book regulating the rate of wages in the shipbuilding yard when a new ship is to be built?—I am not aware of any.

16,616. What is the arrangement that the workmen make with the shipbuilders then?—In our yard we agree with them to do all the labour for a certain sum of money. We find the materials, and they do the labour.

16,617. (*Mr. Booth.*) You have a separate contract for different parts of the vessel, I suppose?—Sometimes for different parts, but sometimes one man and his mates engage to do the whole. That is an individual bargain for each job.

16,618. (*Chairman.*) For the building of each ship?—Yes.

16,619. At times I think that you have let the whole of the work to one shipwright for him to employ subordinate contractors under him for each department, have you not?—To employ equal workmen. They are not subordinate contractors; they are all equal.

16,620. But does not one shipwright contract with you for the whole of the labour, letting out the different departments to other persons at his will and pleasure?—One man is the spokesman, and his mates work with him, they being also shipwrights. Then he employs riveters, and labourers, and different other inferior workmen at a lower rate of wages than the shipwrights receive.

16,621. (*Mr. Harrison.*) You have perfect security in entering into a contract with one man on behalf of a gang of men in that way; you feel confident that he will carry out the bargain as a rule, do not you?—With the men we know we do. The great difficulty always is to define what work is to be done. If more work has to be done than was understood at the time of making the bargain, we generally have to pay for it.

16,622. (*Chairman.*) If I understood it rightly, there would be a superior workman making a contract for you, and doing so much work for so much money?—Yes.

16,623. And that actual work was done, the hammer was wielded, and so on, by a man employed by the day?—It is a very difficult system to explain. All the shipwrights work together and receive equally, but they employ labourers under them, to whom they pay a fixed rate.

16,624. (*Mr. Harrison.*) But I think that this is the chairman's point. The man with whom you deal and contract is not a contractor who does not labour himself, but is simply one of the other shipwrights and works himself amongst them?—He works himself just as the rest of the gang.

16,625. He merely comes forward and represents the body of men with whom he works?—He is the spokesman.

16,626. (*Mr. Roebuck.*) Is your contract with the spokesman or with the whole gang?—With the whole gang through the spokesman.

16,627. (*Mr. Booth.*) Have you well understood specifications which are the same from time to time in different bargains?—Pretty well. It is generally agreed that the ship is to be similar to one previously built.

16,628. So that you could use the specification of the preceding one for the succeeding one to some extent?—Yes.

16,629. (*Chairman.*) The point I was directing my attention to was whether there were not two classes of workmen paid by you—in this sense, that one took a certain quantity of work to be done for which he was to be paid a certain sum, and that the other was to be employed under him by the day as a day labourer and paid so much, and that the day wages had no relation whatever to the sum paid by you to the shipwright?—That is the case.

16,630. A good deal of remark has been made sometimes about a middle man coming in between the actual labourer and the chief employer. As far as the system goes that is the system here, that there is a class of artisans who are all paid by you as shipwrights, and those artisans hire labourers by the day to complete the work they have to do?—Yes.

16,631. What has been the action of unions as regards you? Has your yard been troubled by the action of unions?—No, I do not think we have. I think that the unions have interfered much more with the workmen than they have with us.

16,632. (*Mr. Roebuck.*) In what way?—In this way—that the shipwrights' union require the shipwright whom I may bargain with to employ other shipwrights for a great deal of work which he could get done by labourers and inferior workmen.

16,633. But does not that compel him to ask you a larger sum for his contract?—We are very peculiarly situated. We some five or six years ago offered the wooden shipwrights the privilege of building iron ships on condition that they would do it at the same price for us that we could get it done by boiler-makers and iron shipbuilders; and if the wooden shipwrights will not work for me on those terms I have got the other body to fall back upon; so that I do not see that it has increased the price of the ships to me.

16,634. (*Mr. Harrison.*) You get your contract taken at the lowest price you can, I suppose?—Yes.

16,635. (*Mr. Roebuck.*) Yes, but I want to know whether the price would not be lower if those men were not compelled to employ costly material, that is to say, costly labour?—I do not think it would, because I have it in my power to fall back upon the other price if I thought it for my advantage to do so.

16,636. And that you think controls the price because you have that means of getting out of the power of the men who are under the dominion of the union?—Yes, because I have that means of getting out of the power of the men who are under the dominion of the shipwrights' union.

16,637. (*Chairman.*) Is the shipwrights' union the most important among the artisans who go to complete any ship?—They are the most important in our yard, because we do not employ the boiler-makers.

16,638. (*Mr. Roebuck.*) Let me ask you this question. If the shipwrights, for example, were to refuse to work, would they turn out of work a certain number of men who are not shipwrights? In the coal trade for instance, if certain men will not work others cannot work, so that 10 men striking may throw 100 out of work. Now is it at all a similar case in your shipyard?—To a very slight extent. If the shipwrights will not work, it is no use my employing sawyers and other people to prepare the material for them.

16,639. Then it does come to what I say, that a certain number of other men are thrown out of work if the shipwrights refuse to work?—Yes.

16,640. Have you any notion of the proportion that

would be so thrown out of work?—No, I could not say the proportion at all.

16,641. (*Chairman.*) In your yard I think there has been no strike. You have had no experience of a strike have you?—I have had no experience of strikes.

16,642. (*Mr. Booth.*) I think you said that the shipwrights contracting with you were sometimes interfered with by the union, rather than that you were interfered with by the union?—Yes.

16,643. Supposing that they were not so interfered with, could they do your work at a cheaper rate for themselves than they can being so interfered with?—I do not think that they would do it at a cheaper rate, but they would put more money into their own pocket.

16,644. Then in fact they could afford to take your contract on terms more favourable to you, if they were sure not to be interfered with?—Yes, but they would look at the question in the other way, "Mr. Wigram "can only get his work done at a certain rate. Why "are we to work for less than that? We will put the "extra price into our own pocket."

16,645. (*Mr. Roebuck.*) To whose pocket does it go now; to the other shipwrights, the body of shipwrights?—Yes.

16,646. Then the body of shipwrights are not injured at all by this interference of the union?—No, not at present. I understand (it comes to me unofficially) that the union are wanting to make further regulations, which I think will throw the ironwork out of the shipwrights' hands into the boiler-makers', and that will injure them.

16,647. (*Chairman.*) Do the boiler-makers work at a less wage? Do they in practice receive a less wage than the shipwrights?—I think they do.

16,648. (*Mr. Roebuck.*) I think then the only effect that I can gather from the interference of the shipwrights' union is that they deprive a certain lower class of workmen of a field for selling their labour which they would otherwise have?—Yes.

16,649. Therefore if any injury is done it is done to the inferior class of workmen?—Yes.

16,650. (*Mr. Harrison.*) The man with whom you contract is not a simple contractor, who can go forward and hire other labourers and put the difference which he makes out of his contract into his own pocket, but you are practically dealing with a body of men who take a certain piece of work and divide the profit equally amongst them all, so that I do not see that there is any option, for if they took their contract at a lower price they would have less to divide among themselves. Is not that so?—Yes.

16,651. (*Mr. Roebuck.*) But I understand you to say that if there were not this powerful union, you would make the contract with certain of the shipwrights who under that contract would employ inferior artizans at a cheaper price than they do now?—They certainly would do that. If it were not for the action of the union they could get a great amount of the work done by a lower class of men, and they would have a larger profit to divide among themselves.

16,652. (*Chairman.*) Supposing we take the "Cleopatra." You say to a man, "What will you put in the sides for?" He answers 575*l.*, or whatever the contract may be. If that were with one individual, he could get the quantity of planks put in the sides of that ship by workmen who would be content with wages of a less rate than that which he as a shipwright of the first order was receiving?—Yes. One of the best instances I can give you is, I think, in the riveting. According to the present regulations the shipwrights' union require all the riveting to be done by shipwrights who divide with the others, and expect to get 7*s.* or 7*s.* 6*d.* a day, whereas the regular class of riveters are perfectly content with about 4*s.* 6*d.*; so that there is just that difference of about 3*s.* a day, which has to be divided among the shipwrights instead of the lower sum being paid to the inferior class of men, and the balance to the men who had taken the job.

16,653. (*Mr. Booth.*) The short effect is that the union causes that portion of the work to cost more to somebody?—Yes.

16,654. (*Mr. Harrison.*) But can you get the work for your ships done cheaper than you do when you make these contracts?—No, I do not think I could.

16,655. Whom do these men employ in the way you describe?—Labourers of different denominations, "helpers" is the technical name for them.

16,656. Then you suggest that they might employ an inferior class of men to do another class of work?—I think that they might employ more helpers and fewer artisans.

16,657. (*Mr. Booth.*) And in that way they could do it cheaper for themselves?—Yes.

16,658. (*Chairman.*) Have you seen the action of the unions in other yards? Attention was drawn to cases where, it was said, unions had excluded working men from work that they could have taken if they had not belonged to a union. Do you know anything of that?—No. I have had two or three representations from men whom we have employed, saying that they cannot get work in other yards because the members of the boiler-makers' union will not work with them in consequence of their having worked with our shipwrights.

16,659. (*Mr. Roebuck.*) Let me put this general question to you. It has been stated that one effect of the unions has been to drive trade out of the river Thames. Now do you, as a person employed in that trade, believe in the truth of that assertion?—No, I do not.

16,660. (*Chairman.*) As far as your personal experience goes, have the unions at all impeded the outlay of capital in your yard; have you had orders which you could have executed, and which the unions have hindered you from taking?—No, I do not think that we have.

16,661. There is a stillness of work in the Isle of Dogs now, is there not?—There is a stagnation of work generally, but I do not attribute that to the action of unions.

16,662. It is the over investment of capital you think?—I think that the talk that has been made about it, and the general impression that unionism does drive work from the Thames has acted prejudicially, and people have gone elsewhere from that impression.

16,663. (*Mr. Roebuck.*) So that in fact the effect has been produced by the people who talked about the union and not by the union themselves?—Yes, I think so.

16,664. And you think that the stagnation of trade has arisen from commercial causes in no way attributable to the action of unions?—I cannot say that entirely. There is certainly much more mobility of wage in the out-ports than there is in the Thames. Wages fall very much more rapidly in Scotland and the North than they do in the South, but whether that is the action of a union or not I cannot say.

16,665. (*Mr. Booth.*) That is favourable, is it not, to shipbuilding at times when that operation is not attended with much profit?—Certainly it is because if wages fall they can take a ship cheaper.

16,666. And if they fall more easily than they do in the Thames, where unions prevail, then in times when shipbuilding is not very profitable the shipbuilder in other ports has the advantage?—Decidedly he has.

16,667. (*Earl of Lichfield.*) How do you account for the slackness of trade in the shipbuilding in the Thames?—From the fact that there is no employment for shipping.

16,668. But there are plenty of ships being built in other places, in the Clyde for instance, are there not?—I have no personal knowledge of that. I cannot answer for what quantity of work is being done in the out-ports.

16,669. Do you know what is the difference in the cost of building a ship in the Clyde and in the Thames at the present moment?—No, I do not. But there is

Mr. Clifford Wigram.

19 May 1868.

a very curious circumstance with reference to shipbuilding, and that is this. Of five Indian transports that were finished last year two were built in the Thames, one at Liverpool, one by Mr. Palmer, and one in Scotland, and over a job about 150,000*l.* I do not think that the cost of those ships varied 5000*l.*; they were remarkably close.

6,670. That was last year, you say?—They were finished last year. It was at the end of about a year and a half's work.

16,671. (*Mr. Roebuck.*) Were they iron ships?—Iron ships, and precisely similar to each other.

16,672. What was the cost of one of them?—They were about 150,000*l.* each.

16,673. So that the whole difference was 5,000*l.* on 150,000*l.*?—Somewhere about that. I have not seen the books, but from what the different shipbuilders have told me I am sure that there was a very slight difference. There was not 10 per cent. difference.

16,674. (*Chairman.*) It was last year you say that the contract was finished?—Yes, the contract was finished last August.

16,675. (*Earl of Lichfield.*) Those ships were built before the want of employment was so severely felt at the east end?—The winter before last was quite as bad if not worse than last winter.

16,676. (*Mr. Roebuck.*) Have you any idea of the number of men of the class of shipbuilders that were out of employment in the East end?—No, none. I did not look into that.

16,677. Were there any out from your yard, for instance, last year?—Yes, we were employing hardly anybody.

16,678. When you say that, you for the most part employ about 1,500 men, you have told us?—That is when we are very full. I look more to our rate of wages. I should think that our rate of wages is generally for the yard about 800*l.* a week, and we must have dropped down to about 200*l.*

16,679. And how long did that last?—It has lasted up to the present time.

16,680. And there is no appearance of improvement?—No, none at present.

16,681. (*Earl of Lichfield.*) Is not the cost of material for iron ships greater in the Thames than it is in the Clyde?—Not for the same quality; not to any appreciable amount.

16,682. (*Mr. Roebuck.*) The iron that makes a ship is made, I suppose, in some of the inland towns, is it not?—The greater part of it is made in Staffordshire or Durham.

16683. And therefore the only difference could be the difference of transit from Staffordshire or Durham to Sunderland, and Staffordshire or Durham to London?—Yes.

16,684. What would that difference be?—The freight from Durham to London, I think, is about 7*s.* a ton.

16,685. And what would it be from Durham to Sunderland?—I do not know at all.

16,686. (*Earl of Lichfield.*) But the cost of the material on the Clyde would be much less because the iron is made on the spot almost, is it not?—Yes, but 7*s.* on about 10*l.* or 11*l.* is no very great difference; it is *a* difference.

16,687. That would be about the difference, would it?—I should think that would be the outside of it.

16,688. (*Mr. Harrison.*) It was stated very continually in various places both during the distress of last winter and during the distress of the winter before, that considerable bodies of shipwrights were out of employment because they were refusing work that was offered to them. That was not true, was it, to your knowledge?—Not to my knowledge certainly.

16,689. And as far as you know there was no strike, nothing that could be called a strike, arising out of the question of wages?—I do not think that there was an instance of work being *bonâ fide* offered to them at a reduced price, or that there was any man who would really come forward and say, "Here is a ship to build, if you will take it for so much money."

16,690. And in point of fact, the contracts which the shipwright enters into are contracts for a gross sum, which are settled by the ordinary rules of the market, and the shipwrights are not paid in any case daily wages by the employers?—Not in our yard. I cannot answer positively for others.

16,691. It is not the custom of the trade to pay daily wages?—No, job work is the custom of the trade.

16,692. So that each ship and portion of a ship is contracted for, as the occasion may arise, at the cheapest rate that men can be found to do it at?—Yes.

16,693. (*Chairman.*) In your knowledge are there yards worked by companies, and yards worked by private individuals, upon different principles from yours in your own neighbourhood?—There are various shipbuilding companies. There is one most noteable one—the Thames Shipbuilding Company.

16,694. Do they employ their artisans on the same terms as you, as far as you know?—I cannot give you any information on that matter that is to be relied on.

16,695. (*Mr. Roebuck.*) Those companies are limited liability companies, are they not?—That one is. There was another, but that has ceased to exist now, the Millwall Company.

16,696. Do you find any difficulty, from the action of the union, in conversing with your men—any interference with your intercourse with them?—None whatever.

16,697. They have full access to you?—I am about the yard two or three times a day, and always willing to see any one of them.

16,698. So that if there were any grievance they would tell you of it?—And they do very often.

16,699. So that, in fact, there is perfect liberty of intercourse between you and your men?—Yes.

16,700. It is not at all interfered with by any dominant power outside?—No, not at all. And ever since we have had the yard we have made it a constant rule to pay the men direct from the counting-house, and not through a foreman. They are paid through a cash clerk.

16,701. On what day do you pay your wages, on Saturday?—On Friday afternoon.

16,702. (*Chairman.*) Although you have differences in the way of bargaining, as between man and man, have you been on terms of mutual goodwill and mutual respect, if I may say so, as workmen and masters?—On our part certainly, and I believe it is so with the workmen.

16,703. (*Earl of Lichfield.*) I understood you to say that the regulations of the shipwrights' union have in your opinion unnecessarily increased the cost of building ships on the Thames, am I right in that?—No, I do not think that, but I think that they prevent a gang who take a ship from us from making as high profits out of it as they could.

16,704. I understood you to say that if it were not for these regulations they could make use of cheaper labour?—Yes.

16,705. Then is it not the case that those regulations you refer to considerably increase the cost of the building of those ships?—Well, I think that if they could employ cheaper labour they would put the difference in their own pockets. You see that there are two bodies of men. I may employ A or B. B is the old class of boiler-makers, we will call them, and they can do the work at a certain rate. The shipwrights (A) say "We can do the work for less, but we will not, and why "should we? We will put the difference into our own "pockets," and I do not find fault with them for that.

16,706. (*Mr. Harrison.*) You cannot get it done cheaper?—I cannot get it done cheaper.

16,707. (*Earl of Lichfield.*) Does the same regulation exist in the Clyde, do you know?—I do not know.

The witness withdrew.

Mr. Joseph D'Aguilar Samuda, M.P., examined.

16,708. (*Chairman.*) You have a yard on the Thames, near to Mr. Wigram's, have you not?—Yes.

16,709. When your yard is in full employ, about how many men would you have to pay daily?—About 1,500.

16,710. You are proprietor of the yard, I believe?—I am.

16,711. How long have you been proprietor?—I have been in business for 35 years. I have been engaged wholly in shipbuilding for the last 17 years. The previous part was partly spent in shipbuilding, and mostly in engine making, but in the last 17 years I have been wholly engaged in iron shipbuilding. I would observe that my experience of what takes place in my establishment is so totally different from that which takes place in Mr. Wigram's that probably it would tend to your convenience if you would allow me to give you a short statement of the way in which we carry on everything. I am now engaged wholly in iron shipbuilding, and have been so since 1851. In our establishment the ironwork is done by boiler makers, and what we term "iron men." The woodwork is done by shipwrights and by joiners. They are totally distinct trades, and have nothing whatever to do with one another, all working under different foremen. In our establishment every man is rated at a fixed daily amount when he comes to work, and the general practice is that work, instead of being done by day work, is done wherever it is possible by piecework. To enable this to be carried out, different jobs are let to small gangs of men, sometimes larger gangs, but generally speaking moderate-sized gangs, and whilst the men are performing this work for a given price, they are allowed to draw the money which their wages would represent at the day rate; that is to say, if a man is rated at 6*s.* a day, and he has worked for six days in one week, and not come to the end of his job, he would receive 36*s.* on account. When the job is terminated, and it is ascertained how much money has been earned, the balance is handed over to the men who have been working upon the job, and the profit remains their own.

16,712. How do you stamp upon a man, when he appears before you in the yard, 6*s.* a day till you have tried him?—It is a very important point, and one that touches the question of unions most closely. When I began business 35 years ago we always took note of a man's working when he was first engaged, and formed as accurate a judgment as we could at the end of the first week as to what we thought that man was worth. We then rated that man accordingly, that is to say, we fixed his wages at what we thought he was worth, 30*s.* a week, or 32*s.* a week, as we thought he was worth. The man was either content to accept that price, or he would remonstrate and say that he thought that we should find him worth more. We then used to say, "You shall work another week, and we will judge at the end of that subsequent week." And if at the end of the subsequent week we found that he was worth 36*s.* a week, we then fixed his wages at 36*s.* a week, and we gave him in addition the wages of the earlier time while we were paying him on account. But we exercised our own right and our own judgment in fixing the men's wage, and this took place for many years. But gradually and by degrees the men have become the parties who have fixed the wages, and the masters have been ignored in the matter altogether, and now we have no power whatever in fixing men's wages in all those departments in which they belong to unions; we must submit to pay them that which they consider or which their unions fix upon as the price, and they, in fact, are the masters of the situation and not ourselves. Now that has caused a gradual rise in the rate of wages, and I think that I am stating the facts about correctly when I say that in the 35 years that I have been in business wages have risen from 25 to 30 per cent., and that 15 per cent. of that has taken place within the last seven or eight years.

16,713. (*Mr. Harrison.*) Do you include shipwrights in that?—Well, I take them as a whole. In the case of the shipwrights it has not been so great—it has been something in the case of the shipwrights, but not so great.

16,714. Has the minimum rate as allowed by the rules of the shipwrights' union risen to that extent within that period?—No, not to that extent. In 1866 the painters required and obtained from us (asking for it as a whole, and through the medium of their unions,) a rise of from 30*s* to 33*s.* a week.

16,715. That coincided with a general rise that the painters' wages had throughout the whole of London, did it not?—Yes. I understood it to be so. The fitters equally in the same way throughout the whole town got a general rise of from about 35*s.* to 38*s.* a week. With regard to the joiners, previous to 1854 we had only two or three men rated at 6*s.* a day, the general rate of wages with them being 5*s.* 6*d.* a day, but they then obtained a uniform rate of 6*s.* a day. These are day work prices, you understand.

16,716. The rise of the wages of the joiners coincided with a movement in the wages of joiners for all building operations, did it not?—I do not think that it did quite—it might have been influenced by that, but I do not think that it exactly coincided with it.

16,717. There was a rise in the joiners' wages throughout London in all building operations, was there not?—Yes.

16,718. And the joiners and painters whom you employ are not necessarily confined to the shipbuilding trade, I suppose?—No, they are not, but each man, generally speaking, selects his own specialty, and as long as he can obtain work in that specialty he prefers to do it. To the shipwrights we have always paid 6*s.* 6*d.* and 7*s.* a day till about 1862, and up to that time the greater number appear to have been rated at 6*s.* 6*d.* a day, and they were rated according to value of service in the way which I have described before.

16,719. Could you say how long they had been rated previous to 1862 at 6*s.* 6*d.*?—My experience of shipwrights only goes back to 1851.

16,720. But it had been so for eleven years?—Yes.

16,721. As a matter of fact it had remained at that 6*s.* 6*d.* for a whole generation in the trade, had it not?—Mr. Wigram would be a much better authority than myself on that point. I think that he only paid them 6*s.*, but I will not be sure. Then at that time we were called upon to abandon altogether the payment to them according to value of service, and 7*s.* was then fixed upon as the minimum rate. That represented the day wages that we paid the men.

16,722. Has there been any rise since that?—No, the tendency has been rather to fall than to rise since the bad times.

16,723. Then in the shipwrights' trade there has been one rise from 1851 to 1862 of from 6*s.* 6*d.* to 7*s.*, and since that time it has been rather sinking?—Yes. The way in which I came to the conclusion as to the general rise which had taken place was this, I had taken out first the per-centage of men out of the whole number that were working in the establishment who in 1865 (I take that as the year of the greatest employment and success) were receiving wages above 40*s.* per week, and I found that the average was about 14 or 15 per cent. But in 1837 no men were receiving 40*s.* a week (I of course exclude foremen). But then, if I take the actual sum of money which the men have received at the end of the week for profits as well as wage, that is to say the money which they had earned by their piece work, in addition to their day work, the number rises to 30 per cent. that have received above 40*s.* a week; and the total amount paid each week taken throughout the entire year averages for men, boys, and helpers, 31*s.* per man per week; whilst in 1832 to 1835 (when I began business), it averaged only about 23*s.* to 24*s.* per man per week.

16,724. (*Sir D. Gooch.*) That includes boys, you

Mr. J. D. Samuda, M.P.

19 May 1868.

say?—It includes everybody, boys, helpers, and mechanics of all sorts.

16,725. (*Mr. Harrison.*) Have you compared those with the simultaneous rise for instance in the building trade?—No, I have not. I have not the means of knowing exactly what it was in the building trade; I have not looked into that. I have given you the rate that the men earned by their day work, but I have a paper showing also what they earned by their piece work, and I find that when the joiners obtained 6*s.* per day as their day wages, the average sum of money which they were receiving for day wages, and for piece work balances, together came in 1858 to about 7*s.* 4*d.*, and rose in 1862 to 8*s.* 9*d.* I find that the shipwrights from 7*s.* came to 7*s.* 9*d.* The painters were not in the habit of working piece work. And the iron men varied very considerably, and their wages ranged from 6*s.* up to 10*s.* 4*d.*

16,726. (*Mr. Hughes.*) Did those rises all occur at the same time?—No. Just before you came into the room I gave the times when they did take place; they varied from 1854 to 1866.

16,727. But you prefaced this statement by saying that when the joiners obtained 6*s.* a day, then the other men went up too, did you not?—No; when the joiners were getting 6*s.* a day for day wages, they were getting from 8*s.* 6*d.* to 8*s.* 9*d.* on piece work profits as well as their day wages. Then I have here a paper sent to me from various firms, and arranged by myself, which represents the comparative wages that were paid at the same time in the different large shipbuilding ports of the kingdom. Perhaps it would be the most convenient course for you if I gave you the result. It comes to this, that supposing the price in London to be taken at 100, Birkenhead would be 92, Newcastle 82, and Glasgow 76—24 per cent. difference between Glasgow and London. This table was arrived at by obtaining particulars from the great establishments in various parts of the kingdom, which I will read over to you—Napiers of Glasgow, Denny Brothers of Dunbarton, Palmer of Newcastle, Laird Brothers of Birkenhead, and then in London the Thames Ship Building Company, Samuda, the Millwall Company, Dudgeon's, Green's, Wigram's, and Fletcher's. That is the general result of the whole.

16,728. (*Chairman.*) Did they produce at 76 per cent. as good an article in Glasgow as was produced in London at 100?—I am not inclined to agree to that; I think that there is a great misapprehension as to that. In some cases I believe that you can get a cheaper ship produced in the north than you can get in London, because the specialty of the north is devoted to building vessels of that particular description, but if they are called upon to produce that which is the peculiar specialty of London to produce—the highest class of work, my experience has never shown me that it could be produced cheaper in the North than it could be in London. Then, notwithstanding the lower rate of wage in the North, more money appears to me to be absorbed to enable you to arrive at anything like the same result. Mr. Wigram gave you one instance, I can give you another.

16,729. He did not give an instance of the same article costing 100 against the same nominal article costing 76, did he?—No; and I have a strong opinion in my own mind, and I think that the operation would be perfect if it were apart from unions, that the labour would collect itself in the different parts precisely of the nature best suited to the article that was produced in those parts, and that where the better article was produced, and the better workmanship was required, the better description of workmen would come away from those districts where there was less demand for that particular description of labour, and locate themselves where there was a better demand at a higher price. We always found it so formerly.

16,730. (*Sir D. Gooch.*) That 100 per cent. that you have given us has nothing to do with the cost of the article?—No, nothing to do with the cost of the articles, but the amount paid for the labour of the men.

16,731. Assuming that the amount of work done in each case was the same, how much does the labour form of the whole cost of the ship?—It will vary with the different characters of the ships, but it might range from 20 to 35 per cent. of the whole cost.

16,732. (*Mr. Hughes.*) But in no cases more than that?—In no cases more.

16,733. (*Mr. Roebuck.*) What makes up the other portion?—The materials.

16,734. And your profit?—And of course the profit.

16,735. (*Sir D. Gooch.*) In that classification do you include engine builders, or are those rates of wages restricted to shipbuilders?—No; they include also vice-men and turners.

16,736. And putting the engines in?—No, they do not include that, but they include the mechanical operations of vice-men and turners to the extent (and it is a very large extent in first-class ships) of the production of the fittings for those ships.

16,737. (*Mr. Harrison.*) You have not observed that the difference in the rates of wages in the shipbuilding trade, as between London and other towns in England, is greater than the difference which we know obtains in various other trades between London and other towns, have you? Do you make the proportion to be greater?—Lately it has been very much increased, and it has taken place in this way. At the time to which the wages in the paper before me refer, shipwrights' wages were 7*s.* a day in London, and they were also 7*s.* at Birkenhead, they were 5*s.* 6*d.* at Newcastle, and they were 5*s.* at Glasgow; but just before the bad times came, as I am informed, they attempted a rise in Glasgow that was unsuccessful.

16,738. (*Mr. Booth.*) What do you call the "bad times"?—I date the bad times from the failure of Overend and Gurney in 1866, which was a tremendous shock to all commercial credit.

16,739. (*Mr. Hughes.*) You date the bad times from May 1866?—Yes, May 1866; that was a turning point with a great many establishments. Then the men returned to the masters at Glasgow, or were desirous to do so, at the old prices, but I understand that in consequence of the bad times the masters required them to reduce their prices, and therefore we had a very great deal of difference, an unnatural difference, set up between Glasgow and London; whilst the men in London would not reduce their wages below 7*s.*, the men in Glasgow were working generally I am informed for 4*s.* 6*d.*, and the difference was too great; I drew a different conclusion from that which Mr. Wigram came to, and I cannot help thinking that that has had some considerable influence in disturbing the proportion of the work on the Thames and the work on the Clyde very considerably, but I do not think that that is by any means the only thing that is disturbing it, and I think that a good deal of misapprehension exists on that point. I believe that both in the Clyde and in London there exists an enormous quantity of what I should call unsound trading, and I believe that that is greatly at the bottom of the difficulty that we are in. The support which the establishments have received from cheap banks and from financial companies has induced many of them to go on taking work at prices which they could not produce it for, and those that have continued to obtain the support have continued to take the work, and those who have either failed to continue to obtain that support, or have hesitated to accept the support when they found that it was not yielding a profit to them, have been without work. I believe that unsound trading is as great a disturbing cause at work as the difference in the price of wages.

16,740. (*Mr. Hughes.*) Then you think that there has been even in these last two years considerable overproduction?—I am sure of it, but then bad trading has made persons take work at prices at which there was no profit at all, and I do not confine my remarks to the two last years.

16,741. They have taken work when there was no healthy demand?—I do not say that, I think that there might have been an extremely healthy demand. I do not believe that they made the articles, generally speaking, upon stock, but I believe that they have supplied ships under the great competition that existed at a price below that at which they could produce them.

16,742. (*Mr. Harrison.*) They have lost money?—They have lost money.

16,743. With respect to the wages, before we leave that point, I have before me the official statement of the joiners' society throughout the country, which gives the average rates of wages, and we may roughly take this as correct. I think in 1867 the wages in London and the suburbs are given, (and so they were in 1866,) as 37*s.* a week. Now at the same date the wages at Newcastle are 28*s.*, at Birkenhead 31*s.*, at Liverpool 31*s.*, at Hull 28*s.*, and at Plymouth 27*s.* That is a difference on the average as great as that which you observed in the shipbuilding trade, is it not?—Those are house joiners, but still there is not a great deal of difference in those figures compared with what I have, because the joiners I have down in London at 36*s.* a week, and the joiners at Birkenhead I have at 30*s.* to 35*s.* At Newcastle I have them at 4*s.* 8*d.* a day, and that would be 28*s.*; and the return made to me for Glasgow would be 4*s.* 8*d.* to 4*s.* 10*d.* a day, which would also make about 28*s.* 6*d.*

16,744. That in fact bears out the accuracy of the returns that you have obtained?—Yes.

16,745. The inference that I ask you to draw, but in which I think you are not prepared to agree with, is this, that the difference in wages with respect to the men engaged in the shipbuilding trade as between London and other towns in the kingdom, agrees in the main with the difference in the wages in other trades?—That may be so, but that I do not know. I do not at all contest the statement, for I know nothing of that.

16,746. Then we are not to draw any special inference with regard to the shipbuilding trade from those rates of wages or the action of unions in that trade, or do you draw any special inference?—I cannot tell whether the unions have acted more favourably or more unfavourably in other trades, and I do not know that it is of great consequence that I should give you that, because mine would only be an opinion which you could form yourself. But these that I am giving are facts which may be useful to the Commission. What I mean to say is this, that with regard to the effect produced upon the trades by means of the union, my experience goes to this, that it does exercise a very material influence upon the trades, and whether the labour is free to adjust itself or whether the labour is adjusted by the unions, and I am of opinion that up to the present time, and judging from the way in which wages have been caused to rise, that influence has been very decided, and has had this particular effect, that it has worked very considerably to the advantage of the workmen and very disadvantageously to capital. But I am not prepared to state that because it has done that it will continue to do so. On the contrary I believe that the only reason why it has done so is because the system aimed at by the unions of a universal rise in wages has not been fully developed, and when it shall have been fully developed that the parties who will have to suffer most will be the workmen, more than capital even. And I look upon it in this way, taking the shipbuilding trade, for instance. Taking the period since I began business as a shipbuilder in 1851, every single establishment that was in existence as an iron shipbuilding establishment on the Thames at the time that I began business in 1851, with the exception of my own, has either failed or discontinued to work as a shipbuilding establisnment.

16,747. (*Mr. Hughes.*) Green's have not failed, have they?—Green and Wigram were not iron shipbuilders then; they have only just taken to building iron ships. But every single establishment that was in activity or in existence as an iron shipbuilding yard on the Thames when I began to build in 1851, and several that have started since, have either broken down, failed, or given up because they could not make money. Yet, notwithstanding that this has taken place, such an impression existed that profit was being made to a large extent by all these establishments, that the workmen did not hesitate to demand, and did obtain, a rise in wages to the extent of 15 per cent. during this time, under the belief that these were all healthy and that they were profitable undertakings, and that they the workmen were not getting their fair share of the profits out of the undertakings; and yet every one of these establishments which have contributed this additional money to the workmen, although they had very excellent wages before, have, after having done so, finished by terminating their own existence. This has been the fate of London. It has not to the same extent been the fate of those other places which you have referred to as having the advantage of working with labour considerably cheaper than London, though all these districts have suffered very much in the same way; but it stands to reason that if a full development of this thing takes place, and if on the capital being driven from London an equal demand is made first in one outport and then in another for a rise in wages, an equal result must obtain, and when you have perfectly matured the entire arrangement of that for which unions are formed, namely, the object of raising the wages of the workmen, you must have destroyed the only source from which they can draw any wages at all. It appears to me perfectly clear that must be the result.

16,748. (*Chairman.*) At 7*s.* a day wages (if I may take that as an example for shipwrights), the employers investing their capital at that rate have disappeared and the trade has gone, if I understand you?—Fourteen have gone; in fact every one has gone that was in existence then as a shipbuilder but myself.

16,749. And taking the fact that at Glasgow they employ the same workmen at 4*s.* or 4*s.* 6*d.* a day, has active trade continued at Glasgow?—The same extent of destruction to the capital has certainly not taken place. Now, making a calculation of the amount of labour which those establishments that I have referred to that have disappeared must have employed, they cannot have employed less than 4,000 heads of families (which represents 20,000 persons supported by the industry) during the time that they have been at work. They cannot have paid less than five millions of money in wages. They have failed and had deficiencies of certainly over one million (I think nearly one and a half), and as one million represents one-fifth or a little more than 15 per cent. upon the amount, it does certainly appear a curious coincidence that if that 15 per cent. had not been added to the wages it would have gone a very great way towards preventing the catastrophe which has taken place.

16,750. (*Sir D. Gooch.*) Perhaps you will tell us now what has been the result upon the workingmen?—The result upon the working men now, but only now, is beginning to be very disastrous. The result has been for many years, that in addition to having the best wages in the kingdom, and I believe in Europe, up to the time of their forcing this advance upon these establishments, they had gone on thriving to an extent that had caused them to congregate in too large numbers to be supported on the Thames; but now the tide has turned, and the great mania for the support of all shipping that had been fostered, as I say, by these cheap banks, financial undertakings, and limited liability companies, has ceased, we have a most deplorable state of things, a most heart-rending state of things in the East of London that can possibly be imagined. In my own establishment where I have for six years never had less than 1,200, and where the number has varied from that up to 2,000, I have not 200 men at work now, and I believe that I represent only a fair sample of what most of the other establishments are experiencing.

Mr. J. D. Samuda, M.P.

19 May 1868.

16,751. (*Mr. Harrison.*) Can you show us that the rate of wages which the shiprights and other men engaged in the shipbuilding trade in London have obtained, as compared with other towns in England, is greater than the rise which has been obtained and exists in other trades?—No, I know nothing about other trades. I am confining my argument entirely to my own.

16,752. (*Mr. Roebuck.*) Do you know whether or not there are in those other trades trades unions?—I know that there are trades unions in other trades.

16,753. Would not that account for the rise in those other trades?—No doubt it would.

16,754. (*Mr. Harrison.*) You employ joiners. You have just been giving us the rates of wages of the joiners and painters. Now those joiners and painters are capable of obtaining employment in house building in the Metropolis are they not?—Yes.

16,755. The rates of wages for the carpenters and the joiners, and the painters, in house building, have risen, as we know, within the last few years in London?—Yes.

16,756. Well, do you expect that the painters and the joiners whom you employ in your shipping yard are to work for you at lower rates of wages than what they could obtain in house building in the same town?—Certainly not.

16,757. Then what is the force of the argument which charges the joiners and the painters, amongst others, with driving a special trade out of this city?—I will show you. There is this enormous difference. If we in shipbuilding were exactly in the same position which people are in house building, it would take a longer time before the catastrophe would take place. Formerly the catastrophe would not have taken place at all, the workmen would have had it entirely their own way, and for this reason: As ships were a necessity for people to have, and as we were the only market in the world to make them, people who required ships would have to submit to the increased prices. But people who require houses cannot go to France to get them made, and therefore they must employ carpenters and bricklayers in London to make them, and it takes a longer time, therefore, before you can get a catastrophe in the trade. But to speak of myself, my greatest customers used to be, 10 years ago, even five years ago, France, Russia, Prussia, Egypt, and Turkey. I have had as much as 700,000*l.* worth of orders for those different Governments in my yard at one time; but at the present moment France is competing with me and taking away my Prussian orders, she is also taking away from me my Egyptian orders, and at this present moment there is in France no less than 380,000*l.* worth of work going on for two of those very Governments who have been my own customers for 15 years. They are now taking that work away from me.

16,758. Do you expect that a joiner who can work for Mr. Kelk and Mr. Trollope, and can get 37*s.* as the standard rate of wages, is to work for you at 35*s.* a week, because you are placed under special disadvantages in the market?—I have not the slightest objection to the joiners getting 50*s.* a week from me if they can.

16,759. But do you expect them to work for you at less than they can get elsewhere?—No, I neither expect it nor do I want it, but what I am attempting to prove to you, and what is clear in my own mind is that since the repeal of the combination laws (which I think were properly repealed) there has taken place a state of things which the men have not realized, which is this, that they have the power of fixing wages instead of myself. But that power involves the necessity of doing that at their own peril. If they fix wages at a price that I cannot afford to pay, and I cannot induce my customers to purchase work at prices which will enable me to pay it, it naturally follows that I cannot find any means or funds from which I can employ these men, and that these men must therefore be thrown out of employment altogether, because my capital must cease to be productive. If they raise the price of the article which I have to produce more than it is worth in the market of the world, I cannot go on producing.

16,760. (*Mr. Booth.*) That is a matter which you understand and they do not?—Exactly so. That is their great mistake, but those who lead them boast of it. You see in newspapers that they think when they are able, by means of their combination, and by spending a small sum of money, say 200*l.* or 300*l.*, in supporting a strike, which they can very well do, to affect the wages to the extent of many thousands, then they think they have done a great deal of good to themselves. But I maintain that it cannot be a permanent good to themselves unless it is equally a good to me. I freely admit that labour, like every other commodity, has a marketable value; that it has a right to insist on this payment, and that if from any combination of capital it be refused, it is just and proper, and it is also certain, that it ought successfully to resist such opposition, and get for itself its normal value. But, on the other hand, if labour by combination has so fortified itself that it can temporarily get an advantage over capital, it would be the most unfortunate circumstance that could possibly happen to the operatives if they succeeded in obtaining terms beyond those which its value represented in the market of the world. It never can maintain one shilling beyond this value, and the only effect which combination and consequent ability to enforce for a time any beyond this can have, will be the certain destruction of the industry on which the demand is made, by causing a migration of capital from the oppressed and overridden branch of industry to other branches—it may be to other countries.

16,761. Is it the result of your argument that shipbuilding cannot be carried on profitably on the Thames?—No, it is not the result of my argument, because I have carried it on on the Thames profitably myself, but it is this, that it can only be carried on as a specialty—it can only be carried on where the character and experience of the head of the establishment enter largely into the production that is made, and are paid for in the price of that production by the purchaser. And yet the workmen imagine that that forms no value, that it is merely represented by the labour; and this is what I do maintain, that if you had to represent nothing but labour, without reference to the character of the engineering production that comes in, then it could not be carried on, because the difference is so great between London and the North.

16,762. (*Mr Roebuck.*) Will you allow me to ask you whether you anticipate, as to other trades in which these high wages have obtained, that their's will be the fate which you say has befallen the shipping trade?—Where the difference is very great between one town and the other, it will have the effect of driving it out from the one town to the other.

16,763. You talk of the disastrous effects (and I have no doubt correctly) upon the shipping in the Thames. Do you suppose that the same disastrous effects will follow in regard to the building of houses in London?—No, because you cannot do without houses. You must pay higher rents, as you do, in fact.

16,764. (*Sir D. Gooch.*) Are you aware whether for the houses building in Grosvenor Place the internal fittings have not come from Germany?—I understand that has been introduced, and is going on now.

16,765. (*Mr. Harrison.*) Do you expect that the joiners upon your employ in your yard will be content with wages lower than the current rate of wages in this town?—Certainly not, I do not expect that they will be content with that for one moment, and as I said before I conceive that they have a perfect power of fixing their wages at whatever they like; that resistance on my part has now ceased, because it is impossible to take place. In 1851, when the unions were not in such great force as they are now, we opposed the workmen when they wanted to impose

upon us what we thought unreasonable conditions on which to employ labour. We fought a great battle, and that battle lasted for three or four months, and it resulted in the workmen having to give in, after having spent all their funds. But they exercised such an amount of courage, and they went through such an amount of endurance, that I do not hesitate to say that it was one of the most painful things a man could experience to be successful in such an undertaking; and if it is any satisfaction to the workmen, I am sure that very few, except on the direst necessity, would engage in such a struggle again. I was one of the committee engaged in carrying on that fight. It went all over the kingdom. We were then able to beat them. On previous occasions we had had very sharp contests, with various results. Sometimes they had beaten us, and sometimes we had beaten them. But of this I am quite convinced that all those contests which did take place, and that amount of resistance that was always offered by capital was really, although the men never understood it so, the safety-valve of labour, and that labour would long before this have come to a very dreadful state of prostration if it had not been kept in check by those very contests.

16,766. (*Mr. Roebuck.*) Do you believe that the prostration has now taken place, and that you have arrived at that point in the Thames for example?—I do not myself believe that the Thames is at all in a worse position for doing the highest class work than any other place.

16,767. (*Mr. Hughes.*) Is it not the fact that a Thames-built vessel can still be insured in the marine insurance office at less terms than other ships?—I think that it ought to be so, but I do not know that it is.

16,768. Is it not the fact that the Thames-built ships command better freights?—I believe so, but I am not sure.

16,769. (*Mr. Roebuck.*) As to these establishments that have gone, having been destroyed by this terrible storm, did they produce this fine article?—As a general rule they have produced it.

16,770. Then, if at the present time the Thames can afford to produce that article, why could they not afford it then?—The answer to that is, that success in shipbuilding is not dependant on one but on many circumstances, and is only ensured by great experience and thorough business knowledge. The material goes out of your yard in a totally different form from that in which it comes into it, and of a totally different value, every cubic foot of wood probably going out of your yard worth at least three times that at which it comes into it, from being shaped and cut away, and it requires a very admirable accountant, with great knowledge of business in all its different phases, to ascertain whether you are making money or whether you are not making money, until you have gone a very considerable distance on the road of doing either one or the other. And where it has taken place (as it has in most of these instances I think) that they have ascertained that they have been losing money, it has generally been at a time when they have gone so far they have not had the opportunity of receding, and their necessity of existence was to keep on in the hope of retrieving themselves, and that I believe to be the history of their destruction. In fact, I said when first I came into the chair, and I cannot impress it upon your minds too strongly, that I believe that quite as much of the unsatisfactory state of shipbuilding throughout this country is due to unsound trading on the part of the masters as to excessive demands on the part of the men.

16,771. (*Mr. Hughes.*) With respect to excessive demands, I understand you to say that the rise of 15 per cent. on the wages has been, in your belief, the cause of the failure of very many of the shipbuilders on the Thames?—No; I say that that has contributed towards it, and that it is a curious fact that if you take an estimate of the rise in wages paid, and the amount of money that they were deficient at the time they failed, it does appear that one very nearly corresponded to the other. That was what I said.

Mr. J. D. Samuda, M.P.

19 May 1868.

16,772. Then the whole amount of value of labour in shipbuilding being according to your evidence from 20 to 35 per cent. (we will say an average of 30 per cent.) 15 per cent. upon 30 per cent. of the whole cost you think has made that difference?—I did not say that it made all the difference, but that the one cause made probably as much difference as the other. But to follow your figures, I would put this to you. If you had wages in Scotland at 4*s.* 6*d.* a day, whilst you had them in London at 7*s.* a day (which was the case until lately, though it is just and proper to the shipwrights to say that they have reduced them within these last three or four weeks, and that now they are content to take 6*s.* a day), that is to say, if you take the difference which existed at the time that all this distress was taking place in London, whilst work was flourishing in Scotland, you find that you have a difference then of something like 2*s.* 6*d.* out of 7*s.* or about 35 per cent. between the wages in London and the wages in Scotland.

16,773. But my point is that this increase of 15 per cent. on wages, which in your belief has been one of the chief causes of the breaking down of the London trade, is simply, when one comes to reduce it, a question of less than 5 per cent. on the whole cost, or something like that?—Yes, and 6 per cent. represents very nearly the profit a manufacturer is satisfied with; 7 to 8 per cent. is quite the outside average profit; but that is not the right way to put it. It is true that 15 per cent. is what has taken place within the last six years in London, but the difference between London and the outports is considerably more, and is specially applicable to all ordinary work that London had to obtain in competition with the outports.

16,774. I fancied that the old wages of the shipwrights were not less than those they get now?—The shipwrights do not form so large a portion of the result as the general character of the wages. And then again, even the difference in the rate as quoted by you does not represent the total difference that exists in truth, because men were content formerly with a very much smaller amount of profit by their piecework balances than they have received lately, and that would go to swell the amount again.

16,775. Then, in fact, you believe that the rise has been 30 per cent. on the average wages of all the trades engaged in shipbuilding?—I am sure that it has been 30 per cent. since I have been in business. But it is not proper to put it entirely to shipbuilding, because my early career was in engine building.

16,776–7. (*Mr. Roebuck.*) Now, to bring it to bear on our inquiry, in what way do you suppose that the unions have mischievously interfered to produce this rise of wages; would you point out the *modus operandi*?—The way they do it is this, they meet together and determine that no man shall work under a certain price. They no longer leave the masters free to fix the wages of the man at that which they find his labour is worth to them, but they say, "Good men or "bad men, you shall insist upon having 6*s.* in the case "of joiners and 7*s.* in the case of shipwrights." Then the master has just this choice placed before him, "You must either take these men and let them work "at the price we ask you, or you must give up taking "contracts, because if you think that you can turn "those men out of your yard, and that you are free "to take any other men who would be disposed to "offer themselves to you, you cannot; those other men "will not be allowed to offer themselves to you, the "unions would prevent it."

16,778. What do you mean by "not be allowed"?—We are not acquainted with the particular means that they use for keeping them away, but that is the result.

16,779. (*Mr Harrison.*) What unions do you speak of, because it is a very wide term?—It is a very wide term, and I do not profess to know the different unions. If you want me to give you evidence which will be of service by being *bonâ fide* evidence, I shall

Mr. J. D. Samuda, M.P.

19 May 1868.

be glad to be of use to you by giving that evidence; but if you think that I shall put myself through the eye of a needle by answering minute questions such as you are putting now, I shall decline to do so, and I do not think it right to ask the question.

16,780. We know that it is illegal to obstruct men from going to their work, and if you are going to speak of acts of illegality I think we are entitled to know what are the bodies of men that have so acted within your knowledge?—I tell you as a positive fact that when men offer to work for me at a certain rate I am informed by my foreman and others that it is of no use my putting these men away, for no other men will take their place. I say, speaking to you in this room, that that is an obstruction put by the workmen in my way, and it is the fixing of wages in their own particular way, and the practical effect upon me is that they become the masters and I become the servant to that extent.

16,781. Have the shipwrights done that?—The shipwrights and the joiners have both done it.

16,782. On what occasions?—On many occasions, when, as I tell you, I find it perfectly impossible to go on any longer attempting to put men on upon a scale of wages regulated by myself. One of the occasions in which that existed was the very one I cited to you at starting. In 1866 the painters came to me and said "We must be raised from 30*s.* to 33*s.* a week." Now I cannot tell you that the painters' union told them to do that.

16,783. You brought a general charge, and you say that men to your knowledge, and men whom you would have employed, have been obstructed?—I did not say so.

16,784. I understood you to say so?—Then you misunderstood me.

16,785. I understand you to say, generally speaking, that unions have prevented men from taking employment with you. Am I right in that?—I have told you already that you are wrong.

16,786. Will you inform me and the Commission to what obstruction you allude?—The answer which I gave to Mr. Roebuck was this, that formerly I, as the master, used to fix the price at which I would put the men on, and I fixed that price, having regard in my own mind to the value of the individual man; but that lately, since the unions have been in full force, an alteration altogether had taken place with reference to that mode of engaging men, and I was obliged to submit to a way of engaging men at the price that they themselves in their own unions regulated that they would take. I must take those men or leave them alone, because if I did not take those men no other men were allowed to come to my yard to take their places.

16,787. Who are the men who have prevented others from coming to your yard, or on what occasions have they done so?—I do not profess to be in the secrets of the unions, or to know how they do these things, but I tell you that they are done, and that I am a sufferer by their doing so.

16,788. On what occasion have you been a sufferer?—On every occasion which I have pointed out to you since the men have deprived me of the power which I possessed and exercised of fixing the rate of those men's wages according to the ability they display. I have no more power of doing it now than you have.

16,789. You tell me that men whom you desired to employ in your works have not been allowed to work for you?—No, I did not say that.

16,790. (*Chairman.*) Does not your evidence come to this: "Since the unions have been in action, I "do not know how it has been brought about, but if "I turn off the men in my employ other men are not "allowed to come"?—At any lower wages.

16,791. "How it is brought about I do not know," you say?—I did not pretend to say that I did not know how it was brought about, but I do not know the machinery.

16,792. (*Mr. Harrison.*) What do you say as to obstruction?—I say exactly this, that since the unions have been in existence I am reduced and compelled to accept the rate of wages which they think fit to elect for themselves that the men should take, or to have no men at all, because, practically, if I were to dismiss those men I should not be able to engage any other men on better terms.

16,793. Do you mean to say that other men would be prevented from taking work?—I think I cannot put it clearer. If you wish to attempt to force me to say that I am in the secrets of the unions, and that I know how those things are done, I will not say that I am. I do not know how these things are done, but I do know that they are done.

16,794. I gather from you that in your experience men have not been allowed to work for you; what trades do you refer to?—Both shipwrights and joiners.

16,795. You refer to cases where shipwrights have had a dispute with you?—No, I have had no dispute with any of them. You are putting words into my mouth which I never used.

16,796. I am asking you if I rightly understand you?—No, you do not.

16,797. You say that within your experience shipwrights whom you might have employed have not been allowed to work for you—is that right?—I never said anything of the sort.

16,798. Then it is not within your experience that shipwrights whom you would have employed have been prevented from working for you at any rate of wages you might offer them?—I never said that either.

16,799. (*Chairman.*) "The men have demanded a "rise of wages up to 7*s.*, and I am obliged to give it "because this, I believe, would be the sequence of "events. If I said I will turn you off and open my "yard to other men, other men would not come, "and I attribute that sequence of events to the "action of unions, but I have no knowledge of the "action of unions. Time was when men would have "come to fill the places of others; now, things are "different." Is that the effect of your evidence?—Yes.

16,800. (*Mr. Roebuck.*) There is another point of view that I wanted to bring before you with regard to these men, that had to do with what might be considered an exorbitant wage. Supposing that they were turned off, could they find work elsewhere?—At the present moment no one can find work.

16,801. I mean on these occasions when you yielded, do you suppose that if you had turned them off they would have found work?—I will tell you exactly how that takes place. I am unable to give it to you except in this way. On all these occasions which I have mentioned to you, the painters for instance go to one establishment, and they say to this establishment, "Things are dearer, "provisions have risen in price, we cannot live at the "price that we are getting, you are very busy" (and they know that this establishment is very much pressed to do its work by a certain time), "give us "33*s.* instead of 30*s.*," and the establishment thus pressed, unable to resist it, feeling that they will be left in the lurch if they do resist it, yield, and give it them. Then, having got the advance from the Thames Shipbuilding Company, say, they come to me and get it from me, and then they take us in detail, and go to Mr. Wigram and get it from him, and so on, and that is the way it is done.

16,802. Supposing in the first place when they had made the application, no matter to whom, that that person had said "No, I will not give it, go," would those men, if they had gone, have found work elsewhere?—I believe that those men then would have caused a general strike in London, and would have been supported by the rest of the unions all over the kingdom.

16,803. You do not suppose that the probability was that they would have got the same wages from other establishments if they had been turned off yours?—The fact was that they were not getting it at that time, but it is just possible that if the necessities of

my neighbour had been greater than my own he might have yielded when I might have resisted. And we have exercised an amount of private judgment in either resisting or yielding in former times, but now we have abandoned all such attempts because it is futile; we know that the men are much more powerful than ourselves with these ramifications of unions over the whole kingdom; we cannot resist them except by taking no more work.

16,804. Is there no combination amongst yourselves?—There is no combination among the masters.

16,805. In fact the masters are not as loyal to one another as the men are?—I do not think that they could be; I have never known any practical combination among the masters since 1851, and in 1851 I was one of the committee for carrying out that contest, and the difficulties that existed in maintaining a combination among the masters, even in those stipulated circumstances, were something enormous, because there were so many masters whose necessities were so great that they could not act to the extent of resisting demands that they thought unjust. It was only men who were thoroughly independent, and who did not care for shutting up their establishments and closing their works altogether for an indefinite period, that could stand the difficulty and face the insolvency that was brought upon weaker houses by resisting the unjust demands of the workmen.

16,806. (*Earl of Lichfield.*) Did you adopt that course of closing your works at the time?—I did; all the engineers did at that time. It was the great lock-out of 1851.

16,807. You said, did you not, that some masters could not adopt that course?—They all did it for a time, but after it had been in force for some time we found that some of the weaker masters were incapable of carrying it on any longer, and the committee recommended that where their necessities were such that they could not keep their establishments shut any longer, they should be authorized to open their establishments and take back their old men; and in some few cases this was done.

16,808. Did you stand out longer than the rest?—Not longer than the rest of the principal masters, we all stood out together about four or five months, till the men had withdrawn their demands.

16,809. (*Mr. Hughes.*) Since then you have had no dispute with the men, have you?—Since then I have never had any dispute with the men.

16,810. When men have come to you and said "We want a rise," have you always admitted it since that time?—When they have come and asked for it seriously we have been compelled to give it to them.

16,811. Without a fight?—Yes.

16,812. You must have thought it just?—No, on the contrary, there are some workmen I see sitting in this room who know that I said to them at the time, "I will give you this wage because I cannot help it; "but mark what I say, the day will come when you "will find that your having demanded this wage will "not be a penalty to me, but it will be destruction to "yourselves." I felt that it was as regards the interests of the men that they were making the greatest possible mistake, and I believe so still, and I think it is most important that they should have those facts brought prominently before them.

16,813. (*Earl of Lichfield.*) You were asked just now if a joiner could be expected to take 35*s.* from you when he could get 37*s.* from a builder in London. Are we to understand that the joiners formerly employed in building in your yard are now employed in building houses in London?—I do not think, as a general rule, that the joiners employed in my yard ever change to building houses, because I think they can earn more money in shipbuilding, inasmuch as they do not carry piece work to the same extent in building houses; but there is nothing to prevent them from building houses.

16,814. As a fact, there are many joiners out of employment in your district, are there not?—Great numbers.

16,815. (*Chairman.*) Would you allow me to ask this question—have the large mass of shipwrights and joiners, and persons employed in that way, disappeared from the Isle of Dogs?—To some extent, but not the whole.

16,816. I meant to say, have you any ratio of the houses occupied and the houses unoccupied? Is it not the case that street after street is occupied by housekeepers paid to keep the house?—Unfortunately a great many men have left their houses and come upon the parish.

16,817. And a great many houses are unoccupied?—They could not pay their rent. With regard to the observations that Mr. Hughes was making about the comparative building on the Thames and other places, and the failure of the houses that I referred to, I pointed out, or endeavoured to do so, that the Thames was only profitably employed, as a general rule, in the highest class of work; but I ought to have pointed out also that from the facilities given to undertake large operations, a number of establishments were started on a large scale, which had not grown to that large scale by experience, and that the consequence was that the only description of work which they could get was not that work for which London is specially adapted, but such work only as they could obtain in competition with the rest of England, and that, therefore, their failure became more rapid and more complete because they were competing for work which they were incapable of obtaining a paying price for. And, therefore, it would be more correct to compare their amount of loss on the cost of their production of this inferior work with the cost of production of the different outports that they were competing with, and that would make the difference greater.

16,818. So far as that cause acts it is the fault of the persons who so came in and assumed to be masters?—Yes; no doubt of that.

16,819. That cannot be laid at the door of the men?—I am not attempting to do that.

16,820. (*Mr. Roebuck.*) Were the persons who acted in this unwise way the masters of establishments which existed when you first entered the business?—They were not, but I ought to have said that there was not one of those that exist now that existed when I came there. Others that have started since have failed. I alluded specially and more particularly to the Millwall Iron Company. That came after me some time, but it was a notable instance of that description. They had no knowledge which had grown up with experience, or which gave that character to their work that could entitle them to be consulted by customers in the same way as myself and other persons who have been a number of years engaged in these operations.

16,821. That state of things was brought about by their getting support from Overend and Gurney and all these financial companies?—Yes, there was another that grew up in exactly the same way of the name of Ash. That firm was only in existence two years. During that time it built a large number of vessels. It was not known when it came into existence, and they had to compete by nothing but competition prices of the most ruinous description with other persons all over the kingdom, and when they failed, this curious circumstance was exhibited, that if they had got their labour for nothing they could not have existed; the amount of money they were deficient was equal to the whole amount of money they had paid for wages from the day they went into business to the day they stopped.

16,822. That is of course wholly unconnected with this inquiry. I mean that it cannot be laid at the door of the trades unions?—I quite assent to the view that that was from reckless speculation, but that exercised a very injurious effect upon the rest of the trade existing there.

16,823. (*Mr. Hughes.*) The raising wages or the reckless speculation do you mean?—The reckless speculation.

Mr. J. D. Samuda, M.P.

19 May 1868.

16,824. Reckless speculation ruins all trade, but a rise of wages I do not believe does. However, that matter we have done with. You say that a great many of the workpeople have received relief since the East End distress; but you do not know of any instances in which the trade union men have had to take relief, do you?—No, I do not; I think as a general rule the shipwrights did not any of them take parish relief, but that they were supported by their unions. The iron men were less able to support themselves, and I think that they had to accept it largely. An immense number were those who are called the helpers, who are really not artisans at all, but who suffered by being thrown out of work, for you cannot employ them unless you are employing the other men.

16,825. (*Mr. Roebuck.*) As respects the state of trade there now, are there as many shipbuilding establishments existing on the Thames as when you began business?—I am not prepared to answer positively, but I should think not.

16,826. Then whatever may have been the cause, you are of opinion that a great deal of the shipbuilding business has left the Thames?—There is no doubt about that.

16,827. You were here I think when I put that very question to Mr. Wigram, and he said that he did not think it had left the Thames?—Well, I know at the present moment reports are made to me that in Scotland they are doing a great deal of business, and in the whole experience of my career I have never known so little doing as there is now on the Thames. I quite agree with Mr. Wigram to this extent, that I do not think it is a permanent leaving of the Thames. I think that the particular description of work which the Thames is calculated to perform is not being required at this present moment, or rather not being applied for at this present moment, and that the peculiar description of work which is generally supplied from the out-ports is being applied for in large quantities.

16,828. Then the cause of there not being the usual quantity of work in the Thames is that there is not a demand, not that the prices here of wages are so high?—No, because as I tell you my own impression is that notwithstanding the present price of wages the best description of work can be performed on the Thames as advantageously as it can be performed elsewhere.

16,829. (*Mr. Harrison.*) Within the last two years you have not been offered work which has been refused on a question of price by the men, and which you have not in consequence had done at all?—No.

16,830. (*Mr. Hughes.*) With respect to the distress of which you were speaking just now, you said that the great body of the people who were in such distress were people called helpers and not artisans?—Helpers principally, I think.

16,831. I suppose that they were the persons who were principally helped by the Mansion House Relief Committee that was formed?—I should think that the helpers and the iron men were the principal recipients of that relief.

16,832. You were on the committee, were you not?—Yes.

16,833. There was a story that made a great sensation at the time, of the stoppage of the relief by that committee (to the helpers, I suppose,) in consequence, it was said, of a strike at Messrs. Pontifex's?—There was a consideration of the suspension of the relief, whether they should give the relief or not, that was in consequence of a strike at Messrs. Pontifex's.

16,834. There was an undoubted strike of the joiners at Messrs. Pontifex's, was there?—Undoubtedly.

16,835. (*Mr. Harrison.*) What were the circumstances as they came to your knowledge?—The circumstances as they came to my knowledge were that a certain number of men had been put on by Messrs. Pontifex, I think to rebuild some factory that had been burned. These men had worked for Messrs. Pontifex for some time in making this repair at a wage which I do not recollect, but which, for the sake of argument, I will say was 33*s.* a week.

16,836. Were they joiners?—Joiners. Mr. Pontifex then reached that point in his work that induced him to send for his bricklayer to bring in some other men connected with the building trades to do the other portion of the work; and when these other men came in to do the other portion of the work, the men who had been previously satisfied with what they were receiving, applied to Mr. Pontifex to change their wages from that which they had taken to that which they said was given by the building trade generally.

16,837. (*Mr. Hughes.*) Were these other men joiners?—No. Their own men (who were joiners) who had been previously working on the building, and had been satisfied with the wages which they had been receiving up to the time of the other men (bricklayers, I think,) coming on the premises, seem then to have been moved, either by the other men who came there, or by a sense of disinclination to work in conjunction with other men at lower wages than those sanctioned by their different societies, to make an application to Messrs. Pontifex for two things. One was to raise their wages, and the other was to do away with a certain portion of the time that they had previously worked on the Saturday, and Messrs. Pontifex resisted this, and the men all struck.

16,838. All, or the joiners, do you mean?—I mean the joiners; all the other men that were brought were brought on by the contractor who was taking the contract job.

16,839. (*Mr. Harrison.*) It was the result of a mistake between the men and the foremen, was it not, that the strike happened?—It did not appear to be in the least the result of a mistake, but a preconcerted thing determined on by the men, and it was put in such a form that it satisfied me at the committee that there was no mistake at all about it, and that the men had a perfect knowledge of what they were doing, and did it with the full intention of leaving Messrs. Pontifex in the lurch.

16,840. How long did that strike last?—I do not know; we did not, on a consideration of the matter, allow that strike to prevent our distributing charity to the district as usual, but it did appear to us a monstrous thing that those men should deliberately have thrown themselves out of work in the way they did.

16,841. But they did not come on the fund?—No, they did not come on the fund, but they added to the distress of the neighbourhood.

16,842. (*Mr. Booth.*) Did they cause other persons to come upon the fund?—It was stated so, but I am not sure whether the fact was so.

16,843. It did not come within your own knowledge?—No.

16,844. (*Mr. Harrison.*) The publicity given to that affair by the letter of Messrs. Pontifex, and the discussion in the committee, did materially tend to stop the flow of money from the public to the fund, did it not?—I have not a doubt that it did.

16,845. (*Sir D. Gooch.*) Is that fund still going on?—No, it is stopped. The effect of that fund, after having tided over the very worst period of the distress, was found to be most injurious in many respects, quite pauperising the neighbourhood, and reducing persons to a state of dependence which when better times were returning they could scarcely arise out of.

16,846. (*Mr. Hughes.*) Then the shipwrights had nothing whatever to do with that strike?—Nothing.

16,847. They had a great deal of the odium at the time, if I remember rightly?—No, I think not.

16,848. (*Sir D. Gooch.*) Was there not a case where a ship might have been built if the shipwrights would have agreed to some reduction of wages at Limehouse?—I heard it said so. There was a public meeting called, and there certainly was an offer made by Mr. Bullivant to build a ship if the men would agree to accept the terms offered, which were not agreed to; but I think, in justice to the men, it

ought to be stated that neither the party who was going to give the work, nor the men who were going to take it, understood enough of it to be in a position to make satisfactory arrangements—I believe that to be the case.

16,849. (*Earl of Lichfield.*) Do you employ engineers?—Yes, to some extent, not very many.

16,850. Have you had difficulty with the engineers?—No.

16,851. You say that the shipwrights had no relief from the parish during this late distress. I suppose that the same remark applies to the engineers?—I am not so sure about that.

16,852. (*Chairman.*) What is the distinction between the engineers and the boiler-makers?—The engineer is a man who works with a file and a hammer and at a lathe. A boiler-maker is a man who works iron hot, rivetting up boilers, or ships, bends angle iron, or anything of that description.

16,853. (*Earl of Lichfield.*) Do you think that any of the engineers have applied for parish relief?—I am afraid that some of them have been obliged to do so, but that would only be an opinion.

16,854. (*Mr. Hughes.*) Did your committee relieve any of them?—We do not know—we gave 500*l.* to this committee and 200*l.* to that for various localities.

16,855. Then your personal knowledge was small; you did not see the people yourself?—In the character of a committee-man I did not see them, but in the character of a person going through the neighbourhood I could not fail to see them, and I also knew a great many of our oldest hands who were in great distress.

16,856. (*Earl of Lichfield.*) What is the rate of the ordinary day labourer, the lowest class of labourer, at your works?—About a guinea a week.

16,857. (*Mr. Hughes.*) In the docks they only get 18*s.*, I believe?—They do not get that, only 9*s.* I think, or very little more. I think they are rated at 14*s.*, but having regard to the intermittent nature of the work they obtain, it was stated before our committee, as a very great misfortune, that the earnings in the docks were on the average under 9*s.* per man, and as the payment that was authorized by the Poplar Union was 8*s.* 10*d.* per man when he had four or five children, it could scarcely be expected that the exceptional amount of distress would be got rid of, because so many people preferred taking the 8*s.* 10*d.* and doing nothing, to taking the 9*s.* and working at the docks.

16,858. (*Sir D. Gooch.*) Was 9*s.* a week the actual amount?—So it was stated at our committee, and one of the men on our committee I understood was engaged at the docks.

16,859. (*Mr. Hughes.*) It would be a good thing if wages were raised there?—Yes, indeed it would.

16,860. (*Earl of Lichfield.*) Surely that was in consequence of their being very irregularly employed?—Yes; the rate they were employed at was, I think, 14*s.* a week, but the number of hours they were employed only enabled them, taking the loss of time in getting ships into berth and out of berth and other drawbacks into account, to earn 9*s.* a week.

16,861. (*Mr. Hughes.*) Your labourers are paid by the week?—Yes; it is about 20*s.* or 21*s.* a week. To give it accurately, I had 217 labourers, and the average rate of wages to the 217, the money actually paid, was at the rate of 22*s.* 7*d.* per week. They were rated at various prices, from 18*s.* up to 27*s.*; 27*s.* would be for a superior description of men—drillers and men of that sort; and the lowest at 18*s.* would be men passing from the gradation of boys into men. Taking their general character, the largest number of all are at 21*s.* and the next at 24*s.*

16,862. In your list of the payment of your skilled mechanics, is there not a variation of that kind from a certain sum up to another sum, as well as with the labourers?—Not in each class of the mechanics, but there is in the mechanics taken as a whole.

16,863. You pay very skilful mechanics higher than you do your ordinary mechanics?—Yes; then those are men whom we look upon as under foremen, leading hands, and so on. Now take the case of shipwrights—until very lately 7*s.* was the minimum, you may say that no man got less; the mass of them, generally speaking, got 7*s.* a day. Then there were a number of leading hands who would be the leaders in each particular job who would get 8*s.*

16,864. Trade societies never interfered with your paying men higher wages?—No; then with regard to the boiler-makers in the same way the platers would get 6*s.* we will say as a minimum, but when we have found men worth considerably more than that wage we have raised them even to 9*s.* a day.

16,865. (*Earl of Lichfield.*) Can you tell me how much those dock labourers get by the hour when they are employed?—I will not be sure, but I think it is 4*d.* I do not think that under any circumstances they could earn more than 14*s.* a week.

16,866. (*Mr. Hughes.*) When you say that you have no more power of fixing the rate of wages than I have in your works, you only mean that you have no power to get them below a certain amount, but you may raise them as high as you please?—Yes.

(*Mr. Applegarth.*) I wish to read, with the permission of the Commissioners, a statement made by the men respecting what happened at the Mansion House Committee respecting the so-called strike at Messrs. Pontifex.

(*Mr. Samuda.*) Before I leave I may say that I can tell you at once what the statement is that is about to be read. The only thing that I should have to say at the end would be that that statement was put before the Lord Mayor at the Mansion House Committee, and that an inquiry from Messrs. Pontifex gave it quite a different complexion, and led us to believe that that was quite wrong.

(*Mr. Applegarth.*) I just desire to say that when this strike as it was called took place at Messrs. Pontifex's, two of the members of our society were concerned in that strike, and they waited upon me to advise them how act, because they had been charged with being concerned in a strike (it was no strike at all, but really a lock-out), and they wanted to know what they should do. They said that they did not care what they did as far as they were concerned, but they were distressed for the other men who were not provided for. There were 30 men who were concerned in the matter, and 28 of those men were non-union men. They said that the committee at the Mansion House had cut off their relief on account of the strike, and they said, "Even supposing that we "were on strike, it would be an act of gross injus- "tice to a starving population to cut off relief from "them on that account; can you advise us what to "do?" I said, "Yes, put the facts in writing and I "will endeavour to go with you to the Mansion "House and see if they cannot be laid before the "Lord Mayor." And one of the men sat down and wrote a statement which all the rest indorsed.

16,867. (*Mr. Hughes to Mr. Applegarth.*) Do you mean that it was merely the union men that endorsed it?—No, but non-union men as well. That statement was read over to them, and they signed this document and the others endorsed it afterwards. Only 14 went to the Mansion House. As to the statement laid before the Lord Mayor, the account in the newspaper is as follows: "The statement is signed by 14 of the "men, and is to the effect that about three weeks ago "Messrs. Pontifex and Wood engaged carpenters to "replace the roofs of some buildings recently de- "stroyed by fire. Additional men were occasionally "set on till they numbered about 30. About a fort- "night ago some bricklayers commenced work on the "same works for a contractor, who took the brickwork "of these buildings. The bricklayers were paid 8*d.* "per hour, and the labourers, we believe, received 5*d.* "per hour. Both bricklayers and labourers left work "at 1 p.m. on Saturday. The carpenters had some "of them worked two Saturdays, and the others one "Saturday till 4 o'clock; but this was done be- "cause they were employed making some large 'vat'

Mr. J. D. Samuda, M.P.

19 May 1868.

" or 'back.' Then it was that the carpenters asked " that they might leave at 1 o'clock on Saturday, " as they would have done if they had been employed by " any of the great builders. They saw Mr. Pontifex, " and he said he would leave it with the foreman. They " saw the foreman, and he said, 'Do as you like, my " boys.' They stopped work on the following Saturday " at 1 o'clock. On the Monday they were not allowed " to resume work, and after being kept from 9 o'clock " till half-past 11, were paid the two days' wages which " it was customary to keep in hand; but before doing " so a deduction of 1*s.* 11*d.*, or 11½*d.* per hour for the " two hours they did not work on the Saturday previous " was made, while, if they had worked those two hours, " they would have received only 6*d.* per hour. Only " two of the 30 men were members of a trade union, " and there was no intention of striking to obtain the " Saturday half-holiday." This was the statement signed by the men, and put in at the Mansion House, and the men declared then and there that they had no intention to strike for the Saturday half-holiday, but the foreman, who was on friendly terms with them, said, "Do as you like, my boys," and they thought that that meant that they could choose for themselves, and they left off work at 1 o'clock, the same as the other men, and when it was put to them whether they would strike or not for it, they said, "No, certainly not;" and when they were asked to resume work on the old terms they said, "Yes, decidedly." The men declared that it was a misunderstanding, and I, for my part, believe the men.

16,868. Did they go back to the work?—No, because when the men went on the Monday morning they would not have them. Some of the newspapers had it that it was the shipwrights or ship-joiners that were engaged in the dispute, and I think that Mr. Pontifex had to correct it in the press, and say that they were not shipbuilders at all, but men engaged in his chemical manufactory or lead works.

16,869. (*Mr. Harrison.*) Mr. Pontifex put in an answer to the case of the men, did he not, in which he contradicted, after inquiry, the statement of the men?—Yes. The men all declared after that, unanimously, that their statement was correct, and he knew very little about it, because he was seldom on the works, and they had treated with the foreman.

16,870. (*Chairman.*) If the foreman was the good-tempered man that you describe, who was the person who excluded them from the works?—He did it by order of Mr. Pontifex.

16,871. When he said to them, "Do as you like" about the Saturday half-holiday, that might mean "and if you do you will catch it," might it not?—Yes, it might; but the men naturally put another construction upon it. The foreman kept a public-house, and the men were in the habit of going and having a glass at that house now and then, and were on friendly terms with him. Mr. Pontifex had been appealed to in the first place, and said, "I will leave it to my foreman;" and the foreman, who was a man almost like one of themselves, said, "Do as you like," and it was on that that they went away.

16,872. (*Mr. Harrison.*) It was on the Saturday that the men ceased to work, and on Monday morning they presented themselves at the works and found that they were locked out, and the next day a letter of Mr. Pontifex appeared in "The Times," and then the relief was stopped?—Yes.

The witness withdrew.

Mr. J. Dudgeon.

Mr. JOHN DUDGEON examined.

16,873. (*Chairman.*) You are a civil engineer, I think?—Yes. I am more correctly a mechanical engineer, and an iron shipbuilder.

16,874. Where is your place of business for shipbuilding?—In Millwall.

16,875. Is it a private concern of your own?—It is a private concern of my own.

16,876. When your works were in full work, about how many men had you in your employ?—We take 1865 as being our best year within these half-dozen years. In that year I employed about 850 men in the shipbuilding yard, now I employ about 175. If you will permit me I may as well state also the number of workmen that I employed at my engine works in Millwall. At the same period, namely in 1865, I employed 650 men in the engine establishment.

16,877. (*Mr. Hughes.*) And how many do you employ now in the engine establishment?—I think my last report was about 225 or 230.

16,878. (*Chairman.*) Are they engaged in making engines, or engineers in the sense just explained to us?—The 850 men were entirely employed in the construction of iron ships, and the 650 men were entirely employed in the production of marine engines, the machinery for those vessels.

16,879. (*Sir D. Gooch.*) You have a specialty in your works, I think, twin screws?—Yes, we have a specialty, but still we are employed as marine engineers generally, as people who make steam engines for steamers, that being our special trade.

16,880. (*Mr. Hughes.*) Are you a London man?—No, a Scotchman.

16,881. (*Chairman.*) How long have you been located on the Thames?—I commenced engine-making about 12 years ago, and shipbuilding about five or six years ago.

16,882. Have the unions among the artisans had any effect upon the business that you carry on?—Yes, the unions amongst artisans have had the effect of annoying us a good deal at periods during the time that I speak of.

16,883. In what way have they annoyed you?—I should like my evidence to be divided as it were into two points, the difference between the two businesses that we carry on making the character of the people whom we employ in the shipbuilding department different from those employed in the engineering department, and as the engineering department has been put first I think it might be well to take that as a starting point. And if we do that I should say that we have in the case of the shipbuilding department met with a considerable amount of annoyance from the conduct of our workmen during the period that I have been in business.

16,884. (*Mr. Hughes.*) In shipbuilding you have met with annoyance?—Yes.

16,885. And have you in engineering?—In engineering to a less degree.

16,886. (*Chairman.*) "Annoyance" is a general term; what is the specific form of annoyance you can quote to us; had the men a strike, for instance?—When I use the word "annoyance" we have not had anything in our experience that amounted to what may be called a serious difficulty with our men. Anything that has occurred between us and our men has been more in the shape of an annoyance than it has been a really standard injury to our day labour in the way of carrying on our business.

16,887. As long as you commercially prosper, I suppose that you do not regard the manner in which the men behave or speak; "annoyance" is a more serious thing than being upon unpleasant terms with your workmen, I presume?—I mean this, that our workmen not acting regularly, putting us into the position of not being able to produce our work so regularly as we expected to be able to do, have caused us annoyance, although it has not come to the point of becoming so serious an evil as would induce us to come forward and say that our business had suffered materially through our workmen having acted in any given way towards us to an extent that would seriously interfere with our carrying on our business.

16,888. Can you give us a specific fact with time, and place, and men. Have you any expensive apparatus, for instance, in your works which you have been carrying on on a given day and the men have come to you and said, "We will take a holiday," knowing that you would have that day wasted. I want specification

of one example for a type?—The annoyance that we have been subjected to has never extended to more than a small section of our men doing what is technically termed "striking," that is to say, marching out of our gates without giving us any notice and leaving us to get on as best we could. But that has never happened in our case with the whole of our men, it has only been in very partial instances indeed.

16,889. And then when a section has walked out, has it so happened that a number of other sections have been interdependently bound up with them, so that if one goes all are stopped?—To a certain extent that is the case. But in our concern it immediately became of paramount importance that we should give in to our men, or accede to their wishes in order to prevent the evil proceeding further, and that we have been compelled to do.

16,890. If they have raised a question between them and you have not acceded to their terms, I could understand their walking out. But we have had instances of reckless men who say, for instance, "We will take a holiday to day," without any consideration of the master's interests; have you found that?—I do not think that exists with us to any great extent. There are always two sides to a question, and I invariably found in our case that the men were not entirely to blame; that there is a degree of animosity or spirit of opposition that arises between the people whom we employ as our managers or conductors of work and the workmen, and I have found that it would not be fair to put the blame of these partial *emeutes* entirely at the door of the workmen, because in all the cases that have been brought before me, I have been invariably able to induce the men to go back to work again, perhaps at the sacrifice of certain personal convenience of mine, and at the sacrifice also of the convenience of the people for whom I was working. But still the impression that I wish to convey is that these things in my opinion have not arisen solely because the men were wrong. I believe that if the men themselves knew the position that they hold with respect to the labour that they are doing, and if the people who had the immediate charge of them were also to know as well, a good many of the annoyances that I have been subject to in my business might have been avoided.

16,891. I understand that you are the principal?—Yes.

16,892. And these men who as you consider have not acted with perfect judgment are men that you have had to select to have power over the men?—Yes.

16,893. And the result of an examination both of the workmen and them has led you to the conclusion that men of greater discretion would have prevented unpleasantness arising?—Yes.

16,894. That has happened several times, has it?—Yes; in point of fact, the evil that exists as far as I have been concerned in the matter, is not one that is to be entirely ascribed to the workmen.

16,895. Would you allow me to ask you with respect to the man that you employed as manager and who perhaps was of an uncompromising manner towards the men, whether he was a man zealous for your duty or a man pursuing a bye motive?—Most decidedly zealous for the interest of his employer, taking the interest of his employer from his point of view.

16,896. For the most part the workmen fully appreciate, do they not, the motives with which those who employ them act? There are ill-tempered managers and ill-conducted managers, and there are also men that are strenuous in their efforts to do what is right?—Yes, we must always bear in mind that the workman is not in the position to take even an ordinarily common view of matters. From the nature of his position, and the nature of his education, up to the point that we find him, a working man, we cannot expect him to take a dispassionate view of what may be considered to be his own line of interest, because if he were able to do so, and the higher class men whom we employ to superintend his operations are not able exactly to do so, it would be inverting the matter altogether.

16,897. (*Mr. Roebuck.*) But do you find that in this ignorant state of mind of the working man there comes in an influence from outside that perverts his mind and turns him wrong in his determination?—That is the truth of the whole matter. That is really one of the reasons why the working man does these things without thinking carefully and dispassionately of what the consequences are.

16,898. Then I understand that what you mean when you say that blame is not entirely to be thrown upon the working man is, that it is partly to be thrown upon his advisers?—Yes, it is not entirely to be borne by the working man, but by his advisers, and partly to be ascribed also to the inefficient nature of all friendly undertakings when the people whom the employers employ are frequently asked more than they ought to do at the moment. Therefore, I am inclined not to throw the whole blame of the inconveniences that arise from the state of things that we have just passed through upon the shoulders of the working man.

16,899. But then the annoyance is created and part of the evil arises from the ignorance of the working man, and part from the influence of his advisers, and a part I suppose from the persons whom you appoint to deal with the working man?—Precisely so.

16,900. In that three-fold division, to whom should you say that the greater part of the responsibility attached of the annoyance caused to you?—The greater part of the responsibility attaches upon the advisers of the men to this extent, that the men acting under the impression that whatever they do as a body they will be held comparatively harmless from results, acquire confidence to quarrel as it were with the legitimate men employed by me, and whom they employ, as it were, by another authority. The thing may be put in that light—that my people represent the employers upon the one side, and that the men represent the authorities under whom they act upon the other, and that, therefore, the ultimate blame of things not being properly done must fall back upon the advisers of the men on the one side and upon the employer who employs the other men on the opposite side.

16,901. How long have you been in business?—I have been in business about 12 years.

16,902. Have you found any great change in that time in your relations with your working men?—Well, no; I stand in about the same position to-day that I did, we may say, 10 years ago.

16,903. Then, in reality, what is called the increased power of the trades unions has not affected you at all?—Personally I do not think that it has affected me (it has affected me to a certain extent) to an extent that would make it the cause of my stating that my business had suffered in such a way, because I could not get working men to perform the labour that I wanted them to perform.

16,904. And in these partial strikes that have taken place in your establishment, have you found any difficulty created or exasperated by the interference of the trade union authorities?—Directly, I think that I may say, no; at least, to the greatest extent that I can recollect. Our pattern makers refused to do something or another, sufficient for me to be called in to decide the question, and when I called these men before me, I asked them the reason why they would not do what we wanted them to do? Something or another that was evidently an advantage to themselves; we did not propose to them to reduce their wages or anything in that way. The men said, "We "each and all of us have been in your employ from "the day that we were boys, or nearly so; we would "agree to that at once, but we dare not do it, because "our unions will not allow us."

16,905. To that extent then unionism has interfered with your management of your business?—Yes; to that extent certainly, but still not to an extent to be a

Mr. J. Dudgeon.

19 May 1868.

vital interference. It was still a thing that I could arrange with the men without having recourse to authority.

16,906. Have you found in the range of your experience any great change in the habits and manners of the working men; have they improved of late years?—My impression is, that if we could dissociate the very inferior class of labour that we employ, we will say in shipbuilding, and if we could take the superior type of workman that we employ, such as our engineers, the habits of a body like them have improved of late years. They have improved certainly very much from what they were in my day when I was a working engineer myself.

16,907. Among the lower classes of your workmen (I do not use the word invidiously) are there any large number, or any number, of Irishmen?—We employ a good number of Irishmen; but still they are a small amount compared to the intelligent labourers that we employ.

16,908. Then the number of Irishmen employed does not affect the character of your workmen generally?—No.

16,909. So that you could not draw any conclusion as to their character separate from the others?—I should rather say that in my establishment the Irish part of it was the most docile part.

16,910. (*Sir D. Gooch.*) They are principally labourers, are they not?—Yes, principally labourers.

16,911. (*Chairman.*) Would the remarks you have made about shipbuilding apply as to the effects of the trades unions upon the engineering department?—Yes, I may as well at once state the only objection that I have to trades unions with reference to the superior classes of workmen that we employ. The character of the men has not deteriorated, I can positively say, through their being trade unionists. That is one point that I concede, but this injudicious mode of endeavouring to establish a forced rate of wages, or a scale of wages, for each man who belongs to the union is, in my opinion, the only thing almost for which we can complain of trades unions with respect to our superior workmen.

16,912. (*Mr. Roebuck.*) Do you mean by that that they compel an equal wage for an unequal capacity?—Yes, that is the meaning.

16,913. And you think that the tendency of the trade union regulations?—Yes, we find that is the tendency. We employ a man, and he must be paid the general rate of wage, or he is immediately withdrawn from our employ.

16,914. In your experience have you found that that has led to a deterioration of the skill of the artisans?—No, I do not think that it has led to that directly. There are two sides to that question. There is an advantage arising from all the men that you employ as skilled men, as men who have not only to labour with their hands but who have also to use their brains as intelligent constructors, being on good terms amongst themselves. I think that our business has gained positively by the men being all friendly with each other during their work. Where the men are all agreed, and where the spirit of acting properly is carried out amongst them, as I am happy to say it is carried out amongst my men there, I think that the employer has an advantage as well as the employed. I think that the skill then becomes more a common fund than if you had an establishment where you had two influences continually at work, one influence tending to pull one way, and another influence tending to pull the other.

16,915. (*Mr. Hughes.*) Then this agreement in your shops between all the men employed you attribute partially, at any rate, to unionism?—I attribute it partially to unionism, because the men are all friendly to each other, and seem more inclined to help one another.

16,916. (*Sir D. Gooch.*) Does it not tend to keep the intelligent men down to the level of the unintelligent men?—That is the opposite side of the picture. When you establish this system, although you may do it without injury to the actual work that you carry on, you are doing a positive injury to the really rising men who ought to become the chief men. If you increase the wages of all the men that enter your establishment to a maximum, as the trades unions would like you to do, then you do away with the wholesome element of competition. Then instead of your first-class men getting, we will say, 38*s.* or 39*s.* a week, and your inferior men getting 32*s.* or 34*s.*, if the trade union system were carried out you would then have the whole of these men coming in at 36*s.* a week, which is about the maximum wage that the engineer has ever been entitled to in London. You get them all coming in at that point, and then you destroy the power of the employer to advance the very superior man, because he must always keep him back to the lowest possible range that he can pay him in order to make up for the amount paid to inferior men; and you do away with the motive for the inferior man's either exercising his energy physically, or attempting to acquire that extra skill that is required in our business; and when you do away with the motive of course you do not get the results.

16,917. Taking the interests of the working classes, which from your long connexion with them you are desirous of promoting, into account, do you think that in their interest it is desirable that they should be reduced to a dead level of mediocrity without the power of rising beyond that, as compared with free trade in labour, by which a man of intelligence can rise and would rise and does rise to better wages? Do you not believe that the working man himself is sadly prejudiced by that dead level system?—I believe that the working man himself is really the greatest sufferer of all.

16,918. Greater even than the master?—Even than the master. I believe that the working man is the greatest sufferer of all. I have no objection to take my own life as an instance of that. I began life as a man making horse-shoes, and I gradually rose, simply because it was always a necessity with me to strive to obtain an excellence that somebody else had, and it is only by a system of that sort that, in a business like mine which has to exist by the superior intelligence of the people who not only carry it on but who produce, the excellence that we have attained can be sustained.

16,919. Do not you think that the system of the trades unions would sadly interfere with that progress that has been frequently made in men rising from the working classes to a better position?—You may gather from what I say that that is my belief, but that the trades unions have done the amount of injury that is publicly ascribed to them, as you will observe from the tenor of my evidence, I do not believe. There can be no doubt, however, that trade unionism is against all the principles that regulate progress. The question is how can you deal with it?

16,920. (*Mr. Hughes.*) Did you ever belong to a union?—Yes, I have been a unionist.

16,921. Did the union ever keep you back from getting on?—I certainly have been a unionist in my time, but I was a unionist in the opposite sense of the term. When I left my father's village blacksmith's shop and went to Glasgow, nobody would allow me to work, and luckily there was a union started at that period for those who were not allowed to work, and I became a member of it and fought for the liberty of the workmen.

16,922. You belonged to a union and that connexion with a union did not prevent you from getting on?—No.

16,923. (*Mr. Harrison.*) It was a free labour movement?—Yes.

16,924. (*Mr. Booth.*) From experience I understand you to be of opinion that it is better for the workman as well as the employer that the employer should be at liberty to pay the men according to their merits?—There can be no doubt that that is the truth. There can be no doubt that unless that system

is established, somehow or other, our trade must go to the dogs.

16,925. It is best for the workmen, that is to say, for the superior class of workmen, as well as for the employer?—It is better for the workmen from the highest to the lowest. You add the wholesome spur of a man's success in life, no matter what the degree may be, that he must do as well as his neighbour before he can be paid as well as his neighbour; and without that there can be no excellence in anything.

16,926. And I suppose it must sometimes happen that the inferior workman who is not worth the minimum wages which the union has fixed is thrown out of work from not being able to accept less?—When we discharge, of course we discharge all our inferior men first, instead of keeping a portion of the men and discharging *pro rata*.

16,927. So that that fixing of a minimum rate of wage is injurious to the inferior workman?—Yes.

16,928. (*Mr. Harrison.*) As a rule, do you find, taking the men for instance whom you employ, that any large portion of the union men are distinctly below the average of capable workmen?—I should apprehend that about two-thirds of the union men that we employ in our engineering establishments, or perhaps it would be more correct to say half, fixing 36*s.* a week as the minimum wage, would not be able to get work at 6*s.* a-day, leaving the balance, if the employer is to receive a profit, to be made up by the exertions of those who are able to produce more.

16,929. Do you put the difference practically between one man and another as very great?—The difference between a good workman and a bad workman almost amounts to the difference between zero and the highest point possible.

16,930. I presume that before a man is a member of the union he must possess a certain amount of skill?—I do not know the rules of the union, but I should apprehend that that does not exist, and that the skill of the workmen is not an element that is taken into consideration.

16,931. Do you find for instance that the members of the engineers' union whom you employ differ among themselves in any very considerable degree?—Yes, quite as much as if they did not belong to the union.

16,932. (*Sir D. Gooch.*) As much as the difference between the painters or any other people?—Yes.

16,933. (*Mr. Harrison.*) You would pay them then widely different rates of wage?—I should say that to the people whom we employ I should pay 32*s.* and 40*s.*

16,934. Instead of 36*s.*?—Yes, instead of 36*s.* I think that would be about the range; the highest range would be 43*s.* and the lowest 32*s.* for the people that we employ.

16,935. (*Mr. Roebuck.*) Where is your establishment now?—My establishments are in Millwall.

16,936. Have you found of late years that there has been any departure of the trade of the Thames from the Thames?—Yes, these last two years we have scarcely had anything to do, little or nothing.

16,937. Has not that arisen from the state of the mercantile world generally?—My impression is that it has arisen more from the state of the mercantile world generally than it has arisen from the differences between the employers of labour and the employed.

16,938. Do you consider that any portion of that stoppage that we all know has taken place has arisen from the disputes between masters and men?—Yes, a portion of it, but I think it is hardly fair to say that it has arisen from the trade unions. It has been partly caused by them, but it would be unfair to them to say that they were ever principally the causes.

16,939. To that my question did not go, but I wanted to know whether they were an item in the whole cause that has driven away trade to the extent to which trade has been driven away from the Thames?—There is no doubt that they were an item in it.

16,940. (*Mr. Harrison.*) Trade has been very bad all over this country and all over the world, you may say, may you not?—Yes.

16,941. Men who have emigrated to Australia and to America in search of work have come back having found that it was as bad there as here?—Yes.

16,942. (*Mr. Hughes.*) What portion do you reckon of your gross expenditure goes to wages, on an average?—In round numbers, I think we may say that if we divide the gross expenditure, wages form one half and material and superintendence, &c., the other half.

16,943. (*Sir D. Gooch.*) It will vary much in shipbuilding and in engine-building will it not?—In shipbuilding it really does come near that. The labour as against material will be greater in engine-building than in shipbuilding. I should almost apprehend that in engineering 5/8ths at all events of the gross cost of the steam-engine will be due to labour instead of 4/8ths.

16,944. (*Mr. Hughes.*) Then in labour you do not include the cost of superintendence and arrangement?—Only the prime cost of the production.

16,945. (*Mr. Roebuck.*) In the cost of an engine you would have a portion (it would be difficult to ascertain what) due to the skill of the man who planned it and who guided the labour; that must be educated and brought up to a certain point?—Yes, in the production of machines made by skill, such as we may term a steam-engine, we are every day of course lessening the amount of skill laid out by the further introduction of machinery. But these machines again on the other hand I apprehend employ almost as many men as engines to construct.

16,946. That is the result of machinery always, that it economises labour upon a particular point, but employs a great deal more labour by the largeness of its production?—Yes, the number of engineers employed in making machines is quite equal to the number of engineers that would be employed in producing the labour which the machines produce, or in round numbers, the number of engineers employed is about the same as it would be if there were no machines used.

16,947. (*Mr. Hughes.*) Have wages risen much during your 12 years' experience on the Thames?—No; 24 or 25 years ago I had 6*s.* a day myself, as a working engineer, at Millwall, and that is about what we pay to-day.

16,948. (*Sir D. Gooch.*) Were you paid the average in those days?—Yes, I was paid the average of a good engineer, a leading man.

16,949. That would be more than 6*s.* a day now would it not?—Not much, about 38*s.* or 39*s.* a week now.

16,950. (*Mr. Hughes.*) At any rate, as far as your experience goes, there has not been a rise of 30 per cent. in wages?—Not in the section of the business that I can bring my own personal experience to test. Just now we have reduced the wages in our shipbuilding establishment 10 per cent., they are less now than they were in 1865.

16,951. (*Mr. Roebuck.*) Has that reduction been made without any opposition on the part of the trades unions?—I think so.

16,952. They in fact have learned by experience, have become wise, and have yielded to the necessities of the times?—I presume so, I have not made inquiries but my natural inference would be that.

16,953. Are you at all engaged in shipbuilding?—Yes; I have had 850 men, and at this moment have nearly 200 men employed in it.

16,954. What class of ships do you chiefly build; are they first class?—I build ships of all classes. I build armour clads for Her Majesty's navy and for foreign governments. In fact, I may state that my trade is the best sort.

16,955. We were told that London can produce the higher class of ships as cheaply as any place, but that the inferior class of ships can be produced more cheaply in other places. Do you agree in that statement?—Well, I am not inclined to concur with that exactly. We certainly can produce a higher class of

Mr. J. Dudgeon.

19 May 1868.

workmanship here in the Thames than they can in the Clyde. I am afraid if I were to say so in the presence of Clyde shipbuilders they would say that it was not so, but we can produce a higher work in the Thames at a rate nearly synonymous with the rate it is produced at in the north.

16,956. (*Mr. Harrison.*) And you consider it better?—Yes.

16,957. (*Mr. Hughes.*) Is that excellence recognised in the Tyne in the charge for insurance and freight as regards London-made vessels against vessels made in other places?—I am not aware that it is. It is a standing grievance with us that it is not so.

16,958. (*Mr. Roebuck.*) A 1 at Lloyd's can be obtained by a Clyde-built ship as well as a London-built ship?—Yes, and obtained easier; that is because the London shipbuilder stands immediately under the eyes of a whole body of inspectors, whereas the Clyde shipbuilder has only one man to deal with.

16,959. (*Sir D. Gooch.*) Are you building some gunboats now for the Government?—I have received notice of a contract to build one of these Bombay monitors.

16,960. (*Mr. Hughes.*) You are employing now on your two establishments only about a quarter of the men you were employing two years ago?—Yes.

16,961. Do you attribute that decrease of the trade chiefly to the unsound trading that has been going on in the financial world?—I attribute the principal part of it not only to the unsound state of the financial world but to the unsound state of the operations which induced us all to overwork ourselves in 1865, which induced all parties to do more than they were able to do. And if the true reasons are stated they may be found exactly in the way that militates against the trades unions, because that unwholesome period induced many people to take contracts to build who really were not able to perform them; and the necessity of performing them caused them to give way to numerous demands that were made for raising the rate of labour to the height it got up to then above its natural value without having the ultimate penalty to pay of not making any profit; that is say, that the workmen took away a large section of the money that the creditors (in fact there are only a few of us left in the Thames now) were entitled to; the workmen positively ran away with the whole affair at the expense not of the employers alone but of the employers' unfortunate creditors.

16,962. (*Sir D. Gooch.*) Do not you think that the workmen themselves have eaten up their capital, as well as that of the masters?—They have been eating it up since. If they had not over eaten then they might not have been so badly off now.

16,963. (*Mr. Harrison.*) But the workmen had no means of knowing that this speculative trade was an unsound one? They did not know that these contracts could not be met, did they?—But unfortunately you see that they gave these bodies who regulate their action the power of putting undue pressure upon the employer, and the employer at that period had to submit. He could not even do what I did, namely temporise; but he had unqualifiedly to take their terms.

16,964. In answer to Mr. Roebuck's question, you said that you thought the stagnation of trade in the Thames had been caused, to a great extent, by an unsound state of trade, and partly by the high demands of the men. Does not your last answer show that the high demands of the men, and their success in raising wages, were themselves due very much to this speculative and unsound trade?—Yes; but then you will observe that the workman happens to be the body of the affair, and the owner of the machine that has to be made, and the employer who makes the machine for the owner of the machine, only represents the head. The body of men, when overpaid, ran away with the whole affair. There was nothing for themselves nor the head afterwards.

16,965. (*Mr. Roebuck.*) I presume that you mean that great power in the hands of ignorant people would, and does, work great mischief?—Yes.

16,966. And is not that the real moral of the whole story?—It is the real moral of the whole story, and until the great amount of power that our workmen represent is put under proper control, there will be no end to the injuries that society will suffer—not only the injuries which the employer of labour like myself will suffer, but those which society will suffer.

16,967. Now you have broached a large question, and I want to know if I can learn anything from you. What do you mean by "proper control"?—Like all men whose interest is heavily concerned in the matter, I believe that there is only one step by means of which proper control can be attained. That step is simply this, simply to make strikes illegal, and then I believe that the man who employs the employed will find little difficulty in managing the men.

16,968. I want to understand that difficulty, because now you touch me very nearly. What do you mean by making strikes illegal? What offence would you call it?—I should call it an offence in this way: Suppose I employed 100 carpenters, I should make it an offence for these men, without warning, or without notice, to go out of my yard, and not only leave my employment, but leave the employment of society that has given me the machine to produce, making me stand still until it suits the pleasure of an irresponsible set of people to say, "You shall do that, or you shall not do that."

16,969. Supposing that you had made a contract with 100 men until the 30th of June, for example, and that when the 30th of June came then they all went out, would you make that an offence?—Certainly not.

16,970. Then I understand that you would make it an offence if they went out before the 30th of June?—Yes.

16,971. Is not that an offence now?—I do not know that it is. Our present practice has been that the men put on their coats and walk off.

16,972. Have they any contract with you to work with you?—They have only a weekly contract.

16,973. At the end of the week they may turn out?—But they do not do it in that way, and it does not suit the employers, and cannot suit them to be continually running into a police court for everything that happens, and so we submit.

16,974. Then if it would not suit you to run into the police court, what would you have us do?—I would have this done, that in case of any body of men leaving their employ by concert, without having a specific grievance, each man should be indictable for an offence.

16,975. Not quite taking your own words, is not that the present law?—I am not aware of what the present law is.

16,976. There is an eminent lawyer near you, and another still more eminent at the head of the table, and I think that you would be told by them that that is the present law?—Then all I can say is that we are all living in gross violation of the present law.

16,977. (*Mr. Hughes.*) Would you make it a penal offence for the master to reduce wages?—I certainly would not make it a penal offence for the master to reduce wages, but I would make it an offence for the master to say systematically on one morning, "Every "one of you must work at my rate of wages under "the penalty of your being immediately turned out," the same as I would make it a penalty for the men to do the same thing conversely.

16,978. (*Sir D. Gooch.*) How do you settle the matter?—Make it illegal for either to do it.

16,979. (*Mr. Roebuck.*) Would you make it an offence for the master to say to his men, "I intend "from next Monday to make my wages so and so to every man in my employment"?—If he coupled it with a threat, "If you do not do so I will shut my place up."

16,980. Would you make that an offence?—Yes, I would.

16,981. That a man should not have the power of saying, "I will not employ my capital in trade." Would you make that an offence?—Certainly, if I asked my men not to do the same to me I should certainly feel that if I did the thing I ought to be held guilty unless I could not find the wages to pay them, which is another matter. But it is quite clear to me that if we do not manage to do away with the power of the men walking out of our establishments without giving us notice, and if we do not put it in such a position that they are not entitled to interfere with the men who will take their place, we shall stand precisely after this as we were before.

16,982. Supposing that Tom, Dick, and Harry, being dissatisfied with their wages, amongst one another talk, and one says, "Now, I do not think that "we get enough." "No, I do not," says another; "I tell you what I shall do; next Saturday when I "get my wage I shall go." "So will I," and "So "will I," say the others. Would you make that an offence?—Clearly not; but it could be made an offence if these men, instead of going somewhere else, planted themselves round my establishment and prevented other people from coming to it.

16,983. That is a totally different offence; that is picketing. But I cannot get at your rule which would make it an offence for any body of men who determine to go away, or for any master who determines, according to his contract (always taking that into consideration), that he will put a stop to his transactions?—I do not see at the moment that if you make the men leaving employment in a body illegal, you can get out of the opposite part of the matter, that sending the men away in a body would be illegal also.

16,984. You can send the men away in a body now, cannot you?—I presume that in precisely the same way as I have not known the law about the men going away I have not known it among the masters. But it never can be the interest of the man who stands between the employer and the originally employed to bring about such a state of things. It is a matter that does not enter into my reason.

16,985. (*Mr. Harrison.*) It would come to this surely, that wages could never be reduced or raised, except by the mutual consent of both sides?—It comes to this, that in my particular business the wages have not been raised to any extent for 20 years, and that so long as the natural position of trade between the man who orders the work originally, and the man who makes it, ultimately exists, it is not for the interest of the employer to lower the wages, but it is for his interest rather to increase them. And to prove that we have done our duty in that respect, and that we have not altered, is shown by the fact that our men have been so well done by throughout the 25 years that I have been connected with the business in London, that positively our rate of wages is nearly the same as it was 25 years ago.

16,986. (*Mr. Booth.*) When you have finished the vessel you are now engaged on, supposing you find that with the present rate of wages you cannot make it pay to build another, would you not feel at liberty to say to your men, "Unless you will work at a lower rate of wages I must close my shop"?—Certainly, that is a different thing altogether. After the conclusion of a particular piece of business I would certainly be entitled to do so, if I found that the rate of wages I was giving was going to eat up all the profit of building the vessel. If I found that at the rate that the men were being paid there could be no result from the transaction, I certainly would have in all ordinary law the right of saying, "I will not give you any more wages, I will give you the wages that I can live by." But if the men on the other hand, having agreed with me at the period that I began this work, during the period that that work is doing, in a body throw the whole thing down, knowing perfectly well that I am bound to finish that work because by means of my being bound to do so they can get terms that they would not get from me if we were upon the fair and level platform of commencing an altogether new ship to build, the matter becomes a different thing altogether.

16,987. Assuming that there is no contract between the employer and the workmen, I suppose you would say that the employer is the person who only can judge what wages he can afford to pay?—Yes.

16,988. Taking the workmen with their present means of information, is it possible for them to be able to judge what rate of wages the employer can afford to pay?—Not knowing the rate at which the employer takes the labour at for his customer, it would be unfair to them to say that they can know; but the rate of wages at the time that the employer engages to do a certain piece of work ought to be the rate at which that work should be finished.

16,989. But the employer must always be left to judge whether he can afford to pay a given rate of wages?—Certainly; but if the employer takes a piece of labour to do at a period when he knows that he is paying a given amount of wages, then he does it with his eyes open, and if he suffers from that he may be said to suffer fairly; but if in the middle of his performing a certain piece of work his men without giving him notice to cease working for him, the construction of that piece of work being fixed to a period of time, then the men in that case are conspiring to make him pay more wages than he would otherwise do unless some undue strain of compulsion were thrown upon him.

16,990. (*Mr. Harrison.*) Do you mean that it should be made penal for men to strike at times inconvenient to the employer?—It should be made penal for men to strike at any time, taking the ordinary sense of the word strike. That ordinary sense does not convey the meaning that the men are in such a position that when they come to receive their week's wages they are not at liberty to say, "Sir, we will leave you next Saturday;" and we employers would be perfectly satisfied if the legality were confined to that and were not carried beyond that.

16,991. You in fact recommended the re-imposition of the Combination Laws?—I do not know what the Combination Law was.

16,992. (*Mr. Hughes.*) You would be perfectly content if the law were (supposing it not to be so already) that men should have power to leave at the end of whatever term the contract for labour was for, say at the end of a week, or at the end of the month, as it might be?—Yes.

16,993. But you think that it would be just and fair that they should not be allowed to insist on any increase of wages in the meantime?—Certainly not.

(*Mr. Allen.*) Before Mr. Dudgeon leaves the chair I should like to mention one thing with regard to the rate of wages that he has spoken of. I can bear testimony to the fact that the rate of wages now paid to the engineers is just about the same as it was 25 or 30 years ago, and I believe that if I refer to Sir Daniel Gooch he will corroborate me by saying that at his works at Swindon the rate is perhaps a little less than it was; but in regard to Mr. Dudgeon's statement with respect to the annoyance to the masters in the way of a rise of wages, Mr. Dudgeon must know exceedingly well that the rise of wages that took place at the time he refers to took place not on the asking of the men but on the voluntary offering of the employers. All the leading employers met at Maudslay's establishment. I am not sure whether Mr. Dudgeon was there, but all the principal employers were, and they agreed to an advance of wages. And I think that Mr. Dudgeon will say that he has men up to as far as 40*s.* a week, showing that there is not a fixed rate of wages as far as the engineering trade is concerned; and I can also, with Mr. Dudgeon, bear testimony with reference to the society into which he went from the horse-shoeing business. Being a Glasgow man, I know the society exceedingly well. It was a society got up by what we

Mr. John Dudgeon.
19 May 1868.

call the whitesmiths in the country, and it was got up in opposition to the engineers, because they believed that they had a right to work at that trade; that is the way Mr. Dudgeon got into the engineering trade.

(*Witness.*) I may say that I was one of the employers present at that meeting to which Mr. Allen has referred, and I believe that I was the only one who objected to the rise of 5 per cent.

The witness withdrew.

Adjourned to Tuesday next at 11 o'clock.

1, Park Prospect, Westminster, Tuesday, 26th May 1868.

PRESENT:

The Right Honourable Sir William Erle.	John Arthur Roebuck, Esq., Q.C., M.P.
The Right Honourable the Earl of Lichfield.	Thomas Hughes, Esq., M.P.
Lord Elcho, M.P.	Frederic Harrison, Esq.
James Booth, Esq., C.B.	William Mathews, Esq.

The Right Honourable SIR WILLIAM ERLE in the Chair.

Mr. F. J. Divers.
26 May 1868.

Mr. Frederick John Divers examined.

16,994. (*Chairman.*) Are you secretary to the Thames Ship Building Company?—I am.

16,995. When was that company established?—It has been established a little over 11 years.

16,996. Where do they carry on business?—At Orchard Yard, Blackwall.

16,997. Is it engaged chiefly in iron shipbuilding or wooden shipbuilding or both?—Iron shipbuilding.

16,998. Is it a large concern; about how many men had you on daily pay when you were on full work?—In full work we employ between 5,000 and 6,000 men.

16,999. At about what period in the 11 years would be your fullest work, or did it go on for several years at about the same rate?—We were full of work I should think for some four or five years. The last two years things have been very slack, but prior to that date business was much upon an average.

17,000. During your time, have the trades unions interfered at all either for good or evil in the carrying on of the works?—They have militated against us.

17,001. The action of the trades unions, according to your point of view, has been adverse to the interests that you wish to promote?—Precisely.

17,002. In what way has it been adverse; in raising wages?—Yes, and interfering with the men accepting work.

17,003. In your belief has the action of the trades unions had the result of raising the wages of the men permanently?—Yes.

17,004. Permanently, that is during the five or six or seven years that you were in prosperity?—Yes.

17,005. Was the action of the trades unions then continuously towards a rise without a break in the way of a reduction?—Yes.

17,006. And did that rise pervade the wages of all classes of artizans engaged in making iron ships?—Yes.

17,007. What is the most important class of artizans; do you call them shipwrights or boiler makers?—We treat the shipwright as being the leading man.

17,008. Is the shipwright the person that rivets the plates in an iron ship?—No, that is done in some works by shipwrights, but not in our works; we have boiler makers specially for that, but the shipwrights in fact lay the blocks and commence the foundations of the ship.

17,009. You consider that there is more skill required, perhaps, for a shipwright to do his work than there is for other departments?—Yes, and theirs has always been regarded as being the leading branch of the business.

17,010. Do the wages of the other artizans bear a proportion to the shipwrights' wages, so that if when you began the shipwrights' wages were at a certain sum and rose up, the wages of the other artizans would bear a proportion to the lower rate, and rise in proportion to the rising rate?—Yes, mainly.

17,011. Will you tell us about what were the daily wages of a shipwright when you began, and what was the rate that they attained to when they were at the highest?—The shipwrights' wages have varied from 6*s.* 6*d.* to 8*s.*

17,012. You began 10 years ago at 6*s.* 6*d.*, and at the highest time it was about 8*s.*?—Yes.

17,013. Have you at all in your head (do not trouble to calculate it if you have not), taking as a datum that a ship would have cost 5,000*l.* at the beginning, when wages were at 6*s.* 6*d.*, what that 5,000*l.* ship would have cost you in outlay at the time when the wages were 8*s.*; or can you give us the difference per ton?—We reckon, and our experience shows us, that the labour bears a proportion of rather more than half of the cost of the ship; that is including the whole of the material and outfit.

17,014. The labour being half the cost of the ship, you began with labour at the rate of 6*s.* 6*d.* and it came up to 8*s.*?—Yes.

17,015. Is that rise, in your opinion, mainly attributable to the action of the trades unions, or would a part of it have occurred if no trades unions had come to the Thames?—It is mainly owing to the trades unions, because we have had cases in which we have offered the men lower rates of wages, and trades unions have interfered.

17,016. Do you believe that the men were willing to accept the lower rate of wages, but that the trades unions forbade them, saying in effect, "If you belong "to the union you must not work under a given rate "rate of wages"?—Just so, otherwise they would be turned out of the union.

17,017. And so forfeit all the provisions for old age and sickness and the like?—Yes, I can mention here one instance showing the action of the trades unions.

17,018. Before we part from this question let me ask you this: Was there any rise in the saleable value of the ship that you produced, which accompanied this rise of wages, because you are obliged, are you not, unless you sell at a loss, to demand a price that covers your outlay?—Yes, but the prices are adverse to the employer of labour, as regards the prices obtained for their ships.

17,019. During this time that the wages of shipwrights were rising, the saleable value of the ships produced was rather falling than rising?—Yes.

17,020. Nevertheless the rate of wages continuously progressed upward as far as your experience goes?—Yes.

17,021. You were going to favour us with an example, I think?—Early in 1866 there was a demand on behalf of the pattern makers for an increase of wages

of 3*s.* a week. We resisted it, and the men struck. We put some of our joiners in to do the work so as to prevent work stopping entirely. These men worked just for a few days, and then they came and said that they were afraid of working any more; that they were threatened; that they expected to get their heads broken; and they would sooner throw up their work altogether, than go on like that. Then we sent to Scotland and brought down pattern makers from the North. We paid their expenses and they came and agreed to go to work. Then they had some consultations, and they came the next morning and said that some of the old hands had seen them, that is to say members of the unions, and they were almost afraid. However, some of them agreed to come; they merely brought their tools down, however, and then away they went. We were obliged to consent to the increase of wages then.

17,022. Were there a set of actions antecedent to the pattern makers coming in, and that would follow after them, so that if the pattern makers stopped, the whole series would be stopped?—The stoppage of the pattern-makers would occasion the stoppage of the foundry, you would get no castings.

17,023. The pattern maker is the first in the sequence, and all the rest would follow, so that if he stopped no one would go on?—Just so.

17,024. (*Mr. Roebuck.*) What evidence have you that it was done by threats and not by persuasion? Might it not have been that those men brought from the North had talked to the men, and that the men had said to them, "If you turn out you will certainly get "higher wages," and that they did not threaten to break their heads? Have you any evidence to show that it was threats, and not that sort of persuasion?—We had it from the joiners that we placed in the place of the pattern makers.

17,025. The joiners said that they had been threatened?—Yes, the joiners said that they had been threatened, that they wished to go back again to their joiners' work, or give up work altogether.

17,026. That was all the evidence you had, that the joiners said that they had been threatened?—Yes, that was all the evidence.

17,027. (*Chairman.*) Did the joiners give you particulars of the threats, or was it only a general description, such as "We are informed that we shall suffer personal violence"?—They put it in this way, "We cannot go on; we are very sorry; we should "like to oblige the company, but if we do we shall "get our heads broken, and therefore let us go back "into the joiners' shop, and if you refuse to do that, "we must give up the berth altogether."

17,028. And the result was that you yielded to this demand of the pattern-makers?—Yes.

17,029. (*Mr. Roebuck.*) Before you leave that point I want to know whether you had ever consulted with your lawyer; for example, to learn whether you could have proceeded against the men who had threatened the others?—No.

17,030. Why did you not do that, because it was clearly a breach of the law? Were you afraid to apply to the law?—You see that there was no special man brought to us. They do not seize a man and say, "This man has threatened to break my head," but the men come to you and say, "We will not work."

17,031. That only brings us to what I fancied, namely, that you had very little evidence for your conclusion. Men said that they had been threatened to have their heads broken. Did you ask them who threatened them?—No, they put it in a general sense.

17,032. You did not ask them to particularize?—No.

17,033. You did not take that step to defend yourselves?—No, we knew that the men positively refused to work as pattern makers, and would even give up their berths as joiners at 6*s.* a-day rather than go on with that state of things.

17,034. Did you know that that threatening was an illegal act, and that under the present law you could punish a person against whom it was proved?—We had no doubt of that.

17,035. And yet you did not take any steps to bring the law into action?—No.

17,036. Then why did not you; had you any fear of any sort?—We had this fear only that those men would not work, and then we sent off to the North.

17,037. But when the thing happened again to the northern men, and you were in the difficulty of having either to accede to their demands or to take the steps I point out, why did not you apply to the law?—We did not imagine that the law could assist us out of the difficulty, because the joiners positively refused to work, and even if we had gone to law and picked out any man, those joiners would not have worked for us.

17,038. Supposing that you had punished the men for threatening, do you not think that it would have had some effect in preventing further threatening?—It might have done so.

17,039. (*Chairman.*) I understand you that you had one thing to do, namely to keep your works going?—Yes.

17,040. Another thing was to provide against your works being invaded by violence, which you might do at a leisure time perhaps. As the secretary, you thought your business was to keep your works going?—Yes, it was that.

17,041. What would be the expense of having your yard ready for workmen, and one set of workmen stopping the labour of all the men in the yard; what would be the loss per day? A railway company, for instance, can tell you what the train would cost them to run if they did not get a single passenger. You have a good deal of outlay, probably, to set your yard ready for the workmen to go to work?—Yes, and where it would fall upon us would be with regard to the contracts in hand; you are under penalties for these.

17,042. Working against time, you mean?—Yes.

17,043. (*Mr. Roebuck.*) But in those contracts, did you ever put a clause that you should not pay the fine if there was a stoppage in consequence of a strike of the workmen?—That is in some contracts, not all.

17,044. Have you ever had it in your contracts?—We have had it in some.

17,045. Has it worked beneficially at all?—Our strikes have been of such short duration that there has hardly been the opportunity.

17,046. (*Chairman.*) How many times have you had strikes such as these? I do not want the particulars, but have you had as many as eight or 10 in the course of the year when you were in full action?—No; we have had commotion among the men. I was mentioning something which took place in the year 1866. Not long after that we had a demand from nearly every branch of the trade for a rise of nearly 10 per cent. in the rate of wages.

17,047. In the year 1866 had the price of ships risen?—It was rather falling, and matters were getting slacker on the Thames.

17,048. Do you know whether the demand for ships had proportionately slackened upon the Tyne and the Clyde, that is to say at Newcastle and Glasgow, as compared with the Thames?—About that time I believe it had.

17,049. It was falling at the other ports also, you think?—Yes.

17,050. Did you ask the men upon what principle they grounded a demand of 10 per cent. increase of cost to the shipbuilder at a time when his ship was depreciated in value?—They put it on the high rate of house rent and clothes and provisions, and all those matters.

17,051. Was it grounded upon any more intelligible principle than that it would be agreeable to them to have a larger income?—No, only those grounds that I have mentioned.

17,052. "It is immaterial to us what the shipbuilder's income is, what we should like to have our-

Mr. F. J. Divers.

26 May 1868.

selves would be a larger income." Was that their tone?—Yes.

17,053. "You are losing 10 per cent. on your "ships, we should like you to lose 10 per cent. more "by increasing our wages." Did it come to that?—Yes.

17,054. (*Mr. Roebuck.*) Might not the argument have been this: "You make a profit. We are at "this present time pressed by the high prices of food "and house rent, out of that profit we want you to "pay higher wages; in fact we want you to divide "a portion of the profit with us"?—It was not put in that way, it was merely that with the high price of food, house rent, and so on, they should have a rise of 10 per cent.

17,055. Do not you think they might have felt that your profits might have allowed you to raise their wages, and that the unions employed their combination for the purpose of forcing you to give a larger share of your profit to the men than you otherwise would?—In point of fact there was more competition, prices of ships were falling, and work was getting slacker.

17,056. But that does not answer my question. Might they not have employed that reasoning to justify their conduct?—But those matters that I have mentioned would materially tend, I think, to show the trades unions that the masters were getting a less profit.

17,057. (*Chairman.*) But did the men say, "We "think that you are getting a larger profit, such a "profit as will enable you to pay us our 10 per cent., "we therefore must have it." Did they put it in that way?—No.

17,058. They did not propose this to you, "Put on "a higher price upon the ship and pay 10 per cent. "more"?—No.

17,059. (*Mr. Booth.*) Were any other of the cases of strikes, or threats of a strike, which you referred to, cases in which you were proposing to reduce wages; or were they all cases of a demand on the part of the men for a rise of wages?—We had one instance in which we proposed a reduction to the shipwrights, and the other trades proportionately. This was some little time after the demand of 10 per cent. when matters got slack, and distress was occurring among the workpeople, and a few yards were closed. There was a contract which we had the opportunity of entering into, and which the directors were desirous of getting, so that employment should be given to the men about the place and to others, no doubt; and then they proposed to make a reduction, and to allow these men on contract, the shipwrights, to draw 6*s.* 6*d.* a day instead of 7*s.*, which they had been drawing. The men took time to consider it. The secretary of the shipwrights' union came down and saw our master shipwright, and (as I learnt from him) saw some of the men, and the men positively refused to accept the payment of 6*s.* 6*d.* a day under that contract.

17,060. (*Mr. Roebuck.*) And you did not take that contract therefore?—We did not take that contract therefore.

17,061. And therefore the men lost so much work?—Yes, I may mention that all this kept the contract open for some considerable time, and then it fell through altogether.

17,062. (*Mr. Booth.*) That did not amount to a strike, I think? My question was whether on any occasion they resisted a proposal of yours to reduce the wages by a strike?—No.

17,063. (*Chairman.*) In this case was a given price proposed for a ship of so many tons?—Yes.

17,064. Was it a private purchaser or the Government?—A French company.

17,065. They offered you so much per ton, and before you could build it at that price, it was essential to you to ascertain what the labour would cost, I suppose?—Positively.

17,066. (*Mr. Roebuck.*) Do you know whether the French company went elsewhere and got their ships built?—By reason of the delays that occurred the matter fell through altogether; but we know this that they had offers from French firms to do the work at a less price, but we offered them in pecuniary matters certain things that would have induced them to come to us. There would have been no profit, however, out of the job, even at the low rate of wages.

17,067. I want to know this, was the ship built either by one firm or the other?—No, the matter fell through.

17,068. So that you were not at all competed with in that matter; there was nobody that stood behind and said, "I will take the ship at a lower rate," and therefore compelled you to build at that low rate?—Yes, there was a French company that would have taken the ship at 900*l.* less than we named, but we could not go on with it, and then the whole matter fell through.

17,069. (*Mr. Harrison.*) There were several ships in this case were there not?—Yes, six ships.

17,070. Perhaps it will be more convenient if I put to you the statement which I believe was made publicly, and which was given to me about those ships, and then perhaps you will say whether that is correct or whether you wish to qualify it. It was stated that at the time of the Exhibition a French company desired to have built six ships of a peculiar class to carry goods from London to Paris, I believe?—Between New York and Paris.

17,071. The contract to build the ships was offered in various places in the trade, but the French company required such very low terms that they could not get it taken up, and one of the terms was that shares to a considerable amount in the French company should be taken as part payment. After consideration your company thought that the offer might be accepted, provided the ships could be built at some unprecedently low rate. The men in your employ were called in and asked if they would undertake this particular contract at a very low price, and to state that price. They then went out and consulted amongst themselves, and came back and did name what they have stated to be a price very much lower than the ordinary average rate, a price which they considered to be 15 per cent., I believe, below what is the usual price at which they build. That offer was not considered to be adequate, and they never heard anything more about it. It was refused, and there was an end of it; they were not asked to make any further offer, and they did not, and in point of fact, the bargain went off and the ships were never built, and it was altogether a doubtful case if the ships could have been built at any rate of profit whatever, at the price which the French company desired. That is the story as at the time it was stated to me, and I believe that Captain Ford and I had some correspondence on the subject, had we not?—Yes.

17,072. And that was the case as, I think, I stated it to you, and asked you if you would be good enough to explain it and say how far it was accurate? That being the statement that was made, how far is that correct, for of course I know nothing of it of my own knowledge?—With reference to taking the ship the directors never anticipated making any profit out of the transaction, and they found that they could only take the contract by getting a reduction in the wages. The men sent in a contract price which we considered too high, and they were asked to amend it, and also we said that we could only allow them to draw at the rate of 6*s.* 6*d.* a day instead of 7*s.*, and that they positively refused.

17,073. The sole question then as far as the union was concerned was the rate at which the men were to draw per day on account?—Precisely.

17,074. But the sum which they were to receive for their work on the whole was a fixed sum, a lump sum which was to be stated beforehand?—Yes.

17,075. (*Mr. Booth.*) They would not consent to draw less than 7*s.* a day?—They would not consent to draw less than 7*s.* a day.

17,076. And you proposed 6*s.* 6*d.*?—We proposed 6*s.* 6*d.* because, looking at the lump sum and knowing that was a very close contract, the directors felt this:

"If we allow these men to get the same rate of wages "and base this contract on 7*s.* a day, when three parts "of the work is finished and the contract is over-"drawn, there is nothing to fall back upon."

17,077. (*Mr. Harrison.*) That does not often happen, does it, that when a contract has been agreed upon for alump sum the men have not finished it by the time that the whole money is drawn?—It has happened that they have not finished the work and then they have overdrawn, because you could not leave your work three-fourths finished. If all the money was drawn you could not then, without considerable increase in the cost, and inconvenience and annoyance in every shape and way, bring in another body of men to finish the work.

17,078. But when the men contract to do a ship for a certain lump sum, if the ship is not finished at the time that that lump sum is drawn, you expect the men to finish it, do not you?—They would not finish it without pay.

17,079. Then the contract is not a *bonâ fide* contract for a lump sum?—It is to this extent that if they save anything on that lump sum they get the balance; but if they have overdrawn, the master is obliged to pay them, that is to say to allow them to draw until the work is finished.

17,080. It is only a contract against you, then, and not a contract in your favour?—It has that bearing.

17,081. (*Mr. Roebuck.*) That I take to be the result in fact. But legally, supposing that you could enforce it, you could compel the workmen to finish the ship according to their contract, could you not?—We do not have a stamped contract with the men the same as we have with the owners of the ships. The men say "We agree to do this work for so much money."

17,082. (*Mr. Harrison.*) What is the use of taking the contract in that form; do you find it work profitably?—We find that it works considerably better than day work.

17,083. But it very rarely happens that the work is not completed by the time the money is drawn, does it?—It has in several instances.

17,084. (*Mr. Roebuck.*) Why do you not make such contracts with the men as you could legally enforce—why not have a stamped contract?—We make a contract, say with some half dozen of the leading hands, and if we were to come upon them for the damage of non-completion of this contract, say three or four hundred pounds, the chances are that we should not get anything, and that we should lose our legal expenses besides.

17,085. (*Mr. Booth.*) Although it may be true that you would be able to enforce the contract and compel the men to complete the work, you would not think it prudent to trust to that and to allow them in the meantime to overdraw?—No.

17,086. (*Mr. Roebuck.*) But you do allow them?—Yes.

17,087. (*Mr. Booth.*) You would allow them to draw 6*s.* 6*d.*, but not 7*s.*?—Yes, in that particular case.

17,088. Your fear was that they would have overdrawn if they had drawn 7*s.*?—Yes.

17,089. You would not think it prudent to allow them to do that, trusting that you would be able to enforce the contract that they should do the work for a lump sum?—Certainly not.

17,090. (*Mr. Roebuck.*) But from what I understand you to say now, in certain cases where these contracts have been made the men have overdrawn before the work has been finished—that is to say, they have got all the money before the ship is completed, that has happened to you?—That has happened.

17,091. Though you do not think it prudent, yet you have done it?—We have been forced to it, but we have not been forced to take this contract paying the men 7*s.* a day, and trusting to being able to enforce the contract.

17,092. (*Mr. Harrison.*) How often would it happen in the course of the year that you would have to exceed the contract price, of course I mean where no alteration was made in the specification?—In several cases in the different branches of the trade.

17,093. (*Lord Elcho.*) Since you have been secretary in how many cases has it happened?—I should say in scores among the different trades.

17,094. (*Mr. Harrison.*) It seems like a premium to the men to do the work as leisurely as possible, because whatever is over they get, and whatever loss there is falls upon you?—When I say scores I speak of shipwrights, joiners, painters, and all those classes of workmen together.

17,095. (*Mr. Roebuck.*) Has competition driven you to that?—That has been the custom of the trade. With regard to our painters, sometimes we have found that the sum was so much overdrawn and we were forced to complete the work. Then at the completion of the work we discharged foremen, leading hands, and all the party and after that went outside, and contracted with people outside to come in and find labour and material.

17,096. (*Mr. Harrison.*) When the men have not received the whole of the money agreed upon at the time that the work is completed, do they receive the balance as a matter of course?—Yes.

17,097. (*Mr. Roebuck.*) In every case?—In every case.

17,098. So that the contract is enforced against you whatever happens?—Yes.

17,099. But it is not enforced against the men when they fail?—That is it.

17,100. (*Mr. Harrison.*) Amongst the shipwrights contracts have been taken in this way for the last 50 years, have they not?—As long as I can remember it has always been contract work.

17,101. (*Mr. Booth.*) At all events in the case under consideration you did not think that you could prudently afford to advance more than 6*s.* 6*d.* a day?—Certainly not.

17,102. And the men refused that?—And the men refused it.

17,103. (*Chairman.*) Were there other unions besides the shipwrights' union; was there a union for the shipwrights alone, or did they belong to a larger national union?—There are separate unions for the different trades; shipwrights, joiners, painters.

17,104. And almost every branch of the trade had a union of its own?—Yes.

17,105. Was it a branch union for that part of the kingdom, or was it a union for the neighbourhood of Blackwall?—I believe that it was a local union, but I do not know.

17,106. (*Mr. Roebuck.*) Now we have been told that there was a protection to the shipbuilder, because he could get the same thing done at a lower rate by the boiler maker than by the shipwright, so that if the shipwright refused he went to the boiler maker Have you that advantage?—No, because we merely employ the shipwrights on the woodwork, and employ the boiler makers for the plating work, riveting, and that like.

17,107. But we were told that if the shipwrights made an unconscionable demand, or what was thought so by the masters, he would have said, "Very well, I will go to the boiler makers"?—Not in this case, because you must have your shipwrights for laying your blocks and building the frames. The iron men cannot do the woodwork, but the shipwrights in many instances do the ironwork.

17,108. In this case of the six ships which have been mentioned were they to have been iron ships or wooden ships?—Iron ships.

17,109. Then in that instance the case comes in which I have stated, where the gentleman stated that he could go to the boiler makers?—The shipwright can do the ironman's work, but the ironman cannot do the shipwright's work.

17,110. How much in an iron ship is the cost of the woodwork; what proportion is there between the woodwork and the ironwork in that ship?—It depends upon the class of the ship, but of course the major part is of iron.

Mr. F. J. Divers.

26 May 1868.

17,111. I suppose so, otherwise you would not call it an iron ship; but I wanted to know if you could tell me the relation, for instance, in these very ships that you were building on that occasion, borne by the wooden work to the ironwork?—The shipwrights' labour varying with the class of ship would go from 18*s.* to 22*s.* or 23*s.* a ton.

17,112. (*Mr. Harrison.*) What was the lump sum for which the shipwrights tendered to do this work on that occasion?—I do not remember; but I may mention this that you cannot proceed until your shipwrights go to work.

17,113. (*Mr. Roebuck.*) There was another question that I wanted to put to you. You talked about these six ships going from New York to Paris. Do you mean that literally, that they were to go up the Seine?—Yes.

17,114. Then they must have been a peculiar class of ship?—They were light draught ships; the peculiarity was in the masting of the ships; there would be no difficulty in that.

17,115. (*Mr. Harrison.*) The shipwrights have drawn at either 6*s.* 6*d.* or 7*s.* a day for 40 years or so, have they not?—They have drawn at 7*s.* a day for some years.

17,116. But it has never been below 6*s.* 6*d.*?—No, not speaking in general terms.

17,117. Then the difference, I suppose, in the value of the work consists in this, that on certain work at certain times the men work harder for the 6*s.* 6*d.* or 7*s.* a day than they do at other times? I suppose that must be the way in which the difference is made?—No, I do not think so.

17,118. Do they always work the same?—We find no difference in the work whether the man is at 6*s.* 6*d.* a day, or 7*s.*, or 7*s.* 6*d.* a day, because you see we pay by the contract.

17,119. (*Earl of Lichfield.*) Do I rightly understand you to say that if the men had accepted that offer they would have insured to themselves wages at the rate of 6*s.* 6*d.* a day until the completion of the ships?—Certainly, if they had accepted our offer.

17,120. Are you aware that Mr. Wigram said the other day in giving evidence, that he did not think that there was an instance of work being *bonâ fide* offered to the men at a reduced price, or that there was any man who would come forward and say, "Here is a ship to build if you will take it for so much money"; and do you agree with that?—We made the offer of the contract to the men.

17,121. (*Mr. Harrison.*) But you did not accept the French contract; it was merely a part of a series of calculations, from which you were going to make an offer to the French company?—The contract was drawn up and ready for signature, but the directors saw that if they had to pay the old rates of wages to the men (they were quite content to have taken the contract without any profit) it would be absolute loss.

17,122. (*Lord Elcho.*) What was the date of that?—It was in 1866.

17,123. And in what month?—In November 1866 we were in negotiation, running into December probably.

17,124. (*Mr. Booth.*) I understand you to say that the contract would have been taken by you if the men had consented to take the 6*s.* 6*d.* a day?—No doubt of it. I may mention also, with regard to the shipwork done by joiners, that, looking at the slackness of work and other matters, and being obliged to take work, as I say, on such low terms of late, we offered our joiners contract work, and to draw at the rate of 5*s.* 6*d.* a day, and they declined it; they would only draw at the rate of 6*s.* a-day.

17,125. (*Lord Elcho.*) What is the total sum that would have been spent on that French contract?—I think, speaking in round numbers, 90,000*l.* or 100,000*l.*

17,126. And the half of that would have gone in wages?—Yes.

17,127. So that, by refusing that 6*s.* 6*d.* instead of the 7*s.* which they wanted, the men lost 50,000*l.*?—Yes.

17,128. (*Mr. Harrison.*) Were the joiners consulted in this case; the shipwrights were the only people consulted, were they not?—Yes, they were the only people consulted.

17,129. It would not have employed the labour of many shipwrights?—No, but they are the starting people; we could not start without them.

17,130. (*Lord Elcho.*) And they were thrown out of work?—The contract fell through and our work gradually slackened, and of course we discharged men.

17,131. How many men of all kinds, labourers, shipwrights, iron workers, and so on, would have been affected by that contract?—A thousand men, I should think. I may say with regard to our joiners that we offered them the other day work that would run into some 3,000*l.* perhaps, or more than that, and they refused to draw under 6*s.* a day for contract work.

17,132. (*Mr. Mathews.*) For how long would that French contract have employed 1,000 men?—Certainly for six months, that would be an average; of course, we should not want 1,000 men to start the ships with.

17,133. (*Mr. Harrison.*) But taking the shipwrights' wages in London, on what occasions have their wages been raised, I mean in the average, in London, taking what is called the minimum which the union recognizes, for instance; when has that been raised?—I believe that the minimum acknowledged by the union is 7*s.* a day.

17,134. When was it below that or when was it raised to 7*s.*?—It has stood at 7*s.* for some years past; it is below now. I do not know whether it is so with the union men, because our shipwrights now are not union men. They say that they have been struck out of the union because they have consented to work for us at 6*s.* 6*d.* a day.

17,135. How long has it stood at 7*s.* a day for the union men?—Some years.

17,136. How many years has it stood at that, for 10 years?—I should think about seven years.

17,137. What was it before that; they drew 6*s.* 6*d.* a day before that, did they not?—It might be more than seven years that they have drawn 7*s.* a day.

17,138. Before the change was made, supposing that it was 10 years instead of seven years ago, they drew 6*s.* 6*d.* a day, was not that so?—Perhaps I may go back to 12 or 13 years ago, before the establishment of this company.

17,139. They have drawn 7*s.* a day for 10 or 12 years, then we may take it?—Yes, that has been the standard.

17,140. Before that it was 6*s.* 6*d.* a day?—Yes, and before that it was all sorts of prices, 10*s.* or 15*s.* a day, they used to draw sometimes.

17,141. When was it ever below 6*s.* 6*d.* a day?—It was about 6*s.* 6*d.* a day before the Russian war.

17,142. When had the regular price ever been below 6*s.* 6*d.*?—I do not think that it had been much below 6*s.* 6*d.* for the regular price.

17,143. What is it now?—Now our men draw 6*s.* 6*d.* a day, but they are not union men.

17,144. And the union men receive 7*s.* It comes to this, does it not, that for the whole of this generation the wages of shipwrights in the Thames have been within 6*d.* a day of the highest price that they have been within the last two or three years, and that since the last two or three years they have been rather falling to the lowest limit that they were at within the generation?—They have been falling, but not the wages of those men in connexion with the unions.

17,145. But the union men are still only 6*d.* a day out of 7*s.* above that at which their wages have stood for a generation. We must conclude therefore, must we not, that the wages of shipwrights in the port of London have scarcely at all been raised during the whole of this generation for the last 30 or 40 years?—

I say that in the time of the Russian war shipwrights were getting 10*s.*, 12*s.*, and 15*s.* a day.

17,146. You would confirm the statements that Mr. Wigram made to us the other day, that since 1815 there has been no permanent rise in the wages of shipwrights with the exception of this sixpence of which you have been speaking?—Yes, I mentioned the Russian war. Of course wages went up that time to a fabulous price, which had the effect of entailing a heavy loss on all contractors.

17,147. Then you do not agree with those who say that the constant demands of the shipwrights have driven wages up to such a point that the shipbuilding trade of the port of London has been destroyed?—No, but we say this, that when a slack time has come on the men will not meet you.

17,148. (*Chairman.*) Still I understand that, as far as your knowledge goes, the same slackness of demand prevails on the Clyde the Tyne, and the Thames at the same time?—It did, but it does not now. I believe that they are busy on the Clyde and the Tyne now, and of course we are very slack indeed on the Thames.

17,149. The Thames has not revived; the Clyde and Tyne have revived?—Yes.

17,150. (*Mr. Mathews.*) Is it owing to the cheaper rate at which they can build ships on the Clyde and Tyne compared with the rate at which they can build them on the Thames that they are more busy than you are?—I believe so. We hear of ships being taken there at a lower cost.

17,151. Does that arise solely from the less rate of wages paid in the North, or does it arise from other causes—getting their iron cheaper, for instance?—I think that the wages is the main feature of it.

17,152. They get their iron cheaper than you do in the Thames, I suppose?—They do perhaps in some cases, but not to any material extent; labour is the leading feature.

17,153. Do you lay down any rule as to the tensile strength of the iron that you use at your works for instance?—In almost every Government contract there is a clause stipulating what it must be.

17,154. What does it stipulate?—22 tons with the grain, and 18 or 19 across the grain.

17,155. Is there any such rule in Glasgow or Newcastle?—In the case of ships built for the Government I should say there is.

17,156. What is the difference between plates built without any stipulation as to tensile strength and those built in accordance with the Government stipulation of 22 tons to the square inch?—I should think that the plate is worth 2*l.* a ton more.

17,157. Should you be able to get plates of the requisite Government strength at 2*l.* a ton more than those which will only bear 18 tons to the square inch?—Yes, I think so.

17,158. Then the difference in the cost of material between the ships on the Clyde and Tyne would be about 2*l.* a ton as compared with the Thames?—I am speaking of the difference between Government ships, with iron having to bear the tensile strain, and the merchant ships.

17,159. Do you make many ships in the Thames without any stipulation as to the tensile strength?—Yes.

17,160. So that without any stipulation as to the strength of the plates you could build them on the Thames as cheap as on the Clyde and Tyne, could you?—Well, I think that the wages are the main feature.

17,161. (*Lord Elcho.*) Where do you get your iron from?—We make the bulk of it.

17,162. Where do you get it in the rough?—We buy old scrap iron.

17,163. (*Mr. Matthews.*) Do you think that by buying old scrap iron you could make your plates of the requisite strength within 2*l.* a ton of the price of those on the Clyde or Tyne?—Yes.

17,164. (*Earl of Lichfield.*) What proportion do the shipwrights bear to the other men employed in your yard?—I cannot say exactly.

17,165. (*Mr. Harrison.*) Is it more than a tenth?—I should think that when we are busy they represent quite a tenth; more than that.

17,166. (*Lord Elcho.*) In those thousand men that you say would have been employed for that French contract, what proportion would be labourers and what proportion would come under the head of operatives or artisans; would they be all skilled artisans, shipwrights, and so on, or would there be a certain proportion of labourers in building the ship?—If you have 1,000 men you must have some proportion of labourers, because a skilled artisan wants a labourer to wait upon him.

17,167. What proportion do the ordinary labourers bear in, say, 1,000 men, to the rest; are half of them labourers?—No, I should think about 350.

17,168. There are rather more than a third?—Yes rather more than a third.

17,169. Then would these labourers have been willing to accept your terms?—Yes; you see that their rate of wages is low, 3*s.* 4*d.*, 3*s.* 6*d.*, 3*s.* 8*d.*, and you cannot ask the men to accept much reduction on that.

17,170. There was no objection on their part?—They would have worked of course; we should not have reduced them.

17,171. But by the refusal of the upper class of workmen the labourer himself was thrown out of work?—Yes.

17,172. (*Mr. Harrison.*) I should like to draw your attention to an answer which Mr. Wigram gave us at our last sitting to question No. 16,621. The question was, "You have perfect security in entering into a "contract with one man on behalf of a gang of men "in that way; you feel confident that he will carry "out the bargain as a rule, do not you?" Mr. Wigram answered, "With the men we know we do. "The great difficulty always is to define what work "is to be done. If more work has to be done than "was understood at the time of making the bargain, "why we generally have to pay for it." Do you differ from Mr. Wigram in that view?—To this extent; I say that we find that our contracts are overdrawn sometimes by the men.

17,173. You find that you cannot feel confident that the men will carry out the bargain always?—Not always.

17,174. You are not speaking of cases in which it was discovered that something else had to be done which was not taken into account in the specification?—No; because that is always made a matter of arrangement afterwards.

17,175. (*Lord Elcho.*) With reference to those labourers thrown out of work, in such a case a skilled artisan is more likely, is he not, to find employment elsewhere, and to have the means of going elsewhere than a labourer?—Decidedly.

17,176. So that in such cases the suffering and misfortune of a strike falls almost with greater severity on the labourer than on the skilled artizan?—I should say much greater, because the labourers' wages being so low they have scarcely any opportunity to make any provision for being out of work.

17,177. Have the labourers any union?—They have no union.

17,178. So that they come directly upon the poor rates?—Yes.

17,179. (*Mr. Mathews.*) Is there any migration of the shipbuilders proper between the Thames and the Clyde and the Tyne, either from the Thames to the Clyde and the Tyne, or from the Clyde and the Tyne to the Thames?—We have found in very busy times that we have had men come from the North, but I do not think it is so in general. I do not know whether the men leave the Thames to go to the North, but I know that it is only in very busy times that we have had them from the North.

17,180. You think that it is only in exceptional

Mr. F. J. Divers.

26 May 1868.

cases that they come from the North to London?—Yes, not in any body.

17,181. (*Chairman.*) Are the works slack at Blackwall, and are the habitations of the labourers vacant?—Yes, you see whole streets of small houses vacant.

17,182. Those men have migrated, then?—Yes.

17,183. You have got at Blackwall and about the Isle of Dogs whole streets of vacant houses of labourers who have gone away to seek work elsewhere?—Yes.

17,184. (*Earl of Lichfield.*) Do you pay the ordinary day labourer yourselves, or are they paid by the men who take the contract?—In some cases they are paid by us, and in other cases by the man who takes the contract.

17,185. Who fixes the rate of wages; do you fix the rate of wages of the ordinary day labourers in your yard?—They have a rate varrying from 3*s.* 4*d.* to 3*s.* 8*d.*, and when a man is taken on the foreman rates the man.

The witness withdrew.

Mr. R. Steele, jun.

Mr. Robert Steele, jun., examined.

17,186. (*Chairman.*) I believe that you are now a shipbuilder at Greenock?—Yes.

17,187. What trade were you bred to?—To the trade of a shipbuilder.

17,188. You are now an employer, but you were bred as a working artisan, were you not?—I learned the trade practically from the beginning.

17,189. How many years have you been an employer?—25 years.

17,190. Are your firm the proprietors of a shipbuilding yard?—Yes, my father and myself and my brother.

17,191. Is it an old-established firm?—Yes; my grandfather was a shipbuilder 100 years ago.

17,192. It has been a yard for shipbuilding more than 100 years?—Yes.

17,193. Do you build wood as well as iron ships?—Yes, wood as well as iron ships.

17,194. About how many men have you in the yard at the present time?—About 1,200 men.

17,195. Are they paid by the day?—They are paid by the week or by the day.

17,196. Have you had experience in trade disputes?—Yes.

17,197. By trade disputes, do you understand cases where unions have been acting on behalf of certain workmen?—It has generally been with the unions.

17,198. It has been with the different unions of the working men?—Yes.

17,199. Has the action of trades unions increased within the last years, or has it been pretty much the same during the quarter of a century that you speak of?—Yes, it has been pretty much the same.

17,200. You had, according to your memory, trades unions in full force in Greenock when you began to be a master in the yard?—Yes.

17,201. And their action has not increased of late years?—It is pretty much the same.

17,202. Were all the skilled artisans, as far as you know, in unions when you began?—No.

17,203. Could you mention any proportion?—The shipwrights were the only trade who were unionists when I began.

17,204. (*Mr. Roebuck.*) How do you reconcile that with the former answer in which you said that they are pretty much the same now as they were when you began?—I was speaking with reference to the shipwrights more particularly.

17,205. Then that answer does not apply to the other trades?—No.

17,206. (*Chairman.*) When did the building of iron ships as a considerable article of commerce begin?—About 25 years ago.

17,207. Then you have being building them as well as wooden ships pretty nearly all your time?—No, not all that time. We commenced in 1851.

17,208. Have you an artisan standing in the same relation to an iron ship that a shipwright does to a wooden ship, and if so what is his name; is he an an engineer, boiler maker, or what do you call him?—Boiler maker and riveter; we distinguish between the two, a boiler maker and a riveter.

17,209. They deal with plates and rivets as the shipwright deals with the wooden materials?—Yes.

17,210. In latter times have the boiler makers and riveters had unions?—In some of the yards they have. We have not been so much troubled with them as a general rule. Unionism has not extended throughout the Clyde, as a general rule, among the boiler makers.

17,211. Are those two classes of artisans, shipwrights and boiler makers, the two material classes that go to the construction, the one of a wooden ship and the other of an iron ship?—Yes.

17,212. There is a good deal of work done by joiners, painters, and so on, but that is comparatively small and immaterial?—Joiners and carpenters and painters form about half the wages of an iron ship.

17,213. (*Mr. Roebuck.*) With regard to the joiners and painters, is there not the same relation between them and the other artisans as regards a wooden ship as there is in the case of an iron ship, or is there any difference?—There is more painting in an iron ship than in a wooden ship.

17,214. But is there more joiners' work, for example, in a wooden ship than in an iron ship?—Yes, there is more joiners' work in a wooden ship.

17,215. (*Chairman.*) According to your experience, have the trades unions raised the wages of the men in the unions?—In some cases I think they have.

17,216. Have the wages been stationary, or progressive, or fluctuating?—They have been very fluctuating.

17,217. Could you say the maximum and minimum?—When I first went into business a guinea a week was the wage of a shipwright, and the wages have been as high as 36*s.* a week.

17,218. (*Mr. Mathews.*) How long is it since they were a guinea?—25 years.

17,219. (*Lord Elcho.*) For how many hours did they work at that rate?—Ten hours a day six days a week.

17,220. (*Mr. Hughes.*) That is only on the Clyde?—I am speaking of the Clyde.

17,221. (*Mr. Roebuck.*) You say ten hours. Have the hours varied?—Only two years ago, they were restricted then to 57 hours in the week.

17,222. Is that the case now?—Yes, that is the case now, ten hours five days a week, and seven hours on the Saturday.

17,223. With that restricted time they have got the same wage?—No, that has been deducted from their wages. They had a strike on that point two years ago; they wanted the same wage for the 57 hours, that is to say, they wanted no reduction for the three hours that they lost on Saturday. That was partly the origin of the strike and lock-out on the Clyde two years ago.

17,224. What was the result of that strike and lock-out?—After being out three months they came back and lost everything that they demanded with the exception of the three hours. The masters gave them the three hours, but deducted that from the men's wages.

17,225. (*Mr. Mathews.*) You paid less wages?—Less weekly wages, but the same rate per hour.

17,226. (*Chairman.*) Do you contract with your men by the day or by the hour?—By the day generally; the painters are the only class paid by the hour; others are by the day and some by the week.

17,227. And you deduct in proportion for the three hours from all?—Yes.

17,228. (*Mr. Roebuck.*) Have the men required that deduction of three hours in spite of your victory in the strike and lock-out; have they still determined to work three hours less in the week?—We have never

asked them ; 57 hours has been fixed on the Clyde as the week's work, and the question has never been mooted again.

17,229. (*Mr. Mathews.*) The men consented to forego the three hours' pay ?—Yes, and the masters the three hours' work.

17,230. And that remains so now ?—It remains the same now.

17,231. Are the men content to do without the three hours' pay ?—Only some classes. The labourers of course who were paid a low rate of wage it falls heavily upon, and they would willingly work those three hours.

17,232. It is a grievance to them ?—It is a great grievance to them and to many of the other classes.

17,233. But they are obliged to succumb to the will of the others ?—Yes.

17,234. (*Mr. Hughes.*) In fact, the will of the majority rules ?—It is a question how far the majority then would be the majority now. The question has never been raised.

17,235. Do you think that an oppressive thing ?—I think that it is an oppressive thing to the men whose wages are low.

17,236. Do you think that it is considered oppressive by the men themselves ?—I think that the men enjoy their Saturday afternoons, and most of them are quite willing to abandon the three hours' wage.

17,237. In the case of the masters' association on the Clyde, the will of the majority seems to rule very arbitrarily, does it not ?—Yes.

17,238. The majority of two-thirds seems to be absolute over the whole of the business ?—It is the only way of carrying on the association.

17,239. How long has that association been established ?—Two years.

17,240. (*Lord Elcho.*) I presume that in trades unions it is the will of a majority that rules ?—Of course, I am not sure whether it is not the will of a minority sometimes in a trade union ; the will of the managing committee, not the will of a majority.

17,241. (*Mr. Mathews.*) I suppose that the hours of labour are regulated by those upon whom the labour chiefly depends, namely, the higher class of artisans ?—Yes.

17,242. If they decide that they will not work more than 57 hours the inferior labourers are obliged to succumb to that arrangement ?—Of course.

17,243. (*Mr. Hughes.*) I see that these rules which are the rules of your association were amended at meetings in June and August 1866, so that, as the rules were amended then, I apprehend the association must have existed before ?—The association was got up very hurriedly, in consequence of demands from all classes of the workmen, probably about the month of March in that same year.

17,244. Are these rules registered—have they any legal effect ?—The secretary will be able to answer that question better than I can.

17,245. As far as you are concerned you agree with these rules ?—Generally.

17,246. And you think that it is for the benefit of the trade that they should be adhered to ?—Yes ; of course the association was got up at that time to counteract the action of the working classes.

17,247. (*Mr. Booth.*) It was a defensive association ?—A defensive association.

17,248. (*Mr. Mathews.*) It is never the custom to take any steps to register any rules of an association between employers of labour, is it ?—We have never had such an association before.

17,249. Have you known any other similar association where the rules have been registered ?—No.

17,250. (*Mr. Hughes.*) Has your association any legal existence beyond what this book of rules indicates ?—It is an arrangement among the masters. I have no doubt that it was legally got up.

17,251. You do not know how the rules are enforced against the members ?—We have never had occasion to bring them into operation against any member.

17,252. Have the members obeyed these rules so implicitly that no question has arisen which has involved legal proceedings ?—Certainly.

17,253. (*Chairman.*) Will you state in what way the action of trades unions has interfered with the carrying on of your business ?—The principal disadvantage that we have lain under has been their restricting the labour market of Greenock by obliging all men who come to work to enter the union.

17,254. (*Mr. Roebuck.*) What has been the effect of that ?—Restricting the amount of work done in the town, and putting the masters to very considerable loss and inconvenience.

17,255. (*Mr. Mathews.*) When you speak of their obliging the men who come to work to enter the union.—what steps do they take to compel them to enter the union ?—If the men did not join they would strike.

17,256. That is to say if men who were not in the union came to offer to work at your establishment they would not work with them ?—No.

17,257. And if you continued to employ the non-union men the union men would strike work ?—Yes.

17,258. In your experience has that been the general custom ?—Yes, the general custom.

17,259. It has been one of the modes by which they operate upon the men to compel them to enter the union, if they are not already in it ?—Yes.

17,260. (*Chairman.*) When they are in the union, does the action of the union interfere with your carrying on your business in any particular way ?—The effect of the union has been to restrict the number of men in the port, and when trade has been brisk we could not get men to finish the contracts that we had undertaken.

17,261. (*Mr. Roebuck*). Supposing that they have restricted the number, say to a thousand, and you brought in a hundred, what would they do ?—If the men did not enter the union they would strike.

17,262. And that is the only thing, as I understand you, that they would do. Supposing that they struck, and you brought in more men, what then ?—We did not find it advantageous to fight the question.

17,263. (*Mr. Mathews*). It was a question which you were beaten upon, you were beaten, in fact ?—We gave in.

17,264. From a knowledge of the serious inconveniences that would be entailed on you, you did not choose to risk a battle ?—Certainly not.

17,265. (*Mr. Booth*). You thought it better to submit than run the risk of the serious inconveniences ?—We have thought it better till the association of the masters was formed. Now one of the regulations of the trade is that the masters be at liberty to employ any number of men that they think proper.

17,266. (*Chairman*). They had that liberty before, but have they done that since the formation of the association ?—Yes.

17,267. Have you employed any non-union men and brought them into your yard against the will of the shipwrights in the union ?—The union agreed two years ago to give up that principle of prohibiting men from working unless they joined the union. They gave it up at the time of the lock-out.

17,268. (*Mr. Roebuck*).—It no longer exists then ?—They gave it up by compulsion.

17,269. It no longer exists ?—Nominally.

17,270. Does it exist in reality ?—We have a large number of non-union men working at Greenock.

17,271. Then you would not call it nominally, but really, would you not ?—They say that the union men are only biding their time.

17,272. (*Lord Elcho*). What proportion do the non-union men bear to the union men ?—More in Glasgow than in Greenock. Greenock always has been the stronghold of the union, and the Glasgow union has always been less severe and strict than the Greenock one.

17,273. Did that rule which you have just referred to exist at Glasgow ?—Yes, but not so strongly ; the unionists in Glasgow allowed men, when trade was brisk, to work there without any interference.

17,274. What at present do you suppose is the pro-

Mr. R. Steele, jun.

26 May 1868.

portion, since the strike in the Greenock yards, of non-union and union men?—I daresay there will be a tenth that are non-union men.

17,275. What proportion at Glasgow?—I could not say.

17,276. How long has your association existed?—Two years.

17,277. Did it exist in consequence of that strike?—No. It was formed in anticipation of it.

17,278. And do you think that without your union you could have succeeded in that strike?—Not at all.

17,279. How many members have you?—I think the engineers and shipbuilders are all associated. I do not know how many members there are.

17,280. If you do not know the number of employers who have joined that union, how many men do you suppose are affected by your association—that is to say, how many men are employed on the whole by the different masters who have joined your association?—A large number, because the engineers are associated with the shipbuilders.

17,281. Shall we say that 5,000 are affected by it?—I daresay that there may be 15,000.

17,282. What is the district?—Glasgow, Greenock, Port Glasgow, and all down both sides of the river, except Dumbarton.

17,283. Why not Dumbarton?—Mr. Denny would not join the association because some years previously an association had been attempted to be formed and it fell through, and he was left alone to fight the battle against the men.

17,284. Is Mr. Denny a large employer?—Yes, a large employer in Dumbarton.

17,285. I see that the sum paid either in money or by a promissory note by the members in your association is *pro rata* to the number of men and boys that they employ, and that the sum is 4*l.* for every man and boy that they so employ. Rule 15 says "To "form a common fund for both general and special "expenditure, each member of the association shall "be held to be a subscriber of 4*l.* for each person "stated to be employed by him in the return made "under rule 3." Then I turn to rule 3 and I find: "The number of men and boys employed by each "member, which shall be ascertained in the following "manner, shall form the basis of voting, of subscription, and of compensation. Each member or "company on joining the association, and thereafter "on every second Tuesday of January, shall make a "return to the secretary of the number of men and "boys employed at their works, taken on an average "of the preceding year ending 31st December." So that each member of your association pays 4*l.* for every man, or is liable to pay that according to the demands of the association; they can raise that amount and he can leave on giving six months' notice?—Yes.

17,286. What amount of capital do you suppose that subscription gives you?—I do not know that. I do not pay much attention to that. The secretary will be able to state that.

17,287. (*Chairman.*) Have you been called upon for any part of that levy of 4*l.*?—A very trifling part of it.

17,288. (*Mr. Roebuck.*) By rule 13 of your association rules you undertake to pay "the sum of 3*s.* "per week for every person who discontinues work in "case of a general strike." Now during that general strike or lock-out had you to pay that sum?—No, nothing was paid.

17,289. Why was that?—It never was called up; all the masters were on strike together. I think the object of that rule was that in the event of any master being obliged to strike his work for the objects of the association, he should be recompensed.

17,290. Does that 3*s.* then go to the master and not to the workmen?—To the master.

17,291. (*Mr. Mathews.*) So that if the master employs 500 men he is paid 500 times 3*s.*?—Yes.

17,292. (*Mr. Hughes.*) Your association does not object to any rules excluding certain persons from work on account of their belonging to a union or otherwise?—No.

17,293. Because your 18th rule (I suppose you act up to it) binds every member when he is applied to by a skilled workman to refer, either directly or through the secretary, to the former master of the applicant, and to require a clearance note. Is that carried out and enforced now?—Pretty generally, not altogether. There is a difficulty in getting all the masters to follow it up.

17,294. But as far as the association can they try to enforce that rule?—Yes.

17,295. And in the same way with apprentices, for I see that it applies to apprentices (to my astonishment) by rule 19, but I suppose that it is seldom enforced?—The reason of that was this, many masters do not engage their apprentices under any indenture, but merely by verbal engagements.

17,296. Your apprentices are simply younger men?—Under the Servant and Master Act, not under the Apprenticeship Act.

17,297. (*Mr. Roebuck.*) And generally speaking you say that this is not enforced because there are certain masters who do not act upon the rule. Do you mean by that that they are not loyal to the association?—I do not quite understand your question.

17,298. By the 18th rule a skilled workman, before he is engaged by a master, must bring a clearance note. You say that certain masters do not require that, though by the rule they ought to require it?—The rule, I think, specifies it in this way. When a man applies for work he is taken in, and the note is then sent to his previous employer. That is the way in which it is done; he does not bring it with him, but a note is sent to his previous employer who returns the answer, printed on this inquiry note.

17,299. At the end of the rule is this: "If it should appear that the workman is at the time under such engagement, employment shall be refused to such workman by the member to whom application is made"?—Yes.

17,300. So that if he had a quarrel with his former master, and left him under circumstances which you do not approve, by the rules of the association he ought not to be employed by a master who is a member of it?—I think that is so.

17,301. But you say that in many cases masters do not strictly follow this rule, and therefore they do employ persons contrary to the rules of the association?—They may in some cases.

17,302. That is to say, in other words, they are not loyal to their own engagement?—I fancy that it is not rigidly carried out.

17,303. (*Mr. Hughes.*) You are not yourself familiar with the detail of the working of the association. We had better address any question on that to the secretary?—Yes.

17,304. (*Mr. Mathews.*) You spoke of the men "biding their time"; what do you infer from that expression?—I think that when the unions see a brisk time when they will be able to enforce their claim they will take an opportunity of doing so.

17,305. So that under the depressed condition of the shipbuilding trade the union men are content to work with the non-union men?—They are content for the time.

17,306. But if the trade were to revive much you think the union men would fall back upon their original policy and refuse to work with men unless they joined the union?—Yes; I speak more of the shipwrights, who are the strictest union men.

17,307. Do you mean iron shipbuilders or wooden shipbuilders?—Wooden shipbuilders.

17,308. Is the character of the union the same with the iron shipbuilders as with the wooden shipbuilders?—In our yard we have no union among iron shipbuilders; the boiler makers with us have no union.

17,309. The shipwrights and ship carpenters and shipbuilders are all the same as applied to wooden vessels, I suppose?—In the Clyde we call them the

ship carpenters; they are what you call in England shipwrights; we call the masters shipbuilders.

17,310. As to these men who are now quiet with regard to the employment of non-union men, you think that when trade revives they will compel them to join the union?—I think when the time comes they will try to.

17,311. Do you think that they would take any physical means to compel them?—I think not.

17,312. (*Mr. Roebuck.*) They never have done so?—Only on one occasion.

17,313. (*Lord Elcho.*) Do you think that what prevents them is the knowledge of the existence of your association?—I have no doubt that it has a great effect.

17,314. Without your union you could not have overcome that strike two years ago?—Certainly not.

17,315. Without your union do you believe that you would have a different state of things from what now prevails?—Yes.

17,316. You might have the same state of things on the Clyde without your union as they have on the Thames, I suppose?—Yes.

17,317. (*Mr. Roebuck.*) Did you say that workmen could not be employed by a member of your association unless there was a discharge note from their former employer?—What I said was that those apprentices, the engaged workmen, cannot be employed by another master without bringing their discharge with them; but it is not the universal custom when a workman applies for employment to send to his employer to ask whether he is clear or not, but he does not take him with the knowledge that he is engaged.

17,318. (*Mr. Hughes.*) Then you do not understand, as a member of the association, that you are bound to apply in every case to see that the workman who offers to you has "clearance lines," as they are called, from his last employer?—It is the duty of the master to send this inquiry note to his last employer except in the case of apprentices, and they must carry their discharge along with them.

17,319. In the case of ordinary workmen?—Yes.

17,320. As I understand you it is the duty of the master in all cases to do that not only where the workman has been under agreement with a former master but in every case?—Yes, in every case.

17,321. (*Mr. Booth.*) You do not know any case in which a master has taken into his employment a workman whom he knew to have broken his agreement with his former master?—No.

17,322. It is only that they do not in all cases take the trouble to send the customary note?—Yes.

17,323. (*Chairman.*) If you have non-union men working in your yard with union men, do you pay different rates of wages to men of the same skill?—No, we make no difference, they are paid according to their skill, but shipwrights with us are all paid the same rate.

17,324. Have you paid non-union shipwrights who are below par the same wages as others?—Just the same rate as the union men.

17,325. What is the principle of that?—A very bad principle; we cannot help ourselves.

17,326. How could you pay a workman below par in point of skill the same wages as you would pay to a workman at par or above it if there was no combination?—That has always been the case with the ship carpenters; they are the only body who have always been paid the same wage.

17,327. You do not like to go against the custom?—We do not attempt it.

17,328. (*Mr. Mathews.*) You do not take your men from those of inferior capacity if you can help it?—We select the best men we can find at all times.

17,329. You spoke of the establishment of this association on the part of the masters as a matter of necessity arising out of the association of the men in trades unions. You found it absolutely necessary, I suppose, and that the men could only be controlled in the operation of their union by a similar union on the part of the masters?—Quite so.

17,330. The men acting in the union against the masters with no union at all acted with considerable advantage to themselves and disadvantage to their employers?—Yes.

17,331. And hence the necessity of establishing that masters' association?—Yes.

17,332. It is defensive?—Entirely defensive.

17,333. (*Lord Elcho.*) Supposing that there were any Parliamentary legislation to recognize the trades unions of the men and to protect their funds, do you consider that your association ought to be equally recognized by Parliament and your funds protected?—I do not think that we would require any association at all if the men did not control the labour market in any way.

17,334. But assuming that they do control it, and that there are unions of men, and that it is thought desirable that there should be legislation with a view to protect the funds of these trade union societies, do you think it equally reasonable as a matter of principle that the masters' associations should be similarly protected?—I should think so.

17,335. (*Chairman.*) Do the shipwrights' union interfere in any degree as to the mode of working by the piece and the day, or is there any interference between the employer and the workmen?—The shipwrights' union with us allow no piece-work whatever.

17,336. (*Mr. Roebuck.*) And to that extent they coerce you?—To that extent they coerce us.

17,337. (*Chairman.*) When building a ship, do none of your shipwrights say, one speaking for a gang, "We will do all the shipwright work for so much," which would be piece-work in effect; is there no contract of that sort?—No such contract; it is all day wages.

17,338. (*Mr. Roebuck.*) Do you find, or do you think, that that is the best plan to be adopted?—No, I think that it is the worst.

17,339. (*Lord Elcho.*) Do you think that it is for the interest of the men?—I think that it is for the interest of the bad man and worthless man, but against the interests of the good workman.

17,340. It prevents the man from rising that would rise otherwise?—Yes; and it is against the interest of the apprentices. They have not a stimulus to rise in the trade, because they look forward to the same wages in any case.

17,341. Supposing that you have not to pay the bad man, as you express it, this minimum rate of wage, and that there was a graduated scale according to the skill of the men, you would be able to pay the superior man more than you now do, would you not?—If they did not regulate the wages the more skilled man would get more.

17,342. And so far, instead of less money going to the labour fund, there would be more in all probability?—I think that there would be more, because a master could afford to give more if the men did more for it.

17,343. If the contracts were safer they would work quicker and do more work?—Yes.

17,344. (*Mr. Roebuck.*) Do you think that this system of the bad men being paid with the good men has had any effect in deteriorating the skill of the artisan?—I think that there would be better tradesmen if there were a difference in wage.

17,345. Do you believe that there is any deterioration in the skill of the artisan?—In building new vessels the best men are always employed, the others are sent to do dockwork and ordinary repairs. We have a large business in repairing as well as in building.

17,346. Then is not the conclusion this, that the rule really does little affect you, because you have by these circumstances the means of evading it?—I think that we should be better off if there was a difference of wage.

17,347. (*Mr. Hughes.*) May I ask you if your association has ever attempted to alter the rule with regard to the shipwrights and piecework?—I do not think so.

17,348. They have never negotiated with the shipwrights in any way to endeavour to put their views

Mr. R. Steele, jun.

26 May 1868.

before them?—No, I think not. I think that one or two of the masters in Glasgow have paid their shipwrights a different wage.

17,349. And without any resistance being made by the union?—Yes, I think that has been so in Glasgow.

17,350. (*Mr. Mathews.*) Do you find that paying the men the same wages, whether they are inefficient or efficient workmen, operates in this way, that it deters you from bringing forward the clever and sagacious and adroit workmen, and putting them in higher situations, as you would do if you had not this straight-laced scale you speak of?—Yes; I think so, certainly.

17,351. Supposing that in your establishment you find half a dozen very intelligent men, not only as to their handicraft but as to their mental capacities, it would be to your interest and the interest of the trade generally that those men should be brought forward and put in better situations, would it not?—Yes.

17,352. And you are deterred from that by the strict obligation which you are under to pay all classes of men, whether efficient or inefficient, the same rate of wages?—Yes.

17,353. Do you consider that a grievance of that sort is one that prevents excellence in the shipbuilding trade which you would arrive at if no such regulation existed?—I think it would be much better if there were a difference of wage in the shipbuilding trade.

17,354. (*Mr. Hughes.*) I understand you that you put your best men forward now?—We put them in the most constant work.

17,355. So that really the only difference is that the man does not get any higher wage as long as he remains a shipright?—He gets more constant employment.

17,356. And he is put in such a position of trust as has been alluded to by Mr. Mathews?—Yes.

17,357. (*Lord Elcho.*) But if there were not that rule not only would he get constant employment but higher pay also?—He would.

17,358. (*Mr. Mathews.*) And the absence of that higher pay takes away the stimulus which would otherwise operate upon him?—Yes.

17,359. And he does not exercise himself so much as he would if he got a fair amount of remuneration for doing so?—No, and it also affects the apprentices; they have not the same stimulus to learn their trade efficiently.

17,360. (*Mr. Booth.*) That kind of emulation naturally affects the skill of the men?—Yes.

17,361. (*Lord Elcho.*) Is the number of apprentices limited?—No.

17,362. Has there never been any rule on that subject?—No.

17,363. What proportion do the labourers bear to the number of artizans on the Clyde?—In the iron shipbuilding the labourers would be about a half.

17,364. And in the wooden shipyard what would be the proportion?—Very trifling indeed.

17,365. (*Mr. Mathews.*) Is it not the fact that in the shipbuilding trade and cognate trades the principals of those trades have raised the description of men that I have alluded to, clever, adroit men, and that they have been put into situations of trust?—A great many.

17,366. That is a stimulus to them?—Yes.

17,367. (*Mr. Hughes.*) Do the same men go to the front now?—Yes, a great many carpenters, for instance, go to sea, and ultimately become shipmasters, and in many cases large shipowners.

17,368. (*Lord Elcho.*) Is the proportion of men who rise from the ranks, as one may express it, as great now as it was?—Much about the same, I think.

17,369. (*Earl of Lichfield.*) What proportion of the total cost of building a ship is paid in labour?—Not much above a third with us.

17,370. (*Mr. Roebuck.*) Will you explain that? I am now talking of a wooden ship. You would call the planking material, would you not?—Yes.

17,371. And would you put it into the side of the cost, that is, in opposition to labour?—Yes.

17,372. But is not that planking the result also of labour?—Yes, of sawing.

17,373. Is that sawing done in your yard?—Yes.

17,374. Therefore you would consider that a portion of the labour?—Yes.

17,375. But supposing that it came into your yard sawn by somebody else, you would call it material?—Yes; therefore of course it varies.

17,376. That is exactly what I wanted to come to. In the same way the plating of an iron ship is the result of labour, but in your calculation it would be material?—Yes.

17,377. (*Lord Elcho.*) What is the proportion of iron and wooden ships that are now made in the Clyde?—There are almost no purely wooden ships built now, very few.

17,378. (*Mr. Roebuck.*) What do you mean by that?—Wooden frames.

17,379. You have ships planked with wood with frames of iron?—Yes, they are called composite ships—ships with iron frames and wooden planking.

17,380. Are there very few ships now of wooden frames?—Very few indeed.

17,381. (*Lord Elcho.*) What is the proportion of wooden planking and iron planking?—If you take steamers in, I should say that a tenth of the number are composite.

17,382. (*Mr. Mathews.*) Has your yard been engaged in iron or in wooden shipbuilding?—Both.

17,383. (*Lord Elcho.*) So that, with the exception of that tenth which is composite, and in which you say the proportion of labourers employed is very small, on a strike occurring half of the men thrown out of employment would be labourers?—Yes.

17,384. These labourers have no union?—They have no union.

17,385. They are entirely dependent on the skilled artisan?—They are entirely dependent on the skilled artisan.

17,386. So that in the case of a strike the skilled artisan falls back on the funds of his union or he emigrates; whereas the labourer falls back on his settlement, whatever it may be, that is to say the poor rate of his parish?—Quite so.

17,387. And he, perhaps, might be willing to work, and has had nothing to say to the strike?—Of course.

17,388. (*Mr. Hughes.*) I do not see that you have expressed any opinion as to that. You say that half the people who are thrown out of work are labourers when a strike takes place, which strike has originated amongst the skilled workmen; but I suppose you do not think that the union is in any way responsible for, or ought to be charged with, the misery that might follow from that strike?—If they are the cause of the strike.

17,389. Supposing that you had a dispute with your skilled workmen, you are bound by your rules, I see, on a vote being passed by two-thirds of your members, to shut up the whole of your workshops?—Yes.

17,390. Then supposing there were such a dispute with two-thirds of your members, you would shut up the whole of your works and turn out the whole of the men?—We must by the rules.

17,391. Can you point to any rule by which you provide for the labourers in that case?—No.

17,392. (*Lord Elcho.*) One hardship would not render the other less hard, would it?—No.

17,393. And yours is a defensive association?—Yes, a defensive association entirely.

17,394. And you consider that you did not throw the first stone?—That is so.

17,395. (*Earl of Lichfield.*) Under those circumstances are the labourers obliged to leave the town?—Of course in some cases they do; they may emigrate or go to another place for employment, and they generally do.

17,396. (*Lord Elcho.*) It is a state of war, and they have their code of war and you have yours; and it is just a question which has the most money, which can hold out the longest?—Yes.

17,397. And while this war is going on there is a danger of trade leaving the country altogether?—Yes.

17,398. (*Earl of Lichfield.*) The preamble of your rules tells its own story: "The subscribers taking "into consideration that they are experiencing serious "loss and inconvenience in their business through "the operation and combinations on the part of work-"men in their employment, have resolved to form "and now accordingly form an association, to be "termed 'The Clyde Shipbuilders' and Engineers' "'Association'"?—Yes.

17,399. (*Lord Elcho.*) In this war you have the command of capital to begin with?—Yes.

17,400. And you have a very large subscription, while the men have no capital but their labour?—Yes.

17,401. In such a war, if it were *bonâ fide* carried on by the masters with their full strength, and they remained true to one another as the men remained true to one another in the union, do not you think that the weaker side must go to the wall?—As a general rule the men have been obliged to give in.

17,402. Do you believe in conciliation and co-operation as the remedy for such a state of war?—I believe that the only thing to prevent it is good sense on both sides.

17,403. Do not you think that good might result if men who differ, and who believe that their differences are very wide, would come together and talk over things across a table as we do here, and that they might find that mountains become mole hills, and that difficulties are smoothed over, and peace results instead of war?—Where there is feeling, I have no doubt it will be so. I have no doubt that the practice of masters and men meeting together would be productive of a great deal of good.

17,404. (*Mr. Mathews.*) Do not the unions interpose an obstacle to masters and men working together, is there not an objection on the part of the employers to meet men who are not in their own workshop?—We have not that feeling in Greenock, because the masters in Greenock have met the men when necessary.

17,405. There was not the least disinclination on the part of the masters, previous to the establishment of the unions, to meet the men and discuss with them any questions of difference?—No.

17,406. But since the unions have been established, has there not been a disinclination on their part to do so?—Individual men have no right whatever now to meet the masters; it must be done through the executive.

17,407. And there is always an objection on the part of the masters to deal with the executive, is there not?—We have not objected to it in Grennock with the shipwrights' union, because that has been in existence so long.

17,408. (*Lord Elcho.*) Supposing that there must be these matters of dispute, do you see any objection to its being a recognised thing that the representatives of the men whom they send, though they may be officers of the union, should meet representatives chosen by the masters?—None whatever.

17,409. On the contrary, supposing the associations to exist on both sides the most natural thing would be to talk the thing over by representatives from both sides?—Yes.

17,410. (*Mr. Roebuck.*) Under those circumstances the chance would be that you would have the most intelligent men on both sides to talk it over?—Yes.

17,411. (*Lord Elcho.*) And the men who would know most of the trade?—Yes.

17,412. (*Mr. Hughes.*) As far as your experience goes at Greenock, then, the men who represent the unions are the ablest and most intelligent of the workpeople?—No; I do not know that. They are elected to the office, and they have not the power of refusing; they are obliged to accept the office that they are appointed to.

17,413. (*Lord Elcho.*) How so?—It is part of their rules.

17,414. Any duty imposed upon a man he is bound to accept?—When a secretary is appointed he is bound to accept it.

17,415. Do you mean to say that supposing a man was making 2*l.* a week in his business, and that he was offered the post of secretary at 1*l.* he would be bound to take the 1*l.*?—I do not think that they have any paid secretary in the shipwrights' union with us.

17,416. Have they no paid officers?—I think not in the working committee.

17,417. (*Mr. Hughes.*) Then, I suppose, as there is no pay, and as people are obliged to serve, it would naturally follow that they would select the men most competent to fill the office?—They sometimes elect those who have most talk.

17,418. (*Mr. Mathews.*) Generally speaking, are the working-men competent to choose men of the greatest discretion and propriety and sagacity, and who are best able to conduct a negotiation with the masters, or do they choose men impelled by strong feelings rather than otherwise?—I think that they are generally strong partisans.

17,419. And therefore, not the best fitted to conduct negotiations with the masters?—I think not.

17,420. (*Chairman.*) Do I rightly understand from you that talk passes for sense with the men of Greenock?—Too often.

17,421. And they elect the men who talk a good deal?—Sometimes.

17,422. (*Mr. Hughes.*) You say that this union has been in existance a long time; how long?—I think since 1828.

17,423. And they have managed to hold their union together since that time?—Yes.

17,424. That must have required something besides talk?—Well, the masters until two years ago were never associated together.

17,425. But now that you are associated, you do not wish to destroy that association of the men that has existed since 1828?—We do not wish to destroy unions at all; if they will just let us alone we will let them alone.

17,426. (*Chairman.*) Have you at all compared the rate of wages in Greenock and the rate of wages in the part of the Thames where shipbuilding is carried on?—Our rate would be, I think, fully 30 per cent. below the Thames.

17,427. And is that 30 per cent lower made up by the purchasing power at Greenock over the purchasing power at Blackwall; that is to say, taking house rent, provisions, and other matters, do the higher prices of London swallow up the higher wages, so that the man's living is nearly the same in either case?—I really do not know how that is.

17,428. You can only say that there is 30 per cent. difference in money?—Yes, in money.

17,429. You cannot compare the purchasing power of money in Greenock and Blackwall?—No, but I think that the Scotchman is contented with and accustomed to a lower style of living than the Englishman.

17,430. Does that lower style of living maintain him in the same vigour that the higher style of living maintains the artisan at Blackwall?—I think so.

17,431. Has your mind been at all directed towards the question whether the man who gets the lower rate of living is less cheerful or happy than the man who gets the higher rate of living?—I do not think he is less cheerful, and I think he has quite as good a coat on as the other man.

17,432. (*Mr. Mathews.*) Let me ask you a question or two about the iron used in the Clyde. Where do you procure it?—Sometimes from Glasgow, sometimes from Newcastle, and sometimes from Cumberland.

17,433. What part of Cumberland?—It is called the West Cumberland Iron Company.

17,434. When you want plates do you prescribe any tensile strength for those plates?—No; merely that they should be a good malleable quality.

17,435. What are plates now on the Clyde?—We get them delivered in the yard up to 8 cwt. for 7*l.* 10*s.* a ton.

17,436. What would you be obliged to give for them

Mr. R. Steele, jun.

26 May 1868.

if they had to stand the test of 22 tons a square inch?—We have never bought any of that.

17,437. So that if the shipbuilders on the Thames are obliged to pay 9*l.* or 10*l.* for their plates, you have that advantage over them?—But Government ships in the Clyde must have the same tensile strength as those in the Thames; and with respect to the merchant ships on the Thames, I do not suppose that any tensile strength is prescribed for them beyond being of a good malleable quality.

17,438. The only difference then would be what they could buy the plates at when delivered on the Thames, and what you could buy them at when delivered at your yard?—Yes.

17,439. (*Chairman*). I see you have referred to a correspondence between your firm and the shipwrights' union. Do you think that that illustrates the action of the unions as against the employers?—Yes; in restricting the number of men in the port when work requires that we should have more hands.

17,440. You have asked permission of the union to be allowed to employ more workmen, and the union has made a difficulty about your increasing the number of your men?—Quite so.

17,441. Is that the correspondence which you hold in your hand?—This is the correspondence. It extends from 1836 down to the present time. but the letters between 1839 and 1857 were lost by some means or other, so that there is only one single letter, or two, from 1836 to 1839. From 1857 down to 1866, when the masters' association was formed, there are a number of letters referring to the same subject.

17,442. (*Mr. Hughes.*) Are those all between your firm and the officers of this shipwrights' union?—Sometimes between myself as chairman of the Greenock shipbuilders, and sometimes from our firm direct to the union.

17,443. Then you had combinations of an informal kind; the shipbuilders had meetings to confer with the men?—We tried to act together as much as we could, without being associated together.

17,444. And in all cases the correspondence was with the representative men of the old union?—Always. Some letters have been lost; the correspondence does not follow up the subject to the very end.

17,445. (*Mr. Booth.*) What would you suggest would be the conclusion which we should draw from this correspondence?—That the union prevented us getting men when the trade of the port required additional hands. The following is the statement which I have prepared and the correspondence:—

At a meeting held at Greenock on 23rd November 1836, the following agreement was entered into between the master shipbuilders and the journeymen carpenters:

"Greenock, 23rd November 1836.

"The master carpenters do hereby state, that when journeymen are out of work, they will always employ those belonging to the town in preference to strangers, when more men are required.

(Signed) "JOHN SCOTT, junior, Chairman."

"Greenock, 23rd November 1836,

"We the undersigned deputation of the journeymen carpenters of Greenock, do hereby declare that, hereafter there will be no restriction upon the masters in the way of employing whatever number of men they may require, and that there shall be no compulsion used on our part to cause them to join the society, and the only qualification now necessary is, that the term of servitude will be four years, and to have wrought two years at the trade as journeymen, or to have served five years apprenticeship.

(Signed) "DANIEL BROWN,
"Chairman of the deputation."

"Messrs. Robert Steele and Co.

"GENTLEMEN, Greenock, 21st October 1839.

"WE beg leave to submit to the shipbuilders of this place, the following statement of facts, which if you consider in any way affecting the general interest of the trade here, and would recommend that a meeting should be called for the purpose of taking the matter into consideration, we shall be glad to hear from you at your earliest convenience. About six weeks ago we sent one of our foremen to the east country to collect about 20 men, if he could get them, having intended that if the men were to be compelled to join the society, we would pay their entry money, upon their agreeing with us for twelve months, and should they not be able to satisfy the society of their having served five years' apprenticeship, they were in that case to serve one year's apprenticeship at a reduced rate of wages. Upon these terms we got 10 men to come forward, the most of whom commenced and wrought with us for 2 or 3 weeks; they were at length however, compelled to leave the work, having found it impossible to get any arrangement with the society, or to get peace to remain on any terms, without the society, from which it appears to us very plainly, that it matters not what demand there may be for men, the society are determined to allow no others to come in. If you think this ought to be passed over without taking any notice of it, we have no objections, but if you think it ought not to be passed over in silence, we will be glad to call a meeting and lay the matter before it. Waiting your reply at your earliest convenience,

We are, &c.,
(Signed) "for Robert Duncan & Co., J. GIBB."

"At a meeting of the shipbuilders of Greenock, "held in the White Hart Inn, here on Wednesday "24th of October 1839. Present: Messieurs John "Scott, junr., Joshua Muress, Robert Thompson, "James McMillam, John Simons, Robert Duncan, "and John Morries representing Robert Steele and "Company, John Scott, junr. Esq., in the chair. "The meeting was called by letter from Messieurs R. "Duncan and Company, to consider the circumstances "in which the masters are placed in consequence of "the conduct of the Greenock Shipwrights' Society, "towards some workmen belonging to the east country "who had been employed by them. After a good deal "of discussion and three forms of a resolution having "been submitted to the meeting the following was "agreed to by all present with the exception of Messrs. "Muress and Clark, who declined voting, 'That the "'ship builders of Greenock have resolved, after the "'1st November, to employ any workmen they please "'whether they belong to the Greenock shipwrights' "'society or not. It was also agreed that this reso-"'lution shall be submitted to the workmen on the "'first Saturday.'"

Further correspondence on this subject has been lost, but the result was that the masters were obliged to employ only workmen who were members of the shipwrights' union. The correspondence between 1839 and 1857 has been all lost.

"Mr. Peter Parker, President of the Greenock Shipwrights' Society.

"SIR, Greenock, 13th June 1857.

"WE beg to acquaint you that we are at present in want of at least one hundred shipwrights, to whom we will give employment during the next six weeks. We trust that the committee will immediately take such means as will procure for us the number of men we name, otherwise our contracts, which are already much beyond the time in which we stipulated to have them completed, and for which we are liable in heavy damages, will be still further retarded. We must strongly express our disapproval of the procedure of the committee in sending workmen out of the town, and from our establishment, when we had very great need indeed for their services.

(Signed) "ROBERT STEELE & Co."

"Messieurs Robert Steele & Co.

"GENTLEMEN, Greenock, 19th June 1857.

"AT a general meeting of the shipwrights of this port held on the 18th instant in the hall of the Mechanics' Institute, your letter of the 13th being read to the meeting requesting a supply of one hundred shipwrights, that being a thing we cannot give nor do we hold ourselves responsible to find men for any employer, neither do we stand in the way of any employer to find men where he best can, on the understanding that they conform to the rules of the society. We may also state that there was no means used to put any of the men that came here to work with you away from the port. We are, &c.,

(Signed) "PETER PARKER, President."

"Mr. Peter Parker, President of the Greenock "Shipwrights' Society.

"SIR, Greenock, 23rd June 1857.

"YOU say in your letter of the 19th instant 'that your society does not stand in the way of any 'employer to find men where he best can, on the 'understanding that they conform to the rules of the 'society.' We are altogether ignorant of the rules of your society, but of this we are confident, that but for these rules we could have no difficulty in procuring the men we require; and not only so, but we repeat that certain means were used to have some of the strangers—workmen we had procured—sent out of the town, some of whom we understand had paid an advance to and were willing to join the society, but were not permitted, while others were sent away because they would not agree to join. Moreover, that but for the very objectionable and restrictive nature of your society's rules we should have had not only at this present time, but for a very considerable time to come, a much larger amount of work on hand, old as well as new, but which in consequence of your regulations we were obliged to decline. Unless, therefore, we can be permitted to obtain workmen when required for our business, we shall be under the necessity in future of very greatly curtailing the extent of it, for we are now perfectly convinced, if we had not been before, that under present circumstances it would be most imprudent and dangerous for us to undertake any extensive contracts on time, seeing that we cannot get tradesmen when they are required to execute the work, thus making the business of the port dependent on the number of men your society may in their judgment permit to come here; we must also repeat that unless we can now obtain the number of men we require, both we and other employers will be subject to very serious inconvenience and loss, and if the society will not undertake to procure shipwrights for us we hope they will at least inform us, and that immediately, that they consent to our employing such men as we can procure, and that they will not in any way interfere with them.

"We are, &c.

(Signed) "ROBERT STEELE & Co."

The reply from the shipwrights' union has been lost, but no men were procured.

"Mr. Alexander McDonald.

SIR, Greenock, 24th Feby. 1863.

"YOUR letter of the 18th current was this day submitted to a meeting of the employers of shipwrights, and I have been desired by them to request a meeting with the members of the committee of management within Borland's Temperance Hotel at 2 o'clock Saturday 1st.

"I am sir, &c.,

(Signed) "ROBERT STEELE, jr."

"Mr. Robert Steele, jr.

"SIR, Greenock, 26th Feby. 1863.

"YOUR note dated 24th instant was submitted to a meeting of the shipwrights of Greenock held in their reading room on the 26th instant, when your note was considered to be no answer to our letter of the 18th, and we can see no good which can result from a deputation meeting the employers in the said Temperance Hotel, as no questions have been proposed by you which you wished to discuss.

"Yours, &c.

(Signed) "ALEXANDER MCDONALD, "President."

"Mr. Alexander McDonald.

"SIR, Greenock, 2nd March 1863.

"I AM in receipt of your favour of 26th ulto., the contents of which I have communicated to the shipbuilders of this port, and they have desired me to express to you their disappointment in receiving such a very discourteous reply to their request to meet a deputation of the ship carpenters of this port. It is, I am sure, the first occasion that such a request has been so treated, and very different from that which a similar one on the part of the men would have received from the masters, who have invariably treated all communications from the men with attention and respect. It must be evident to the men that such conduct cannot but tend to disturb the good feeling which ought to exist between employers and employed. With reference to the subject of my letter, I beg to say that it was not so much the question of wages which it was intended to discuss at the proposed meeting, but other matters of equal importance to both parties, and which could be more amicably arranged by an interview than by correspondence. In case there may have been any misapprehension on the part of the men with reference to the meeting, I will be glad to hear from you whether such a deputation as proposed will meet with the masters, and on which day it will be most convenient for them to do so.

"I am, sir, &c.,

(Signed) "ROBERT STEELE, junr."

"Messrs. Robert Steele and Co.

"GENTLEMEN, Greenock, 7th March 1863.

"I AM in receipt of your favour of the 2d March, and in reply beg to state that I called a general meeting of the shipwrights of this port, and laid your letter before them. After being well discussed it was finally arranged that I alone should meet the master shipbuilders upon Monday first, the 9th inst., at 12 o'clock noon, in Borland's Temperance Hotel, the place that yourselves appointed.

"Gentlemen, I am, &c.,

(Signed) "ALEXANDER MCDONALD, "President Shipwrights' Provident Union Society."

"Messrs. Steele and Co.

"GENTLEMEN, Greenock, 12th March 1863.

"ACCORDING to your desire I convened a general meeting of our body last night, for the purpose of submitting to them what transpired in the conference of Monday last. The propriety was then discussed of admitting strangers into town, when it was decided that if the masters respectively would state in writing what number of men they would require, with a written guarantee that when the trade becomes dull, and the masters severally not able to employ all hands, that they would not pay off any of the Greenock men while any of the strangers are employed; the body of workmen, seeing the necessity, also the utility, of admitting strangers into town under the above conditions, the men would not only give way, but would most cheerfully aid the masters with all the means in their power in bringing men into town. Gentlemen, hoping this will be the means of preserving the good feeling and friendship subsisting between masters and workmen, I am, yours, &c.,

(Signed) "ALEXANDER MCDONALD, "President."

Mr. R. Steele, jun.

26 May 1868.

"Mr. Alexander McDonald, President, Shipwrights' Society.

"Sir, "23rd March 1863.

"We duly received your favour of 12th inst., a copy of which we have sent to the different shipbuilders. In the event of any of them requiring additional hands they will communicate with you, and will be quite ready, we have no doubt, to give the guarantee you require, and which we consider quite reasonable.

"We are, &c.,

(Signed) "Robert Steele & Co."

"Mr. Steele.

"Sir, Greenock, 14th April 1863.

"At a general meeting of the shipwrights of Greenock, held on the 10th instant, I am instructed to write to you in consequence of so many strangers coming to town under the impression that they are not to be asked to become members of the Shipwrights' Society. Sir, on a perusal of my letter of 12th March, you will easily see that those employers who employing strangers in preference to the Greenock shipwrights are not complying with the conditions set forth in my letter. Hoping that this will meet your approbation, and that you will transmit a copy to the employers, an early reply will oblige,

"Yours, &c.,

(Signed) "Alexander McDonald,

"President."

"Mr. Alexander McDonald.

"Sir, Greenock, 15th April 1863.

"I am in receipt of your favour of 14th inst., a copy of which I have sent to the several shipbuilders. I have read your letter of 12th March, and the clause referring to the terms upon which strangers were to be brought into town is as follows:—'With 'a written guarantee that when the trade becomes 'dull and the masters severally not able to employ all 'hands, that they would not pay off any of the 'Greenock men while any of the strangers are em-'ployed.' If therefore any of those masters who have brought strangers to town have discharged any of the Greenock men while any of the strangers have been allowed to remain I do not hesitate to say it is a breach of the agreement. I may mention what you are already aware of, that we are at present in want of a number of hands, and although there are a considerable number going about idle they do not choose to come to our work; such really have no cause to complain.

(Signed) "R. Steele, junr."

"Mr. William Wilson,

"President, Shipwrights' Society.

"Sir, Greenock, 18th February 1864.

"We are at present in want of a number of ships carpenters, and request that we may be allowed to get them without loss of time to meet our present emergency.

"We are, &c.,

(Signed) "Robert Steele & Co."

"Messrs. Robert Steele & Co.

"Gentlemen, Greenock, 9th March 1864.

"We received your letter of the 18th February, which was read at the first general meeting after reception, when it was considered that we had neither the power to grant or restrain you from getting as many men as you may deem necessary, only we shall use our privilege of most respectfully requesting them to join the Shipwrights' Provident Union Society.

"Gentlemen, &c.,

(Signed) "William Wilson,

"President."

The following letter refers to a strike which took place in Messrs. Robert Steele & Co.'s works in consequence of two foremen refusing to join the Shipwrights' Union:—

"Mr. Alexander McDonald.

"Sir, Greenock, 22nd February 1867.

"Referring to the conversation with you today, we beg to say that we agree to the proposal you made to the writer that the two foremen Wishart and and McGlashan shall either join the union or become engaged servants. These you mentioned were the conditions upon which the men would return to their work. It has been hitherto the practice when there was any complaint to make to write first to the employer, and we regret very much, as we are certain every proper thinking man in your body must, that a very different course has been pursued in the present instance. Had you either written or spoken to us before the men struck work the same end would have been gained.

(Signed) "Robt. Steele & Co."

"Messrs. Robert Steele and Co.

"Gentlemen, Greenock, 23d February 1864.

"In answer to yours of the 22d inst., I am instructed to inform you, by the members of the Greenock Shipwrights' Provident Union Society, that they, after having taken your letter into consideration, have finally decided that they can have no farther intercourse with Mr. McGlashan, as they do not consider him eligible to become a member of our society. With regard to Mr. Wishart, after due consideration likewise, it was decided that they work with him on condition that he becomes a member of our society immediately.

"I am, &c.,

(Signed) "Wm. Wilson,

"Preses."

"Mr. Wm. Wilson, Preses, Shipwrights' Union.

"Sir, Greenock, 23d February 1864.

"We are in receipt of your favour of this date, and beg to say in reply that we consider the decision come to by the union most unreasonable. With regard to Mr. McGlashan, we agree that he either produce satisfactory lines of apprenticeship and join the union, or that he leaves our employment. As to Mr. Wishart, he refuses to become a member of the union, and we shall consequently require to part with him. Indeed, we cannot expect to get any one in his position to join the union, and we hope the workmen will not be so very unreasonable as to ask it. The position of head foreman carpenter with us is totally different from that of the other foreman, and we trust to the good sense and good feeling of the workmen to allow Mr. Wishart's successor, whoever he may be, to be unconnected with the union.

"We are, &c.,

(Signed) "Robt. Steele & Co."

"Messrs. Steele and Co.

"Gentlemen, Greenock, 24th February 1864.

"After receiving your letter of yesterday, a meeting of the Shipwrights' Provident Union Society was held, and your letter laid before the meeting. After being long and well discussed, the meeting finally determined that they can hold no farther intercourse with either Mr. Wishart or Mr. McGlashan, for the reasons that they have trifled with us so long, and finally putting us to defiance. If this barrier be removed the men are willing to resume work immediately. Be pleased to answer this by 12 o'clock to-day, as after that hour the men will take the liberty of engaging themselves wherever they can find work.

(Signed) "W. Wilson,

"Preses."

"Mr. Wm. Wilson.

"Sir, Greenock, 24th February 1864.

"We are in receipt of your letter of this date, and agree to the terms.

(Signed) "R. S. & Co."

The following letters refer to the scarcity of shipwrights in the port of Greenock caused by the action of the Shipwrights' Union:—

"Mr. William Wilson, Preses, Shipwrights' Union.

"Sir, Greenock, 14th January 1865.

"We have been informed that it is the intention of the Shipwrights' Union to prevent the stranger carpenters who have been lately been employed by us from working any longer with us. This we must say if persevered in would be most unjust to us, as we not only want the services of the men but we could at present, and during the next six months, employ thirty to forty more. You may remember when we applied to some time ago to be allowed to bring some hands to town in order to enable us to complete our contracts by the time agreed on, your reply was that if we brought hands to town you would exercise your privilege of requiring them to join the union. This of course put a stop to our getting any, and in consequence our work got seriously behind, and the ships we had on hand were not delivered by the time we contracted, which in several cases subjected us to heavy penalties. At present the ship we have on the stocks in the woodyard ought to have been delivered by 1st November last, in order to go out to China in time for next season's teas, but in consequence of the scarcity of hands we have not been able to fulfil our contract and the ship will not he delivered for several months yet; she is therefore of no use to her owners for this year, and as she is intended for the China trade they cannot send her out there till next fall, thereby losing a whole year of the ship's employment. The loss to them is so great that we are expecting daily to hear that they will refuse to take delivery of the ship; you will therefore see, that should such be the case we must naturally feel that this misfortune has been brought upon us by the action of the union. We have therefore to request that you will not only allow those men who have joined us to remain, but that you will at once take steps to procure for us at least thirty additional hands. We are, &c.

(Signed) "R. Steele & Co."

"Mr. William Wilson,

"Preses, Shipwrights' Union.

"Sir, Greenock, 5 June 1865.

"We are at present in want of about 60 carpenters, and will thank you to procure them for us in order to enable us to accomplish the work we have at present in hand by the time we contracted. We have to complain of the very great injustice of your union, that while we are so urgently in want of workmen you sent away from our iron building yard about three weeks ago above a dozen men. You cannot but see that such conduct is not only most unjust to us, but highly injurious to the interests of the town, and therefore most prejudicial to your own interests. We trust you will at once adopt means to procure for us the number of men we want.

"We are, &c.,

(Signed) "Robert Steele & Co."

"Mr. William Wilson,

"Preses, Shipwrights' Union.

"Sir, Greenock, 12th June 1865.

"We are without any answer to our letter to you of 5th inst., and as time is most pressing with us, we have urgently to request that you will at once take steps to get us the carpenters we require. Our contract work is already very far behind, and unless we get some assistance we shall be placed in very serious difficulties with the owners of the ship. We have already suffered most severely through the interference of your society with the labour, having paid several thousand pounds of penalties during the last three years for ships not completed within the time contracted. We trust to hear from you immediately on the subject.

"We are, &c.,

(Signed) "R. S. & Co.

"P.S.—Since writing the above we are very much surprised to learn from one of your committee that although a week has elapsed since you received our letter you have not yet called the committee together, or taken any steps to get us men. This we think great neglect on your part, and very unfair to us, as every day is precious.

(Signed) "R. S. & Co."

"Mr. William Wilson, Preses,

"Shipwrights' Society.

"Sir, Greenock, 13th June 1865.

"Since writing you yesterday we are very much surprised to learn that a large number of the Greenock carpenters are at present employed at Port Glasgow. While the Greenock masters require hands we think it very unfair to them that the men in this union should be allowed to take work elsewhere If the union prevents men coming to town when the work requires additional men, we think the very least thing they can do, to make such an interference bear as lightly as possible on the masters and the trade of the town, is to oblige their members to remain in town as long as the work here requires them.

"We are, &c.,

(Signed) "Robert Steele & Co."

"Harvre Lane Hall,

"Sir, 13th June 1865.

"At a meeting of committee held to night to consider your request of 5th instant, we would wish you to state for how long you would employ those men, as we may have to procure them from a distance; also, we can enter into arrangement with men only on the understanding from you, that when our own members are refused work it will then be obligatory on us to withdraw them; also, in answer to your statement of your members working in Port Glasgow, I beg to state that we have no control over them as long as they are in the boundaries of our society.

"I am, sir, &c.

(Signed) "William Wilson, Preses."

"Mr. William Wilson.

"Sir, Greenock, 14th June 1865.

"We are in receipt of your favour of the 13th inst. We cannot say how long we could employ the men we require at present, as everything would depend upon what amount of repairs we may have to do. If your union did not so unjustly interfere with the supply of labour for the port it would regulate itself by the ordinary law of supply and demand, and the trade would be increased to a very large extent. We have ourselves refused a very great deal of work during the last few years in consequence of the want of carpenters, and for the same cause have suffered very heavy loss by our contract work not being completed by the time agreed on. During the last two months we calculate that your union have driven from our works about 30 men. If these had not been interfered with our work would have been in a more advanced state and we should have been relieved from the danger which now threatens us. If the two ships we are at present building are not ready by the time agreed on we shall be in a most serious difficulty, as they will be unable to take the voyage for which they are now engaged. The very last ship we built, the 'Chinaman,' should have been ready in November last for the China tea season trade, but she was not ready till April, and was therefore too late for the trade intended, and for which we had to pay a heavy penalty, and besides lost the good opinion and friendship of the owner, so that he will never give us another ship to build. You must surely see how very aggravating these matters must be to an employer, and you would find it very much to your own interests if instead of pursuing the policy you have been doing you consulted the interests of your employers more. With regard to additional men, if the hands we have at present employed at the Town Dock come all over to our own dock we think 30 additional hands would

Mr. R. Steele, jun.

26 May 1868.

get us out of our difficulties. We expect a ship, the 'Alfred the Great,' to be here in a few days from Amsterdam to be reclassed, and unless we get more hands we shall have either require to take some from our new work and get into trouble with the owners, or else refuse to do the repair to the ship.

"We are &c.,
(Signed) "Robert Steele & Co."

"Robert Steele, junr., Esq.,
"Sir, Harvre Lane Hall, 19th June 1865.

"In answer to your letter of 14th current, at a general meeting held this evening, your letter was there read and discussed, as we wished to comply with your request for additional men, as we have to send to a distance for them they would not come without a guarantee of time. As to your statement of our union driving from your work thirty men you must be wrongly informed. We have not interfered with any man in your employ. In regard to your statements of the men leaving your employ and going elsewhere, we have been much surprised at it ourselves, and on finding from inquiries it was stated that they receive more civility and respect in other yards in town.

"I am, &c.,
(Signed) "John Hutchison, Preses.

"Mr. John Hutchison,
"Preses, Shipwrights' Union.
"Sir, Greenock, 27th June 1865.

"We are in receipt of your favour of 19th inst. In consequence of having received a number of additional hands lately, and having now the prospect of getting as many as we may require very shortly, we do not need to urge our demand for strangers to be brought into the town. We hope therefore to be able to complete our present contracts very shortly over the time agreed upon. With regard to your remarks as to the disrespect with which workmen are generally treated in our establishment we beg in the most emphatic terms to contradict. We have the very highest respect for the honest, sober, and industrious workmen, and such we consider an honour to the trade, and who at all times receive from us the highest consideration, but we cannot pretend to have any respect for those of an opposite character, seeing they do not respect themselves.

"We are sir, &c.,
(Signed) "Robert Steele & Co."

The witness withdrew.

Mr. J. P. Smith.

Mr. John Paterson Smith examined.

17,446. (*Chairman.*) You are the secretary, I believe, of the Clyde Shipbuilders' and Engineers' Association, which is an association of the masters?—I am.

17,447. Was that established about two or three years ago?—In May 1866.

17,448. Was it established in consequence of the action of trades unions?—In conequence of the action of the unions at the time.

17,449. Are the rules that are here before us the rules of that association?—Yes.

17,450. (*Mr. Hughes.*) These rules were settled, as I understand, at meetings in June and August in 1866?—They were amended at those meetings.

17,451. When were they first settled?—I think that they were settled first in May, but they were amended in June and August.

17,452. At any rate, no rules existed previously to that year?—No rules existed previously to that year.

17,453. (*Mr. Roebuck.*) Nor since these?—Nor since these.

17,454. (*Lord Elcho.*) How many subscribing members are there?—Our subscribing members will number, I think, somewhere about 35.

17,455. Subscribing, according to rule 3, 4*l.* for every man and boy?—Yes, or rather, granting a liability to that extent.

17,456. That gives a sum total of what amount?—Between 90,000*l.* and 100,000*l.*

17,457. At the present moment in case of a strike that association could draw to that extent?—Yes, if required; we hold promissory notes payable at a day's date lodged in bank, and for which we can get cash at any time.

17,458. (*Mr. Hughes.*) What proportion of the shipbuilders on the Clyde were present at the meetings, or agreed to the rules?—I believe that with the exception of three or four firms all the firms on the Clyde were present.

17,459. Now, have all the firms come in?—There are some still out. The builders in Dumbarton are not members; the largest firm there (Messrs. Wm. Denny & Brothers) was, in consequence of the action of the unions some years ago, obliged to shut their works; they then resolved not to employ any more union men, and they believe they have no union men now. Messrs. Robert Napier and Sons, in consequence of Government contracts on hand at the time of the lock-out, and which could not be delayed, could not join, but they have always supported the association.

17,460. They are in the position of non-unionists?—They are very much in that position.

17,461. (*Mr. Mathews.*) Denny's concern and Napier's concern form no part of your association?—They do not.

17,462. (*Mr. Hughes.*) Were these rules submitted to those meetings as they stand now?—They were submitted and discussed at several meetings.

17,463. Were they accepted unanimously or anything like unanimously?—All our meetings I may say have been unanimous. We have had no division on any particular since we have been organized.

17,464. Then the representatives of all these firms agreed that a majority of two-thirds should limit them in all these matters which are named in the rules?—They so agreed.

17,465. And you have had no strike since then?—We have a strike going on now with the ship joiners.

17,466. In how many firms?—All the firms on the Clyde, about 30 firms I should say.

17,467. How did that strike arise?—It arose in this way. The branch of the joiners' union in Greenock made a demand through their secretary upon the Greenock employers for an advance of 2*s.* per week. This was not conceded, and it was followed by another demand, stating that unless the 2*s.* per week was agreed to by a certain day, they would strike work and would not resume under a rise of 3*s.*

17,468. That was made in all the shops; they did not try to take the masters in detail?—They took the Greenock masters. The strike was at two or three shops, and comprised about 250 men on the 21st March.

17,469. What did the masters do?—The masters had a meeting previous to their striking at which they approved of the action of the masters in Greenock in not conceding the demand of the men. The result of the masters' meeting was communicated to the secretary of the men's unions, and immediately a reply was returned that next day the men would leave work and not return till the demands were conceded. Then the strike took place. The masters called a meeting at Glasgow, and passed a resolution on the 25th of March last, resolving not to employ any joiners belonging to the union until the strike was terminated. The masters considered the union was to blame,

as no demand had come from the men themselves; the demand was made by the union secretary.

17,470. Then they turned out of all the workshops all joiners belonging to the union?—They put up a notice that all joiners belonging to the union were to cease work. The result was that not only those belonging to the union but also a great proportion of the non-unionists went out.

17,471. Did you turn them out too?—No, we did not turn them out, but they made common cause.

17,472. Are they out still?—The strike has not been withdrawn, and the lock-out remains in force until it is. I may say that the number of joiners employed by the members of this association previous to the strike was somewhere about (I am speaking roughly just now) 950 journeymen joiners. The number that were in after the strike and lock-out was somewhere about 240. The strike is still going on, but now there are at work about 640 or 650 men.

17,473. How is that?—It is in this way: we have got from London, through the agency of the Free Labour Registration Society, about 130 or 140 men I think, and we have also got from the north and east of Scotland a great number of men, and also a number of joiners have left the union and come back to their work.

17,474. So that in fact the strike is virtually over as far as your men are concerned?—Well, it is not over, it is still going on, but we expect that it is dying out. We have now about 650 men in, and our previous number was 950 or 960.

17,475. Then the whole of the members of the masters' association have joined in this action?—Yes.

17,476. So that you have had no test of your rules—that is to say, you have had no subscription for any particular firm; there has been no call on the others, inasmuch as all have suffered alike?—Just so, and in cases where strikes have taken place with individual firms, no demand has been made.

17,477. (*Chairman.*) It is no subscription, but only a liability?—It is a liability which is available at any time.

17,478. A promissory note being given in proportion to the number of men employed?—Yes, exactly so; of course we make a subscription to meet the working expenses of the association.

17,479. Those are of an insignificant amount, I suppose?—Yes, something very small.

17,480. (*Mr. Hughes.*) Is this form of inquiry which I find at page 15 of your rules, what is referred so as "lines of clearance" in the 19th rule?—No that is not "lines of clearance."

17,481. What is the meaning of "lines of clearance"?—"Lines of clearance" refer to apprentices who have not completed their apprenticeship. Many of them are not under a written agreement, and very often when they see a chance they leave one employer and go to another. The employers think that it is very unfair that the employer who has had an apprentice the first two or three years of his apprenticeship and paid him more than he was worth, should lose him at the end when his services become valuable, and they have combined amongst themselves that as a matter of honour they should not take one another's apprentices.

17,482. Your lines of clearance, though they would seem to apply to workmen, are stated in rule 19 to apply to apprentices?—They apply to apprentices, or workmen under agreement.

17,483. Then "workmen under agreement" and apprentices are the same people?—Yes, under Rule 19.

17,484. Then in the case of an ordinary workman, is it the duty of the member of the association to whom he applies for work to forward such an inquiry to you?—Not to me; it is his duty to forward it to the master whom the workman has left; but in case he should not wish to communicate with that master, he sends it direct to me.

17,485. But either through you or directly through the master, it is his duty to have this form of inquiry filled up by the last master of any man that applies to him?—Yes, the occasion for that was this: In some shops on the Clyde there was a good deal of piece work done; the men who had contracts sometimes left them unfinished, and other men who had engagements went away, and the masters did not know where to find them; and sometimes men applying for work made representations as to wages they received, and the class of work they were accustomed to, which the masters had cause to doubt, and therefore the masters thought it well that they should cause that form of inquiry to be sent to obtain that information both as to the men's character and whether the statements were true; and they have found the enquiry form most useful, for while it is a check upon the evil-doer, it is an advantage to the good and well-behaved workman.

17,486. But as I understand, unless this form is filled up satisfactorily a member of the association is bound not to give employment to the applicant?—If he sees that he is under agreement to another employer he cannot, or rather as a man of honour he will not, give him employ. He may have a verbal agreement though not a written one, and the members of the association think it is their duty to act with one another in matters of that kind.

17,487. In fact it is their duty to see that that inquiry paper is filled up accurately?—Yes.

17,488. (*Mr. Mathews.*) The association interposes no obstacle at all to the employment of men in the regular way, provided that they are perfectly free from a previous engagement?—No obstacle whatever.

17,489. When a man applies for employment and states that he has no prior engagement, is it generally the case that the person to whom he applies applies to his previous master?—It is understood to be his duty always to apply.

17,490. Is there much deviation from that rule?—I do not think that there is much. Perhaps when everything is going on smoothly there is a little laxity, but it is understood to be against our rules not to apply.

17,491. But in the event of the master to whom he applies finding that he has broken a contract with some previous master, he invariably refuses?—Not invariably perhaps, but it is the rule.

17,492. The rule with reference to apprentices is adhered to, is it not?—It is difficult to enforce the rule as it appears in that book. An apprentice may have been with several employers, and he may say that he has lost his lines of clearance. He is sometimes taken in as a skilled workman is, and an inquiry sent to his former employer.

17,493. That is to say, the apprentice may have broken his agreement so often that it may have been gradually lost sight of?—Yes, or through other causes he may be unable to produce his lines of clearance.

17,494. (*Mr. Booth.*) Have you any means of knowing whether a master ever employs a man under engagement?—I should think not.

17,495. (*Mr. Roebuck.*) You do not know any instance?—I do not know any instance.

17,496. (*Earl of Lichfield.*) Does this union of masters interfere or attempt to interfere, directly or indirectly, with the trade of those masters who have refused to join the union?—Certainly not. Indeed, those who have not joined us act in concert with us as much as our own members do.

17,497. (*Mr. Hughes.*) We have been told that these rules were agreed to rather in a hurry?—Yes.

17,498. I should like to ask whether the 10th and 11th and 12th rules were discussed; those are the rules as to "Action to be taken in case of demands made by workmen," "Duty of members in case of a strik," and "Powers of general meeting of association to resolve "that members shall cease to employ workmen." It seems to me so extraordinary that men should agree to be bound by two-thirds in such points as these, and to such an extent, that I should like to know whether they were really carefully considered?—Those very rules were considered fully, and discussed many days.

17,499. Do you think that the members of the

Mr. J. P. Smith.
26 May 1868.

association are prepared to carry them out thoroughly?—I think so; so far as we have gone they have always done so.

17,500. (*Lord Elcho.*) Do you know, with respect to the trade union of the men, what majority binds?—I do not know.

17,501. A bare majority, is it not?—I really do not know how the men's unions act in that respect.

17,502. (*Mr. Mathews.*) I think you stated that this association was established as a defensive association?—Entirely so.

17,503. Against the association of the workmen's unions?—Yes.

17,504. In fact it has been a defensive association throughout?—I cannot recall any act just now that has not been a purely defensive act.

15,505. And in the event of the workmen's union ceasing this association would become a dead letter?—We should be only too glad to give it up.

15,506. It has never been aggressive?—No.

15,507. Defensive throughout?—Defensive entirely.

15,508. (*Mr. Hughes.*) I understood the last witness to say that it was formed in anticipation of the strike of 1866?—In anticipation of the lock-out, not in anticipation of the strike. We had many strikes pending at the time.

17,509. You consider that purely defensive?—Perhaps I had better recall, as nearly as I can remember them, the circumstances of that period. There were a series of strikes of various classes of men and various kinds. Then there came a general claim for the reduction of the hours of labour from 60 to 55 hours a week, the men asking a conference on the subject. The masters met then having no association formed, and considered the subject. They felt that it would not be prudent to strike off five hours from the week's work, and they agreed that each employer should hold a conference with his own men and ascertain what was wanted, and make any reasonable concession. The men in the various yards, after meeting with their employers, told them that they had no power to meet with their employers at all; what they wanted was an aggregate meeting of the employers and delegates from the workmen to hold a conference and discuss the matter. A conference was held, and I think it extended over two or three days, at which the masters agreed to limit the hours of work in a week to 57. The workmen agreed to that, and the next demand turned out to be that there was to be 60 hours' pay for the 57 hours' work, which the masters refused. A number went out on strike from various shops, and the masters saw no escape from the difficulty but a lock-out, so they formed an association with two or three days' notice, and locked out 17,000 or 18,000 men at once.

17,510. (*Mr. Mathews.*) Was the effect of that lock-out to bring the men to the masters' terms with reference to the decreased pay for decreased work?—Yes, the joiners came in first, and the others followed in succession; the carpenters were the longest out, they remained out 16 or 18 weeks.

17,511. (*Lord Elcho.*) Are not some on strike now?—The shipjoiners are on strike now.

17,512. (*Mr. Mathews.*) But the strike is not of that nature to justify the employers in a general lock out?—Not at the present time.

17,513. If the present strike were to become aggravated the masters would be obliged to have recourse to a lock-out as previously?—Yes.

17,514. They never have recourse to a lock-out except on an extreme emergency?—No.

17,515. In case of a fight on the part of the men against the masters, it is for the masters to bring into play their reserved forces and have a lock-out?—Yes, it is the only power they have.

17,516. Is that generally successful?—The first was successful; and that now pending is a lock-out only of joiners belonging to a particular union.

17,517. And if the masters resorted to a lock-out again, do you think it would be effective?—I believe it would be effective.

17,518. But it is a remedy which the employers do not employ except on an emergency?—Certainly not, it is a very serious loss to themselves.

(*Mr. Steele.*) May I be allowed to add one sentence. Some of the Commissioners have spoken as if I had led them to understand that we did no work by piece work. What I referred to altogether was the shipwrights, who only do day work; but the boiler makers and ironworkers are altogether on piece work; we work with them on piece work, and prefer it.

The witness withdrew.

Mr. J. Allen.

Mr. JOHN ALLEN examined.

17,519. (*Chairman.*) Are you a boiler-maker at Liverpool?—An iron shipbuilder. The association or union with which I am connected extends over all parts of the three kingdoms where the trade exists.

17,520. It is an iron shipbuilders' association, and the head office is in Liverpool?—Yes.

17,521. (*Lord Elcho.*) Does it embrace the Clyde?—Yes.

17,522. (*Chairman.*) Are you the secretary?—Yes.

17,523. When was it established?—In 1834. When first established it only embraced the boiler makers' society; but when iron shipbuilding commenced, any men being employed upon that business, it also embraced the term "iron shipbuilding" with the work of the boiler-makers, and took the name of the Boiler-makers' and Iron Shipbuilders' Society of Great Britain and Ireland. That is the title at present.

17,524. How many members have you got at present?—We have about 7,000.

17,525. Have you got your rules here?—I have not them with me. I forwarded them here some time ago in anticipation of my coming to give evidence.

17,526. What is the subscription for members?—4*s.* per month at present.

17,527. Have you branches in most of the ports; have you a branch in Dublin, for instance?—Yes, in Dublin, and Waterford, and Cork, and Belfast.

17,528. And you are on the Clyde also?—Yes, and on the Clyde. We have members in Glasgow.

17,529. You have branches in the chief ports of the United Kingdom?—Yes.

17,530. How long have you been secretary?—It is 11 years this month since I took the head secretaryship of it.

17,531. Have you at times had strikes since you have been the secretary?—Yes, we have had various strikes. I have a general statement of our strikes and our expenditure for the last six or seven years.

17,532. (*Mr. Hughes.*) Do not you print your periodical reports like the other societies, which show the expenditure?—We have printed them, but last year (I am bound to admit it, and I admit it with sorrow) we had not funds to go to the expense of doing so.

17,533. (*Mr. Mathews.*) You say that your contribution is 4*s.* a month?—At present it is.

17,534. And what fund have you now?—Somewhere about 1,000*l.* now.

17,535. (*Chairman.*) Will you tell us when the important strikes occurred, how long they lasted, and what they cost you?—During the five years previous to 1867 our disputes or strikes cost us 5,803*l.* 1*s.* 3½*d.*

17,536. That is for the whole of your branches?—For the whole of our branches.

17,537. Where was any particular strike?—The heaviest was at Chatham Dockyard.

17,538. That cost how much?—I have not the exact item. It included the whole of the strike expenses together during the period.

17,539. What was the date of the Chatham strike?—It happened in 1862.

17,540. And how long were the men out on strike?—I believe that the men were out about 13 or 14 weeks.

17,541. What was the question which led to the strike?—It was on account of the iron shipbuilders being requested to work with the shipwrights and other men who were not accustomed either to the shipwright's trade or to the iron shipbuilding trade. The men objected; consequently a strike ensued, and it continued for 13 or 14 weeks.

17,542. (*Mr. Roebuck.*) And what was the result? The result was that it almost ended as it began. The shipwrights went on the work, and other assistance they got. The men thought proper to go in and do the best they could to instruct the shipwrights and work themselves, and so it ended.

17,543. The strike failed of its object?—The next was at Mr. Wigram's of Blackwall. That cost our society 1,500*l.* It was on account of our men not being willing to work with the shipwrights, to instruct them in the iron shipbuilding. Mr. Wigram was agreeable for our men to work with the shipwrights, but our men were not agreeable to instruct them in the art of iron shipbuilding; consequently our men retired from the yard and they came upon the funds of our society and received strike-pay

17,544. (*Mr. Booth.*) What was the result of that?—It resulted in this, that from time to time, and as it went on, Mr. Wigram continued his work as he commenced it. We gained no advantage, and I do not know that Mr. Wigram did any more than gain his object and we ours. I do not know whether he lost anything or not.

17,545. (*Mr. Roebuck.*) When you say, "We carried our object," what did you gain?—We gained nothing, but lost our money.

17,546. (*Mr. Hughes.*) You were beaten?—We were not beaten.

17,547. You did not get what you went out for?—No.

17,548. But Mr. Wigram did, for he carried on his work?—Yes, but whether to an advantage or not I cannot say.

17,549. (*Mr. Roebuck.*) But you lost your money?—Yes. Those are the only two strikes that are of any great moment.

17,550. (*Mr. Mathews.*) At what period did this strike at Mr. Wigram's occur?—Somewhere about the same time, 1861 or 1862. The next case that I have to name which may perhaps be considered to take the course or name of a strike is a question that has been just brought up, before my taking my seat, by the previous witness; that is with respect to the lock-out on the Clyde. The lock-out on the Clyde cost our society 2,167*l.* 8*s.* 10*d.*

17,551. (*Mr. Booth.*) Was that the lock-out resisting the diminished pay according to the diminished number of hours?—No; I have never heard of that subject before as the cause of a lock-out.

17,552. What was the object of the strike you now refer to?—There was a firm in Renfrew in whose shop there were 13 members of our society, and they wished to have an increase on the pay, either to do so much less or to receive more for what they were doing. We only had 13 members in that shop, the greater number being non-unionists and those who come under the name of apprentices, or men progressing in the trade. The men solicited that increase, but eventually it turned out that through the employers in that yard applying to other firms the men of that yard left, and in consequence of that a lock-out took place, but without having any reference whatever to the shortness of the time of labour; it was merely a question of advance of wages on the prices then received. Now so far it was the case that our men came out, that is to say, the unionists of our trade came out; but they were in the minority, a long way in the minority; we never had above 2,000 men, members of our society, on the Clyde, where there are so many thousands. We were in the minority and compelled to give way to the non-members, and eventually out of the many thousands that were locked out during that time we only paid to the members of our society during that time 2,167*l.* 8*s.* 10*d.*, whereas if we had been the majority we should have had five times that sum to pay.

17,553. (*Mr. Roebuck.*) What was the result of that?—The result was that those men who first brought the union men out found that they had no funds to fall back upon, and they wished to throw themselves upon the funds of our union. We would not countenance them, and they ultimately rushed to the employers and went in and our men went in with them.

17,554. (*Mr. Booth.*) The strike failed of its object?—Yes, it failed. Our society was quite opposed to it from beginning to end. They were compelled to leave. They said, "Would our society stand aloof and see "members of a union stopping at work while non-"members were striking for such an advantage as "they thought it would be to them?" So that we really suffered by the non-unionists, and the union bore the blame of the whole action.

17,555. (*Mr. Hughes.*) Is yours a friendly society; have you any rules as to giving allowances to your members in case of accident, sickness, and so forth?—Yes. I will read the statement of what that has cost for the same period as I have now named. For the six years previous and up to January the 1st, 1868, the expenditure for sickness was 18,145*l.* 4*s.* 3*d.*; funerals, 4,213*l.*; surgeons and their attendance on members, 5,052*l.* 3*s.* 4½*d.*; travelling in search of employment, 15,698*l.* 18*s.* 2½*d.*; aged members at home, 1,111*l.* 10*s.* 10½*d.*; aged and superannuated members, 1,391*l.* 0*s.* 7*d.*

17,556. What is the difference between the last item and the last but one?—There are two classes; men that are considered too old to travel, others that are considered too old to labour. Then for sending men to situations the expenditure was 259*l.* 7*s.* 7*d.*

17,557. Why was not that included in the 15,000*l.* for travelling?—That refers to men in search of employment; men that are out of employment, and wish to go somewhere else to seek it.

17,558. What is the meaning of "travelling"?—We give them a travelling card, and they receive so much per day at the branches throughout the country while they are in search of employment.

17,559. And upon that you spent 15,000*l.*?—Yes.

17,560. Why was not this 250*l.* that was spent on sending members to situations included under the same head of travelling?—It is not travelling; I will explain what it is. If an employer or a foreman has a particular desire for a certain person, and that person is out of employment, we go to the expense of paying that man's fare or travelling money to send him to that employer to oblige him so far. That is different from a man travelling in the other way.

17,561. (*Mr. Mathews.*) When you speak of travelling expenses, they have so much a day besides the travelling expenses to account for that sum, have they not?—No, unless the man is out of employment and depending upon the funds of the society, then we allow him for the time he is travelling besides paying his fare.

17,562. Suppose that he is out of employment and is going about the country to search for work, does your society pay him so much a day while out of employment, or is that 15,000*l.* travelling expenses exclusively?—No, not exclusively; the travelling expenses are simply what is paid as a man's railway fare to take him to the place.

17,563. You paid 15,000*l.* during that period to men travelling?—Men on travel looking for employment.

17,564. It is a large sum, is it not?—Yes, but we must take into consideration the depression that existed for a part of the time. The 259*l.* 7*s.* 7*d.* is the bare railway fare; the other sum, the larger sum 15,698*l.* 18*s.* 2½*d.*, is at so much per day while the man is travelling the country in search of employment.

17,565. (*Mr. Hughes.*) That is all your expenditure?—That is all our expenditure.

Mr. J. Allen.

26 May 1868.

17,566. Besides which you have expended in strikes or disputes in the same period somewhere about 6,000*l.*?—Yes.

17,567. Then in fact you have raised in your society considerably upwards of 50,000*l.* in those six years?—Yes.

17,568. Has that all come by the 4*s.* a month regular subscription?—Yes, 54,151*l.* 15*s.* was our expenditure for that period, and that has all come through the force of subscriptions.

17,569. Have not you had any levies to bring it up to that amount?—No, not for any of the circumstances here named.

17,570. Then you have never made any call beyond the 4*s.* subscription?—No.

17,571. Have any of your benefits ever been refused, or is it the case that you have always paid all the benefits that you undertake to pay in your rules?—No, we have not.

17,572. Just tell us the times when you have not?—Latterly the depression has been so great that we have been compelled to reduce the benefits in respect of travelling money while out of employment, and that is the only thing that we have been unable to meet.

17,573. By your rules do you settle the amount which you will give to travelling in that way?—Yes, we settle 1*s.* 8*d.* per day for a person if he loses his employment through depression of trade, or anything satisfactory to the society.

17,574. And that particular allowance you have had to reduce?—We have had to reduce that at present, we are under a shilling a day.

17,575. How did you reduce that?—We reduced it by taking the sense of the members in question.

17,576. And they agreed to this reduction?—Yes.

17,577. (*Mr. Mathews.*) You state that you have only 1,000*l.* in hand; supposing that want of employment should continue, will you be obliged to increase your contribution in order to meet the liabilities?—We increased the contribution to meet the liabilities which we are at present under, we increased it from 3*s.* 6*d.* to 4*s.* a month.

17,578. You have increased the liabilities, and been obliged to decrease the allowance to travelling members?—Yes.

17,579. Shall you not be obliged to carry that operation still further if the present depression continues?—We are about to take the question up before the whole of the members, and know whether we shall increase our contribution or lower the benefit of travelling money for a certain time. For sickness and funerals we still pay the full amount.

17,580. (*Mr. Booth.*) Have you any stated amount of superannuation which you allow?—Yes, when a man becomes too old to labour we pay him 5*s.* a week, and his contribution ceases.

17,581. Have you been able to pay that in these hard times, or have you been obliged to reduce it?—We have been able to pay that. As to superannuation, sickness, and funerals, we have met those demands.

17,582. (*Mr. Mathews.*) On the occasion of a strike in any particular part over which your association extends, do they before they strike communicate with you at head-quarters for your consent?—In the case of any strike that takes place they are bound to receive the consent of the executive council; if they do not receive it they are allowed no support whatever.

17,583. I think you said that the executive council is at Liverpool?—It is in Liverpool at present; it has been in Manchester.

17,584. Unless they communicate with the executive council in Liverpool and get the consent of that council, they are not allowed to get any money out of the association during the continuance of the strike?—Precisely so.

17,585. And in the event of their so communicating with the council, the council supports them with the funds while out on strike?—If they consider that they were justified in taking up the course of striking then they receive according to the amount prescribed by the rules.

17,586. In the event of the funds of the association being exhausted incidental to a strike, you would be obliged to increase the payment from the members?—We should seek to support them by a levy.

17,587. Have you had occasion to resort to a levy?—We have in some cases; for instance, there was a dispute in Liverpool some weeks ago which was contrary to the wish of the executive council. The executive council would not countenance it. So far as the principle was concerned the executive countenanced it, but the executive entertained no hope of carrying the object; consequently they advised them not to strike, but the men persisted in striking, and consequently they struck upon their own resources, and had to depend on their own resources, and eventually they failed. That was a reduction of wages that the employers made of the 4*s.* a week, and the men agreed to 2*s.* reduction, but the employers would not accept that.

17,588. Where did this occur that you are now speaking of?—In Liverpool, about five or six weeks ago, the employers would not agree to meet the men half-way, that is to say, between 4*s.* and 2*s.*, consequently the men came out.

17,589. That was the iron shipwrights, was it not?—The boiler makers and iron shipbuilders.

17,590. What is the result of the strike?—The result of the strike is that the men are in the same position now as in the beginning, for there is no work in the shops, and the men are not required to do it; the men who took the union men's places are walking the streets.

17,591. Did the men who took the union men's places take the reduced rates of wages, or did they get more?—Some of them did, they received that which the men had before they came out; they gave them that in order to induce them to come in.

17,592. Then there is no question as to a strike now as to the amount of wages, but simply as to the finding employment for the men?—That is the question at present.

17,593. And if the masters were to come and say, Now, we have got employment for you if you choose to come in at the reduced rate of wages, the men would be ready to go in under the master's terms?—Yes, but under the protest which that first gave to the employers.

17,594. No man goes in satisfied under a reduction, but seeing the inevitable necessity for reduction they would not stand against fate, but make the best of a bad bargain?—Certainly the men would take the work from the masters at the price they offered when the men struck.

17,595. (*Mr. Booth.*) As I understand it, the expenses that you have incurred in these abortive strikes put it out of your power to make the stipulated payment to the men for travelling expenses?—Yes, during the great depression.

17,596. But for those strikes you would have been able to keep faith with those men?—Yes, had trade been up to its usual point or anything like it.

17,597. Or if those expenses had not been incurred in those abortive strikes then you would have been able to make the stipulated payment?—Yes, if it had not been for the expenditure in strike years we should have been able to do so.

17,598. (*Earl of Lichfield.*) How many members have you in the Thames shipbuilding yards?—I could not say.

17,599. About how many up and down the river Thames, I mean?—We have between 1,300 and 1,500 men in London and the vicinity in different departments belonging to our union.

17,600. Have you been supporting them out of the funds of your association lately?—We have been supporting all those who come under the out-of-work donation. We have been supporting them at the East end.

17,601. (*Mr. Mathews.*) In regard to Liverpool, in

the case of this notice of reduction on the part of the the masters, what was the rate of wages previously paid; how much a day?—It was 32*s.* a week for riveting.

17,602. For how many hours?—Fifty-seven and a half hours per week.

17,603. And now they propose to reduce the men to 28*s.* a week for the same number of hours?—Yes, they have reduced them, and eight months before that they reduced them 3*s.* more, so that within fifteen months they have reduced the men in Liverpool 7*s.* per week.

17,604. That reduction having been brought on by the want of employment, in fact?—Well, we may say that it was brought on by the want of employment, but it was a very singular fact that those who brought it on had plenty of trade.

17,605. Is it not the fact that disasters have occurred among the iron shipbuilders in Liverpool, and has there not been great distress and ruin among those large establishments, and a breaking up?—I do not know any large establishment that has broken up.

17,606. At all events they have suspended, and not paid their creditors; that I call breaking up?—Well, I will allow that there have been some bankruptcies.

17,607. Then we will assume from that fact that the trade has been bad, and that there has been distress existing among the masters as well as among the men?—Yes, but I do not think, if I am to speak candidly (though I would also speak cautiously), that it was the depression in the trade that was the cause of the bankruptcies you are speaking of.

17,608. (*Mr. Hughes.*) What was the cause?—I should wish to be prudent. I would not wish to commit myself if there was a possibility of avoiding it. I am quite unacquainted with the operation of the law, but I know that it is very curious, and I may commit myself if I give the cause. I hope, therefore, you will not press me.

17,609. (*Mr. Mathews.*) I suppose you admit that it has arisen from causes entirely beyond the control of the masters and the men?—I believe that it was not beyond the control of the employers in the case, or in the two or three cases, or whatever number you are pleased to refer to.

17,610. You do not mean to say that the employer has failed, and had his establishment broken up from choice?—I mean to say that sometimes employers are imprudent, and run on one side of themselves as well as the men.

17,611. (*Chairman.*) Is there anything else that you wish to state here?—No, there is nothing else that I wish to say at present; but in the course of the examination of the employers, questions may arise that I should be able to answer, and there may be questions, perhaps, which at present I might go into, but yet you would have to recur to them again in the event of examining employers after me.

The witness withdrew.

Mr. Peter James Robson examined.

17,612. (*Chairman.*) In what way are you connected with the shipwrights' unions?—I am the President of the Shipwrights' Provident Union of the port of London.

17,613. That is an elective office for one year, probably?—Yes.

17,614. How long has that society been established?—It was established in 1824, and previous to that year there was no trade union or combination among the shipwrights in the Thames. But there had been frequent disputes amongst the employers and the employed, and also among the men themselves in reference to the way in which the work was taken. A number of the men took vessels to build by the job, and sublet it at a price at which those who did that work, although it was the mechanical portion of the work, were not able to make more than labourer's wages, and that was the cause of the union being instituted. And the principles of the union were that the minimum rate of wages should be 6*s.* per day; that the men should share equally among each other the amount earned on each particular job, and the price book was made out and submitted for the approval of the employers.

17,615. By the price book was the rate fixed at which they would take certain work by the piece?—Yes, the rate at which they would take certain work by the piece.

17,616. All the shipwrights were to share equally when that transaction was completed; but was there anything that compelled the man that took that piece of work to pay any given rate of wages to the labourers that he employed to do it?—In the trade at that time there were no labourers in the shipwright department until the iron shipbuilding took place. There were no labourers who had any connexion at all with wooden shipwrights.

17,617. Then at the time that that union was established the job might be taken by the piece, but then the shipwrights that were engaged in doing it were all entitled to share equally, and they were bound to calculate the price of the piece at the rate of 6*s.* per day each man's labour?—That does not follow, because if they took it for a price and had a stamped agreement (and it is at all times the wish of the men that that course should be adopted), and if it would not pay that rate all through they would have to work for some time for nothing till the completion of the job.

17,618. In taking a job they would calculate that those men should be paid a sum which would work out at the rate of 6*s.* a day, If it should turn out that they had done it at a less cost of labour, there would be something to divide, but if the job required more labour they would not be paid a farthing more?—Yes, that is so.

17,619. Have there been in your time some strikes by the members of that union?—There has been no general strike throughout the trade since that time.

17,620. Since 1824, you mean?—Since 1824 there has been no general strike, but there have been a few occasional strikes. The shipwrights struck at one particular yard, Messrs. Young, Son, and Magnay's, in 1856, on a question of beer time. The shipwright's work is very exhausting, and they require rest and refreshment, and it has always been the rule of the trade that half an hour should be allowed at 11 o'clock in the morning and half an hour at four o'clock, and Mr. Young wished to do away with that, and the men on those premises struck.

17,621. For that 6*s.* a day how many hours in the day did they work?—Nine and a half hours a day in the summer.

17,622. From what time?—From six in the morning until six at night was the day's work. Half an hour was taken out for breakfast, half an hour at 11 o'clock, one hour at one o'clock, and half an hour at 4 o'clock.

17,623. That is two and a half hours out of the 12, which would leave nine and a half hours' work?—Yes.

17,624. As far as your memory goes back, that was the number of hours they worked, was it?—That was the number of hours.

17,625. One firm tried to strike out the half hour at 11 o'clock?—They wished us to leave off at five in the afternoon without having these two half hour intervals.

17,626. Giving the same time but differently distributed?—Yes.

17,627. And the men disagreed and struck?—Yes.

17,628. Was it a general strike along the Thames?—No; in that one particular yard.

17,629. How long were they out?—They were out four months.

Mr. P. J. Robson.

26 May 1868.

17,630. In the end, what was the result?—That Mr. Young got as many men as he required to go in at his terms.

17,631. (*Mr. Mathews.*) The strike failed?—Not failed altogether; it failed as far as that yard was concerned, but the shipwrights were of opinion that whatever ruled in that yard would rule through the river.

17,632. (*Chairman.*) Messrs. Young took away that half hour?—Yes.

17,633. Do I rightly understand you that all the other firms on the river continued to allow that half hour?—They continued to allow it until very lately; but we have gone into work at any firm where they are doing the ironwork without the half hour, because it is not prudent that the machinery should stop during that half hour, so that if the men require beer or whatever they have, they take it as they go on with their work, or only stop a short time, and do not come off the premises.

16,334. (*Mr. Booth.*) That was not an unreasonable demand, was it, on the part of the masters, considering that it is inconvenient to stop the machinery?—They had no machinery in Mr. Young's case, and we objected to that demand until a good reason was shown why we should submit to it; there seemed no good reason why Mr. Young should do away with it, seeing that he gave us the two half hours at another time.

16,335. (*Mr. Mathews.*) Were the men who were out during that time paid by the society?—Yes.

16,336. What is the contribution?—We pay a penny a day for every day that we work. The men on that strike were paid 4*s.* a day.

16,337. How many members have you?—We have 1,400.

16,338. What is the state of your funds now?—We have 12,400*l.* in the new three per cent. annuities. I may say that our society was first a trade union society, established purposely for the protection of our trade and our members, but seeing that we have had no strikes for such a number of years, our funds have gradually increased, and it has merged largely into a benefit society.

17,639. The benefit purposes now take precedence in point of importance of the trade purposes?—Yes, with the exception of that strike of Messrs. Young's, which cost us nearly 3,000*l.*, we have had scarcely any strike; the amount paid in that way has been trifling in the extreme.

17,640. Have you certain rules providing for the payment of the members who are laid by from sickness and other causes?—We have no out-of-work fund.

17,641. (*Mr. Hughes.*) Have you a copy of the Rules?—Yes (*handing a copy to Mr. Hughes*).

17,642. (*Chairman.*) Do you calculate that you have derived any benefit from the unions beyond the benefits in sickness and burial fund and so on?—Yes, that is proved by the bare fact that they were always having disputes with the employers and among themselves before this, and that there have been none since or very few; of course there is disagreement, because we shipwrights in London work differently from any other shipwrights in the kingdom. This is the only port where they work by the job or the piece.

17,643. (*Mr. Hughes.*) Are the shipwrights who are out of employment in the East end members of your society?—Many of them; a number of our men are out of employment in the East end at the present time.

17,644. Then they are getting donations at present, I suppose?—We have no out of work fund. From the nature of our hiring, and from the fluctuations of the work, it would not be practicable. We may be all employed one day and half the hands walking about the next, because the specialty of the port is not so much shipbuilding as ship repairing. We have had a deal of shipbuilding of high class and low class in London, but it is only at certain times. In the time of the Russian war we numbered then 2,300 members. Of course after that we had to fall back on the old work that we always look for in the river, the repairing work; vessels must come to London and they must be repaired.

17,645. (*Mr. Mathews.*) You are speaking of wooden vessels now, not iron vessels?—I am speaking of wooden vessels now.

17,646. Your association applies principally to wooden vessels?—It applies principally to wooden vessels, but we do the ironwork as well in certain places. We do it for Mr. Wigram and for Mr. Green, but in the large yards, such as that of the Thames Company Limited, we do not. We are supposed by the public to earn 7*s.* a day, but it does not follow that we earn two guineas a week. In the repairing trade we may have to wait several days before we can dock a vessel; only from eight to 16 men are required to dock the vessel, and perhaps 20 or 30, but possibly not so many, will be required on the repairs. Our work fluctuates very much indeed.

17,647. (*Chairman.*) Still I do not see what your union does for you excepting that it is a source of strength in case there is need to resist the employers. You have tried one or two strikes that have been immaterial in their results; you formed a union and said, "We will have not less than 6*s.*" and 6*s.* you have had from the time that you formed the union to the present time. Therefore the strength of the union is that in case a master should infringe what you think to be sound trade rules, you would stand by one another?—Just so.

17,648. In case a master should offer you 5*s.* when you think that he ought to pay 6*s.* you would support one another?—Yes.

17,649. (*Earl of Lichfield.*) You do support one another when out of work?—No, only when out of work on strike.

17,650. We have been told that the shipwrights on the Thames now have been supported by their association. What association would that be, for you say that yours are not supported?—The Commission have been quite misinformed on that point. There is only only one shipwrights' society, and ours is that society, and we have no out-of-work fund. The statement has appeared frequently in the papers that the shipwrights were being supported and fell back upon their union; but such is not the fact; they would receive no support unless they were called out on strike.

17,651. (*Chairman.*) Whose yard do you work in?—Mr. Fletcher's.

17,652. Have you taken the work of any new ship by yourself, because in the case of Mr. Wigram's men, a single man would take the whole work himself?—No.

17,653. You do it jointly?—Yes, we do it jointly, and they do it the same. There must be one leading man; it is generally in the name of one man and mates. One man does not take it alone, but one is nominally the leader, and he is the provider of the stuff, but he shares just the same as the others.

17,654. He has nothing more to do than the rest with the terms accepted, except that as between him and his mates he is considered to have a better judgment; when you settle what terms you are to take the work upon you consult together, I suppose?—Yes.

17,655. (*Earl of Lichfield.*) You have said that the men have always wished that there should be a stamped agreement; in that case with whom would you have the masters enter into that stamped agreement?—With the party, or company, or gang (we call them a company) who would have to take it first, say six or eight men.

17,656. You said that the reason why the men wished to have that stamped agreement was that it would enable the masters to compel the completion of the contract. How would they be able to compel its completion if they only had a stamped agreement with six or seven of the men; those six or seven of the men could not complete the contract without the assistance of the others, could they? No; but those who went on to the work afterwards should by rights

see the agreement and know what they were going to work for, because if the business is carried on in a proper manner the employer will see that it is not overdrawn as they go on.

17,657. But the master must have some responsible party with whom to enter into such an agreement as you propose, and if he only enters into an agreement with six or seven men who undertake to do the job, employing other men to do it, I do not see what guarantee the master would thereby have of the job being completed?—There would be no objection to the whole of them signing it. That course has been adopted in many instances, for all the men to sign the agreement as they went on, but that is not usual; as a rule, the employer would not put it into the hands of those whom he did not consider trustworthy to carry it out.

17,658. (*Chairman.*) The 6*s.* is only the drawing, as far as I understand; you are to be paid so much for the total work, on account of which you may draw 6*s.* a day until the job is done; and if then adding up all the 6*s.* they do not amount to the contract price, the balance is paid over to you?—Yes. There are two ways in which the money is paid in the port. One is where there is no payment by time at all, but where you draw on account of the price, which there must be an agreement for. In some yards they take no agreement for day's work at all; but you send in a certain price, and then you get the price for the work performed according to the specification, and you get that each week in the majority of instances; there are one or two where it is done fortnightly. But in other yards they draw according to the number of day's work that is wrought, and then you receive any surplus at the end. The more legitimate way is to draw it according to work performed according to specifications.

17,659. (*Earl of Lichfield.*) We have been told that the shipwrights were offered work at 6*s.* 6*d.* a day. Are you aware whether that is so or not?—You mean in reference to the Thames Limited Company?

17,660. I refer to the evidence that was given to us by the secretary of that company just now?—They called some of their leading men, some who are in the habit of signing the contracts or of being considered responsible, and told them that they had six vessels of 800 tons to build, and gave them the specifications for them, and said, "You will have to do it at a reduction of 10 per cent." The men took it at what they thought was a reduction of 10 per cent. In the opinion of some it was an error of judgment on their part, because it was far more than a 10 per cent. reduction. When these same vessels were in the market another firm asked other shipwrights, "In the event of our taking this what will you do it for?" Now in the other case the men said that they would do it for a pound (that is per ton on the shipwrights' work); but in this particular case of the Thames Limited and these particular men they offered to do it at 12*s.* 6*d.* Now the union does not interfere in the least with any persons taking contracts. They do not say to any man, "You shall take the contract for this sum or that;" but they allow the better class of men or the better party to do it cheaper if they can, which is, they think, a legitimate arrangement. But this price of 12*s.* 6*d.* was not what the directors of the company or the manager of the company wanted; they wanted that the work drawn for should only be drawn for at 6*s.* 6*d.* a day, and the people who were called in knew that would not be allowed; for this reason, they had been called in question before for having had surplus money on jobs at that particular yard which they had not shared with the whole of their mates according to the custom of the trade; and it would have followed that if they had paid these men 6*s.* 6*d.* a day on account, the extra sixpence if they got it, that is to say if it paid them 7*s.* right through, would have gone into the pockets of the signers, or the responsible people; and it would also have followed that if we had worked for that particular firm in this special case for 6*s.* 6*d.* a day, we should have had to do it for every other firm; and it did not appear that the case was special only to them. But the men brought the case before a general meeting of the society, which said, "You know the rules of the society; you may work "for them at any price you like; 10 per cent. re- "duction or anything else that you like, but you may "not draw for your work less than 7*s.* a day, seeing "that it will rule the trade; but what you may do is "this—you may agree for a specification with the "manager, and agree with him that a certain amount "of work shall be paid a certain price for, and if it "only comes to 5*s.* a day, then it shows that you can- "not do any more. If you make that agreement the "union will not interfere with you at all." Now persons have stated in the public papers, and it has been believed by the public, that the refusal of the shipwrights to do that work was the cause of the company losing the contract; but the manager of the company told me when I saw him: "I did not send in "that price of 12*s.* 6*d.* before the directors, because "it was too small; they could not have completed the "job for the money; the directors never saw that; I "never sent it in."

17,661. (*Mr. Hughes.*) The manager was not a member of your society, I suppose?—He has been.

17,662. And he did it out of friendship to the men, I suppose?—Yes. These people who gave in the estimate to do it at 12*s.* 6*d.* believed that they could do it and make a good job of it; but others believed they could not.

17,663. (*Chairman.*) How could the directors be ruined by paying a very low price for the article they wanted to buy, because I understand you to say that the manager would not send it in. The seller offered to do it instead of at a pound at 12*s.* 6*d.*; the agent for the buyer says, "That is so low that you must lose by it, therefore I am determined to do more." That seems to be the effect?—But you see there were two parties who sent in their agreement to this man. One party, who brought their case before the society, sent in theirs for 12*s.* 6*d.* Now what I assert is that the company did not refuse to take that contract to build these vessels because the shipwrights refused a reduction in wages. They asked our men to reduce the price usually paid for such work 10 per cent., and I assert that the men did it, and that they did it to a greater extent than 10 per cent. reduction, that in fact they reduced their wages 20 per cent.

17,664. (*Mr. Mathews.*) But did not they stipulate that they should draw 7*s.* a day in the meantime?—If it was to be drawn on account right through the job.

17,665. And if the employers had paid on account 7*s.* a day to the men, they would have paid themselves short at the end of the time, and they could not have called on the men to re-imburse them?—Yes, they could.

17,666. (*Mr. Hughes.*) Would not the fact have been, in the instance which has been put to you, that so long as the price agreed upon would afford 7*s.* a day, the men would have drawn that, and then would have completed the job without drawing anything farther?—Yes, they would have done so. But that is not the course that the men were recommended to take, or that reasonable men would take. If they found that they had taken the job at a price that would not pay 7*s.* right through, the reasonable way, and the custom of our trade, would be to see at the fortnight's end whether they had overdrawn, and if they had, not to draw so much.

17,667. (*Chairman.*) How much was the sum in question?—500*l.*

17,668. "I will take it at 12*s.* 6*d.* a ton, and I am to draw 7*s.* a day without reference to the quantity of work done," was that what the shipwrights said?—We always have reference to the quantity of work done.

17,669. If I say, "I will take the shipwrights' work for 500*l.* for that ship of 800 tons, and I will draw 7*s.* a day," according to that contract the man that employed me would be bound to pay me 7*s.* a day; and then when he has paid the 500*l.*, and the ship is

Mr. P. J. Robson.

26 May 1868.

only half finished, he would say, "You are bound by your contract to finish that ship." Are there not some men that would say then, "It is necessary for me to have a breakfast and a dinner, and if you do not give me enough to get it, I will not continue working for you"?—That is not the custom of the trade as a matter of fact; although they might say that, men have worked for weeks without being paid. There have been times when a few of them who have been required to finish the job have been paid by their mates who were at work elsewhere, and who were on with them at the time.

17,670. (*Mr. Hughes.*) When they have a bad job, according to your experience, they finish it loyally themselves?—Yes, and the cases where they say that it is overdrawn, are the cases principally of the Government rams, and it would defy anybody to see what they would cost in the end, seeing that there are so many alterations in them.

17,671. (*Mr. Mathews.*) So that in the case of any alteration of a specification, the contract is void, and the men must go on at the stipulated rate of wage per day without any contract at all?—That is the custom.

17,672. So that putting aside the Government contracts, and putting aside any alterations in the terms of the specification, if the men agree with the master to build a vessel at 12*s.* 6*d.* a ton, and draw 7*s.* a day, supposing that before the vessel is half built they find that they cannot build it at that price, have the men then a right to say, "We will not go on working any longer," or the master to say, "I will not let you go on working any longer"; is not the stipulation still that the men have 7*s.* a day?—That is not the legitimate arrangement under which we work.

17,673. I meant to ask you whether that was not the legitimate result in the case of this contract that was offered you?—No, it does not appear to me so, because in going on with our work we always have regard every week to the question whether we have earned the money.

17,674. (*Chairman.*) As I understand you, in many specifications you put stages. "You shall have so much value for work done;" and you pay the man either at those stages, or else a certain sum divided into 7*s.* a day?—But what I am endeavouring to prove is this, that certain persons have made a statement to the public, and it is believed by the public, that the company lost their contract in consequence of our refusal to work for 6*s.* 6*d.* a day. Now the facts of the case are that they accepted our contract, that is to say, they accepted our price per ton for these vessels, but they refused to allow us to draw it in our way. The way in which they wanted us to draw this money would have been an act of injustice to a number of our men in the rest of the yards, because those men also would have had to work for 6*s.* 6*d.* a day.

17,675. (*Mr. Booth.*) Was it not the fact that they refused to allow you to do that which would be overdrawing the account in their judgment?—In their judgment they did so; but we offered if they would make a specification out, if it only paid 5*s.* a day at the end of the week we would take it if it would be for work done. I may state that the amount in dispute was only 35*l.* on each vessel. The secretary said 90,000*l.* for the whole. I should have said from what I know that the vessels would be about 20,000*l.* each, and the question in dispute was only 35*l.* on each vessel. It was not on the amount, but merely on the mode of payment, and on that fact they tell the general public that they were obliged to refuse those contracts; and the shipwrights in consequence have had all the blame and the odium of the distress in the east end of London.

17,676. (*Mr. Mathews.*) Then the objection of the shipwrights to receiving less than 7*s.* a day on account was owing to the fear lest it should be construed into an acceptance on their part of reduced wages which would extend to the other shipwrights?—Yes.

17,677. (*Earl of Lichfield.*) But in what way would you be doing a greater injustice to the other shipwrights on the Thames in accepting 6*s.* 6*d.* per day than in accepting the contract at 12*s.* 6*d.* per ton while the usual price was 1*l.* a ton?—Well, it was a matter of opinion whether they were right in offering for 12*s.* 6*d.* a ton.

17,678. You say that the men accepted 12*s.* 6*d.* a ton, and that they only refused to draw 6*s.* 6*d.* a day because of doing an injustice to the other shipwrights?—Yes.

17,679. (*Mr. Mathews.*) In fact, the shipwrights wished it not to go forth to the public that they were working for less than 7*s.* a day, lest that fact should prejudice the other shipwrights?—It would be known the next day all over London. It was stated at the time, and it was reported in the newspapers, that the Government were about to issue 40 vessels to the building firms, that is to say, to the private yards, and of course we reasonably supposed that a number of them would come to London; and we should not have been justified therefore in taking a considerable reduction at this one place.

17,680. (*Earl of Lichfield.*) In short, it comes to this, that the shipwrights thought it was better for the men not to be employed at all rather than it should be known that they were receiving 6*s.* 6*d.* a day instead of 7*s.* That is the plain statement, I suppose?—It is nothing of the sort, as it appears to me. We were most anxious to get this job, and we offered a legitimate way in which we might take it.

17,681. (*Mr. Mathews.*) That is to say, you offeree to do it in an indirect way instead of a direct one. If you had come and said, "Instead of working for 7*s.* a day we will work for 6*s.* 6*d.*," do you not think that these jobs would have come into the Thames?—I do not think that there was the slightest probability of their getting them.

17,682. (*Mr. Hughes.*) You believe that they had no real existence whatever?—None.

17,683. (*Mr. Mathews.*) But supposing that they had been issued, if they could have got those ships built cheaper on the Clyde or on the Tyne would they not have gone there?—If they could have found a firm willing to take the work on their terms they would have done so. One of those terms was taking part payment in the shares of a company.

17,684. And the fact of the shipwrights on the Thames stipulating for 7*s.* a day (whether they got it by an indirect mode is another question) because they were afraid to take any steps that would lead th public to suppose, or their fellow workmen to suppose' that they were taking less, would have had the effect of driving work into the Clyde or Tyne, where the men were working for 5*s.* 6*d.* a day?—As soon as a *bonâ fide* offer was given to us of building a vessel it was accepted. Mr. Green said, "I have a vessel to build for myself, but you must take it at a reduced price per ton." The men said, "We will take it;" and he said, "Now I think that you had better reduce your wages to 6*s.* 6*d.*; there is a great outlay, &c." Here was an offer, a real offer, and the shipwrights went to work on these terms.

17,685. (*Earl of Lichfield.*) Then I understand you to say that in the case of the Thames Shipbuilding Company there was no *bonâ fide* offer made to the men of employment at 6*s.* 6*d.* a day?—There was not.

17,686. (*Mr. Mathews.*) If there had been a *bonâ fide* offer made to the men of employment at 6*s.* 6*d.* a day, would they have gone to work at 6*s.* 6*d.*?—I am not prepared to say that.

17,687. (*Chairman.*) Will you tell me the meaning of the statement you made just now that the only question was 35*l.* upon 20,000*l.*?—The value of each vessel would have been 20,000*l.*, and the question in dispute on which the company say they gave up the contract was 35*l.* on each vessel.

17,688. Would the 6*d.* a day come to that?—Yes, the 6*d.* a day on 500*l.* (the amount of the shipwrights' work) would have come to 35*l.*

17,689. (*Mr. Mathews.*) Whether the shipwrights' work was 500*l.* or 5,000*l.*, if the shipbuilder had come to the shipwrights and said, "I can take this contract if

you will take 6*s.* 6*d.* a day instead of 7*s.*," would the men have consented to that reduction of their wages?—I cannot say.

17,690. (*Chairman.*) You say that all they were concerned with was 12*s.* 6*d.* per ton, and that the shipwrights were ready to take the work at 12*s.* 6*d.* per ton?—Yes.

17,691. (*Mr. Booth.*) It has been stated to us distinctly that the men refused to take 6*s.* 6*d.* a day on account; that they refused to work unless they were allowed 7*s.* a day on account. Is that so?—Yes, but it very likely never came before the secretary of the company who made that statement that the men made this offer; they offered to do it in this way, to draw according to work done regardless of the amount they received each week. We work by the piece, and we say, "We will do a certain amount of work for a "certain amount of money, parcel it off into sections, "and when we have done a certain amount we will "receive the sum due for it."

17,692. (*Chairman.*) You say that you made that offer, and the secretary never made it to the Thames Company, as I understand you?—I cannot say that. The secretary does not appear to know it; but that offer was made to the manager. From the evidence which the secretary has given, I conclude that after that offer was made to the manager he did not communicate it to the secretary.

17,693. (*Earl of Lichfield.*) I put a very distinct question to him upon that point, and I asked him whether an offer had been made to the men by which they could have earned 6*s.* 6*d.* a day if they had chosen to accept it, and his answer was that that offer had been made. Do you now say that that offer was not made?—The shipwrights would not guarantee to work for 6*s.* 6*d.* on that job regardless of contract.

17,694. Did they or did they not refuse to draw at the rate of 6*s.* 6*d.* a day?—Regardless of contract they did.

Mr. P. J. Robson.
26 May 1868.

17,695. (*Chairman.*) I understand that the masters offered a contract at 12*s.* 6*d.* a ton; that with regard to this treaty about the 6*s.* 6*d.* the men refused to take that; then you say that the contract fell through for some other reason, namely, that the French company offered to pay them the 20,000*l.* for the ship, provided they would take so many thousand pounds in the shares of a company, but I do not see what that had to do with your contract as shipwrights?—It is a question as to whether the shipwrights were responsible for the Thames Company losing this contract or not; now we contend that we were not responsible for it. They agreed that the price that we gave in was sufficiently low; they did not object to the price, but they merely objected to the mode in which we should draw the money. Captain Ford says in his letter that it was for that special job only. Now, we had in our eyes that it was not for that special job only, and it turned out that it was not, because they have not paid more than 6*s.* 6*d.* a day since then.

17,696. (*Mr. Booth.*) They agreed to the lump sum, namely, 500*l.* to be paid for the shipwrights' work; then the only question was as to how much a day should be drawn by the workmen; they insisted on 7*s.*, the company insisted on 6*s.* 6*d.* only, and the men refused to have the job because they were only to be allowed to draw 6*s.* 6*d.* a day. That was the result?—That was the result, but still the company cannot say that we refused it on that account, seeing that although we could not draw the 6*s.* 6*d.* a day on account, we could draw any amount for work done.

17,697. (*Chairman.*) That is the explanation that you wish to give of that affair?—That is the explanation that I wish to give of it.

The witness withdrew.

Adjourned to Tuesday, 9th June, at 11 o'clock.

1, Park Prospect, Westminster, Tuesday, 9th June 1868.

PRESENT:

The Right Honourable Sir WILLIAM ERLE.
The Right Honourable the EARL OF LICHFIELD.
JAMES BOOTH, Esq., C.B.
JOHN ARTHUR ROEBUCK, Esq., Q.C., M.P.
THOMAS HUGHES, Esq., M.P..
FREDERIC HARRISON, Esq.
WILLIAM MATHEWS, Esq.

THE RIGHT HONOURABLE SIR WILLIAM ERLE IN THE CHAIR.

Mr. CHARLES MARK PALMER examined.

Mr. C. M. Palmer.
9 June 1868.

17,698. (*Chairman.*) I believe you have a great shipbuilding place on the Tyne?—Yes. Perhaps I had better commence my evidence by stating the nature of our occupation and works. I may say that our works are principally situated on the banks of the Tyne at Jarrow. We work the ironstone in Yorkshire; we bring it to Jarrow; there we smelt it in four large blast furnaces; we have large rolling mills on the same premises; and from the rolling mills we take it to the shipbuilding yard and the engine works; so that we have the whole of the operation from the beginning to the end, and all classes of workmen in the varied descriptions of work and manufacture in which we are employed. The number of workpeople that we employ in all departments, I suppose, will be something approaching 5,000.

17,699. That includes mining operations and the transport of ore, does it?—Yes, and also all the rolling mill operations and blast furnaces, boiler making, foundries, and shipbuilding.

17,700. Up to the point of bringing out a complete ship?—Yes, the joiner's work, and the cabinet maker's work, and everything connected with it is carried on on our premises.

17,701. (*Mr. Roebuck.*) Is there any rigging?—Yes, rigging as well.

17,702. It is hemp rigging, not iron, I suppose?—We do not make our own hemp, we buy the rope, and also the wire rope and fit it to the ships. I may mention that I am very largely engaged in collieries, perhaps as largely as anyone in the north of England, being managing partner in 14 collieries, producing near 1,250,000 tons of coal in the year, and we have somewhere near 1,000 coke ovens, producing near 300,000 tons of coke a year. The number of workpeople that we employ in the coal and coke trade will be, I should think, rather above 5,000.

17,703. (*Mr. Hughes.*) Then you have an army of 10,000 altogether?—We have upwards of 10,000 altogether in the concerns in which I am managing partner.

17,704. (*Mr. Roebuck.*) Are those all paid on Saturday night?—No, I make arrangements to pay them every fortnight.

17,705. So that every fortnight you have 10,000

Mr. C. M. Palmer.

9 June 1868.

people to pay?—I have every fortnight upwards of 10,000 people to pay. The amount of wages will of course depend upon the rate of wages. At one time it was upwards of 20,000*l.*, now it is upwards of 18,000*l.* a fortnight.

17,706. In your own experience have your operations been at all crossed by what we are inquiring into, namely, trades unions?—To begin with the shipbuilding part first, I have taken out a list of the varied wages from 1858 to 1868, that is to say, for the last 10 years, in the different classes of labour—the platers, labourers, riveters, caulkers, fitters, painters, joiners, carpenters, smiths, and riggers. I find that the rates of wages have steadily risen with the prosperity of trade.

17,707. As the demand for ships has increased so the labour has risen?—Yes. We of course have had unions among the different classes of men, but we have never had any special trouble, I may say, from the unions at our works excepting as a matter of course in the rolling mill department.

17,708. Why do you say "as a matter of course?"—Possibly I had better answer that question more fully afterwards. When I speak of it as a matter of course, it is from the excessive stringency of the trades unions power over the men and also of the false position in which the men have been placed to some extent in special work in the north of England. That I will explain by-and-bye as regards the iron workers. As I happened to be the chairman of the Iron Manufacturers' Association during the time of the great lock-out in the north of England, I had good deal of experience of the troubles connected with that dreadful time.

17,709. (*Chairman.*) On what basis are the wages paid; is it that the men are hired by the day, or a certain quantity of work given to them at a certain price, which is equivalent to payment by the piece?—The platers, for instance, are nearly all on piecework. We put so many men on to a ship, and each man who is what we call a plater has so much per plate for putting it on, and we allow him some four or five labourers to work with him.

17,710. (*Mr. Roebuck.*) And you pay those labourers?—We allow it in the price to the plater, but if the plater goes off we retain the money for the labourers.

17,711. (*Mr. Hughes.*) Does he or do you fix the rate of the labourers wages?—We fix the rate.

17,712. He is simply your agent for paying them?—He has more power over his labourers by letting the money pass through his hands to them. But I may say that I cannot enter practically into the detail of the different classes of men, because they do not specially come under my guidance. The managers of each department and the foreman of course have the direct superintendence of the men and also of this special piecework. I of course am there to overlook, and when any difficulties arise to deal with them, I fear therefore that I cannot enter into a particular detail of each man's labour. Generally speaking I may say that in our shipbuilding yard we find that in proportion to the demand for their work the men's wages have been gradually increased, sometimes by threatening us with a strike, sometimes without it. Sometimes we are obliged to pay the higher wages to induce men to remain with us, and sometimes we advance them to induce others to come to us quite apart from any union question.

17,713. (*Mr. Roebuck.*) You say that you sometimes do it to induce them to stay; what inducement would take them away?—The inducement to take them away would be better employment elsewhere.

17,714. And if the men can get better employment elsewhere you are obliged to raise your wages equal to what that employment might give them?—Precisely.

17,715. That is the natural law of trade, is it not?—Yes. I have had that specially brought before me not only in the shipbuilding department, but also in the coal trade. Where we found that we could not get men to the collieries at the wages that we were paying, we have been obliged to advance the rate to induce them to come.

17,716. (*Mr. Booth.*) It was not that the union in a body prevented you from getting other men, but that, supposing labour to be left quite free, you could not get other men lower?—No.

17,717. (*Mr. Roebuck.*) It was competition in fact?—It was competition. There was more capital in proportion to labour.

17,718. (*Mr. Hughes.*) But you find, do you not, that general law modified every now and then by applications from the men which you are compelled, or which you find it to your interest, to listen to—that is to say, that the natural supply and the natural rate of wages are occasionally violated or interfered with by special applications from the men, either for an increase of wages or to resist a reduction, which have the effect of altering that natural rate?—Sometimes the men become exorbitant in their demands and require more than we can conccede, and therefore we object to pay it and run all the risk.

17,719. And at other times occasionally they have made resistance, have they not, against a reduction, which resistance you have found reasonable, or which at any rate you have yielded to?—I do not believe that there has been any case of reduction which we have not carried, because we never ask for a reduction unless the trade is so depressed as to render it necessary for us to do it.

17,720. There have been three reductions in wages quite recently, have there not?—Yes.

17,721. My information is, that before the depression the platers had 6*s.* and you reduced them to 5*s.* 6*d.*, and then to 5*s.*; and that before the depression the riveters were paid 9*s.* 6*d.* per 100, and that you reduced them to 9*s.*, and then to 8*s.* 4*d.*, which is the price at present. Those are reductions which have been recently made according to my information; and then I am informed (the date is not stated, but I apprehend from the way in which it is put in this letter which I hold in my hand that it is even more recent) that "an attempt was made to reduce other 2*s.* a week, but we resisted and gained our object." Do you remember that case?—No.

17,722. As far as your experience goes you have always carried your own views as to reductions?—Not stringently. Of course we have modified any demand in order to meet, as far as possible, the shipbuilding trade, but with regard to our workmen, excepting the iron workers, we do not allow the trade union to come between us and our workmen, and hence we can have a free conference with them, and where a difficulty of that sort does arise where we require a reduction we meet the men and sometimes modify our demand to some extent.

17,723. (*Mr. Roebuck.*) When you say that you do not allow the trade union to come between you and the men, what steps do they take to come between you and them, and what steps do you take to prevent them?—They ask us to meet delegates and we refuse.

17,724. You have always refused to meet delegates?—We have always refused to meet delegates.

17,725. What has been the consequence of that; have the men ever said, "Well, if you do not meet our delegates we will go"?—I may mention a case in point. We were likely in the north to get into the same difficulty as they were in Scotland, upon what we call the nine hours' movement, and it was likely to become a very serious matter all through the north of England, and the men gave in their notices for a reduction in hours. As the time approached I took the course which I generally do of calling all the men together and addressing them upon the question.

17,726. What was the date of this?—1866. The proceedings at that meeting were published in the shape of a pamphlet afterwards (*handing a pamphlet to Mr. Roebuck*). We had a very large meeting of the men, and I entered fully into the difficulty of acceding to their request, and the result was that it stopped the movement.

17,727. The men listened to your reasons?—The men listened to all my reasons, and at that meeting, before it dispersed, they passed resolutions agreeing to withdraw all the notices, and it stopped the movement.

17,728. At that meeting do you suppose that there were any delegates present?—I have no doubt that there were; but the fact of the meeting coming to a decision at the time I believe stopped the movement. I can tell you another case in the iron trade. Before the strike of the iron trade in 1866 (I think it was in November 1866), I followed the same course by calling all the men in the ironworks together and addressed them in the same way. Before doing so, however, I had a meeting in the presence of a third party with the president of the trade union, Mr. Kane (I declined meeting him except in the presence of a third party), and I told him that I wished to prevent great privations and suffering on the part of the men, because this reduction would require to be carried, and he agreed with me in the presence of this third party. I said, "I am not going to meet the men if you are going "to meet them afterwards (I know you have consi- "derable influence) and counsel them to the contrary." He agreed not to do so. I went down and addressed the men for a considerable time, and I believe that if a ballot had been taken amongst the men at that time, they would have continued work at this reduction. I have a copy of the proceedings here taken from a local paper. Mr. Kane had gone down with his secretary and some of the delegates and people, and had a meeting with them, and they seemed to have come to the conclusion not to settle anything before me, but to have a meeting afterwards to discuss what I had addressed to them, and to my amazement they came to a conclusion to strike. I was led to suppose that Mr. Kane and his delegates had counselled them to do so, contrary to what he had undertaken to me.

17,729. How long did that strike continue?—It lasted several weeks, and eventually the men not only gave way, but further reductions followed, and they were considerable. I am satisfied that if the men had given way upon that occasion the other reductions would not have come so quickly upon them. I know in my own case that at that time we had a great deal of work in hand, and times were just on the turn, beginning to be depressed in the shipbuilding yard, and that the strike had the effect of stopping orders coming to us; it delayed our contracts and threw us under penalties, and we could not take further orders. If the men had submitted to that reduction at first we certainly would have kept our works going much longer than we did; and the result was that we got into a depressed state in our works much sooner than we should otherwise have done, and the men were of course the greatest sufferers.

17,730. What was the eventual result of the whole proceeding?—The result of that strike was that the men agreed not only to that but a considerably larger reduction than we asked then.

17,731. Did times go on becoming worse and worse?—Times went on becoming worse and worse. Prices fell (I am speaking more of the iron trade now), and the men certainly discovered the error they had committed in not listening to the counsel that I had given them.

17,732. And did they eventually lose work, or did you continue to carry on the business?—We had to close part of the works, and lost a great deal of work.

17,733. In fact you had to get rid of the hands?—We had to get rid of the hands; we reduced our number of hands greatly.

17,734. Did you ever follow those men to know what became of them?—No, I did not.

17,735. Therefore you could not tell us what the real effect of that transaction was upon the fortunes of those men?—Well, before that transaction took place the men were making large sums of money. Many of the men in our works then, such as shearers and managers of the rolls, were workmen that we had brought from Staffordshire originally; and by bringing them to largely improved works, works where it was all new machinery and capable of turning out the manufactured article with much more ease, as well as in larger quantities and in shorter time, and these men being set on originally at the prices they were then being paid in Staffordshire, when the improved machinery was put into their hands they earned enormous wages.

17,736. When you say "enormous wages," could you give us any instance?—I daresay that some of them were making as much as from 500*l.* to 700*l.* a year—some of the leading men—not altogether from their own labour, but from that and from the profit derived from the work done by the men employed under them.

17,737. What would you call those men?—Shearers are one class, for instance, men who take the plates after they are rolled, and who have their gangs of men and put the plates into the shears to cut them into the proper dimensions.

17,738. Does that require great skill or nicety?—No; it requires some degree of skill, but with a little practice they overcome the difficulty. We found that to be the case, because during the strike we partially opened our works and brought men in who had not been skilled shearers, and they did exceedingly well.

17,739. Did the price of wages fall from that high point?—We reduced them; not 10 per cent. as has been stated, but a very large per-centage indeed to bring them down to some point commensurate with their condition as workmen.

17,740. To what point did you bring them down?—I really could not speak positively as to the reduction, but it must have been more than 50 per cent. I should think as regards the shearers.

17,741. So that the men who had been making 600*l.* a year eventually made something like 200*l.*?—They were brought down to about 200*l.* a year I should think; about 4*l.* a week.

17,742. (*Mr. Hughes.*) How long did that exceptional prosperity of the shearers last between the introduction of the new machinery and the strike?—I cannot say exactly.

17,743. It was quite an exceptional case, I suppose—I do not know that it was so much an exceptional case. The iron trade in the north of England is a new creation to a great extent, and all the new works that have been erected there are upon that improved system, and of course we had to man the works from Staffordshire, Wales, and other places, and the men had the advantage of the improved machinery when they came.

17,744. (*Mr. Roebuck.*) What was the effect of those high wages upon the manners and conduct of the men?—Much drunkenness in many cases, and it also led to extravagance and foolish living.

17,745. Eventually did they save money?—I do not believe that they saved much.

17,746. (*Chairman.*) Did those men who had 500*l.* to 700*l.* a year squander their money in that way?—Yes, greatly in high living.

17,747. (*Mr. Hughes.*) But on the whole I take it that in the north, as in the rest of England, the amounts of the savings of the industrial classes in your savings banks and so on increase, and the accumulations become larger year by year?—Yes.

17,748. That shows that somewhere or other, whether among the shearers and high paid workmen, or among the inferior artizans, there is a decided increase in the amount of money saved?—There is a decided improvement in the working classes. I have no doubt that they are year by year becoming more intelligent people.

17,749. This in fact was an exceptional time of temptation?—The amount of drunkenness during that time amongst some classes was something fearful.

17,750. (*Mr. Booth.*) Do I rightly understand you to say that in consequence of that strike your business was so much interrupted that when you were able again to resume it you were obliged to insist upon

Mr. C. M. Palmer.

9 June 1868.

further reductions which would not have been necessary but for that strike?—I will not say that they would not have been necessary, but the reductions came more rapidly upon the men than they would otherwise have come.

17,751. You were obliged to make reductions sooner than you would have done but for the interruption occasioned by that strike?—Yes, that was so. During that time there was one shipbuilding firm on the Tyne which was completely ruined from the difficulties with their workmen and the trade union.

17,752. (*Mr. Roebuck.*) The mischief of that strike you trace distinctly to the operation of the trades unions?—I am speaking of the iron trade.

17,753. I am alluding to the case in which Mr. Kane took part?—I trace it to that cause entirely in that case. I believe that if the men had been left to decide it by ballot amongst themselves they would have all taken the reduction and continued at work.

17,754. (*Mr. Hughes.*) I remember that in the accounts contained in the northern papers at the time it was said that the great strike on the Tyne was remarkably free from anything like outrage of any kind. Was that so in your experience?—It was quite so in our experience. I believe that the people at Jarrow are very peaceable, and I think there is a good feeling existing there generally.

17,755. It was stated to be a very marked improvement on anything that had happened before. Was your experience to that effect, or do you not remember any other great strike?—Well, we had a strike some years before that, the great strike in the iron trade.

17,756. At any rate, as regards the 1866 strike, it was remarkably free from any outrage or any objectionable practices?—Yes.

17,757. (*Mr. Booth.*) As I understand you, it was a mistake on the part of the men to suppose that you could go on to pay the wages that you had been previously paying, and that the reduction was not necessary on your part?—They thought that it was not necessary, and that was the reason of my calling them together and addressing them and pointing out really why it was necessary.

17,758. They had in fact no means of knowing whether it was necessary or not; they assumed that it was not necessary that you should make that reduction?—They had no means of knowing till they were told.

17,759. (*Mr. Roebuck.*) When that iron strike took place, did you attempt to bring in other men?—We sent into Staffordshire, if I remember rightly, but we could not get any men to come.

17,760. For what reason? Were they prevented from coming, or did they refuse of their own accord?—They were prevented from coming.

17,761. How?—From the arrangements of the trade union, which was spread all over the country. The fact of a strike existing in Jarrow was just as well known in Staffordshire as in Jarrow.

17,762. Was there any picketing, for example?—If you mean picketing by people placed at the works, I believe that the men were not allowed to go near the works during the time.

17,763. If they had done so what would have happened?—I should think that in all probability ill-usage would have resulted to those who went.

17,764. It has been said that it was remarkably quiet; was it quiet because the men were frightened at first and did not go?—The men, after they once went out, never came near the works again; they laid the works idle.

17,765. (*Mr. Hughes.*) Then there was no picketing as far as your knowledge goes?—As far as my knowledge goes; but I would not like to speak to it positively that there was no picketting.

17,766. (*Mr. Roebuck.*) You could not say yourself that the men were prevented or threatened, or that they feared anything?—No more than what workmen generally tell the foremen at the time, that they dare not come and that they are threatened. We gather it from the foremen generally.

17,767. Did you gather it from the foreman on that occasion?—Upon that occasion we did. I went to the works sometimes, and the foreman had met the men in the town and elsewhere and asked them and spoken to them about it, and I remember frequently hearing that the answer was that they would like to come to work, but they were afraid to do so.

17,768. (*Mr. Booth.*) From the information which you have received you have now no doubt that the men were prevented from coming?—I have no doubt that they were prevented from coming.

17,769. (*Mr. Roebuck.*) So that when they say that it was marvellously quiet, still there was behind the threat of mischief?—Yes; but the question put to me I fancied really meant that the men, though they did keep others away, were quiet. They did not come near the works, and therefore there was no breach of the peace

17,770. (*Mr. Booth.*) Practically, other men were prevented from coming to supply their places?—No question of that; we could have filled our works over and over again with any number of men had they been allowed to come.

17,771. (*Mr. Roebuck.*) Are you aware of any act done by anybody to prevent their coming?—I cannot mention any special party who did any special act to stop their coming; but it is well known that the effect of the men being in a trade union and of men being placed about there, who threatened them, guarding the place as they do, was to prevent them from coming.

17,772. You say "guarding the place as they do;" were you cognizant at that time that your works were guarded?—We were perfectly satisfied that they were.

17,773. Then that great quiet arose from great fear?—The fear deterred the men from coming undoubtedly. I remember that upon one occasion a man did come and he was attacked by two other men, and I came to the works the next moring and heard of it. I asked why he did not get a summons out against them, and was told he said "Well, I have punished them already "myself, and I have not yet done with them. I do "not care about going before a police court with "them." That proves that there is no question that the men were prevented from coming and that they were deterred by fear.

17,774. (*Mr. Hughes.*) But when you say that they were deterred by fear, (I do not in the least wish to doubt your impression,) I remember that at the time it was stated in the northern papers over and over again that the men were specially exhorted by the union to commit no outrage, and to conduct themselves perfectly peaceably, and to carry it on in the most lawful and legitimate manner; I suppose that might have had an effect also, as well as fear?—I do not know what "lawful and legitimate manner" might carry us to. It is not lawful and legitimate for trades unions to station men about the town and about our works to prevent other men from coming, which I am satisfied they did. Of course I cannot mention the names of people who were stationed about, because they are too cunning and too clever to let you know that; but that the men themselves think that they are deterred from coming, I know.

17,775. (*Mr. Roebuck.*) With reference to Mr. Hughes's statement about those exhortations to keep the peace, I remember a story told of O'Connell's saying "Do not put those men under the pump;" do you think that illustrative of the exhortations that Mr. Hughes mentioned?—No, I believe the feeling was that they did not wish to have any breach of the peace.

17,776. (*Mr. Hughes.*) You do not believe that it was the increased terror which had arisen from trade unionism but that the improved principles generally of the people employed determined them not to go into such things?—I believe they did not wish to break up the good feeling that existed, and therefore they counselled them not to illuse people, although I daresay they were threatened.

17,777. You are chairman of the Iron Manufac-

turers Association, are you not?—I was during that special strike.

17,778. Had you any rules agreed to?—No, the rules were agreed to after the strike, and the association was organized after the strike.

17,779. Have you a copy of the printed rules that you could put in; there are printed rules, I presume?—There are printed rules, which the secretary has put in already, I believe.

17,780. (*Mr. Mathews.*) I had not the advantage of hearing the former part of your evidence; are you speaking now of the strike of the iron men or the shipbuilders?—We are speaking of the iron men. We copied rules for our shipbuilding association something upon the same principle as those for the iron manufacturers, but we seldom find it necessary to bring them into operation.

17,781. (*Mr. Hughes.*) In the event of any member of the Iron Manufacturers' Association carrying on his works on conditions that were not agreed to by the other members of the association, were you bound by any penalties; did you give bonds, as has been done in some other cases, which were forfeited in that case?—The rules will speak for themselves; there are no penalties upon the parties. The object of the rules was simply to deter the unions from singling out any special works for attack. The object was in the first instance to see whether disinterested parties could settle the dispute between the employers at the special works and their workmen; and failing that, if the association thought that the employers were right in resisting, to subsidize them in fact during the time of the strike.

17,782. That subsidy, in many cases, is carried out by the members of the association giving bonds with a considerable penal sum enforceable in the ordinary courts; is it so in your case?—That is not so in the north of England.

17,783. Then your subsidy would be in fact a voluntary subsidy on the part of the masters?—No. In the ironworks we can enter our works at so much per puddling furnace for instance; in fact a scale is laid down.

17,784. But what I wanted to get to was how you think that scale could be enforced, supposing a man said "I choose to go on, and I defy you to hinder me?"—If the master chose to go on of course he could go on.

17,785. Supposing that he does not go on and that he says, "I call upon you gentlemen to pay your subsidy," could he enforce that in your association, or would it be voluntary?—He enters his works for a certain payment during the time that his works are on strike. He cannot put his works on strike before the association has thoroughly examined into his case as between himself and his workmen to see whether it is a proper case for resisting.

17,786. But supposing that the association has said in its corporate capacity, "We believe yours to be a proper case, therefore you shut your works and we will subsidize you;" and supposing that some of the members of the association are in default, what is done then?—We take care of that. We take promissory notes from all the works in proportion to the amount which they enter for, and deposit those notes with a banker and draw the money.

17,787. That is the same method as I was alluding to. Has it ever been tested whether those promissory notes are good in your case?—It has never been tested. We have never used them, because instead of making use of the promissory notes we make a call of the money.

17,788. And that call has been responded to?—Yes, that call has been responded to.

17,789. (*Mr. Mathews.*) In the event of its not being responded to the promissory notes are your security?—Yes; they are in this form, that they are payable to the bankers.

17,790. (*Chairman.*) Are they payable to bearer or order?—Payable to order, and a cheque would be drawn upon the banker, and the banker would refund himself out of the promissory notes.

17,791. (*Mr. Mathews.*) You have been asked about the apprehension that workmen coming from other districts would have as to being ill-treated in the event of their coming to a district under strike. Is not that notion generally prevalent?—It is generally prevalent, and is carried out in all strikes.

17,792. So that even if there be the absence of any manifestation of actual violence on the part of people on strike, there is a sort of understanding that no people from a distance should interfere with that strike?—It is so understood, I believe, throughout the whole of the working classes. Whether that feeling is first brought about by a fear of ill-treatment or not I cannot say, but you cannot get workmen to come to a place where it is known that they are on strike.

17,793. Taking, as an instance, the importation of Staffordshire workmen into your district, whilst your district was under a strike, have you any doubt about the reception of those men on the part of the people on strike?—I think the reception would have been a very warm one.

17,794. And a very disagreeable one?—And a very disagreeable one.

17,795. And that opinion is founded upon the experience and knowledge which you as a practical man have of the habits of the working classes?—Yes, certainly. I may say that I once went through a very serious strike in the coal trade. It was at a place called Marley Hill where we had a large number of coke ovens, and the railways which then burnt coke instead of coals, and were depending upon us for keeping open their traffic. The pitmen struck work, and after fighting for a considerable time with them we were obliged to bring men from Scotland in special trains.

17,796. (*Mr. Hughes.*) What year was this in?—It was in 1849; for there is one of the handbills that I happened to find (*handing it in*), which they put about the country in all directions, and at that time men were picketed in all parts of the country to prevent men coming near the place.

17,797. (*Mr. Roebuck.*) Did they commit any violence upon the men that you brought from Scotland?—They attempted great violence.

17,798. (*Mr. Mathews.*) This handbill is an appeal on the part of your people out on strike to the Scotch miners to prevent their coming into their district, that they may not interfere with their rights?—Yes.

17,799. (*Mr. Hughes.*) Then, as far as your own personal experience goes, the method in which these struggles are conducted now is very superior to what it was in 1849?—I do not believe that they would go now to the same extent of violence that they did then. At that time they actually threw gunpowder under the boilers to blow them up, and proceeded to great acts of violence. But these acts of violence always prove that the strike is coming to an end; the men become desperate at the end.

17,800. But in the strike of 1866, although the men were completely defeated, no such acts took place in the district?—No.

17,801. (*Mr. Mathews.*) Is not that attributable to the more effective organization of the police?—I do not believe that the men would hesitate to injure your machinery, or do any acts of violence of that description now.

17,802. (*Mr. Hughes.*) At any rate they have not done it?—We are not quite sure that during that strike some acts of that kind were not done at our works.

17,803. (*Mr. Mathews.*) What is your opinion as to the absence of violence being owing to the more efficient organization of the police in the district?—I believe that the police tend very much to keep down these violent acts on the part of the men.

17,804. (*Mr. Booth.*) The interference, though less violent, is not less effectual now than it was then?—It is equally effectual.

17805. (*Mr. Hughes.*) Was the result of the strike at Marley Hill in 1849 that the men gained what they required, or that you gained?—We gained. It was a

Mr. C. M. Palmer.

9 June 1868.

claim that we were making upon them for a reduction of wages, and we gained the point with them; and from that time to this, all through our collieries in that neighbourhood (we have several in that part of Durham), we have never had any unions.

17,806. (*Mr. Roebuck.*) But from the time of 1849 has not the trade in coal been an improving trade up to a very late period?—It has.

17,807. And during that period was there no rise in wages?—We have raised wages during that time, though we have had no trades unions. In fact, to induce men to come to the place, we have been obliged to raise their wages in the natural course, without any interference from any trades unions, and we brought large numbers of men also from Cornwall and elsewhere.

17,808. Since the time when the trade has decreased and become less profitable, has there been any attempt to introduce trades unions?—None at all. I look upon trades unions as simply efficient in the time of prosperous trade. At the present time, in iron-works for instance (and that is the stronghold of trades unionism), they are most ineffectual, as they have proved upon the last reductions, and I believe that very few of our men indeed now subscribe to those trades unions.

17,809. What is the area of your operation, taking Newcastle as the centre; how far do your mines run?—Our shipping places are on the banks of the Tyne, and the extent for our mining operations is about 15 or 16 miles on both sides north and south of the Tyne.

17,810. (*Mr. Booth.*) So far as your experience goes have the strikes been successful, or have they been unsuccessful?—Unsuccessful, I think, generally. I do not know whether you have had evidence here upon what they call the Steam Coal Association in Northumberland. There the trades unions are rather strong, and what we call the Steam Coal Association formed themselves together to protect each other, in the same way as the ironworks have done, and they have had very long contests with the men, and have always beaten them.

17,811. (*Mr. Hughes.*) Have there been any strikes; are you connected with that association?—I am a member of the Steam Coal Association. I cannot go into the details of the strike, but there was a strike with the Cramlington Colliery which was of long duration. The rules of that association are much the same as you see laid down for the iron-workers; that in case of any difficulty between the workmen of the colliery and the masters they call in two disinterested viewers to report to the association as to whether the workmen are fair in their demands or unfair, and if these viewers cannot settle the matter with the men themselves, and they report that the workmen are making demands which the colliery ought not to concede, they then allow the colliery to go upon strike, and subsidize the colliery in large sums. The amount paid to the Cramlington Colliery was many thousands of pounds, to enable them to contest the point against the men, and I paid my proportion of that.

17,812. (*Mr. Roebuck.*) Suppose this operation took place: that the trade is flourishing; the men ask an increase of wages; you say "No;" then the trades unions come in, and without a strike you, foreseeing a strike, accede to that demand. Would you not say in that case that the union had enabled the men to obtain an increased wage?—No, I would not. If the union were to come between us and the men, and to do as they very generally do, namely, in an arbitrary manner demand all sorts of extravagant things, then we should say that the union had caused the strike, if a strike took place. But if the trade was so prosperous that we really required to keep our works in operation to meet the increasing demand upon us, then we would consider it a fair and legitimate time to give an increase of wages.

17,813. But I think you have rather forgotten one of the incidents that I put into my supposititious case. Men ask for an increase of wages; I suppose you to refuse, and that thereupon the union begins to operate?—Then we would consider as a matter of course that the union brought the strike.

17,814. Then supposing that you yielded to them rather than have the strike, would you not say in that case that the union had enabled the men to get higher wages more rapidly than you would otherwise have given them?—The circumstances also are special, and the supposition is difficult to answer, because if the trade were so prosperous at the time, it is not probable that we would refuse some concession, but if we once refused the concession in all probability we would not give way to the trades unions.

17,815. The case that I have put is a very common case put by those who fancy that trades unions have benefited the working men. You answer by saying that it is an impossible case?—I do not say impossible, but I think it improbable, that during a time of prosperity we would refuse any fair and legitimate demand of the men. We certainly would not concede the point to a trades union if we had resisted it previously to the men themselves.

17,816. Then your experience goes to this, that trades unions never in your experience induced you to raise wages when you had not been induced to do so by the mere force of the circumstances in which the trade was?—I think that the operation of trades union in the iron trade has had the effect of raising the wages sooner than they otherwise would have risen.

17,817 (*Mr. Mathews.*) Through the influence of the union upon the men themselves, do you mean?—Yes, and also a certain degree of alarm which they cause to the employers of labour. Rather than face an organized union the employer of labour would give way.

17,818. They will give the rise quicker, you mean, than they would have done if no union had been in existence?—Yes; but I think that the reaction comes all the sooner. I think that when the demand comes through a trade union it creates a bad feeling, and breaks up all good feeling between employer and employed.

17,819. That is, the suspension of the ordinary social amenities between the master and his servant, and the substitution of a question of dry interest, each party seeking how much he can get from the other?—Certainly.

17,820. As a large employer of labour you do not consider that to be at all a satisfactory condition of things, do you?—I think it is most unsatisfactory, and I have no doubt that without unions the working classes would get their wages advanced as the trade improved. It might not be quite so rapidly as with unions, but it would be much more permanent.

17,821. And do you consider that the establishment of trades unions on so extensive a scale has had the effect of dislocating the friendly relations between the employers and employed that formerly subsisted?—Most certainly, because the trades unions are so dictatorial, and there is nothing so objectionable as sending people to your works and telling you that you must employ this man, and that you must not have this thing or the other.

17,822. That establishes a feeling betwen the employers and the men much the reverse of friendly, compared with what it would be otherwise?—Yes. we have a great number of places where there are no trades unions, and the feeling existing between the masters and the men is everything we could desire, and the advance of wages has been in accordance with the state of trade; and, in fact, things are done in a social point of view under such a state of things which are not done where there exists a strict and rigid trade union.

17,823. (*Mr. Roebuck.*) Perhaps you recollect that at the beginning of your evidence you said, that there were reasons why the trades unions had more power in the iron trade than in the shipping trade; can you state those reasons now?—I think that I have pretty well explained them by the statements which I have made. It is simply fromthe increase of the iron trade in

the north of England which I have mentioned. The demand for labour was far in excess of the supply. The development of the iron trade was so rapid, and the class of workmen that we had to bring into it were of a description that soon became so much spoiled by the exorbitant wages they got from the demand that there was for them, that naturally when they got into these unions their strength was excessive at the time over the employers of labour.

17,824. Then it comes to this, that the trades unions have more power in the iron trade than they have in the shipping trade, because the iron trade is more prosperous than the shipping trade?—It was a new trade in the north. There was more capital, in fact, than labour; there were not men to man the large mills and works that we had opened out.

17,825. But that demand for iron, I suppose, was in great part or in some part to make ships with?—Also for bridge building and railways, and the large export trade.

17,826. (*Mr. Mathews.*) It was the opening of a new district to make iron, where previously there was no iron making population?—Yes, almost none; we were taking the trade from other districts.

17,827. And you were obliged to import men?—Yes, and we brought them at the rate of wages that they were then getting at old-fashioned works. We put them into new works and then they made very much larger wages.

17,828. (*Mr. Roebuck.*) Being on piecework?—Being on piecework.

17,829. (*Mr. Mathews.*) You imported a great number of men from South Staffordshire?—A great number of men.

17,830. And the men got more money at your works where the demand was greater than they had got at their old works in South Staffordshire?—Very much more.

17,831. And since the depression of the iron trade you have got them down now to pretty much the same level?—We have; in fact we have given our capital the advantage of the improved machinery; formerly the men got the advantage of the improved machinery, and not our capital.

17,832. Now in fact you have got the men down to that scale that the South Staffordshire men are striking about?—Yes; I do not know the merits or demerits of the strike there.

17,833. (*Mr. Hughes.*) Do you employ women or children in your collieries?—No.

17,834. How long ago was that change made?—I do not think that we ever employed women. I was speaking of the course I take in bringing the men together. I really find that I can always deal with the intelligent class of the men. But, for instance, early in the spring we got a little more activity in our place, and we had a strike immediately amongst the labourers, and it was wonderful that we could not make any impression upon them at all, no reasoning would do it. But where we have intelligent workmen we find that we can reason with them and deal with them.

17,835. (*Mr. Roebuck.*) What became of that strike?—We gave way to a certain extent to them. I believe that there was no trade union question in that, but the simple question that there was a scarcity of labour, and they asked a rise in wages, and we had to give way to a very large extent.

17,836. (*Mr. Mathews.*) And have you restored the original rate of wages since?—Not at all.

17,837. They still remain above the average rate of ordinary labourers?—They retain the advantage that they got.

17,838. (*Mr. Hughes.*) Then they were right in that case?—They were right in that case.

17,839. (*Chairman.*) Can you say what they were advanced from, and what to?—I think that it was an advance of 2*s.* a week upon about 16*s.*

17,840. Is that by the hour—50 hours a week?—59½ hours. I would not like to speak positively as to the exact advance, but I know that there was an advance of wages.

17,841. Wages being advanced beyond the ordinary rate, did not that produce an influx of labourers, and so a competition by which abatement would result?—No. I think the trade is generally reviving upon the banks of the Tyne, and I think that there is an increased demand for labour generally.

17,842. (*Mr. Roebuck.*) During the time that the trade has been depressed, and you have been obliged to dismiss a great number of your hands, have they entirely disappeared from your view?—To a great extent they have. It has often been difficult for me to understand where they went to, but certainly the numbers decreased very much.

17,843. Did they emigrate?—I fancy large numbers did.

17,844. And since the trade has revived have you met old faces again?—I could not speak for that. I believe that they are men who have been brought out of other districts. A number of the same men have come back.

17,845. Men that you knew that were in your employ before have come back?—Yes.

17,846. They had not emigrated, but merely gone to another district?—Partly that, and partly they go into other trades and do any work they can; and as the improvement in trade arises they will come back for their own work again.

17,847. (*Mr. Hughes.*) With respect to this shipbuilding union of masters, I see that the objects are—"the securing of prompt and united action against "any attempt on the part of the workmen to obtain "concessions injurious to the general interests of the "trade," and "the holding of free and friendly com-"munication with representatives of the workmen in "order to avoid strikes." When you speak there of "representatives of the workmen," do you know whether the association contemplated representatives elected by the unions?—No, by the men.

17,848. So that though you combined yourselves in a union of the very strictest kind you did not intend to hold any intercourse as a union with the union men?—We do not consider ourselves as a union at all. It is simply between the masters and the men; it is with a view of avoiding the strikes that we unite.

17,849. But with that view you became, as it seems to me, exactly the counterpart of the men's union, because the object of the men is "to obtain concessions" from their point of view?—Quite the contrary. If we paid certain people to go round looking after the different works, and made a business of it, then you might consider it so; but here we are all masters, and there they are all workmen. We are all, in fact, workmen in one point of view.

17,850. But although you do not go about yourselves, surely under these rules you have a united method of action which is quite as powerful as anything that the trade union can exert?—The only object of the union of the masters is to meet any special attack made by the trades unions upon any special works.

17,851. (*Mr. Booth.*) Yours is merely a defensive association?—Purely defensive.

17,852. (*Mr. Hughes.*) But whether defensive or offensive, it appears to me quite undistinguishable from the unions of the men in its object?—Quite the contrary.

17,853. I understand the object of the men to be, taking your own words, "the securing of prompt "and united action against any attempt on the part "of the masters to obtain concessions injurious to "the general interests of the trade"?—But you should read all the rules, and there you would see what the programme is. In the first place the masters bind themselves to abide by the decision of the other masters, whether they feel they are right or wrong, or hold communication with the men independently of the masters.

17,854. But I apprehend that the men do that, do

Mr. C. M. Palmer.

9 June 1868.

they not, in their unions? They bind themselves, as I understand the action of the men's union which is established in the same district, to abide by whatever decision is come to by the trade council, or whatever they call it of the district, just as you bind yourselves to be ruled in all these matters by the majority of your own body?—I do not see the resemblance. All we say is, that we wish to be in communication with the workmen themselves and we do not recognize the trades union.

17,855. (*Mr. Matthews.*) That is to say, you wish to have your communications with the workmen of each respective work?—Yes.

17,856. (*Mr. Hughes.*) I apprehend that that is exactly the object of the union, because they wish to be in communication with one particular master. Do you not think that the cases are exactly analogous?—I do not think they are.

17,857. (*Mr. Roebuck.*) Did your association ever confide to any portion of yourselves to discuss a matter as for your association with a particular body of workmen?—No, the association does not discuss the matter directly in that form with the men. In the first place we leave the master to have his own discussion with his own men, but we do not allow the trade union to come between them.

17,858. But supposing that they were to turn the matter round upon you, and you wanted to discuss with a body of men, having appointed certain persons as your delegates. Do you ever do that; do you ever appoint A. B. and C. to discuss a question with the working men; you, I mean, as an association?—That has been done.

17,859. I want to know how you can distinguish that from the trades unions who do exactly the same thing?—But the trades unions are not the working men, I mean the officers of the trades unions are not actually men employed in manual labour.

17,860. That is only as good as to say that the working men trust people who are not working men?—Yes.

17,861. That does not touch the question that I put to you. You say that as an association you have deputed or delegated persons to discuss a question with the working men. Can you distinguish that proceeding from the trade union doing exactly the same thing, namely, deputing persons to discuss a question with the masters?—We might just as well employ counsel to discuss the question with the trade union delegates, and the masters and the workmen would be entirely out of the discussion.

17,862. That does not answer my question. I want to know how you distinguish one set of people from the other?—I distinguish them as I have already said, in this way, that we are simply the masters and they are the workmen.

17,863. I see that distinction; but when the masters act as the working men do, I want to know how you draw a distinction between the two. What is good for you to do, surely is good for the men to do?—The whole of this association of the masters is simply to prevent an attack being made; it is a defensive association to prevent an attack being made upon any special works by the masters protecting themselves by uniting together.

17.864. Supposing that that was the immediate object which you had in view, and that A. B.'s men are turned out of their employ, could it happen that your association should delegate people to talk with A. B.'s men?—Yes it could happen.

17,865. Now I want to know how you can make any distinction between that operation and the trades unions doing exactly the same thing, namely, talking with A. B. about the circumstances of his men?—You cannot stop the operation.

17,866. I am not talking about stopping it, but about the distinction between the two?—There you delegate a third party, and delegate another interest to talk to the masters, but we delegate ourselves.

17,867. Would they not say that their president and their secretary (I do not know that they are really, but do not they say that they are,) are working men?—Certainly not; they cannot say so, because they are not men actually engaged on manual labour.

17,868. (*Mr. Hughes.*) Your secretary is not a master, is he?—No.

17,869. Then he stands in the same relation to you as the officers of the trades unions to the men?—But he never speaks or acts as a delegate.

17,870. Does he not stand in the same relation to you; he keeps the communications open between the masters and the men, does he not?—He keeps the communications open by writing letters when required.

17,871. (*Mr. Mathews.*) Your honorary secretary is an iron manufacturer, is he not?—Yes.

17,872. You merely employ a secretary to do any ordinary writing required?—Yes.

17,873. He has nothing to do with the workmen at all?—No.

17,874. You have no paid agents of any sort or kind to interfere between you and the workmen?—No.

17,875. That is done by the iron manufacturers themselves?—By the masters themselves.

17,876. And if the honorary secretary takes part in that he does so by virtue of his being an iron manufacturer?—Yes.

17,877. (*Mr. Booth.*) Is there not this main difference between your association and the union of the workmen, that the union of the workmen interfere with workmen not desiring to join in union, whereas you, as I apprehend, never interfere with other masters who do not desire to join your association?—Certainly. We never invite anyone to come into it; it is quite voluntary their coming in, and they can withdraw when they choose upon giving notice.

17,878. You do not interfere with any other masters?—Not at all.

17,879. (*Mr. Roebuck.*) But that only says that your proceedings are wiser than those of the trades unions?—No, they are of a different character, with all submission.

17,880. But surely you cannot see any difference in the operation of the two; one is a union of masters to protect their interests, and the other a union of men to protect their interests?—I see a wide difference; because one is a union of paid delegates who are not actual workmen, and who are paid simply for the purpose of the union, whereas we masters simply represent ourselves, and all we ask is that the workmen should represent themselves.

17,881. Then you would not object to trades unions if the president and the secretary and the whole body of their executive were working men?—I do not object to trades unions, provided that they do not interfere between us and our workmen and with our general operations. By all that I have said here I merely wish to imply that I do not believe that, generally speaking, the working classes have benefited by the trades unions. I believe that demand and supply would have regulated the rate of wages equally as effectually as the operation of trades unions.

17,882. Then I gather from that, that you do not suppose that the habits and manners of the working men have been at all improved by their union with trades unions?—I believe not; I believe the contrary. I am satisfied, as perhaps one of the largest employers of labour, that where the working men are brought into contact with myself, and apart from any trade union dictation, it is much better. Much more was done for the men in the iron works before we were so hampered by the union. In every way that we could meet their requirements in a social point of view, in building them houses, and different other ways.

17,883. (*Mr. Hughes.*) No doubt that is so in certain cases; but do you think that there are no masters who would act unfairly to the men if the men were not organized?—Well, I cannot conceive it likely, because I think that now that there is so much railway communication and intelligence passing from one part of the country to the other, the men so ill-treated would very soon be able to find better masters,

and it would not be for the interest of the master to ill-treat or lose his men.

17,884. But it is a difficult thing for men to remove even now, and where there is an excessive competition between masters surely the most natural thing, except where the master is a very wise one, is that the first reduction the master attempts to make should be in his men's wages, and not in his own profit?—But a master cannot reduce the wage he pays below that which his neighbour pays, or else the men would leave him. Allusion has been made to the transport of men; we brought a large number of men from Cornwall and elsewhere, where work was scarce. We have paid their fares for them to the north of England, and the men have refunded us over a period; and we have done the same for men from Staffordshire.

17,885. (*Mr. Mathews.*) As a rule, when an ironmaster was found to be unfairly oppressive to his men, and found to take advantage of them unduly, would he not lose caste with his brethren in the trade?—He would lose caste as not being considered a very sensible man, because he would naturally lose the best of his men; good men will not stop with bad masters.

17,886. (*Mr. Roebuck.*) Supposing the result was really to make himself rich, do you think that he then would lose caste for behaving in that way?—Equally so, I should think.

17,887. Then your experience of human nature is very different from mine?—I do not know perhaps precisely what you mean by "losing caste."

17,888. (*Mr. Mathews.*) By "losing caste" I mean that those friendly relations would not exist betwixt him and his brethren in the trade that would exist if he acted with the same care and consideration for the workmen that they do?—Of course they would not, but the man who did that would not show himself to be a sensible, intelligent employer of labour.

Mr. C. M. Palmer

9 June 1868.

17,889. In the first place it would be bad policy?—Yes, it would be bad policy.

17,890. And in the next place it would be unpopular for his position among his brethren in the neighbourhood?—Yes.

17,891. (*Mr. Booth.*) I think we may understand that, so far as your experience and your means of judging go, you think that the operations of the trades unions have been on the whole injurious rather than advantageous to the workmen?—I think that they have been injurious to them.

17,892. You mean with reference to the question of wages as well as in other respects?—I think that the effect has been in some trades to advance the wages more rapidly, but the reaction has come sooner and keener in consequence.

17,893. So that on the whole you think that they have not been advantageous?—On the whole I think that they have not been advantageous. I will take the last strike for instance. If the union had not interfered we would have carried the reduction of wages, and our trade would have continued in a prosperous condition much longer in the north of England, and the men would not have been called upon afterwards so rapidly to submit to one reduction after another.

17,894. (*Mr. Mathews.*) Is it your opinion that, irrespective of trades unions, the law which regulates the rate of wages in the long run will regulate them in spite of trades unions; that, in fact, some higher cause than that of trade unionism regulates the rate of wages between employed and employer?—I have no doubt of it; in fact I have given proofs of it. Where we have no unions existing, and where labour has become scarce, we have been obliged to advance wages to bring labour into the district.

The witness withdrew.

Mr. George Bayley examined.

Mr. G. Bayley.

17,895. (*Chairman.*) Were you formerly surveyor under the Board of Trade?—I was.

17,896. And for more than 20 years you have been the principal member of the firm of George Bayley and William Ridley, surveyors and auctioneers, I believe?—Yes.

17,897. Have you had to superintend the building of some Transatlantic steamers for the North German Lloyd?—I have been superintending the building of eight steamers for the North German Lloyd.

17,898. They were built, I believe, by Messrs. Caird and Company at Greenock?—Yes.

17,899. You were down on the Clyde to superintend this building, I suppose?—I went down at intervals of five or six weeks whilst they were being built.

17,900. In what years was that building going on?—From about 1861 to the present year.

17,901. During that time were there strikes among the workmen employed in shipbuilding?—There was a strike at Greenock during that time (I think it was in the year 1866 or 1867), a lock-out as it was termed in the Clyde.

17,902. With whom did the strike begin, what class of workmen?—With the iron shipbuilders. I think they prescribed certain terms to the builders which they declined to give.

17,903. They demanded a rise you mean?—I believe that it was a rise of wages and some internal regulation with regard to the mode of conducting the business in the trade.

17,904. Was the claim resisted?—It was resisted.

17,905. Was it a claim made by the whole class of workmen working for different firms, and a claim made by all at once, or by the workmen of one particular firm?—I understood that a claim was made by the workmen on particular and separate firms, that such and such terms were to be adopted, and if not agreed to they were to cease working.

17,906. As to the other firms the workmen were to go on?—I understood so.

17,907. What was done by the masters?—The masters came to a resolution, as I was informed (and as I found at Messrs. Cairds) to close all their works and cease working.

17,908. So as to make it a general question with the whole of the masters on one side, and the whole of the workmen on the other side, rather than a special question between the workmen and the masters of one particular firm?—Yes.

17,909. How long did that lock-out last?—I think it lasted for five or six months altogether.

17,910. Had you means to observe the operation of that strike?—I was repeatedly in Greenock during the time, and I found that the work had ceased excepting such as could be carried on by the apprentices to the firm. Then men gradually came in giving up the terms which they had prescribed, and coming in upon the masters' terms, that is to say, upon Messrs. Caird's terms.

17,911. During all the time that the lock-out continued was there the option to the workmen to come in upon certain terms?—There was the option to the workmen to come in upon certain terms.

17,912. And gradually they came in?—Gradually they came in. The strike lasted five or six months, from the beginning to the end of it, I think.

17,913. The masters succeeded in the contest, that is, the men came in upon their terms?—Mesrs. Caird appear to have suceeeded in the contest; the works were filled and carried on on the terms agreed between them.

17,914. Has the operation of the trades unions altered the feelings of good will between the employers and the employed according to your observation?—I find that the feelings existing now between the employers and the employed are very different from what they were when I was first connected with the business in 1812. There was a kind of family feeling then; the masters had an interest in their men and the men had an interest in the welfare of the masters.

Mr. G. Bayley.
9 June 1868.

17,915. In large establishments had the masters personal acquaintance with the men?—They had personal acquaintance with the men, with the individual wants and circumstances of the men.

17,916. How many men would be employed at Messrs. Caird's yard in Greenock?—I think altogether something like 2,500 in the whole establishment, the machine works and the building yard.

17,917. And according to your observation there was an acquaintance and friendly tie as between man and man?—I observed that there had been that feeling of personal knowledge between man and master which I am sure is necessary for satisfactorily carrying on any work of the kind.

17,918. Did the masters do anything to help the men? If they help one man, according to your observation, does not that create great jealousy in the minds of others who do not receive the same help?—That depends upon the nature of the assistance rendered. If the assistance rendered was of a pecuniary character it might be very likely to create jealousy; but there is an assistance rendered which might be called a moral assistance, the encouragement of a steady, industrious workman, and he goes from one step to another, and I have known a great many instances in the course of my experience in which such men have become very wealthy members of society and large employers of labour themselves.

17,919. Since the action of the trades unions has that rise from a lower step to a higher been more rare?—I think that it has been more rare, and very much more so. The feeling of antagonism has become very strong, and particularly amongst the less informed and less skilful members of mechanical trades. They are the most difficult to deal with; I refer to the lower grade of workmen, those whom (I would not insult them) I should be disposed to call the unskilled workmen, men who have no mental cultivation.

17,920. (*Mr. Harrison.*) But the unions do not exist among the labourers, do they?—The unions control the labourers. The unions say to masters, "You "shall not employ such and such persons, you shall "employ a skilled labourer," or rather, "You shall "employ a member of the union to do that which an "unskilled labourer is quite sufficient for."

17,921. The shipwrights' union existed during the whole of your recollection, did it not?—No. I was connected with business in 1812; the shipwrights' union commenced somewhere about 1823 or 1824.

17,922. (*Mr. Hughes.*) On the repeal of the combination laws?—On the repeal of the combination laws.

17,923. But they had a private union before, a secret union, had they not?—Not that I am aware of. I was in business from 1820, and connected with it from 1812, and I was not aware of that.

17,924. But there were secret unions in many trades?—Yes, but none in the shipwrights'.

17,925. (*Mr. Harrison.*) The book list of prices was settled with a certain combination among the men in 1812 or 1815, was it not?—No, I think you will find that it was in 1825.

17,926. Are you speaking of the Clyde?—No, my own experience as a shipbuilder is that connected with the east part of England, Ipswich and London.

17,927. (*Chairman.*) Did I rightly understand you to say that you can manage the workmen almost in proportion to the scale of their intellect, that they are easy to manage if they are men of clearer powers of mind?—It is so, and was so previously.

17,928. And were those clearer powers of mind the gift of nature or the result of education, according to your observation?—I should say that they were the result of education of a particular kind, that is of observation.

17,929. I meant was it the result of education by books?—I think it was not so much education by books. But a very singular thing that used to impress me very much with these men who excelled as skilled workmen was, that they were very much disposed to study and applied themselves to books.

17,930. Their faculties were opened by observation first and then they applied themselves to books?—Yes, books were a source of information that they made use of, and very freely.

17,931. Those were the class of men that you dealt with amicably?—We never had any trouble with those people at all. If it was necessary to reduce wages from falling off of work it was only necessary to represent it to them, and they would consent. But when the shipwrights' union came into operation in 1823 or 1824 the men were compelled not only in the river Thames but in the adjoining rivers (I mean at Ipswich) to enter the union, and were forbidden to work if we employed certain persons. We were required to grant certain privileges or perquisites. On the men presenting to me the paper requiring that, (I did not preserve it unfortunately, or I should have brought it with me,) I said distinctly to the men, "I cannot allow you to interfere with the manage- "ment of my business; I shall manage my business "myself, and you are aware that I have always treated "you fairly and honourably, and why do you listen to "these men outside." They said, "We are compelled to go into the union, sir," and the consequence was that they turned out and kept out for four months because I would not consent to the terms.

17,932. (*Mr. Hughes.*) Was that scale contained in this old book which you have put into my hands drawn up entirely from the masters' point of view, or in consultation with the men?—I believe by the men themselves, by the delegates. Some of the names on the first page are the names of foremen—men who became so afterwards.

17,933. But the scale was accepted by the masters?—There was some arrangement come to here in London, but we did not adopt it in the outports.

17,934. (*Mr. Mathews.*) Is it the tenor of your evidence that the establishment of unions has not tended to increase the confidence and the friendly relations betwixt the masters and the workmen?—I am satisfied that they have had that result. The feeling is very different now from what it was. I have myself not been in business as a shipbuilder, carrying on my own business, since 1831. Since that time I have been engaged as principal surveyor to Lloyd's for 10 years, from its establishment in 1834; and from that time onwards have been in a position to observe the character of the men, and I am very sorry to say that the skill of workmen as a class is certainly less than it was 30 or 40 years ago.

17,935. I am speaking as to the existing relations?—The feeling between the masters and men of course is that of alienation; the master wants work to be done, and the men come to him with the feeling, "Well, he will cut me down to the lowest point," or the master has the feeling, "They will ask the utmost amount they can."

17,936. Now it is a matter of mere dry interest, without any reference to those friendly relations that you think formerly subsisted between employers and employed?—I think so. I may say that in that strike of 1823 or 1824, when our people stood out for four months, they used to muster at the yard gate in the morning and make their remarks. They would say, "Give us a job, master; let us have some work." I used to answer, "There is work, you can go to it if you like." At length there was a certain operation required—a ship had been hauled up for the purpose of lengthening. I had heard that the men had said, "The boys cannot do it;" but I did the best I could to lead the boys on, and they did it. The men came to me saying, "Will you give us a job, master?" I said, "There it is; you can do it if you like, and you know the price; you know what we have always given." "Oh, about the union?" they said. "I have nothing to do with the union," I said; "there it is, there is the work"; and they went to work the next morning without making any terms, and from that time I had no further strike; but I employed men out of the union at pleasure, and would not be restrained as to the number of apprentices.

17,937. (*Mr. Hughes.*) So far as your experience goes, then, you think that the repeal of the combination laws has had a bad effect upon the relations of masters and men?—I think it has.

17,938. Would you go so far as to wish that the combination laws should be re-enacted?—No. I think that the bad effect has resulted from a misapprehension of the relation in which the parties respectively stand as employers and employed; their real interest must be identical.

17,939. No doubt, if all parties were perfectly wise they would see that?—I think it is honesty more than wisdom.

17,940. Even assuming that the relations are not quite what they used to be, do not you think that on the whole the repeal of the combination laws was a wise act?—I think decidedly so.

17,941. The object of that was to give the work-people freedom to combine?—The object was to remove from them penalties which resulted from a few men agreeing together. They worked in companies in shipyards at that time, 8 or 10 or 12 men together, according to the nature of the business. They would agree among themselves not to take certain work except for so much money, and certain cases occurred in which masters took advantage of that to bring them under the combination laws, and so far I think that the repeal of the combination laws was perfectly right. There is no reason why, if I am with six others, I should be prevented from saying to my five mates, "Such a job is worth 5*l.*, and we will not work for less," but I have no right to prevent another man to take it for less.

17,942. But do not you think that since the repeal of the combination laws masters inclined to take advantage of their men would still be likely to do so?—I cannot say that I have observed that as a general characteristic. I have observed masters who take advantage of their men, but what is the effect? That very policy drives away good workmen from them; a good skilful man says, "I will not go to that man if I can get work elsewhere."

17,943. (*Mr. Booth.*) That is the natural corrective of that evil, is it not?—That is the natural corrective of it. A master who pays his men fairly, according to the price of provisions and circumstances and localities, I have never found to be deficient. We have had a very remarkable illustration of the difference of localities. In 1820, I think it was, we built two East Indian ships at Ipswich, the "Fairlie" and the "David Scott." The "Fairlie" was let to a company who came from Barnard's yard, at Deptford; those men took the ship at a less price than they had received in London, for a similar ship, and Nathaniel Clark was the leading man of that company. Long after that time, when one of the surveyors to Lloyd's Register of British and Foreign Shippers, I asked him how it was that he came down to Ipswich with his 22 mates and took a ship with the great difference of price between what was got at Barnard's and at Ipswich. His answer was: "The facility at Ipswich for carrying "on the work was so much greater, that we earned "more money than we did at Barnard's." And that I think is rather a remarkable case, and Mr. Nathaniel Clark was one of the most active members of this trade union at its commencement, in 1823-4.

17,944. (*Mr. Mathews.*) Has it ever come under your observation that during any recent strike the workmen out on strike have taken any steps to prevent fresh men coming in to take the jobs?—I have heard that, but I cannot say that it came under my personal knowledge.

17,945. (*Mr. Harrison.*) With reference to a question about the time at which that book with the list of prices was drawn up, I was misled by an answer of Mr. Wigram's, in which he said that it was in 1815, but I now learn from our secretary that he has since corrected that, and that he wishes to put it at 1825.—The date is 1825, I believe, and it was before 1825 that this strike took place that I speak of as having personal experience of it. It was universal at that time, that is to say, all employers of shipwrights were called upon to consent to certain conditions. Amongst them this was one, that no man should be employed who was not a member of the union.

17,946. (*Mr. Hughes.*) As surveyor for Lloyd's and for the Government, do you now think that the work is worse done than it used to be 30 years ago? You can get as good work done now surely?—You can get as good work done of course, but you must pay an extra price in time. I think that there are fewer skilled workmen than there were 30 or 40 years ago. I think that the effect of the union has been to create this feeling: "What matters it? Why should I try "to be more skilful than my neighbour, and carry out "the work in half the time that he can do it; I can "only have so much a day." The rules of the union were, "They shall all be paid not less than so much a day," and that, I think, is very injurious. I have been often struck with the thing in connexion with another branch of the business, namely, the smith's shop. At that time I never heard of a union connected with smiths. There every man was paid according to his skill; he was paid 3*s.* or 4*s.* a day, or whatever it might be. There was never any union amongst the smiths, but an emulation to get on, for a man to make himself a better man. And so it was with some companies of shipwrights. These men from Barnard's that I spoke of as coming to Ipswich would not allow other men to come in. They selected their men, and it was something like a point of honour to be a member of the "Royals," as I think they called themselves. It was, in fact, a union of 22 men to make their own terms.

17,947. Twenty-two highly skilled workmen?—Yes; they included, I think, four nearly worn out shipwrights, and it was very much to their honour that they did so.

17,948. You approve of that union?—I approve of that union most heartily.

17,949. Supposing that the unions now made the same test and that the entry depended upon the skill of the workmen, you would think then that they would not be so injurious?—I should not think them so injurious. They would then be injurious, but not to the same extent. But now the effect is certainly this, to deteriorate the quality of the workmen; and from the fixing of a minimum wage there is a disposition, a natural reaction of course, to do as little for the money as possible, and it is embodied in the saying, "Come night, come ninepence."

17,950. (*Mr. Mathews.*) There was no disposition, I suppose, on the part of these superior men you speak of to interfere with any other men building these ships?—Not at all. The men used to be very careful in going through their work. I have here a schedule showing how much should be paid for it.

17,951. (*Mr. Hughes.*) And they extended to two or three old shipwrights; in fact the same advantages which the unions, rightly or wrongly, endeavour to extend to all the old men?—No, these men had been in the yard. There were fewer changes at that time. Men did not go from yard to yard, but remained, so to speak, connected with one yard.

17,952. The conditions of society were quite different then, were they not?—There was something different; we have made much progress now.

17,953. After all, the objects of that small union which you approved of were really only the same as the objects of the great unions now?—They did not attempt to prevent their employer from employing anybody he chose.

17,954. They would not have allowed him to put on the "Fairlie" any man he liked, would they?—Yes; there were certain prices paid for the work. "I will put on so many men to do the top side," for instance, he might say.

17,955. Do you think that Nathaniel Clark and the other 22 men would have allowed another gang to be put on?—Yes; I remember the fact that there were a few men (I think some six or eight) employed to work the top sides of the "Fairlie" at such a price,

Mr. G. Bayley.

9 June 1868.

the list price as agreed. The schedule between the body of the shipwrights and the masters was the schedule on which payment was made.

17,956. And the Royals did not even object to that being done which you have mentioned?—No, they did not object to that. I think it is due to the men to say what they did.

17,957. (*Mr. Booth.*) As far as your experience goes the unions have operated injuriously for the men?—I believe they have. They have driven the work away from the river Thames to an extent which is quite alarming; it is a matter of serious importance.

17,958. (*Mr. Harrison.*) How have they driven the work from the river Thames?—In consequence of the union they have refused to carry on work when there was a hurry for it, and they have refused to allow any other person to be employed than persons connected with the union. I have seen it in many cases which came under my notice when a surveyor at Lloyds; work was stopped.

17,959. Do you mean that the cost of building has become increased?—The cost of building has become increased in consequence of the union, because the union, as I understand it, meet and arrange that such and such prices shall be paid.

17,960. You mean that the union has succeeded in raising the wages?—I do not think they have really raised the wages—not if you take the aggregate earnings of the men, but I think they have diminished them. The wages per day may be raised, but the aggregate earnings are less, decidedly.

17,961. But are the wages per day raised?—The wages per day are raised above what they were in my early recollection.

17,962. Since when? What was the last time they were raised?—I cannot tell you the last time they were raised; but I know that instead of their being as they used to be 5*s.* or 5*s.* 6*d.* a day, the men are now, I am told, standing out for 7*s.* or 7*s.* 6*d.* a day.

17,963. Mr. Dudgeon, Mr. Wigram, and other large builders on the Thames have assured us that the wages for 20 or 30 years had not been raised at all, with the exception of one 6*d.* eight or 10 years ago, which has subsequently been taken off. Is your experience contrary to that?—I think that they must be under some misapprehension as to the actual fact. If they referred to their accounts they would see that 20 years ago the wages were not what they are now. Mr. Clifford Wigram is of course a highly respectable man, but I think that he is under some misapprehension on that matter.

17,964. (*Chairman.*) All the shipwrights, according to his evidence, were paid by the piece, and then they drew a nominal sum?—Yes, the wages for day-work, according to my recollection, have gradually increased. I think it probable that they allowed them to draw 7*s.* a day in 1840 and 1848, because work was plentiful then.

17,965. (*Mr. Harrison.*) Let me direct you to an answer given by Mr. Dudgeon, a shipbuilder on the Thames, at question 16,947. This question was put to him: "Have wages risen much during your 12 years' experience on the Thames?" and his reply was, "No; 24 or 25 years ago I had 6*s.* a day myself as a "working engineer at Millwall, and that is about "what we pay to-day."—That was engineers' work. Engineers were better paid at one time than shipwrights.

17,966. Then, in regard to the engineers, you do not include them in your statement?—No.

17,967. With regard to the shipwrights, we have had if possible more precise evidence than that which I have quoted, but, without referring you to all the questions, can you tell us specifically what was the shipwrights' rate of wages 20 years ago, what it has risen to in the interval, and what it stands at now?—I cannot answer that question upon the instant, but I could refer to documents at home which would show me the precise amount at that time. I was not at all aware that I should have any examination as to the rate of wages beyond the general question. The precise dates of change I cannot give you now upon recollection; not having been engaged myself as a master, paying shipwrights, I cannot speak myself of the amount they have received. I shall be able to give, from my position as a surveyor for the last 34 years, the prices charged per day for shipwrights work; that is the information I can give from documentary evidence that I have access to.

The witness subsequently handed in the following statement:—

"Shipwrights' wages in London, before the establishment of the union in 1824, were 5*s.* per day. After the union, in 1825, wages were raised to 6*s.* per day, and remained so till the Crimean war. During the war as much as 7*s.*, 8*s.*, 14*s.*, or 15*s.* a day was paid, and I am informed that in one instance as much as 20*s.* or 21*s.* per day was paid. At the close of the war wages fell to 6*s.* a day, and remained so until 1866, when they were raised to 7*s.* a day, the present rate.

"On reference to the notes of accounts for repairs, examined by me during the last 34 years, I find that the rate charged has been advanced in most of the building and repairing ports in the United Kingdom since the shipwrights' union has come into operation, particularly at Hartlepool, where shipwrights' wages were 2*s.* 6*d.* and 3*s.* per day in 1830, and remained so till 1840 or 1842. In 1848 the union came into active operation there, and wages were raised to 4*s.* 6*d.* per day, and advanced in 1851–2–3 to 5*s.* per day, and in 1867 to 6*s.* per day. At Bristol, in 1851, shipwrights' wages were charged 4*s.* per day, and in 1866 5*s.* 6*d.* per day. In the Clyde, in 1851, 4*s.* and 4*s.* 6*d.* per day was charged, and this was raised to 5*s.* 9*d.* in 1866; in Liverpool, in 1851, 5*s.* per day was charged, and in 1866 7*s.*; in Sunderland, in 1851, 4*s.* 6*d.* per day was charged, and in 1866 6*s.* 6*d.*; in London, in 1851, 6*s.* 6*d.* per day was charged, and in 1853 7*s.* and 8*s.* 6*d.* It is not the practice in London accounts to charge shipwrights' labour at per day, but in a gross sum; thus, 'Shipwrights' labour, &c., 450*l.*"

17,968. We had it at first-hand. The evidence of the builders who are paying the wages, and the evidence of the men who received them, which is direct evidence?—Perhaps you may have got evidence from them that they have drawn so much a day for so many years.

17,969. We have had that explained. Have you had it explained to you that at one yard in the river till a comparatively recent period they were in the habit of charging in their bills the day's work of shipwrights at 4*s.* 6*d.* a day?—That was a singular thing.

17,970. What is the effect of that?—The effect of that, of course, was to conceal the price paid to the shipwrights. The practice in the yard for many years was that the wages paid to the shipwrights was charged, and so much per cent. profit, and that that amount was divided into day work at 4*s.* 6*d.* a day; a very singular course of proceeding. I never knew but one place where it was so.

17,971. That was a low rate of wages?—Yes; it was much lower than it really was. I believe at that time the actual day wages were 5*s.* 6*d.* a day.

17,972. But we have had it repeatedly in evidence that the rates at which the men draw occasionally vary, that the sum paid at the end of the job is a lump sum, which was stated at the commencement?—Yes, that is so.

17,973. Of course the wages are calculated upon what they receive, not upon what they draw?—The day wages are different from the wages drawn. When they are upon a job they draw upon a certain rate. The day wages are different.

17,974. Perhaps you would explain what is not entirely clear to all of us, I think, at present, namely, what is the advantage of taking a contract on either side, either to the contractor or to the men, to do certain specified work for a lump sum down, and then drawing in the interval? Do you find that the men, if they have drawn out the whole sum and there still remains some days' work over to finish the job, leave you in the lurch, and leave you without having finished it?—I never was left in the lurch; but I am

sorry to say I have understood that such cases have occurred, and in other cases, to their honour, the men have worked out and completed the job without having any wages.

17,975. What is the advantage of the system?—The advantage of the system is to the master, that he can calculate to a tolerable certainty as to the period necessary to complete the work in, that it can be completed by a certain time, and the advantage to the men is obviously this, that if they exert themselves, using head and hands, (for they must have their heads in the work as well as their hands, or else they will make nothing of it,) they then derive the benefit of their intellect as well as their muscular strength; and that is to me one of the great perplexities of trades unions. I have seen it stated by their rules in various works that men shall only do so much work in so much time.

17,976. But the trades union which you have had experience of introduced nothing of that sort?—In such a trade union when a man takes a job he does the best he can, subject to the condition that it is done in a workmanlike manner. That is another reason why a company of men select their own companions.

The witness withdrew.

Mr. Peter James Robson further examined.

17,977. (*Chairman.*) We have already had your statement as president of the Shipwrights' Provident Union; I believe you wish to make some further statement?—Yes. In thinking over my evidence it appeared to me that it might be construed in this way, that in answering some of the questions I was endeavouring to fence. Such was not my object at the time, but in thinking over the answers that I gave I think some of them would possibly bear that construction, and as I had no wish that they should do so, and as I know that the shipwrights have everything to gain by giving a full and free explanation of everything in connexion with themselves and their union, and as some of the explanations that I gave do not now appear quite satisfactory to me, I trust that the Commission will just allow me to go over some portion of it again, and to give evidence with reference to the things that I do not think I put clearly before you on that occasion.

17,978. (*Mr. Hughes.*) We had the question before the Commission of those ships which were taken at 20,000*l.* a piece, or rather were proposed to be taken by the Thames Shipbuilding Company. You stated to us that the shipwrights agreed to do their portion of the work on each of those vessels for 500*l.*, did you not?—Yes.

17,979. You stated at the same time that they did not consent to draw less than 7*s.* a day, but you also stated that they would have been prepared to finish the whole of that work for the 500*l.*, whatever daily sum they drew?—I stated that most distinctly.

17,980. Do you undertake to say, that supposing the 500*l.* had not enabled them to draw 7*s.* a day during the whole of the time which it took to finish those jobs, they would have completed the jobs without exceeding the sum of 500*l.* which was agreed upon as the contract price?—I say that it was the wish of the men to do so, but there are a great many technicalities in reference to our trade, and I wish to put the case before you by an example. I will mention two cases in which I was interested myself. The first was that of a vessel called the "Apelles." I, with 10 others agreed to do the woodwork of an iron vessel for 16*s.* per ton, amounting in the whole to 800*l.* We had no stamped agreement, because we had confidence in the employer for whom we were working; we knew that if in the end there were any surplus he would give it us at the conclusion of the job (we drew at the then minimum rate of wages 6*s.* per day). We had drawn only 600*l.* at the finish of the job, leaving a balance of 200*l.*, which, with extra work amounting to 30*l.*, left us 230*l.*, which we divided amongst ourselves afterwards, and it paid us at the rate of 2*s.* 2½*d.* a day. That is one instance. I am showing now the custom of the trade, and I am going to apply it to this question to which we have referred. Then the other case is this—at the commencement of the present year things were very slack in the Thames; there was very little of shipbuilding and very little repairing just at that time, and what few jobs were in the market there was a considerable amount of competition for them. The employer for whom I worked, Mr. Fletcher, took one of these vessels to repair, and he said, "I have taken "it more for the sake of giving you employment than "for the sake of reaping any profits," and I quite believed him. And he said "You will have to take it at a reduced price." The work was let off into portions. I was asked, with a few others, to do one portion for 42*l.*; that sum was not nearly so much as they have been in the habit of paying, but there appeared to us to be good reasons why we should take it, and we took it at that. But he said nothing to us about any difference in the mode of drawing; we went to work according to the custom of the trade; the minimum rate had risen since the other affair I have mentioned to 7*s.* a day; we drew at the rate of 7*s.* a day while it lasted, and for the last week it only paid us at the rate of 3*s.* 3*d.*; but seeing that we had made a contract we were perfectly agreeable to take what remained to us. And that is the custom of the trade, and evidence could be piled up to show that it is the custom of the trade. But now in reference to this Thames Limited Company, that was not the custom of that particular yard. During the time for which they had held that yard they had never paid less than 7*s.* a day, and the shipwrights who have worked there know nothing about any contract, and the shipwrights generally of the river know nothing about any contract price, there the men being paid by the day. The secretary of the company in giving evidence said, "We issue the "work at contract price, and when there is a "surplus we pay the men, but when there is "no surplus the men refuse to work unless we "continue to pay them the 7*s.* a day." Now what I assert most emphatically is, that the shipwrights generally who go to work at that yard know nothing of this special agreement under which they let the work to one, or two, or six men (according to the size of the vessels). They do it in this way: they say to a man "I want you to build a vessel, what will you do it for?" He says "So much," if it suits them the men sign to do it for a certain sum, but those who go on after them have nothing to do with the question as to whether they make a good or a bad job of it.

17,981. (*Mr. Harrison.*) Are these sub-contractors shipwrights?—They are shipwrights; they have been brought before a meeting of the shipwrights who work at these yards, and they have been asked, "Have you received any surplus?" They have constantly denied that ever a surplus has been paid, or that they took it under any other agreement than 7*s.* a day, and the first time that it has been stated that there has ever been a surplus at all was when it was stated in this room by the secretary of the company. There may have been a few instances of the kind, but I do not think there have been many. That practice which I have described is an innovation in the custom of the trade brought on by them at that particular yard. They work by the day contrary to the general tenor of the work done in the port, which is by the piece. We in London are the only shipwrights who work by the piece; in the rest of the ports in the kingdom it is usual to work by the day and not by the piece. So far as to the custom of the trade. Then that being the custom of the trade, it would have followed that

Mr. P. J. Robson.

9 June 1868.

the shipwrights generally who went to work for them would only have received 6*s.* 6*d.* a day, and not have received any balance at the end, because the company had never paid any balance to shipwrights. They have never paid any balance that has been acknowledged by shipwrights; and when shipwrights that have been on these particular jobs where it was asserted that a balance had been paid, went to the company to ask whether they had paid them any surplus, they received no answer, and were told to mind their own business. This particular contract therefore had a different aspect, looking at it from that point of view. Then in reference to the particular question of doing these vessels for 6*s.* 6*d.* a day, the secretary of the company says, "When the ship-"wrights refused to do the work for 6*s.* 6*d.* a day, "there the matter ended." There it did not end, because a deputation from the society, accompanied by the men in question, appeared before the manager and pleaded that they might have the work, showed him the difference between the working in that particular yard and the working in others, and pledged themselves to do it for a lump sum; and I will put in evidence the usual way in which it is done. Here is a contract signed and stamped in which every particular item is specified, and it is at the option of the employer to stop at any week or to pay at any week the amount of money due for the work performed. That is the system of the trade. The manager was told that his system was not customary in the trade, and that those who would take the job would guarantee him from any loss, for the society was not restrictive so far as that went; if the men had agreed for 11*s.* 6*d.* a ton they would not have objected to their taking it; it is quite immaterial to them, and the best men can do the work cheapest. You may take your work at a price at which you think that you can do it, always having regard to the minimum rate of wages that you shall draw if you draw it by the day. The men wished to see the directors of the company; they asked to be allowed to see the directors to explain to them what was the difference between the rule of their yard and the rule of other yards, and to point out the difference it would make if they took it in their particular way; and the only answer was, "The directors refuse to have any "communication with you except through their "manager," and the manager said, "If you do not take it for 6*s.* 6*d.* a day you will not get it." There the matter, as far as we were concerned, dropped.

17,982. (*Mr. Mathews.*) Are you now speaking of the company?—The Thames Shipbuilding Company.

17,983. And the manager is the organ of the directors?—Yes.

17,984. And your complaint is that you could not see the directors?—I am offering that in opposition to the secretary's evidence that there the matter ended. I say that the men would have guaranteed to have done it by a stamped agreement in such a way that the company should have had no loss. The men were offering to make terms, but the company refused any other terms than their own, which would have been injurious to other men.

17,895. When you say that it would have been injurious to other men, you mean that it would have compelled the other shipwrights in the Thames to have accepted a lower rate than 7*s.* a day?—Just so.

17,986. (*Mr. Harrison.*) What was done was this. They were asked to draw 6*s.* 6*d.* a day instead of 7*s.*; if they had actually gone upon the work they would have drawn 7*s.* for a certain portion of the time, and then as it came short they would have drawn 6*s.*, or even 5*s.* 6*d.*, only for the rest of the time?—Yes. I would like to put in evidence what the company offered to the public. Here is the letter that the company wrote, with the shipwright's answer.

17,987. (*Chairman.*) Will you read only the business part of that correspondence?—The company say this in their letter: "We are just finishing some large con-"tracts which would necessitate the discharge of some "hundreds more of our hands, and being anxious to "avoid this aggravation of the present distress, we "had opened negociations for building some steamers "for a foreign company, which we could only obtain "at a greatly reduced price. Profit was altogether "out of the question, and we could only hope to "escape loss by some reduction in the cost of labour. "We asked our workmen to accept for this especial "job, without affecting any others, a reduction of 6*d.* "per day on the daily wages paid on account of the "contract work, giving them still whatever balance "might remain due on its completion from the amount "settled by mutual agreement. This involved a "reduction of the daily wages of the shipwrights "from 7*s.* to 6*s.* 6*d.* per day, and other classes in pro-"portion. We annex a copy of their reply received "this day absolutely refusing our proposal; we make "no comment on this refusal except that we have good "reason to believe that most of our men would wil-"lingly have accepted our offer but they are forbidden "by their trade unions." The following is the only part of the reply to which I wish to direct your attention: "We beg respectfully" (for reasons which are given in the letter) "to decline your offer of 6*s.* 6*d.* per "day, but are willing to take any work by contract, and "draw the money for the same as the work pro-"gresses." And the men who went to see the manager said, "If it only pays us 5*s.* a day we will do it; it "shall be a matter of agreement between you and us "whether you will leave sufficient in your own hands "so that there shall be no loss to you whatever." They pleaded the case, pleaded for the men, and they were refused it.

17,988. (*Mr. Mathews.*) The inference which we are to draw from that is this, I suppose—that although the men were willing to take contracts which would have paid them perhaps not more than 5*s.* or 6*s.* a day, they were unwilling to take contracts which would have appeared to pay them less than 7*s.* a day, the ordinary rate of wages?—Yes.

17,989. (*Mr. Harrison.*) Was any copy of that letter from the Thames Company sent to the "Times"?—Yes.

17,990. And did you write any answer to that?—We wrote an answer to it and sent it to the "Times," and the "Times" refused to publish it.

17,991. Did you see anybody and ask that it might be inserted?—Yes, and they said that they would take notice of it, and it never appeared. The Mansion House Relief Committee was sitting at that time, and a member of the relief committee who came before them for assistance said, "Because six shipwrights "refused to put up the frames of these vessels 1,400 "men are kept out of employment." That stone was kept rolling by the newspapers until the monstrous assertion crept into one of the papers that when a few shipwrights on the Thames kept 30,000 men out of employment it was quite time that the Legislature took some steps to remove such a state of things. We were advised by the employers, who, as a rule, work amicably with the shipwrights, to take some steps to show the public that we were not at all the cause of this state of things. I was one who went before the Lord Mayor. Our society had previously in going to the Mansion House gone for a different object; we had given 100*l.* to the Patriotic Fund, and I had taken 100*l.* at the time of the Lancashire Distress Fund; and the next time I had occasion to appear before the Lord Mayor was to beg that we might not be charged with stopping the flow of charity in this case, which in fact we were not doing, because the shipwrights, as a rule, are particularly charitable, and give away a large amount in charity to any cause that requires it.

17,992. (*Mr. Hughes.*) When you went to the Lord Mayor did anything happen at that personal interview?—I went before the Lord Mayor and made a statement. If it will not be out of place I will read a portion of it. "The shipwrights altogether "deny that they have been the cause of throwing "workmen out of employment. The following is a "correct statement of facts in reference to the "Thames Ironworks and Shipuilding Company. The

"shipwrights offered to build vessels at a price which "was equivalent to a reduction of 10 per cent. on the "price usually paid for such work, and the directors "of the company agreed to accept their tender, but "refused to allow their shipwrights to draw 7*s.* (the "usual amount) per day. The shipwrights then "offered to draw the money each week according to "the work performed, whatever amount it might "come to, but this was also refused them. It will be "seen that under these circumstances the company "is not justified in declining the contract on the plea "of loss caused by the shipwrights, for it is not the "amount but simply the mode of payment that is in "dispute. It is said by some persons that shipwrights "who are in distress can have work at once at 6*s.* 6*d.* "per day at the Thames Ironworks Company but "it is not correct, for the company, although they "have talked of this price, have really no work at "present ready." That was all that I said in reference to our case; the rest that I said was in reference to the charity; and Mr. Robert Wigram, a shipbuilder, who thoroughly understands the case, spoke on that occasion. "Mr. Robert Wigram, a member of the "committee, said Captain Ford, the managing direc- "tor, had stated that he offered them a reduction of "10 per cent, and that they refused it. They on the "contrary said they were ready to work at a reduction "of 10 per cent., and draw the money they earned, "which would have been a most legitimate arrange- "ment if it had been carried out." It would be carried out according to the custom of the trade. He said further, "The question was whether the ship- "wrights had refused any reduction during these ex- "ceptional times, and whether they were justified in "refusing it. A vessel taken by contract might "stand over for a year or two years. The ship- "wrights could not consent to make a reduction in the "case of any large vessel, the building of which might "occupy a year or two, but they might for a few "months. What little he had seen of union men "himself, whenever his firm had had any question "with them, the men had always looked at the matter "from a sensible point of view."

17,993. (*Mr. Mathews.*) Supposing the shipbuilders on the Thames had said, "Now, putting aside "all contracts, we are willing to open our yards, pro- "vided the shipwrights will work for 6*s.* 6*d.* a day," do you think that if they had made such an offer the shipwrights would have accepted the offer and taken 6*s.* 6*d.* a day?—I can meet that with this answer, that now we will work for 6*s.* a day.

17,994. I am speaking of the particular period that you have been calling our attention to. At that time would the shipwrights have taken 6*s.* 6*d.* a day if they had been offered it?—I am not prepared to say what they would have done.

17,995. Will you give us your opinion upon that point. You are very competent to give an opinion upon it, and you know pretty well what the feeling of the shipwrights was, and whether they would have accepted 6*s.* 6*d.* if the shipbuilders had opened their yards to them at that time?—If the shipwrights at that time had seen that there was no probability of employment they doubtless would have done it. But I explained in my evidence before that it was reported that there were 40 vessels to be built, and under the circumstances they would not have been justified in taking a considerable reduction.

17,996. Irrespective of what the state of the trade may have been, of which the masters of course had much better knowledge than the shipwrights, if the masters had said, "We are willing to open our yards," would the shipwrights then have accepted 6*s.* 6*d.*?—Not irrespective of the state of the trade; they would have taken into account the state of the trade when they gave the answer to that.

17,997. The whole of this transaction that you have been referring to before the relief committee all turned upon that, that the shipwrights had work offered them at 6*s.* 6*d.* a day and refused it. I ask you again if the masters had offered them 6*s.* 6*d.* and opened their yards to give them employment (whether their yards could have continued open is another thing), do you think that they would have accepted that offer?—Seeing that this was something so different from the way in which we were working, I am not prepared to say that.

17,998. (*Mr. Harrison.*) The shipwrights would have considered what they were to receive in wages with reference to the state of the market and what was doing in their trade?—Yes.

17,999. (*Mr. Mathews.*) But is not the state of the market rather a consideration for the employers than the shipwrights themselves?—Well, those who think that the shipwrights do not study these things make a mistake.

18,000. But I suppose that as the interest of the builders was concerned more than that of anyone else in the state of the market they were best able to judge what they could afford?—It was not put as a question of wages.

18,001. I want to know whether the shipwrights would have accepted 6*s.* 6*d.* if they had said that they would have opened their yards to them at that price, because it all turns upon that?—If they had asked them, "Will you change your old system when all "in London work by the piece, will you work by the "day at 6*s.* 6*d.* regardless of contract," that would have required so much consideration among the body at large that I am not in a position to say what they would have done.

18,002. But I suppose that there is an understanding as to what the rate of wages is in the Thames to shipwrights; there must have been a conviction on the part of the employers of labour that 7*s.* a day was too high a wage to allow of their taking the ships, but that 6*s.* 6*d.* would admit of it. I understand from you that they declined to work at 6*s.* 6*d.* a day, and said that they would rather work by contract at what would result in even a lower rate than prejudiced parties who were working at 7*s.* Again I ask you whether if they had offered them the 6*s.* 6*d.* the shipwrights would have accepted it?—At that particular time and for the particular reasons that existed at that time I think they would not.

18,003. (*Mr. Harrison.*) What do you suppose that that 6*s.* 6*d.* a day on the average comes to with a fair workman; what do you suppose it brings out at the end of the year?—About 5*s.* a day.

18,004. You would consider that the average earnings of a good workman are 5*s.* a day spread over the year?—Not the average wage of a workman in the trade, of a man who has to go about and get his living. There may be a few who would get as much as that on the average.

18,005. How much would it represent for the ordinary workman?—27*s.* a week.

18,006. Then the stories we have heard of the calculations based on 7*s.* a day compared with the income of a curate, and that kind of thing, are rather fallacious?—Altogether as far as the shipwrights are concerned.

18,007. (*Mr. Mathews.*) But will you show us the fallacy. At 7*s.* or 6*s.* 6*d.* you may have full work, or may not have full work. If you have full work of course it represents so much the more, but if you are short of work you, like all other classes of the community, must take the rate of wages according to the amount of work furnished you?—Undoubtedly.

18,008. Therefore that question is rather beside the question of the standard rate of wages, is it not?—But the fallacious part of it was comparing, the income of a curate paid by the year with that of the shipwright who gets 7*s.* a day, and only perhaps gets two and a half days' work a week.

18,009. (*Mr. Harrison.*) The statement was that the shipwrights of London refused to work for less than 100*l.* a year. You say so far from that that no shipwright does receive 100*l.* a year?—I do not say that no shipwright does, but a great many do not.

18,010. (*Mr. Mathews.*) The curate may be out of

Mr. P. J. Robson.

9 June 1868.

work; he may be out of his curacy for six or nine months together, may he not?—But he is not so liable to be out of work as the shipwright is.

18,011. (*Mr. Booth.*) Let me ask you whether I am right in supposing that the refusal of the men to take less than 7*s.* a day was made under the influence and with the sanction of the union?—Under the influence and with the sanction of a general meeting.

18,012. Of the union?—Of the members of the union.

18,013. Was the question considered by the union?—The question was considered by the union.

18,014. And did the men refuse it with the sanction of the union?—They refused it with their sanction.

18,015. (*Mr. Harrison.*) We have had some distinction drawn to-day between masters' unions and those of the workmen; and it was stated to consist in this, that the officials of the mens' unions are not like themselves working men. Now, you are president of your society, and I presume that you have worked in your trade yourself?—Yes, I work now. I was out at half-past 3 this morning.

18,016. (*Mr. Mathews.*) You had been doing overtime, I suppose?—Yes.

18,017. (*Mr. Harrison.*) The other officials of the society are *bonâ fide* working men; that is to say, if they are not working at this particular moment they are workmen by trade?—They are. The secretary does not now work at his tools, seeing that there are so many benefits connected with the society that we have to keep a person to do the writing and correspondence the same as the masters' association do, and in our particular case we give a shipwright the job, whereas in theirs they give a clerk; but we are all working men.

18,018. With respect to the wages in London, upon which some doubt was thrown by the last witness, can you give us satisfactorily, from any published or written returns, what have been the rates in London for the last 20 or 30 years?—I can tell you the minimum rate of wages. From 1824 until February in 1866 the minimum rate of wages was 6*s.* per day; it never varied at all. But at that time, seeing that such yards as the Thames Limited, and in fact all the iron companies' yards, were paying 7*s.* a day, and that the masters who employed us in the docks were paying us a sum for the job that paid us at the rate of 7*s.* a day, and that when vessels went out of dock the captain or the overlooker could get men to work for 6*s.* a day, there was an objection raised to that, that we worked for 7*s.* a day in the dock, and that our men might go to work outside the dock at 6*s.* a day, thereby taking a certain portion of the work away from the employer, and we asked that the wages all through might be raised to 7*s.* a day, and it was acceded to immediately by the whole of the employers. But since that time, since that affair of the Thames Limited, we have given way in the building of new ships, also at the instigation of the employers, and our minimum rate of wages in the building of new ships is 6*s.* a day.

18,019. (*Mr. Mathews.*) That is owing, I suppose, to the want of employment?—Yes.

18,020. Wages fell as the state of the trade relaxed?—Yes.

18,021. And if the state of the trade were to revive again there would be a rise in the wages, irrespective of the union?—Yes, irrespective of the union.

18,022. (*Mr. Harrison.*) Are there any other points that you wish to mention?—I wish to say that I consider that our shipwrights' union is less restrictive and less in restraint of trade than any shipwrights' society in the kingdom, and less than any with which I am acquainted; and yet we have been charged with the whole of the sins that are attributed to trades unions, and we feel sore in consequence of that.

18,023. With regard to piece work, you lay no restriction upon that, but it is the custom of the trade, is it not?—It is the custom of the trade, and no restriction is laid upon it at all. If the Thames Limited Company had done the straightforward thing, and supposing that 12*s.* 6*d.* a ton was too high a sum for them, and they had asked the men to do it for 11*s.* 6*d.*, I have no doubt they would have found a company of men to do it. The union does not interfere with any man in taking work, the best man earns the best wages, and provided that he does it on account, or according to his own skill, the union does not interfere with him at all.

18,024. Have you any restriction as to apprentices?—Not the slightest. They are a source of considerable annoyance, but in our rules we have no restrictions on that point; and some of the employers who are speaking a good deal about the distress are still continuing to take apprentices, and are adding to that distress. But as a union we have no restrictions against apprentices.

18,025. And wherever overtime is necessary for repairs and so forth, or finishing a ship under an emergency, the union would put no embargo on that?—Only so far as this: we know that there are times when it is absolutely necessary, on account of the tide, that men should work overtime. One of our rules states that any person meeting with an accident before 6 in the morning, or after 6 at night—that is, while working overtime—does not receive any accident allowance.

18,026. (*Mr. Mathews.*) So that you discourage overtime by that means?—Yes. But in my experience I never knew that fact to keep a man from working overtime.

18,027. I only ask whether it is not an indication of discouragement on your part of working overtime?—It is an indication of that.

18,028. (*Mr. Harrison.*) Do you think it an evil?—Yes. Of course we know that if we are working overtime, and hands could be put on only by day, it would give those employment who are out of employment. But, seeing that there are necessities in the case, and that sometimes it is absolutely necessary that they should work overtime, the union does not restrict it further than in the manner which I have stated.

The witness withdrew.

Mr. R. Quaile.

Mr. Robert Quaile examined.

18,029. (*Chairman.*) Are you a workman employed in shipbuilding?—Yes.

18,030. Have you been employed in Hull?—Yes.

18,031. Has there been a trade union at Hull, and have you suffered at all from it?—Yes. I was there last week, and I was a prisoner most of the time; not a prisoner in the hands of the police, but for my own safety. When I went down to work the men on strike gathered round us and would not let us work.

18,032. What was the strike about—shipbuilding?—No, platelayers' labourers.

18,033. Was it a strike among the labourers?—Yes; they wanted to hinder us from going to work. They had sent back at their own expense some of the men that left London here to take their places.

18,034. Some of the new men that came to Hull were sent back at the expense of the union?—I do not know whether they were unionists or not, but they were sent back at their expense. They paid their passage back to London sooner than let them work.

18,035. Then had you anything done to you?—Yes; I was not let to work. They put me into the train and forced me back to London, but when I got about 20 miles from Hull I came back again to Hull again, and two of the men that threatened me were imprisoned.

18,036. (*Mr. Roebuck.*) What did they say to you?—They used different threats. They said that if I went to work on Saturday night, Sunday night would not see me safe. They said they would throw me into the dock.

18,037. So that, in fact, they threatened to kill you?—Yes.

18,038. What did you do then when you had got back to Hull?—I was brought up as evidence against them. There was a warrant issued against them.

18,039. You said that you went 20 miles from Hull and then got back. How did you get back?—I walked back.

18,040. When you got to Hull what happened to you?—I was sitting on the beach, and a gentleman out of the yard with a policeman came over to me, and the gentleman out of the yard bade me good morning. He said, "There is a warrant out for you, but do not be alarmed." I laughed and said, "It is nothing more than what I expected." He said, "It is nothing but to "give evidence against the men who have threatened "you and prevented you from working."

18,041. How did he know all that; did you tell him?—He knew all the threats that were used to me going to work, coming from work, going to meals, and coming back.

18,042. How did he know?—He could see it.

18,043. Did they threaten you in his presence?—Yes, decidedly, in his presence. He gave evidence at the trial, where they were convicted.

18,044. Where was the threat?—Going to work, coming from it, and going back.

18,045. Was this gentleman from the yard near you when the threat took place?—Yes, more than one of them was with me.

18,046. How was he with you; did he go to take care of you?—It was so close to the gate. The men on strike, when I was going to work, would congregate a few yards from the gate, and there the threats were used even in the presence of the chief foreman of the yard.

18,047. Who were the men that congregated round the gates; what class of workmen?—My own class of workmen—labourers.

18,048. (*Mr. Mathews.*) Men out on strike?—Yes.

18,049. And they wanted to prevent your coming in?—Yes; they said that I came to work under the right wages.

18,050. (*Mr. Harrison.*) Were they members of a trade union?—I cannot say.

18,051. You did not hear that they were?—No, I did not.

18,052. (*Mr. Mathews.*) What is your opinion; is it that they were members of a trades union?—I do not know. They seemed to be of one mind on their own principle, and that was to prosecute and annoy me, and I kept under the protection of two policemen all the time I was there, and was sent back under the protection of one.

18,053. (*Mr. Roebuck.*) Were they a body of labourers from the country you are from, Ireland?—They were a mixture of all.

18,054. (*Mr. Mathews.*) From what part of Ireland do you come?—From the county of Londonderry.

18,055. (*Mr. Roebuck.*) All that you suffered was threats; they did not beat you?—That was quite enough. To be imprisoned eight days, and to lie in a garden, as I did, one night without a bed, was not pleasant.

18,056. They only threatened you?—Yes.

Mr. R. Quaile.

9 June 1868.

18,057. (*Mr. Mathews.*) Had you any apprehension that they would have beaten you?—Decidedly, had I returned to work.

18,058. Although they did not beat you, you were under bodily fear that they would have beaten you if you had returned to work?—Yes; the last day I was at work the same gentleman came out when he heard the violent threats they were using about 30 yards from the gate, and took me away, and then they threw stones at both him and me.

18,059. Did the stones strike you?—No, they did not strike either of us.

18,060. Were they thrown at you with the intention of hitting you?—I do not know with what intention they were thrown. I do not like to state that.

18,061. (*Mr. Roebuck.*) Your complaint is that you were willing to go to work, but, owing to the labourers' strike in Hull, they prevented you from going to work, and sent you away, and when you got 20 miles from Hull you returned to them again, and then you received the same reception?—When I came back I was put where I could not receive the same reception. I was put in the police guard-room in the station-house, in order that I might give evidence against the two principal men that had annoyed me.

18,062. What were you doing in London previous to going to Hull?—Working in a Government dockyard and victualling yards.

18,063. And who suggested to you to go to Hull?—Colonel Maude. I entered my name.

18,064. You belong to the Free Labour Registration Society?—Yes.

18,065. And the managers of that suggested your going to Hull?—I came to solicit a place.

18,066. And you got the reception you have described?—Yes.

18,067. (*Mr. Booth.*) You could have got work at Hull unless you had been prevented?—Yes.

18,068. Had they any other cause of complaint against you except going to take work which they had refused?—No other cause.

18,069. They entirely prevented you from obtaining work there?—They could not prevent me from obtaining it so long as the masters were inclined to give it, but they acted so that even if the masters did give it I could not remain there.

18,070. You did work for some time?—Yes, for a few days.

18,071. (*Mr. Roebuck.*) Was anybody else illtreated besides yourself?—Yes, four or five men have been committed and sent to prison with hard labour for illtreating other men.

18,072. (*Mr. Mathews.*) And there was a conviction in your case?—Yes, two men were sent to prison with hard labour in my case.

18,073. (*Mr. Booth.*) Notwithstanding that, you were not allowed peaceably to work?—Well, these men that were out on strike turned in again to their employment and I came home; in fact I was too miserable to remain.

18,074. Have you any further statement that you wish to make to the Commission?—No.

The witness withdrew.

Mr. JOHN ALLEN further examined.

Mr. J. Allen.

18,075. (*Mr. Booth.*) We understand that you have some further statement which you wish to make to the Commission?—Yes. Since I was here before I have looked for and obtained information which I think will have the effect of saving me from the necessity of going into detail on the various questions put to me then by the Commissioners. I wish to show the action of our association with respect to the regulation of wages and the hours of labour. With respect to the regulation of wages we have adopted the course of attempting to regulate them when we saw that the times and the trade were in such a position that we might appeal to our employers to grant us what we thought was a sufficient remuneration for our labour. We have in some cases succeeded and peacefully; and I may say, with regard to Lancashire in particular, that we have nearly always succeeded in getting an advance of wages when we looked for it with scarcely any trouble, but when I come to Liverpool, London, the north of England, and the Clyde, I feel that the case is a little different from that. There we do not go on so well as we do in Lancashire. It has been stated here that in London within this last 35 years wages have advanced from 25 per cent. to 30 per cent. I will admit

Mr. J. Allen.

9 June 1868.

that in portions of the country they have risen nearly to that amount, but in London they have not. And it has been stated that within the last seven or eight years wages have advanced in London 15 per cent. out of the 30 per cent. that they have advanced in 35 years. Now, so far as the trade which I represent and the society which I represent are concerned, I do not think that in London wages have advanced 10 per cent., or anything at all like it, within this last 30 years. I admit that they have in some cases advanced 10 per cent., in London within the last 30 years, but if I take into consideration the amount of labour done now as compared with the amount of labour done 35 years ago, or 30 years ago, I shall find the labour in excess of the advance of wages granted. I say that much relative to the day work. But if I go to the piece work that has been practised since iron shipbuilding came into operation I shall find this to be the state of the case. I have been in company with a man that has kept an account of the prices paid on iron shipbuilding for this last 27 years. He has been a contractor, that is to say, a sub-contractor, and has kept an account of that kind, and I have gathered this much from him, that in the year 1841, that is 27 years ago, rivetters' wages were in some parts 28*s.* a week; at present they are 30*s.* a week, that is an advance of 2*s.* per week, in some of the shops in London, that is in the boiler shops. But if we go to the iron shipbuilding we find that in 1841, supposing that in a ship of 1,000 tons there would be a piece of work amounting to 20,000 rivets in the shell of the ship, that would amount at that time, when wages were only 28*s.* per week in the boiler shops, to 210*l.* At present, when they say that the wages have advanced so much, we find that the same amount of work would be done at piece work prices now given for 75*l.*; consequently, taking the iron shipbuilding into consideration and the difference existing, we find that in place of the price of labour being advanced it has decreased, so that there would be a difference on one branch alone of 135*l.*, as compared with the state of things in 1841, in favour of the employers now in the construction of an iron ship of 1,000 tons.

18,076. (*Mr. Mathews.*) Is the rivetting done by machinery?—No, not in iron shipping.

18,077. The same mode of rivetting existed in the previous cases as exists at present?—Yes. Then if I take three other branches and take that difference into account I find a balance in favour of the employers now in a ship of 1,000 tons of 405*l.* over and above that which they had when their wages were 28*s.* per week, or 10 per cent. less than what they are at present. Now, about 14 or 15 years ago the wages in Liverpool in the iron shipbuilding yards were 24*s.* or 26*s.* per week; at present, that is to say since the last reduction, they are 28*s.* per week. Well, I find that when the wages were 24*s.* or 26*s.* per week the men put in 120 rivets for a day's work, that is 120 for 4*s.* 8*d.* or for 4*s.* At present for 28*s.* per week they put in 180. Here, then, there is 50 per cent. advance on the amount of work done, while there is only about 10 per cent. advance in the wages. I think that that statement will do away with the idea that the wages have risen so much as far as the iron shipbuilding is concerned. When they say that we have advanced the wages so much per cent. we find by a strict examination of the accounts (and I have had the accounts from the offices of the various shipbuilders in London), that in place of an advance of wages of 10 per cent. being given we have fallen back about 50 per cent. when we consider the amount of work done. There is another statement that has been laid before this board to which I should like to refer. Some men have said this in effect: "I have an opinion in my own mind, " and I think the operation would be perfect, if apart " from the unions a better class of men would locate " themselves where there was a better demand for " their labour at a higher price;" that is as much as to say that the unions interfere with the skilled workman and will not allow him to locate himself in a place where there is a call for his labour at a better price.

18,078. (*Mr. Harrison.*) I do not think that it has ever been suggested that the unions have interfered with men going from one part of the country to another?—But it means that. It has been put before you that it is desirable that the better class of men should locate themselves where there was a better demand for their labour at a higher price. To interfere with that would be in direct opposition to the principles of the trades unions; for, as I have stated here before in my evidence, we have even paid men's railway fares to take them to an employer at a distance when he required men and when we had men to send to him. Then there was another question, namely, How it was that so many firms on the Thames closed, and why they became bankrupt? Now I must say that though there have been firms that have closed their operations on the Thames they have in many cases removed elsewhere to go on with their operations, and that not, as has been stated here, because they could not make money enough here. There have been some of them that could make money and perhaps did make money, but left it to others to take care of it for them. That I am sorry to say is the case. There are employers who apart from the trades unions, if they had had that judgment that they ought to have had in carrying on the business of their firm and had not trusted so much to others, would have been perhaps in a position to-day which is now occupied by those whom they trusted. Then questions were asked as to what the operation of the societies is, and how it affects the employers and workmen. Now, as far as the feelings existing between employers and workmen are concerned, I must say that trades unions certainly have not created a better feeling than what there was existing previous to their coming into operation, and the reason of that is very obvious. The men look for a little more wage, and the employers like to keep what they can get.

18,079. (*Mr. Mathews.*) You say that trades unions have not created a better feeling; have they created a worse?—I believe that they have in many instances, but in a great many instances I believe they have created a better feeling with many of the employers who feel inclined to consult with the men on matters affecting the interests of both employers and employed. There is certainly a great antipathy existing between employers and employed where the employer, as a matter of dignity of trade or dignity of person, will not condescend to meet their workmen, or meet the officials belonging to the trades unions. It has been stated to the Commission that the officials of the trades unions have done such and such things (of course bad things), but I believe that if the thing is looked at in the right light, and if it is taken into account in an unprejudiced form it will be found that the principals of the trades unions always advocate a peaceable form of action.

18,080. I can understand the objection on the part of the employers to meet the officials of the trades unions, but do you know any instances where the employers have objected to meet their own workpeople and discuss the question of wages with them?—There are instances of that, but I would beg not to be pressed to name any person.

18,081. I do not ask you to name the people, but are the instances numerous that have come under your observation of the employers of labour declining to meet their own workpeople and discuss the question of wages with them?—They are not so numerous where they have refused to meet their own workpeople as they are where they have refused to meet deputies from the workpeople. In answer to some other statements that have been made I may say that the officials are in general men belonging to the trade, and are men who are placed in that position by the workmen of that trade, and the men consider that whereas one of them might be discharged from a shop through being pointed out as a leading feature in a movement the official could not be, because he is placed in a position,

and kept there by them. I know a case, for instance, where I was engaged in a strike, and I was opposed to that strike because I thought that we could not gain our object, although the object was a very honest one on the part of the men. As I say, I was opposed to that strike, and though I was opposed to it they appointed me as a deputation to wait upon my employer; the consequence was that I was hunted through the country, and even after I obtained a situation here in London my employer happened to see me in that situation, and he applied at the office to get me discharged, although I had been opposed to the steps the men had taken. It is the case that men in general have an objection to see their employers in case of a dispute for fear of the employers taking an undue advantage of them, consequently the men fall back upon the officials of their society; and here the employers disagree with our view of the case A question has been put to me with regard to apprentices. I may say that in Liverpool at present there are three apprentices to one journeyman employed. One may calculate that there are 400 men belonging to our trade walking about Liverpool and Birkenhead idle to-day, and if I take three people as depending upon each of those 400, we shall have 1,200 persons out of employment, and the question is, which of the two evils is the greater? Shall we have an excess of youth, that is to say apprentices, in the trade at work and throw all those men and their families out to suffer want? or shall we destroy the youths, throw them out of work, and have so many of the working men and their families supported?

18,082. Do you think that if the apprentices were to be thrown out of work it would necessarily follow that the shipwrights would be put in at full wages? —Yes. As to the iron shipbuilders, I believe that if there were not so many apprentices employed the men would be employed.

18,083. (*Mr. Roebuck.*) Then do you think that it would be just to destroy the apprentices in order to keep these people alive?—I do not think it would be just to destroy them all.

18,084. It would be just to destroy some of them? —As far as the evils go I should say let us take the less evil of the two.

18,085. I want to know whether you would justify the Legislature which should say, "Yes, we know that "the law which we are about to pass will destroy so "many young men; we cannot help it, we must do "it." Would you justify the Legislature in doing that?—No, I could not wish for any act of any Legislature to do any injury to any person.

18,086. (*Mr. Harrison.*) Do you mean that so many young men had better not enter the trade which is already overstocked?—Yes. The state of the matter is this: They are both great evils, but I think that the greater evil is at the side of the poor men with their families, because there are so many more of the poor men with their families out and suffering than there are of the youth employed in their places; consequently the greater evil must be with the poor men and their families.

18,087. (*Mr. Roebuck.*) What would you recommend to have done with these young men who have no other means of subsistence, but think that they could get it in an honest way by taking to that trade? —What I would do if there was a possibility of doing it would be to carry out emigration.

18,088. You would banish those men?—I would not banish them; they would be free men and live in hopes of having a better prospect before them.

18,089. (*Mr. Mathews.*) Is there anything to prevent their emigrating now?—Yes.

18,090. What?—Poverty.

18,091. Is it your theory that Government should be asked to provide means for sending these people out of the country because the trade happens to be slack just now?—Not because the trade happens to be slack just now, but if it became slack for a certain period, and there was an over-abundance of labour stocking the market, if we could form a system to lessen the labour and so lessen the poverty through this country by placing them in a more comfortable position elsewhere, I think that it would be an act of charity; it would be doing humanity in general a great service.

18,092. (*Mr. Roebuck.*) But do not you think that that is very much like putting salt upon the bird's tail?—No, I do not; you have to wait to catch the bird, but you have poverty around you at all times.

18,093. (*Mr. Mathews.*) Then would you advocate the doctrine that in every time of depression of trade Government should take upon itself either to support the men or to send them abroad?—After it had come to a certain pitch. I think that from the Poor Law guardians, and the applications that would be made to different quarters under some code of laws with certain regulations, Government might be generally put in a position to know when the natural limits were exceeded at home.

18,094. Would you send out the elder workmen or the younger workmen?—Certainly I would not send out the old men.

18,095. (*Mr. Roebuck.*) Why not; you are talking of mischief, why should you not get rid of the greatest mischief?—When I speak of old men I consider that I am an old man myself, though I am not very old.

18,096. "We have too many of us in this room, throw him out of window;" is that the sort of proceeding you advocate?—I would not advocate that.

18,097. (*Mr. Mathews.*) Supposing that we were to send out by the aid of Government all the surplus hands that could not find work when trade was slack, would you bring them back again when trade revived? —That is giving it a very wide scope. I have not given it such a wide scope, I merely suggest that certain regulations may be adopted, whereby the Government of the country may be led to judge aright on the question.

18,098. You say that a large number of men in the shipbuilding trade are out of employment in Liverpool. Do you know the Clyde or any other shipbuilding districts, so as to be able to say whether they are equally short of employment there?—I believe that on the Clyde they have plenty of trade, and also on the Tyne.

18,099. But in Liverpool they are very short at present?—In Liverpool and in London they are very short.

The witness withdrew.

Adjourned to Tuesday, June the 23rd, at 11 o'clock.

COMMISSION.

VICTORIA R.

Victoria, by the Grace of God of the United Kingdom of Great Britain and Ireland Queen, Defender of the Faith.

To Our right trusty and well-beloved Councillor Sir William Erle, Knight; Our right trusty and right well-beloved Cousin Thomas George Earl of Lichfield; Our trusty and well-beloved Francis Charteris, Esquire (commonly called Lord Elcho); Our right trusty and well-beloved Councillor Sir Edmund Walker Head, Baronet, Knight Commander of Our most Honourable Order of the Bath; Our trusty and well-beloved Sir Daniel Gooch, Baronet; Our trusty and well-beloved Herman Merivale, Esquire, Companion of Our most Honourable Order of the Bath; Our trusty and well-beloved James Booth, Esquire, Companion of Our most Honourable Order of the Bath; Our trusty and well-beloved John Arthur Roebuck, Esquire, one of Our Counsel learned in the Law; Our trusty and well-beloved Thomas Hughes, Esquire, and Frederic Harrison, Esquire, Barristers at Law; and Our trusty and well-beloved William Mathews, Esquire, greeting.

Whereas it has been represented unto Us that it is expedient that inquiry should be made into the several matters herein-after mentioned.

Now Know Ye, that We, reposing great trust and confidence in your ability and discretion, have nominated, constituted, and appointed, and do by these Presents nominate, constitute, and appoint, you, the said Sir William Erle, Thomas George Earl of Lichfield, Francis Charteris, Esquire (commonly called Lord Elcho), Sir Edmund Walker Head, Sir Daniel Gooch, Herman Merivale, James Booth, John Arthur Roebuck, Thomas Hughes, Frederic Harrison, and William Mathews, to be Our Commissioners for the purposes of the said inquiry.

And We do hereby enjoin you, or any Four of you, to inquire into and report on the Organization and Rules of Trades Unions and other Associations, whether of Workmen or Employers, and to inquire into and report on the effect produced by such Trades Unions and Associations on the Workmen and Employers respectively, and on the Relations between Workmen and Employers, and on the Trade and Industry of the Country; with power to investigate any recent acts of intimidation, outrage, or wrong alleged to have been promoted, encouraged, or connived at by such Trades Unions or other Associations, and also to suggest any improvements to be made in the law with respect to the matters aforesaid, or with respect to the relations between Workmen and their Employers, for the mutual benefit of both parties.

And for the better discovery of the truth in the premises, We do by these Presents give and grant unto you, or any Four of you, full power and authority to call before you, or any Four of you, such persons as you shall judge necessary, by whom you may be better informed of the truth in the premises, and to inquire of the premises and every part thereof by all other lawful ways and means whatsoever.

And Our further Will and Pleasure is that you, Our said Commissioners, do, with as little delay as may be consistent with a due discharge of the duties hereby imposed upon you, certify unto Us from time to time, under your hands and seals, your several proceedings in the premises.

And We do further will and command, and by these Presents ordain, that this Our Commission shall continue in full force and virtue, and that you, our said Commissioners, or any Four of you, shall and may from time to time proceed in the execution thereof, and of every matter or thing therein contained, although the same be not continued from time to time by adjournment.

And for your assistance in the execution of these Presents We do hereby authorize and empower you to appoint a Secretary to this Our Commission, to attend you, whose services and assistance We require you to use from time to time as occasion may require.

Given at Our Court at St. James, the Twelfth day of February 1867, in the Thirtieth Year of Our Reign.

By Her Majesty's Command.

S. H. WALPOLE.

TENTH REPORT.

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

We, Your Majesty's Commissioners appointed to inquire into and report on the Organization and Rules of Trades Unions and other Associations, whether of Workmen or Employers, and to inquire into and report on the effects produced by such Trades Unions and Associations on the Workmen and Employers respectively, and on the Relations between Workmen and Employers, and on the Trade and Industry of the Country; with power to investigate any recent acts of intimidation, outrage, or wrong alleged to have been promoted, encouraged, or connived at by such Trades Unions or other Associations, and also to suggest any improvements to be made in the law with respect to the matters aforesaid, or with respect to the relations between Workmen and their Employers, for the mutual benefit of both parties, have held several meetings, and humbly beg leave to submit to Your Majesty the evidence given before us at our meetings held upon the 23d and 30th days of June, and upon the 1st, 14th, 22d, and 24th days of July 1868.

MINUTES OF EVIDENCE

RETURN OFFICE PALL MALL

TAKEN BEFORE THE

ROYAL COMMISSION

APPOINTED TO INQUIRE INTO THE

TRADES UNIONS AND OTHER ASSOCIATIONS.

1, Park Prospect, Westminster, Tuesday, 23d June 1868.

PRESENT:

The Right Hon. Sir WILLIAM ERLE.
The Right Hon. the EARL of LICHFIELD.
Sir DANIEL GOOCH, Bart., M.P.
JAMES BOOTH, Esq., C.B.
JOHN ARTHUR ROEBUCK, Esq., Q.C., M.P.
FREDERIC HARRISON, Esq.

THE RIGHT HON. SIR WILLIAM ERLE IN THE CHAIR.

Mr. ROBERT LEWIS examined.

Mr. R. Lewis

23 June 18

18,100. (*Chairman.*) You are of the firm of Lewis, Sons, and Parker, tailors, of Saint James's Street, are you not?—Yes.

18,101. You have been in business for nearly 30 years?—I have.

18,102. And are you well acquainted with the regulations connected with the trade?—I am.

18,103. Has the action of the trades unions been brought under your attention, particularly in 1867?—We were put to great inconvenience through the action of trades unions at that time. A strike was declared and kept up for a considerable period, which created very great inconvenience.

18,104. Perhaps it would be best if you would tell us what you consider the most prominent points of interest in respect of that strike?—The whole affair is so full of dates and numbers and facts, that I should be saving the time of the Commission if I just refer to the document a copy of which I have already submitted to the secretary. The first question put to me in the printed questions is this, "Has the institution "of trades unions according to your experience tended "to facilitate or improve the dealings and relations "between workmen and their employers, or the "contrary?" I have made this reply: "In my "opinion the institution of trades unions does not "tend to facilitate or improve the dealings or relations "between the workmen and their employers, but on "the contrary has, according to my experience in the "tailoring trade, been the sole cause of disaffection, "and the trouble that has been created. In support "of my opinion I beg to illustrate the injurious effects "of trades unions in the tailoring trade by the "following short history of the strike in 1867, and "the circumstances preceding it. For upwards of "30 years past the operative tailors of London have "been paid by piece-work, so much for each garment; "the prices having originally been fixed by a calcu-"lation based upon the number of hours in which an "average workman could and did up to that time "ordinarily do the work at 6*d.* per hour; alterations, "repairs, and items not provided for being paid for "as nearly as could be calculated according to the "same scale. This calculation of time has come to "be called technically 'the London log,' and the "system was adopted to overcome the dissatisfaction "felt by clever and expeditious workmen at not being "able to earn more than slow and inefficient ones "under the previous existing system of daywork. Its "result has been to increase considerably the earnings "of industrious and skilful men, and to lower those "of the opposite class. Under this arrangement "matters proceeded until the spring of the year 1866, "when the master tailors of London received a circu-"lar from the London Operative Tailors' Protective "Association, (a copy of which, marked A, is ap-"pended,)* requesting an advance of 1*d.* per hour in "the rate of payment, and an answer by a given day. "A meeting of masters was hastily convened to con-"sider this application, the statements set forth in it "duly considered, and a committee appointed to act "on behalf of the masters generally as it should "appear best to them to do. This committee col-"lected statistics from about 30 of the leading firms "in the west end of London, by which they ascertained "that accidents and exigencies of business had gra-"dually produced variations in the rate of payment in "different shops; but having by these means learned "the average prices paid they recommended the "general adoption of a new scale, giving an increase "of about 10 per cent. upon this average. They "further recommended that the announcement of this "advance should be made by each master to his own "men, in preference to making it to the union. "Their recommendations were very generally adopted, "and the advance was received without objection by "the workmen, excepting in the case of three firms—

* The Appendix to the witness's printed Statement, which had been previously circulated among the Commissioners, will be found at the close of his evidence (p. 8). As the greater part of the statement itself is quoted in the oral evidence, it is not reprinted here.

r. R. Lewis.
June 1868.

" Messrs. Poole, Stulz, and Morgan—where, from the " fact of exceptionally high prices having previously " been paid, the increase of 10 per cent. upon the " average was found to give comparatively little " advance." It was, I may explain, 16 or 17 per cent. higher than some houses had been paying. " A " strike against these three houses followed, and the " other masters feeling that they were bound in " honour to support them, determined upon closing " their shops until an arrangement was effected, " which was done in about 10 days by a further con- " cession on the part of all the masters; and this " agreement as to the future rate of payment in the " trade was signed by the masters and the represen- " tatives of the London Operative Tailors' Protective " Association, at St. James's Hall, and has since been " adhered to on the part of the masters. Its effect " has been an increase of about 15 per cent. upon the " rate of wages paid by the leading houses." I will just say here that that is still adhered to on the part of the masters. We have practised no inquisitorial method of ascertaining the facts from one another except what has casually come out. There may have been exceptions to that which I am not aware of; but those friends that I am intimately acquainted with adhere to it strictly on principle. " The matters " above alluded to led to the formation of the " Master Tailors' Association of the United King- " dom, which was established on the 1st of Septem- " ber 1866, with the objects, as set forth in the rules, " of 'the interchange of information on all matters " ' connected with the trade generally, the holding " ' of free and friendly communications with the " ' representatives of the journeymen, with a view " ' to the avoidance of strikes, and at the same " ' time to secure the prompt and united resistance to " ' any attempt on the part of the men to enforce " ' unreasonable demands, or to limit the free action of " ' any individual master.' By this association, on the " 5th of January 1867, a communication was received " (a copy of which marked B is appended), signed by " the representatives of the London Operative Tailors' " Protective Association, and of the Amalgamated " Society of Operative Tailors, proposing that an " endeavour should be made, by a committee of masters " and a committee of workmen, to arrange an uniform " time log for the United Kingdom, for the purpose of " avoiding the constant occurrence of such disputes " for want of such a standard. This proposal was " after consideration assented to on the part of the " masters' association (though with some doubt on " their part as to its practicability), and a committee " of masters acquainted with the subject was appointed " for the purpose. At the first stage of the negotia- " tions the chairman of the masters' committee in- " troduced a proposition for arbitration in case of " disagreement, and pressed it upon the workmen's " committee, who, however, stated that in their opinion " it would prove impracticable and useless. Two " meetings took place, and sufficed to show the " masters' committee that there was not the slightest " possibility of any good being done, and that the pro- " position had been nothing more than a device to " obtain the sanction of their association to a 'time " log' bearing no relation to the actual number of " hours required for the performance of work by " average workmen, and that it was a plausible pre- " text, under the pretence of a desire for symmetry and " uniformity, to obtain a further increase of wages " both in town and country. Under these circum- " stances a dead lock took place, and both parties " referred to their general committees for instruction. " The masters determined that unless the workmen " would accept, with some slight modifications, where " palpable errors could be clearly demonstrated, some " such standard of time as had been recognized at the " meeting at St. James's Hall in April 1866, when the " agreement for an increase of wages was made and " signed by both parties, as before referred to, and " had previously satisfied masters and men when " considerably more work was put in the various " garments (some of the garments certainly), they " must abandon the matter. The operatives' com- " mittee replied that by far the greater part of the " log submitted to them by the masters would re- " quire substantial additions, and insisted on pro- " ceeding with the matter as before forthwith. The " negotiations were then broken off, the workmen " complaining of a breach of faith on the part of the " masters, and endeavouring to persuade the public " that they were only seeking an adjustment of time " and not an increase of wages, to realize in fact, as " they put it, what had been nominally conceded to " them the year before; whereas they had, as has been " shown, obtained a tangible increase of 15 per cent. by " fair and open negotiation, and were now endeavouring " by indirect means to obtain at the very least as much " more. It will be proper here to state that very few " practical master tailors believe in the possibility of " establishing either an exactly uniform rate of the " time to be allowed by all houses in one town, or of " an invariable calculation of the time taken to make " similar garments in various places. In the former " case the master doing the most fashionable class " of business, and obtaining the highest prices, will " naturally require the most pains taken about his " work, and have to pay more, because of the extra " time taken to do it neatly; and in the latter " it will be obvious that, although a coat for a " country farmer may be made in a certain number " of hours, it by no means follows that the same " description of coat for a peer or M.P. can be made " in the same time. The master tailors, therefore, " feel that they have gone as far as they can on the " road to uniformity in recommending the assimilating " as they have done the rate of payment in London " houses of an admittedly similar class. Following " the breach of negotiations, the master tailors of " London received on the 18th of April 1867, from " the president and secretaries of the London " Operative Tailors' Protective Association, and of " the Amalgamated Society of Journeymen Tailors, " a circular dated the 16th April, 1867 (a copy of " which marked Appendix C is annexed), informing " them of the failure of the attempt to establish an " uniform 'time log' by the means already tried, and " stating that they had no resource (a time log being " indispensable to the requirements of the trade), but " to enclose for adoption one of their own, and re- " questing an answer stating the willingness of the " masters to pay to it by 2 p.m. on Saturday the 20th, " the intervening day, the 19th, being Good Friday. " This circular received very little attention; the " masters having by this time become fully aware of " the real question at issue, determined to resist the " further interference of a trade union between " themselves and their workpeople, or to make any " advance upon the prices agreed to in the previous " spring between themselves and the operatives' " committee, under whatever disguise it might be " sought, or by whatever means it might be at- " tempted to be enforced. On the following Monday, " the 22d April 1867, a meeting of the workmen " (nearly all of whom were by this time members of " the union) was held at the Alhambra, when a strike " was declared against 88 of the principal employers " of London. Denunciatory speeches were made; it " was openly stated by the leaders that a system of " picketing would be at once commenced to prevent " others who might be willing to do the work these " men had left from undertaking it, and that a weekly " levy of 2*s.* per man would be made upon every mem- " ber of the union for their support during the strike. " The number of men thrown out of employment by " this proceeding was nearly 3,000. Their means " of subsistence, instead of their ordinary earnings of " from 30*s.* to 50*s.* or more per week, were reduced " to an allowance of 15*s.* or 20*s.* a week at first, which " very soon diminished to irregular amounts of some- " times less than 10*s.*, and ultimately to nothing at " all. Many respectable men eventually had to break " up their homes, and were with their families

" reduced to great distress. Many who had worked " for long periods with the same firms had to " sacrifice all connexion with their former masters, " frequently very much against their own will, but " powerless to resist the dictates of their union. Some " went into the country, others emigrated, but a large " number remained parading the streets as pickets to " prevent members of their own body from returning " to their employment, or others from supplying their " places, and this they continued to do until August. " The position of the masters may be shortly described. " Attributing the difficulties of the preceding year " and these later ones almost solely to the interference " of a trade union between themselves and their " workpeople, with whom they had previously been " able to adjust matters satisfactorily for 30 years " without this interference, and being a second time " placed in the difficulty of having their businesses " all but brought to a standstill at the commencement " of the busiest season of the year, they naturally " resented such interference, and resolved thenceforth " to employ no professed members of any union, but " to stand out for the principle that masters have a " right to employ any men they please, and workmen " a right to work for any master they choose, upon " terms that may be agreeable to both, without the " dictation of a third party. Their difficulties at " first were considerable, not from any want of work- " people willing, and even eager, to supply the places " of those who had left them, but principally from " the action of these latter, who by walking up and " down in front of their houses, and by interfering " with the would-be applicants in various ways, con- " trived to terrify them in some cases into bringing " back work they had undertaken, in others to make " them almost afraid to venture beyond their own " doors, so that for some time most of the work had " to be taken to and fetched away from the workpeo- " ple by the foremen and porters. The system of the " pickets was, first to attempt to persuade or bribe " those working to cease doing so; where this was " ineffectual, to abuse and annoy them by calling them " disgusting names, to threaten them with bodily in- " jury, sometimes by letter (as shown in the Appendix " marked D), and frequently to assault and severely " injure them. It was a common practice for them " to assemble towards evening around the premises " of any master who was fortunate enough to have a " few men at work in his shop, and upon their " leaving off work for the day to assail them " with hootings, abuse, vile and filthy epithets, " and frequently with personal violence. In some of " the principal streets, such as Bond Street, St. James's " Street, Sackville Street, Savile Row, Conduit Street, " Clifford Street, and Princes Street, as many as 20 " or 30 would be seen lounging about at one time; and " towards evening, as mentioned above, sometimes " from 100 to 200 would keep the whole neighbour- " hood in excitement and uproar for an hour or two. " To such an extent was this carried on that the in- " habitants were forced to ask the advice and assist- " ance of the magistrates towards the abatement of " the nuisance, and extra constables had to be kept on " duty in consequence. The Appendix marked E gives " a record of such of these outrages as were prose- " cuted; many more, however, took place in which " the parties assaulted and abused were afraid to come " forward, and others where the assailants were " not found. The annoyance and intimidation at " length came to such a pitch that the masters deter- " mined to seek redress from the law, and acting upon " the advice of Messrs. Vallance and Vallance, of " Essex Street, who had been retained by them for " the prosecution of such cases, and for their guidance " generally in important matters, summonses were " applied for and granted by Mr. Knox, of Marl- " borough Street, against several of the leaders, and " upon the 24th June the president Mr. Druitt, the " secretary Mr. Lawrence, and several conspicuous " members of the union, were committed for trial for " conspiracy, the indictments being laid under the " 6 George IV. c. 129. On the 10th July they were " brought up for trial at the Central Criminal Court, " and the trial postponed until the next session, at " their request, on a distinct pledge being given by " them, through their counsel, that the pickets should " be withdrawn. This pledge was most shamelessly " broken; the union deciding that the leaders had no " authority to make it, deposed them, and elected " others to fill their places, who continued the system. " This led to an application by the masters for further " summonses against the new leaders, which were " granted without hesitation, and on the 17th August " these also were committed for trial. The trials " commenced before Mr. Baron Bramwell on the 21st " August 1867, when Messrs. Druitt, Lawrence, and " Adamson, the leaders, were found guilty of con- " spiracy. Their successors, Messrs. Bailey, Shor- " rocks, and 13 others, were tried on the 22d and 23d " August, and were also found guilty of conspiracy " and intimidation by picketing. The law being " thus declared and vindicated, the masters had no " desire to press for punishment, and the learned " judge, after emphatically endorsing the verdict of " the jury, ordered the accused to find bail to come " up for judgment when called upon. Immediately " afterwards the pickets were withdrawn and the " strike came to an end, as it would have done long " before but for this method of coercion applied by " the unions. Seeing, then, that for 30 years the " trade had gone on quietly without the assist- " ance of any union, masters and workmen ad- " justing their own differences, and that during that " period large numbers of men had earned such wages " as enabled them to lay by something with which to " start them in business for themselves" (I should like to add that they had earned such wages and had earned for themselves such a character as to obtain support and credit from the wholesale houses—I would say that the character that they earned for steadiness, and honesty and sobriety was of more consequence than the money that they were enabled to save), "that the " effect of the union has been to create discord " between employers and employed, to set one class " of workmen in antagonism against another, to place " 3,000 men in the streets for upwards of four " months, to the great injury of themselves and their " families, to render them reckless and desperate, to " cause many of them to be committed to prison for " assaulting those who were willing to do the work " they had refused, and that the business of the masters " had for two successive years been seriously affected " by their actions—I will conclude my answer to this " question by repeating that in my opinion the insti- " tution of trades unions does not facilitate or im- " prove the dealings and relations between workmen " and their employers." I confine my observations entirely to the tailoring trade; I have no means of judging of the effects in other trades.

18,105. (*Mr. Roebuck.*) With reference to the employing of non-union men, I should like to know whether now at this present time you have any difficulty in employing non-union men, and whether when employing them any interruption takes place to the men themselves whom you employ?—I think very little, if any. I have heard of none in my own workshop.

18,106. So that in fact you think that the influence and effect of the trades unions in your particular trade has for the present at least died out?—I think so; the whole affair appears to me to have collapsed, and is only kept up I think by an attempt at continued agitation. There are a few of the original leaders who are doing their best to restore the thing to life.

18,107. Can you give us any account of the way in which that agitation is now carried on?—I really am not so well informed on that matter as to be able to say anything worth your listening to, I am sure.

18,108. Then why do you say it is being carried on?—From the printed reports in the "Beehive," for instance, and conversations.

Mr. R. Lewis.

23 June 1868.

18,109. (*Mr. Booth.*) Do you in fact stipulate with your men that they shall not belong to any union?—We stipulated when men came to work for us after this strike that whoever came must be a non-unionist. It was announced in the windows that non-unionists were wanted. As I have described in the first answer in my paper, we resolved that we would employ none but those that were non-unionists. We of course had a feeling that when the difficulties were over we did not want to ride roughshod over any rules, or that sort of thing; but we adopted this principle, upon men applying for work we told them that we had been so annoyed by unionists that we did not intend to employ any more. "We do not ask you not to belong to a union," we said; "but as our determination is "not to employ unionists, whenever you join a union "we expect that you will tell us;" they said they would, and all the men that we have employed have gone in upon that condition.

18,110. Upon the understanding that you employ none but non-union men?—Yes.

18,111. (*Mr. Roebuck.*) Have any of the men whom you have employed first as non-union men, after they have come to you told you that they have joined the trade union?—Not one.

18,112. Look at question 7 on page 4 of your paper: "What, according to your observation, has been the "effect of trades unions on the character and the "well-being of the workmen," and in addition to that I would ask, What upon their skill?—I have said, "detrimental as regards their character, since it appears "to lead them to the coercion of those who disagree "with them, and to their well-being, by leading them "to seek by combination the achievement of magnificent impossibilities, to the neglect of the legitimate "and certain means of advancement by industry and "perseverance."

18,113. Now will you give your attention to the last part of the question I put, which was, Have you remarked any effect produced by the trades unions on the skill of your workmen; has their skill deteriorated in consequence of any habits or manners derived from their connexion with the union?—That is a question that is so general, and my experience is so small in the matter, that I can scarcely say anything worth your listening to in answer to that, I think; but I will just say what my impressions are, namely, that from the short time that the men of our trade have been under the government of trades unions the effect has not ripened so as to become of any great consequence; but I have this impression, that men had become more reckless and careless about their work, and in point of fact I think there was a feeling something like a point of honour that they must not do too much or do it too well beginning to show itself, or a feeling of that kind.

18,114. That having begun to show itself, has that effect ceased since the last proceeding with respect to the trade union?—Entirely.

18,115. And the men now are as diligent and careful as they were before?—Quite; but I should still wish to repeat that the thing had gone to no great extent in our trade, because the trades unions had had an influence but a very short time.

18,116. (*Mr. Booth.*) Your present relations with your workmen are satisfactory?—Perfectly.

18,117. (*Mr. Roebuck.*) There is another important question relating to the amendment of the law. "What are the points in which the present law "relating to combinations among workmen or their "employers is defective?"—I say in answer to that, "I am of opinion that as the law has now been vindicated by the steps which were taken by the "master tailors to test the legality or illegality of "picketing and intimidation by members of the union. "and as the defendants were convicted, the law is "sufficient for all purposes, as it will furnish, in my "judgment, a satisfactory corrective of all such interference in future. The leading statute upon "regulating the conduct of masters and workmen is "the 6th George 4, chapter 129. The principal "defect in the Act in its practical application is that "a 10*l.* bail only can be required by the magistrate."

18,118. If a 10*l.* bail only can bring a man to justice, or drive him away altogether, would not your object be attained?—The 10*l.* is easily obtainable, and if it is a dangerous case there is a temptation to the man to run away.

18,119. If he does run away you would get rid of him altogether?—Yes.

18,120. Do you think that a mischief?—I like things to take their due course, leaving him in the hands of the law. I do not wish to be severe upon him then; there is no tendency in the magistrates or judges to be harsh.

18,121. (*Chairman.*) Is it 10*l.* upon being committed to take trial?—Yes, I think it is upon being committed to take trial that the magistrate can only ask 10*l.* bail.

18,122. (*Mr. Booth.*) Does it appear to you that the facility with which they obtained bail through the instrumentality of the union made the men less careful to observe the law than they otherwise might have been?—It is a very general question; it becomes a matter of opinion only. I can only look at it as being part of a system that throws round them as much protection as possible in every way, and therefore assists in easing them off.

18,123. (*Mr. Roebuck.*) In your trade are you at all aware of any instance in which an attempt has been made to form an international trade union?—I know very little about it; all that I know I have stated in my printed answer: "I am not aware of "any instance, beyond the public reports in 1867, of "the co-operation or assistance the journeymen obtained in Paris, Belgium, Geneva, and America, "and the attempts then made to form an international "combination. I have read a report in the public "organ of the operative tailors of a speech made by "Mr. Druitt, then president of the London Operative "Tailors' Protective Association, to the operative "tailors in Paris on strike, on or about the 11th "April 1867, as follows: 'With reference to English "'workmen, be assured that no member of our asso-"'ciation will respond to any invitation that may be "'offered by the employers of Paris, and that work "'discovered in London belonging to any Paris "'establishment would be struck to instantly the "'fact was discovered.' And I have read other "speeches of similar import in the public journals." But I have no special knowledge on the subject.

18,124. (*Chairman.*) Did Mr. Druitt mean to say that the international co-operation was for the interest of the English tailors, that if work from Paris was sent to London to be done, it would be struck against immediately?—Yes, in London.

18,125. That they would maintain the strike in each country?—Yes, that they had sympathy with one another.

18,126. (*Sir D. Gooch.*) Do you know whether much money was collected abroad in support of the strike in London?—I think not, but I have no means of exact knowledge of the matter at all.

18,127. (*Mr. Booth.*) With regard to the question of picketing, you have no doubt that workmen who were ready and desirous to work for you were effectually prevented through the pickets from so working? There is not a shadow of a doubt of that. From the first day of its commencement we had in our case plenty of applications for work, but very few had courage enough to come to the shop to fetch the work, or to work in the shop.

18,128. (*Mr. Roebuck.*) Have you any means of ascertaining whether the men who so offered were competent workmen?—We got them in by degrees immediately, because though they could not come into the shop, in many cases we found some courageous enough to brave it all. As to their competency, we find in almost every case that they are the same men

whom we retain still from choice; they do very well for us and they are very satisfactory workmen.

18,129. Had you ever employed those men before?—They were strangers, I think, in almost every case. I am speaking now of the period before the strike was concluded; since that men have come in that I have seen in our shop four or five years before; but we have steadily resisted taking any men back that went away at the strike. We told them so when they went away. There were some that had been with me a quarter of a century, and we were on excellent terms for a long while, and had been glad to serve one another for a long while; and I told them, "This "is the second time a difficulty of this kind has oc- "curred; if you go away this time, I have consulted "my partners, and we have made up our minds you "shall not return to work again."

18,130. In any of those cases where men went away did you endeavour to ascertain whether they went away from being threatened?—For myself I have no very strong opinion as to the effect of the mere threats held out by trades unions. I think it is the general influence they bring to bear that is important.

18,131. You do not think that the men left you through terror, but through the moral influence of their fellows?—Yes.

18,132. And that effect you punish by not employing them again?—Yes.

18,133. (*Chairman.*) By "moral influence" do you mean merely that they found that they were surrounded by fellow workmen who showed signs of ill-will which they dislike?—It would vent itself in that way generally; and as I have said in answer to one of the questions in the printed paper, they classed the trade into two divisions, calling those men who went with them "flints," or honourable men, and the others "dungs," or dishonourable men.

18,134. Then they showed signs of contempt and ill-will; that is the extent of the pressure?—I believe so. There would be exceptional cases of assault; indeed there are many of them, of which I have appended a list.

18,135. (*Mr. Roebuck.*) I was going to ask if there were not cases of personal violence towards men and even women?—Yes. A great many of violence towards men, and some of violence towards women; but I cannot do better than refer the Commission to the Appendix, in which the list is contained of proved cases.

18,136. (*Chairman.*) Do you attach much importance to disrespectful words used by men in a strike towards others?—It naturally leads to something far worse, quickly.

18,137. At all events it is the end of a peaceful industrious life if a man is insulted every time that he shows his face in public?—No doubt, and especially if it lasts for four months. I have no doubt myself that picketing is the beginning of rattening, as rattening leads to something more violent. I think that they are all of the same family. I have furnished "a "chronological statement of some of the commitments "and trials incident to the strike." I may say for myself, if you will allow me to express my opinion, that I never attached much importance to the danger of threatening letters. Threats might have come in the way of anonymous letters, perhaps, very often.

18,138. (*Mr. Booth.*) But you know that these letters were in fact received?—Yes, we know that.

18,139. (*Chairman.*) In Appendix D there is a threatening letter; do you know who received that?—It was received by Mr. Smallpage of Maddox Street.

18,140. And he was one of the masters' association?—Yes.

18,141. (*Mr. Roebuck.*) Let me call your attention to a question on page 6: "Is it in your opinion desi- "rable that courts of conciliation or arbitration, "composed of employers and workmen, should be "constituted for settling disputes between employers "and workmen?"—My answer is, "Speaking for my "own trade, I cannot see how such courts could be "useful; already there exists a strong necessity for "workmen to remain with good employers, and for the "latter to retain good workmen, and each must make "any reasonable sacrifice of opinion to preserve a "connexion equally desirable to both; whereas the "knowledge that there was a court of appeal beyond "this necessity might, and in my opinion would, tend "to render both less careful to avoid disputes."

18,142. Then the question I would wish to put to you on that matter is, Do you think that in any arbitration—a court of conciliation of two parties—the masters on the one hand and the workmen on the other come upon equal terms to that arbitration; do you think that the responsibility of the workman is equal to the responsibility of the master?—I am inclined to think that it would be so; but I have only to repeat, in answer to that question, a remark that I made before. I am imperfectly acquainted with the history of any such cases. I have heard of none, except that with which the name of Mr. Mundella is associated, and as to the practical operation of the thing I would only refer to the experience obtained there. I think that the difficulty is to get the parties together, and to get their agreement to abide by the verdict that they come to.

18,143. (*Chairman.*) To make the award of the arbitrator obligatory upon the parties?—Yes. In order to make a thing of that kind effective it becomes a work for Parliament, and not for casual evidence such as I can give.

18,144. (*Mr. Harrison.*) Would your opinion be that the establishment of a uniform time log for the tailors of a certain district of London would be an unreasonable thing?—It might perhaps be a little unreasonable. Our association, however, consented to take part in attempting to do that; but I never had a strong opinion of the feasibility of it myself individually.

18,145. As a matter of fact, the time log varies very much indeed with different shops in the same street; in Bond Street, for instance?—Quite so; there are shops varying greatly, at any rate within a quarter of a mile. You can get your coat for 2*l.* 10*s.* at one shop, and the same coat to look at would cost you six guineas at a quarter of a mile distance. Of course I need not attempt to explain to any reasonable being that the workmanship in the two cases is not alike any more than the quality of the cloth; the prices of the cloths varying—the one being 12*s.* a yard, perhaps, and the other 26*s.*

18,146. I do not by the light of that understand the objection given in your paper to the possibility of establishing a uniform time log over the country. In the second paragraph, at page 2, the objection to establishing a uniform rate appears to be stated thus: "Although a coat for a country farmer may be made "in a certain number of hours, it by no means follows "that the same description of coat for a peer or M.P. "can be made in the same time." If the London operatives were endeavouring to have a uniform rate it would be very much against their own interest, would it not?—I think, in the first place, that they are attempting an impossibility.

18,147. But the argument bears the other way, surely, does it not?—I do not quite understand how it does.

18,148. As I understand it, a coat is taken as say 30 hours' work, the rate per hour being uniform?—That is, uniform in a small district only, a little bit of the west end of London.

18,149. Then it is proposed by the London men that there should be a uniform time log, that is to say, that the same number of hours should be allowed for a coat in the country as in London. Then if a country coat can be made in a shorter number of hours, say in 20 hours and not 30, the London workman who attempted to establish a uniform time log was doing it against his interest, was he not?—No, for the interest

Mr. R. Lewis.
23 June 1868.

of those who were making the inferior article. He would be endeavouring to lift up to a higher level those that would be too weighty for him to carry.

18,150. (*Mr. Roebuck.*) Would it not also be for the interest of the inefficient workman, because the payment for the hour being the same there is no reference to the quality of the work in that hour, and therefore the inefficient workman would receive the same sum as the efficient workman?—Yes, but you see that does not come directly into operation with us, because we do not pay by the hour.

18,151. (*Mr. Harrison.*) As I understand it, it was proposed by the London men to make the same number of hours' work payable upon a coat in London as in the country. Then I say, on the face of that, that was a thing which was disadvantageous to the London man, because according to your showing the country coat is made in a fewer number of hours, and the London man would have had to make his coat or to be paid at the rate of 20 or 25 hours instead of 30?—I have already said that all that was introduced to mystify the question. The whole question, as it came practically before us, was that the men wanted to be allowed in London a great many more hours for making a coat than they ever had been allowed before.

18,152. But that is not the argument in this paper; is not the argument in the second paragraph of it based on a misapprehension?—I say there, "It will be proper "here to state that very few practical master tailors "believe in the possibility of establishing either an "exactly uniform rate of the time to be allowed by all "houses in one town, or of an invariable calculation of "the time taken to make similar garments in various "places." To me it is perfectly plain that one coat is only to be compared with another by having the same name, they may be quite different things, and if so then away goes uniformity; they cannot be all alike if they are all different.

18,153. You do not seem to see the source of confusion that has been introduced into this paper, and which I confess has not yet been cleared up?—Well, I have tried to clear it up to some gentlemen before who knew nothing about the business, and they cannot understand it.

18,154. The men demand a uniform time log, that a coat shall be made in the same number of hours in London as it is in the country, and you answer, "That is "impossible, because a country coat takes so much fewer "hours to make than a town coat." The answer is, therefore, that the men were asking something for their own injury?—In the first place, if there were to be a uniform time allowed for making every coat, Parliament would have to settle the quality of the cloth, the number of stitches, and such things.

18,155. Why Parliament?—Because no one else would have the power, and I doubt whether they would.

18,156. It is a matter of agreement, is it not, between a number of firms and a number of workmen?—Yes; but then you see the thing is infinitely varying ten times a day with as many orders possibly. The coat of the last half hour and the coat of this half hour are not the same sort of thing at all, and do not consist of the same work.

18,157. Do you mean that this follows then, that the working tailor never can know what his wages are to be for making a coat in a given shop, because he has received a certain price for making the same coat in a shop next door?—Unless he has inquired before making the coat what is the usage there, which he can do readily.

18,158. Then in point of fact you mean that there never has been any uniformity in the trade?—Never, and if the Commission will allow me to say so, I venture to say there never will be.

18,159. What then becomes of the argument that the tailors were paid at the rate of 7*d.* an hour, or any other price an hour, because that represents nothing uniform?—If you look at the beginning of my paper you will see that I say, "For upwards of "30 years past the operative tailors of London have "been paid by piece-work, so much for each gar-"ment; the prices having originally been fixed by a "calculation based upon the number of hours in which "an average workman could and did up to that time "ordinarily do the work."

18,160. That is as to the prices, but the question is whether the hours in which the work was to be made were uniform in say the houses in the same street?—I have already answered that even in the same street the kind of coats made varies considerably, and therefore the time that they require to make them varies considerably.

18,161. Then there never was any uniformity?—And never will be, unless you get an Act of Parliament or something else that will compel all persons to have the same amount of work in their coats.

18,162. When the associated master tailors entered upon negotiations upon the basis of a uniform log, they did not at all consider that it was an impossibility, did they?—I have said in my evidence that they did. Will you allow me just to repeat this: "Two meetings "took place, and sufficed to show the masters' com-"mittee that there was not the slightest possibility of "any good being done, and that the proposition had "been nothing more than a device to obtain the sanc-"tion of their association to a 'time log' bearing no "relation to the actual number of hours required for "the performance of work by average workmen, and "that it was a plausible pretext, under the pretence "of a desire for symmetry and uniformity, to obtain "a further increase of wages both in town and "country." Now it is simply that, stripped of other things.

18,163. I was not speaking of a uniform log for the country, but a uniform time log for the west end of London. I understand that a number of west-end tailors did associate together, and did propose a uniform time log for that district?—They offered to go as far as they possibly could towards producing this symmetry and uniformity by going on to discuss a rate, if the workmen's committee were disposed to do it, that should be adopted by the neighbouring firms, some 30 or 40 tailors about the neighbourhood.

18,164. You do not see any impossibility in that?—No, that is just possible, though I have not any very great faith in it.

18,165. As a fact, at the time of the strike a first-class London workman going into a first-class house in Bond Street, or Conduit Street, and receiving a first-class dress coat, was paid for that work at one price, and if he went the next day and produced the same article for a first-class house adjoining in the same street, and put in precisely the same work, he was paid at a different rate, was he not?—I think not to any extent. It is impossible to bring about exact uniformity in any matter of that kind, because the whim of the wearer, or the suggestion of the foreman cutting out, or anything of that kind, makes some little variations. There may be few and trifling variations not worth speaking about, perhaps, but otherwise I think the work is pretty much the same about our neighbourhood.

18,166. You say, alluding to Messrs. Poole, Stulz, and Morgan, "where from the fact of exceptionally high prices having previously been paid"?—That was so, I think.

18,167. In their shops there was a higher rate of wage than in many other shops?—I think that came out; that is not of my own knowledge, but I believe it to be the case. There is this safeguard always, that when a man goes into a shop he can ascertain if he likes the price of the garment that he is going to make before he makes it, and he need not make it unless he likes.

18,168. (*Mr. Roebuck.*) As a matter of fact, have the wages of the operative tailors risen since the strike?—Yes. I put it down at 15 per cent., and that I think is about the fact.

18,169. Do you attribute that to the strike, or to the mere operation of trade?—You will remember that I said that immediately the thing was mooted the master tailors met and agreed to give an advance of about 10 per cent. upon the average of some 30 houses, so that I think, if I may use the word, they were very squeezable, in consideration of the rise of rent, and other things.

18,170. Do you think that the strike did squeeze them into the 15 per cent.?—The resistance that was carried on against these three houses made it appear to me and to many of my neighbours a palpable thing that we could not allow them to have their business stopped, and that we must bring about some arrangement with the men.

18,171. Then I may conclude that in that case the strike did lead to a rise of wages?—Yes, in that case; but I would add that in my opinion if the demand had proceeded from their own shops instead of from the union many of the masters would have conceded it more freely. In this last case where the strike continued for four months it led to nothing of the sort; and if I may go back to the strike of 1834, dictated by the trades unions of that day, it also resulted in nothing but heavy loss to the men. Three strikes have occurred in my memory; two have been fruitless, and one has produced the effects that you have just now learnt.

18,172. Then I may conclude that the last great strike of four months really has led to no rise in wages?—None. It has led to the introduction of machinery more extensively.

18,173. Has the sewing machine been at all introduced into your trade?—Yes, considerably.

18,174. Has it lessened the price of the garment to the wearer?—No, but it has given a far larger quantity of interior ornamental work in the inside of the coat, in the padding and lining, which we who are accustomed to the trade rather like to see.

18,175. The customer derives no advantage from that?—A man of taste for such ornamental work would think he did.

18,176. (*Chairman.*) Would a sewing machine sew up a plain seam?—Yes.

18,177. (*Sir D. Gooch.*) Do you employ a good many women?—Not a great many. The labour of women was increasingly introduced for the same reason. We were compelled into it.

18,178. During this strike did the women join the strike?—Yes, I think they did to a considerable extent; they had a separate meeting, perhaps one or two, but Mr. Druitt will be able to inform you as to any particulars of that kind much more exactly than I can, because my knowledge is only derived from reports in the papers.

18,179. (*Mr. Harrison.*) You were speaking about strikes just now. The strike of 1866 was simply successful, was it not?—Yes, as I have said in one of these replies, it brought about a negotiation which terminated in a meeting at St. James's Hall.

18,180. It obtained the result of a rise of wages?—It did.

18,181. With regard to the number of men in the union just previous to the strike, at what proportion do you estimate the number of unionists to non-unionists in the trade?—Do you mean when they were at the height of their success, when they declared the strike at the Alhambra meeting?

18,182. I mean the number in the union, not those on strike or strike pay, but the members of the established union?—I am not well informed on that point, but from what I can guess I should think there must have been something like 6,000 or 7,000 unionists among the tailors in London at that time.

18,183. Out of how many?—Out of 25,000, I suppose.

18,184. (*Mr. Roebuck.*) You mean men?—Yes, I think they were getting on to 35,000 hands altogether, men and women.

18,185. Is there a great difference in the skill of different hands in the trade among the operatives?—Nothing can be more various; a man can earn up to as high as 3*l.* a week by working hard, whereas another man equally industrious cannot earn more than 25*s.*; nothing can be more various. It is just as one man can write much quicker and better than another.

18,186. (*Mr. Harrison.*) With respect to these anonymous letters which have been put in, have you anything which remotely connects them with any person authorized on the part of the union?—I should think not the slightest; personally I have not the least knowledge of that, and I am not aware that anyone has, and for myself I did not mention them just now, as considering it of any great consequence whether they were read or not, because I think that at most they could only prove a general feeling that was aroused from the agitation going on at the time. It might have been some ill-tempered fellow or some half-tipsy fellow that wrote them, or something of that kind.

18,187. I think it came out at the Clerkenwell trial that some of the Irish tailors who were concerned in the Clerkenwell outrage had been out of work at this time?—Yes.

18,188. You do not think, as I understand you, that there was any connexion between these letters and any person authorized by the union?—I have no suspicion at all of the sort.

18,189. (*Mr. Roebuck.*) Have you any information to give the Commission as regards trades unions about the time of 1832?—I have alluded to the effect of strikes upon wages in answer to one of your printed questions, and I have named a strike in 1834 that produced no advantage to the men but only loss, inasmuch as they were out of work for several weeks, and even months, I believe. With regard to the condition of the trade at that time I may read this short statement: "Trades unions were zealously set on foot about the "time of the Reform Bill of 1832. Up to that "time the tailors had a well-organized union of "their own in London, consisting of from 17 to 20 "houses of call, with from 100 to 800 members "each, every house of call being represented by "one person at a town committee that held frequent "meetings, the decisions of which were final. The "tailors, however, caught the feeling for and merged "into a general trade union, the declared object of "which was to enforce a universal rise of wages, and "the shortening the time of labour. The unions "ultimately decided that each trade" (that is to say, masons, bricklayers, &c.; there was then a large trade union, I think, quite as extensive in point of numbers as it ever has been up to the present day), "should strike separately, and be supported by the "whole until they obtained success. The tailors "were up to that time to a great extent paid by the "day, and owing to their practical organization it "was decided that they should strike first. Accordingly in the spring of 1834 a strike in that trade "was declared for, I believe, an advance of 1*s.* a day "wages, and a reduction of two hours a day in time;" that is to say, whereas they had 6*s.* before for 12 hours' work, they struck for 7*s.* a day for 10 hours' work. "This strike lasted several weeks, but resulted in a "complete failure, and so ended the boasted work "that the trades unions of that day were to accomplish. The formerly well-established trade union "of the tailors was completely shattered by the ill-"advised strike they had been put forward to make. "Instead of obtaining for themselves any advantage, "their own system of management which had worked "well for an age was completely demoralized; house-"of-call or society men ceasing to keep up any dis-"tinctive rules, society men and non-society men "working indiscriminately together. At length about "the year 1858 an attempt was made to reorganize "a union that should have some power, conducted by "one committee, with one code of rules, and one "secretary."

Mr. R. Lewis.
3 June 1868.

18,190. (*Mr. Booth.*) Did that grow out of the building strike in 1858?—I think it was much about the same time, but I cannot speak very positively. It was about that time when the feeling became pretty general and the tailors came under its influence. "The "former houses of call had come to an end. After "a lengthened canvass of the trade a union was effected "and carried on with tolerable success for four or five "years, a portion of the contributions being set aside "for a sick fund; the rules were, I believe, duly certified. The contemplated provision for the sick, "however, failed, and the tailors joined the agitation "that had again been set on foot generally for trades "unions. Pamphlets were circulated, and a canvassing carried on amongst them which brought "about the strike and lock-out in the spring of 1866." I merely thought it might be within the wish of the Commission to hear a slight sketch of the state of things that preceded the 1866 affair.

The witness withdrew.

Appendix to the Statement by Mr. R. Lewis, referred to in the foregoing evidence.

APPENDIX A.

Circular Letter addressed to the Master Tailors of London by the London Operative Tailors' Protective Association.

"United to support, not to injure."

London Operative Tailors' Protective Association.

At a delegates' meeting of the trade held in Cambridge Hall on Tuesday the 6th inst., it was resolved that this committee should present the following memorial for your consideration, and to request that the advance asked should take effect from Monday the 12th of March:—

Memorial to the Master Tailors of London.

Gentlemen,

We, delegates of the operative tailors of London and its neighbourhood, beg most respectfully to request an advance of one penny per hour on our present rate of wages; the increased cost of living renders this course absolutely necessary, and, impressed with the justice of this request, we submit it to your consideration, feeling assured that your answer will be given with due regard to its equity, and upon a fair consideration of the grounds upon which it is based.

Whilst employers of labour in other trades have granted an advance from an innate conviction of its imperative necessity, we trust that master tailors will evince the same practical sympathy with their employés.

We cannot resist the conviction that as a trade we have been treated with an exceptional want of consideration, which must be deemed unjustifiable, subject as we are to a number of drawbacks totally unknown in other trades; for instance, the men working in shops are practically compelled to have the greater portion of their food in the workshop, thereby increasing its cost; the outdoor workers are also subject to expenses for which they receive no indemnity, having to provide light, fuel, workshops, and messengers, and in common with indoor workers have to wait hours, frequently days, unemployed until the various garments in hand are fitted on: this is a practical injustice. Men are expected to wait the convenience of customers calling or that of employers to wait upon them, thus men's time is virtually taken up waiting the leisure of customers or employers, for which they receive no remuneration. These evils, in common with many others, to which we desire to avoid alluding, are perhaps to some extent unavoidable, but it must be conceded that they furnish an indisputable justification for an advance of wages.

In support of our claim we might quote actuaries, physicians, and publicists to prove the unhealthy, harassing, and unremunerative character of our trade, which makes many seek to escape it by adopting other callings, or by emigration; the emigration statistics last published show that 1,500 tailors left Great Britain within the year. We think we are justified in assuming that if those men had been fairly remunerated at home they would not have left, and when we reflect that it requires a combination of the rarest qualities—ability, persevering industry, combined with almost superhuman self-denial—to realise out of a working tailor's income a sufficient sum to emigrate, we can then fairly estimate the loss to the trade of such a body trained to its requirements, possessing that native ability characterised by elegance, combined with solidity.

In asking an advance of one penny per hour we express the general desire of the trade, and we wish to base that request upon its absolute justice and indisputable necessity. We would prefer to have it conceded upon such grounds than as a reluctant concession to superior argument or convincing statistics, being prepared, if necessary, to discuss the minutiæ of the question. We at the same time desire to avoid protocoling and grievance-mongering as much as possible. In conclusion, we trust it will be borne in mind that we have allowed the dull season to pass without troubling you when the slackness of trade might render our request inopportune; we have now, at the opening of the busy season, to submit our request, hoping it will receive fair consideration, knowing it cannot be deemed unreasonable or illtimed.

On behalf of the meeting,
Mathew Lawrence, Chairman.

We beg most respectfully an answer to the above at your earliest convenience.

On behalf of the committee,
Mathew Lawrence, President,
Charles Green, Chairman.

"Green Dragon,"
King Street, Regent Street, W.,
15th Feby. 1866.

APPENDIX B.

Letter received by the Master Tailors' Association of the United Kingdom.

Manchester, Jany. 5th 1867.

To the Committee of the Master Tailors Association of the United Kingdom.

Gentlemen,

At the meeting of your association held in St. James's Hall you expressed "That the object of the association be, the interchanged on all matters connected with the trade generally, the holding of free and friendly communication with the representatives of the journeymen with a view to the avoidance of strikes!" We, the representatives of the Amalgamated Society of Journeymen Tailors and the London Operative Tailors Protective Association, fully appreciating and being desirous of meeting you in the spirit and fairness of your resolution do address to you this communication.

At your meeting you generally expressed a desire for a fair time-log to become general in order that the same time be paid for making a garment all over the country irrespective of what amount is paid per hour in the different places. We fully agreed with those principles, they being an exact expression of "resolutions" previously come to by the members of our associations. And we have here to request that you appoint a meeting with us to make arrangements for the carrying out of those principles.

Gentlemen, you will see the necessity for having a proper time-log in as concise but still explicit a form as possible; framed to set at rest the many disputes, whether they be in the form of lock-outs or strikes, which have been going on for some considerable time. And in the spirit of your resolution the proposition of such a log, properly considered and agreed to by you the representatives of the masters, and us the representatives of the journeymen, tailors, will have a tendency to put an end to those painful proceedings called "lock-outs or strikes." We desire it; you in your resolution expressed the same, desire and we trust that you will name an early day when we can arrange for a meeting.

We are, gentlemen, yours respectfully,
MATTHEW LAWRENCE, Chairman,
PETER SHORROCKS, Sec.,

on behalf of the Joint Committee of the Amalgamated Society Journeymen Tailors and the ondon Operative Tailors Protective Association.

APPENDIX C.

CIRCULAR LETTER addressed to the Master Tailors' Association by the Amalgamated Society of Journeyman Tailors and the London Operative Tailors' Protective Association.

LONDON OPERATIVE TAILORS PROTECTIVE ASSOCIATION.

"United to support, not to injure."

To our employers, Committee Rooms, 38, King Street,
GENTLEMEN, April 16th 1867.

OF the numerous resolutions submitted to a conference of master tailors last year, the one most freely discussed, and which found greatest favor as being of vital importance to the general interest of the trade, was that which deemed an universal time-log for the United Kingdom of the greatest necessity. As this necessity has long been recognized by the operatives of the kingdom, their executives willing to act in concert with the masters, who had formed an association, volunteered to take part in the accomplishment of this great work. A message to that effect having been sent to the committee of the masters' association by a joint committee of the London Protective Association and the Amalgamation of England, a reply was received favorable to the proposition, and agreements were accordingly entered into by the joint commttee of employers and employed, by which they were bound to freely discuss a "time-log," and in the event of any difficulty arising the two chairmen were to retire, and exercise a power vested in them of calling a third person as arbitrator in the matter of dispute. Such a difficulty occurred, and after two or three adjournments the masters' sub-committee declined to discuss a log in detail, they never having referred the matter to arbitration as the agreements set forth; and they submitted that the only course to which they would consent was, that though they were the committee of the masters' association of the United Kingdom, and had so freely ventilated their opinions on the advisability of a universal time-log, they would only discuss a time-log for London with the representatives of the operatives of the London association alone.

Gentlemen, a time-log being an arrangement indispensable to the present requirements of the trade, we have no other alternative but to present the enclosed log for your adoption. A reply by Saturday next, April 20th, at 2 p.m., announcing your willingness to pay to it will greatly oblige us, and save considerable trouble.

We would respectfully draw your attention to the fact that we do not seek an increase in the rate per hour, but simply the adjustment of the time necessary to realize that which was but a nominal advance.

Signed on behalf of the Amalgamated Society and the London Operative Tailors Protective Association,
JOHN ADAMSON, President of the Amalgamated Society.
GEORGE DRUITT, President of the London Association.
ALFRED BAILEY, Vice-President of the Amalgamated Society.
WILLIAM NEAL, Member of the Executive Council.
MATTHEW LAWRENCE, Acting Secretary.

APPENDIX D.—Copies of LETTERS RECEIVED during the Strike.

(Copy of a Letter to a West End Firm.)

Gentlemen,

There is a deep laid system of Blood about to be put in force upon the Firm of the 1st Master Tailors that it can be carried into effect for employing Non-Unionists.

Beware for yr. life & theirs. I am forced at present to hold my tongue, but I cant countenance Blood.

Gnt.

NO MURDERER YET.

Saturday.

M. Abrams

We A Lot of tailors on Strike Are Given to under Stand that you Are takeing our Work under Prise We Write just to Let you know that you had Better Beware for We All Swear to to Be Revendge on you you Ought to Be Ashamed of your Self As We Are All Got familys to keep As Well As you Butt We Ave All keeping A Good Watch for you As there is Not A irishman in London What Would do this Except A few Butt We Are A Going to See What We Are Going to do As We Are All desperite Men So you had Better Look for your Life

no more At Present

MEN ON STRIKE.

(Copy of a Letter to a West End Foreman.)

Mr.

you nead not think that you are going to keep ununion men to do your work as we are determd to get them all out of work by hook or by crook; they are a mean sperrited lot of humbuggs or they would not work for a shop that is on strike we will spoile you of the lacey ——— you have who defie uss at present: one of the men you have got if you do not give him sack on Saturday next we will give him something for him self so you had better get red of him or by the Living God we will stab and murder him the ——— for letting us at defieence his name is . or so you will do well to get red of him as son as posserble or look to it for we mean to have him out first if you do not sack him he shall not do any work for we will hunt him down for his cheak.

i am shour your heart is with the men that air on strike as you must let this man go or we will kill him by God we will and all the others in thear turn we will not let a ——— man of them be at work never fear we shall get the day yet and we will give your ——— something for all this so gook to this if you want to escape our vengens and sack this man above all others but you must sack all in thear turn or we will know the reysen why.

we will spoil all your men.

APPENDIX E.

Chronological Statement of some of the Commitments and Trials incident to the Strike.

1867. 24 April. John Woolfender, Thomas Seckroyd, and William Graccy, three operative tailors on strike, charged before Mr. Tyrwhitt with acting as pickets and forcibly molesting Ann Newland and searching her bundle when coming out of Mr. Poole's shop, and by intimidation endeavouring to force her to leave her work.

Prisoners ordered to find bail, each 5*l*., to keep the peace for six months.

N.B.—The case was watched by and bail was procured by Mr. Partridge, the vice-president of the London Operative Tailors Protective Association.

Same date. John Clarke, a journeyman tailor on strike, charged before Mr. Knox, at Marlborough Street, with acting as a picket, and following a master tailor and annoying him and his workmen in the street.

4 May. Thomas Lawrence, Thomas Sanson, George Burns, Benjamin Tolks, and William Mansworth, charged before Mr. Knox, Marlborough Street, with acting as pickets and molesting and intimidating a non-unionist, and sentenced to three months' hard labour.

N.B.—Four of the defendants gave notice of appeal. Mrs. Lacy, a sixth defendant, was discharged.

10 May. William Jelly and John Hall, charged before Mr. Knox with conspiring to intimidate Margaret Rattenbury, a tailoress, and committed for trial at the Central Criminal Court.

15 May. Thomas Geary committed for trial at the Central Criminal Court for conspiracy to intimidate a non-unionist and force him to leave his work, and threatening to knock him (the non-unionist) down wherever they met him.

18 May. William Turner, unionist, committed for being drunk and disorderly, and annoying John Rogers, another unionist journeyman tailor, who had abandoned the strike and gone back to work, and had ever since been annoyed by mobs led by defendant.

29 May. Joseph Reardon, a union man, convicted at Marlborough Street, for entering the shop of a master tailor on pretence of getting work, and threatening and molesting a non-unionist while engaged at work. Gave notice of appeal.

29 May. William Connolly committed for trial at Central Criminal Court for conspiracy with others to intimidate Joseph Hope and force him to leave his work, and for a brutal assault.

One of the defendants absconded, and a reward of 20*l*. offered by the Master Tailors' Association for information leading to his apprehension.

2d June. John Oliver, journeyman tailor, residing at Greenwich charged with desertion of his wife and two children; his only excuse was he had no work, as he was "out on strike." Sentenced to three months' imprisonment.

3 June. Ellen Meade, convicted of threatening and molesting a non-unionist workwoman to prevent her from working for her employer. The following statement is extracted from the evidence of the prosecutrix:—

"On Saturday last I met the prisoner in Wardour "Street, when she said to me, 'Well, Mrs. Mills, you are "'doing the dirty work, are you?' I asked her what she "meant, and she said, 'Why you are fetching work from "'shops that are on strike.' I asked her if that had "anything to do with her, and she replied, 'Yes, it's "'all to do with me; it's all such stinking hussies as you "'who are keeping men out of their work, you stinking "'cow, and when the strike is over you'll be off, and "'there will be no work for you. You are a . . . . "'When the strike is over I will do for you.'"

The prisoner's brother was a journeyman tailor, and a sort of corporal of pickets.

10 June. Sitting of the Central Criminal Court. The Recorder charged the grand jury as to the law of combinations and strikes.

15 June. William Jelly, convicted of a conspiracy to intimidate Margaret Rattenbury who was supporting her children and husband in a consumption by her earnings as a tailoress, and sentenced to six months' imprisonment.

15 June. William Connolly, convicted of an assault on Joseph Hope, and sentenced to six months' imprisonment.

17 June. Several charges and committals for intimidation and assault upon non-unionists. These cases were heard by Mr. Knox at Marlborough Street.

18 June. James Whelan and Thomas Edwards, charged before Mr. Knox, at Marlborough Street, with conspiring to intimidate John Ortziefen, a journeyman tailor, and for a brutal assault upon him. Committed for trial at Central Criminal Court.

21 June. Application to magistrates at Marlborough Street for summonses for conspiracy to impoverish certain master tailors against Mr. Druitt, chairman, Mr. Lawrence, secretary of Operative Tailors' Association, and Mr. John Adamson and several others members of the Amalgamated Society. Six summonses granted by Mr. Knox.

24 June. Messrs. Druitt, Lawrence, and several other members of the Amalgamated Society of Operative Tailors were committed by the magistrate at Marlborough Street for trial at the Central Criminal Court for the conspiracy charged in the summons.

6 July. Application of Mr. Coleridge, Q.C., for a certiorari to remove the trials for picketing from the Central Criminal Court to the Court of Queen's Bench. Refused by Mr. Justice Lush.

10 July. At Central Criminal Court, Messrs. George Druitt and others brought up for trial, and at their request trial postponed to the following sessions, on a distinct pledge being given by their counsel that the pickets should be withdrawn.

13 July. The President and Secretary of the Master Tailors' Association summoned before the magistrates at Marlborough Street for an alleged conspiracy to prevent and endeavour to prevent certain journeymen from hiring themselves, and accepting work and employment. Application supported by Mr. Coleridge, Q.C., the counsel for the prosecutors, and dismissed by the magistrate as being totally unsupported by any evidence.

26 July. James Meagher, a journeyman tailor and active picket, charged before Mr. D'Eyncourt at Marlborough Street, with threatening, molesting, and endeavouring to intimidate John Riley, and thereby to induce him to leave his hiring and work; very violent language used. Prosecutor had some time previously broken his arm, and the prisoner had threatened to break the other arm, and prevent prosecutor ever working again. Sentenced to three months' imprisonment.

The pickets not having been withdrawn, application made to the magistrate for summonses against the new leaders.

17 August. Messrs. Bailey, Shorrocks, and others committed by the magistrate at Marlborough Street for trial at Central Criminal Court for conspiracy.

21 August. Trial at Central Criminal Court of Messrs. Druitt, Lawrence, and others. Messrs. Druitt, Lawrence, and Adamson, the leaders of the union, found guilty of conspiracy.

22 and 23 August. Messrs. Bailey, Shorrocks, and 13 others tried, and 12 of them found guilty of conspiracy and picketing.

Same date. Dorval Edgeberg tried for conspiring to intimidate, and for a cowardly assault on Isaac Kaiser for working for a shop on strike.

James Whelan and Samuel Edwards tried for a violent assault on John Ortziefen. Whelan found guilty and sentenced to three months' imprisonment.

Sept. 8. Edward McDermott, a journeyman tailor, summoned before Mr. Tyrwhitt, at Marlborough Street, for assaulting John Murphy, another journeyman tailor, who was lame, and threatening to drive a knife through his heart, and striking the prosecutor several times in the face.

The defendant had four other persons with him.

Sentence: six weeks' imprisonment with hard labour.

Sept. 24. James Glyn, John Glyn, and William Glyn, tailors, summoned before the Lord Mayor for threatening, beating, and molesting John Engright, a journeyman tailor.

James Glyn sentenced to seven days imprisonment and the other defendants fined.

Nov. 21. Theodore Medro, a unionist, surrendered in discharge of his bail to take his trial at the Middlesex Sessions for assaulting and dislocating the shoulder of Henry Brunswick, another journeyman tailor and unionist, who had gone back to work.

The cause of quarrel was that Brunswick had gone back to work when he ought to have held out, as he the defendant Medro had done.

Mr. Robert Bennett examined.

18,191. (*Chairman.*) Will you state what firm you are a member of?—Of the firm of Bennett & Company, Conduit Street.

18,192. How long have you been in business?—About 20 years.

18,193. In that neighbourhood?—In that neighbourhood.

18,194. You have heard the account given by Mr. Lewis of the late strike in your business?—I have.

18,195. And his paper, I understand, represents very much the opinion of yourself as well as Mr. Lewis, Mr. Wain, and others that have taken a part in that affair?—Quite so.

18,196. Do you wish to add anything to the answers which Mr. Lewis has given?—I should like to make a few additions to his evidence. Mr. Lewis was asked a question as to the masters refusing to employ non-unionists, and their reasons for so doing. I wish to add to what he stated that there was a further reason for employing non-unionist workmen after the strike had taken place, namely, that some few of the workmen who had been in our employ before had remained with us, and they naturally pleaded that it would be very much against them if we were to receive the unionists back to hunt them away at the conclusion of the affair; and we promised those workmen that they should never be subjected to any annoyance of that kind, and bound ourselves for that reason to keep our shops for the future as non-union shops in support of the men who had worked for us and stood by us during our difficulty.

18,197. That assumes that if you had admitted unionist workmen to work with non-unionist workmen who had abided by you the unionist workmen would have made the non-unionists uncomfortable?—It assumes a belief on the part of the workmen that they would have made them uncomfortable, and that I endorsed that belief.

18,198. They felt that; you thought that feeling on their part justifiable, and said, "I will protect "you"?—Yes. Then a question was asked of Mr. Lewis as to the willingness of good and skilful workmen to work for us during the strike had it not been for the pickets. I am of opinion that good workmen were willing to work for us at that time from instances that came under my observation. I can mention the case of a man who had previously been working for us, who was ostensibly engaged as a picket walking up and down in front of our house while he was actually still doing work for us. I have seen that man start off to follow one of our porters to see where he took the work to, when he perfectly well knew that it was going to his own house, and that he was going to do that work when he was off picket duty.

18,199. What was his purpose in doing that?—He was being paid and supported as a picket as being on strike against us, whereas he was actually at work for us at his own house. His duty as a picket was to follow the porter and see where the work went to, and to thwart its being done, whereas his duty to himself and to his family was to go and do the work.

18,200. (*Mr. Roebuck.*) That was the means which he took to blind the union?—Yes.

18,201. (*Chairman.*) He got paid by you and he got an allowance from the union as well?—I know what he got from us. I can only imagine what he got from the others. Then with regard to the abuse that the men met with who continued to work, I may state that one man that worked for us even in our shop during the whole of the strike, and who went backwards and forwards night and morning, was systematically annoyed and hissed at both ways till his life became a burden to him; he became thin and melancholy.

18,202. (*Mr. Roebuck.*) Did the man leave you?—No, he remained with us the whole of the time.

18,203. (*Chairman.*) How long did the system of continual execration last?—It lasted during all that time.

18,204. Five or six weeks?—As long as the picketing was continued, about four months. I may also state that other men who had worked for us in the shop up to that time still continued to work for us at their own houses. They had the will to work for us, but they had not the courage to face the pickets, and they sent little children and women backwards and forwards with their work hoping that they would not be annoyed.

18,205. (*Mr. Roebuck.*) Were the little children and women annoyed?—No.

18,206. Was that simply because they were overlooked, or was it that there was such a feeling on the part of the men as prevented their annoying them?—I hope that there was a feeling on the part of the pickets that they would not annoy them. Then there was another matter spoken of to which I should like to refer, namely, the uniform time-log. I wish to make it perfectly clear that the Master Tailors' Association of London and the master tailors generally never did believe in the possibility of the attainment of a uniform rate of payment or of the calculation of a uniform rate of time within which work should be made. The proposition for that came from the workmen's association.

18,207. (*Chairman.*) Will you explain a little more that first proposition. Are there not a certain class of coats that are first-class coats, and a certain class of workmen able to make those coats in about an average time, so that you might have got an average basis of wages?—We never were asked even to do that. The question that came before us was to make a uniform time-log for town and country, and that was insisted upon; and upon our finding (that which we had imagined we should find), after being willing to try it, that it was impossible, thereupon it was insisted upon that it should be done or that we should be struck against. After we had met the thing in a fair and friendly way and tried to do it, and had found it impossible, it was insisted that it should be carried out, and thereupon a strike ensued.

18,208. Was Mr. Druitt, or were any of the men who were prominent in making this requirement, employed at first-class houses and acquainted with the great variety of work, and great variety of prices, and great variety of wages?—The committee of workmen who met us certainly were men who by their experience should have been well acquainted with the state of the trade generally.

18,209. Is there anything else that you wish to state?—I would simply add that it has occurred to me, during Mr. Lewis's examination, that a poor man could never get a coat at all if the master tailor who sold it to him had to pay the same number of hours for making his coat, or the same price for making his coat, as would have to be paid for making one for yourself for instance, or for any gentleman able to afford a higher price. Then, as a farther argument against uniformity, I may state that, taking six houses in the same street, one master may get 6*l.* for a coat, another may get 5*l.* for a coat, and another may get 4*l.* for a coat, and necessarily they will have to pay different prices, and necessarily a different number of hours' work will have to be put into the coats.

18,210. (*Sir D. Gooch.*) Do you pay a man who makes a large coat and a man who makes a small one the same amount?—Where there is any glaring disparity we pay an extra price for the large one, and we do not take anything off for the small one.

The witness withdrew.

Mr. G. Druitt.

23 June 1868.

Mr. George Druitt examined.

18,211. (*Chairman.*) Of what society are you the secretary?—The London Operative Tailors' Protective Association.

18,212. About how many members has it?—The number of the members at the present time does not exceed 1,000.

18,213. What is the highest number you have had?—We used to call ourselves 10,000, but I expect that financial members, members within the meaning of the term as interpreted by a financial test, never exceeded 7,000.

18,214. (*Mr. Booth.*) When you say "used," what period do you refer to?—Prior to the strike of 1867.

18,215. Immediately prior?—Just so.

18,216. (*Chairman.*) When was the society established?—On November 10th, 1865.

18,217. And was it established upon any question that was of interest to the workmen at that moment, or was it a defensive measure that it was thought prudent to adopt without any particular aggression?—Absolutely defensive from circumstances that had been accumulating for a great number of years. I have prepared a few suggestive notes strictly in accordance with the paper which I had sent to me from the Secretary of the Commission; and I think it would perhaps facilitate the business of the Commission if you would allow me to read them, and of course I am subject to any questions the Commissioners may ask me. In the paper sent me I find first, "The history, "organization, and objects of the trades unions or associations (whether of workmen or employers) now in "operation." I will deal first with the history. The history of this association is this: "It was established "at the end of the year 1865, in consequence of the "employing class of the trade being principally in the "hands of capitalists, 'adventurers,' and not practical "tailors, and who in order to realize enormous profits "were gradually reducing the prices paid for various "garments, and requiring extra work put in the "same, while the price of all the necessaries of life was "rapidly increasing. It thus became evident that "something must be done on the part of the operatives to meet this state of things. A meeting was "called by a few of the men working in some of the "reputed best shops, and it was unanimously adopted "at that meeting, which was largely attended, to form "a committee whose business it should be to produce "the draft of a plan for establishing an association of "the whole London trade, including out and in door "workers. The plan proposed was accepted and acted "on by the best workmen in the trade, and the association was established on the 10th November 1865. "Prior to this a state of disorganization had existed "among members of the trade for upwards of "30 years." (That is dating back to the last strike in 1832, spoken of by Mr. Lewis.) "There were "several 'call-houses,' a system degrading in the last "degree to all who were subject to its rules, it being "a remnant of the barbarism known as 'statute fairs.' "Men out of work were compelled to hang about the "tap-rooms of public-houses, so long as they had the "misfortune to be out of work, and Sunday night was "not made an exception to the rule; any man being "absent when his name was called was placed at the "bottom of the list. Employers would send to this "call-house for six or eight men at a time when frequently they only required two and would keep "them only partially employed to the week's end, and "then tell them they had no more work for five or "six of them, the men so served having lost several "days' work waiting. When a man had a call to a "certain shop he had no choice but to go, whether he "liked the employer or his foreman or not, the only "alternative being losing his call or turn. And if "there happened to be 70 or 80 men of the call-house "to which he belonged, each of those 70 or 80 would "have the preference before it came to his turn for "another call in consequence of his having taken some "objection, probably founded on experience, to the "employer or foreman of the firm where the call came "from. The system, too, was pernicious, inasmuch as "bribery had more to do with the calls than efficiency "of workmanship, and numerous were the victims in "the persons of young men fresh from the country and "without friends at these slave markets. Applying "for work" (that is from shop to shop) "was not "allowed, and if any man did so the employer would "ask, 'What house do you belong to?' If the man "rejoiced in the freedom of what is now called non-"unionism he was insultingly told to 'go and put his "name down.' At the present time many employers "when applied to for work insolently demand that a "man shall forego his union proclivities before they "will allow him to earn his living in such employers' "firm." Such is the short note that I have made with reference to the history of the association. The next matter as stated on the paper is the organization. "This association is so organized as to exclude no "practical tailor above the age of 18, whether "working on the premises of the employer or at his "own house, but those whose characters will not bear "investigation. Should any such obtain admission, "the following rule (the 30th of our association) "gives the committee for the time being power to "deal with them on discovering the facts of the "case:—'*Expulsion of Members.* (1.) Any member "'having made a false statement on his first appli-"'cation to the committee for admission to the "'association, such statement having a tendency to "'deceive the committee, shall, on the same being "'discovered, be expelled. (2.) Any member being "'convicted of an offence which the general com-"'mittee shall, by resolution, declare to be disgraceful "'or criminal shall be expelled.' It is governed by "a committee and officers elected by the members. "For convenience it is divided into branches, each "having a committee and officers. The West End is "the central district. Prior to the strike" (that is the strike of 1867), "we had 17 London branches, "numbering at one time 7,000 members. We make "a point of extending our organization not only to "those of our own trade, but we join with all other "trades for the purpose of extending our protective "influence, and assisting one another in our respective "difficulties. We are in league with the tailors of "England, Ireland, and Scotland. We assisted by "money and advice the tailors of Paris, and I in the "presence of nearly 8,000 men in that city ratified a "contract of mutual support financially and morally "between the two associations. A similar contract "was also entered into in London before a body of "over 8,000 between us and Berlin, and I am now "negotiating for a consolidation of the tailors of the "United States and Canada with this country. We "are also an affiliated society of the International "Working Men's Association, and to the United "Kingdom Alliance of Organised Trades, a body "numbering over 60,000—a society solely for defensive purposes, giving assistance only in cases of "lock-out; the leaders in all of which societies or "associations being appointed by a majority of the "members in open meeting." Such is the note that I have made upon its organization. We next come to its objects. "The objects of this association is made "manifest in the first rule thus. Rule 1 enacts: "'The objects of this association shall be to use all "'legal means to obtain a just and remunerative "'price for the labour of its members and to protect "'them against injustice in cases of dispute arising "'out of the trade, and to raise funds for their sup-"'port in case of sickness, and for the burial of the "'members and members' wives in case of death." Such is the note on the objects. We next come to the second section of the paper, "The action of such "associations." First, with respect to "the regulation "of wages and hours of labour." As to the regulation of wages: "The only action we take with reference "to the regulation of wages is to endeavour by

" appealing to the fairest of all known systems—" arbitration, or to the more doubtfully just—the " law—to induce employers to abide by their own " self-imposed contract, the log." The log I have is a copy of the one agreed to, already referred to by Mr. Lewis, but I need not do more than read its conclusion, which is simply a copy of our law with regard to disputes. "It was agreed that all disputed inter-" pretations of this log should be submitted to " arbitration. Attention is directed to the following " article of the association:—(Arbitration 17.) This " association being established upon principles of " strict justice, having for its object the protection " and furtherance of the interests of employer and " employed, it is desirable that all disputes which " may arise between them should be submitted to arbi-" tration, as the most speedy and equitable way of " arriving at a conclusion, and it shall therefore be " the constant aim of this association to see that this " desire be, as far as possible, carried out. The arbi-" trators shall consist of an equal number of employers " and employed, whose decision shall be final, the " disputants first subscribing minutes of submission, " binding themselves to abide by the same; or an " agreement, binding them to enter into a regular " submission when required." This was the log agreed to on the 5th of April 1866, and signed by Mr. Brown of Princes Street, and Mr. Landon of New Burlington Street, on behalf of the masters' association, and by the then President and Secretary of the association which I now represent. Then as to the regulation of the hours of labour: " The London Association has not yet made " any move with reference to the regulation of the hours " of labour in consequence of the fluctuating nature of " the West End trade. I having myself worked in the " West End have worked 15 and 18 hours per day. In " the season 32 hours' work frequently has to be done in " four and five hours." I would observe here that the masters are in no way responsible for this arrangement. In fact, I have been engaged frequently in completing orders for gentlemen which in the ordinary course of things should have taken a week to finish, that have had to be finished between 10 o'clock in the morning and 7 the same evening. "In Scotland and some towns in " England the men endeavour to keep to a regular sys-" tem, but employers and their foremen strive hard to " break through such a salutary system. For a man to " leave his work to go to his dinner subjects himself to " dismissal." Now the next question is the action of our association with regard to the supply of workmen (stipulations as to non-members, apprentices, &c.) As to the supply of workmen: " Members of our " association are allowed to work in any shop without " reference to the character of the men in the same " shop." Of course it will be readily understood that when I speak of the character of the men in the same shop it has reference to their union or non-union proclivities. " No rule or stipulation as to apprentices or non-members." We do not enact in any part of our rules that there shall be a limit to the number of apprentices, or that a member of the union shall not be allowed to work with a non-member.

18,218. (*Mr. Roebuck.*) You say that you do not do that by your rules; do you do it by your deeds?—Certainly not. We lay down a code of rules that we strictly adhere to in every case, as I shall presently show. In reference to disputes that have arisen where our members have been found to be wrong by our own committee, a verdict has been given on behalf of the employers. I have already submitted a copy of our rules, and I have now a copy in my pocket. What you find in our rules is simply the principle upon which we act, and any member of the executive violating in any degree these rules holds himself amenable to the general body. Then we come to " the conditions of labour (piecework, overtime, &c.)" The conditions of labour in the West End of London, or in the London district (our district embraces the postal district of London), is " mostly piece work. No stipulation, but " day work not recognized as being more or less " unjust to both parties." It very frequently happens that under the day working system one man may be perfectly competent to earn for his employer the rate of wage allowed per day, but it is quite within the bounds of probability, nay experience has told us over and over again, that where there is one of such a character there are three or four who, either from incapacity as to workmanship, or from a want of industry, have not been able to do an amount of work in a given time to satisfy the reasonable demand of the employer. Hence we hold as a rule that piece work is the more just towards both employers and employed. Then we come to the question of " strikes or lock-outs." " The association operates to the " prevention of strikes except in cases of extreme " injustice backed by extreme obstinacy; and in " such cases we regard a strike only as the least of " two evils." I may add here that the association acts in this way: A dispute arises, it may be on one side or the other; information is laid before the executive of the association I represent; the whole detail of the case is gone into. Were usage such that no union existed, but that they settled these matters themselves, the great probability is that the men—worked up perhaps by personal feelings towards an employer, or (which is more frequently the case) by personal feelings towards a foreman for whose actions in a great many instances the employers are not responsible—would resort at once to the expedient of a strike before trying to settle it by more conciliatory measures. Since our association has been established we have had two or three such cases, in which we have conferred with representatives of the masters' association. The matter has been discussed to a satisfactory conclusion, and satisfaction has been given to all parties concerned. When I say " satis-faction has been given," at all events, whether they have felt satisfied or not, the men, on the part of the men's association, have acted strictly in accordance with the verdict of that united committee. So we deal with strikes and lock-outs. Now we come to the third section of this paper, viz., the " effects of the action of such associations." And, first, as to " trades." I have never found in any single instance, that is to say where employers have been animated only by a desire to do that which is right and to be bound by reason, that the operation of our association has been anything but what could be desired. In fact I can freely endorse the evidence given by Mr. Green, the famous shipbuilder, in this respect. He said that he had always found the best men to be union men, and that he had always been able to carry on his business very satisfactorily with the operation of the union on his men. Now, as to " the social condition of the workmen," I think that it cannot be denied that anything that tends to raise the price of a man's labour justly tends to ameliorate that man's social position; and I can only illustrate that in this way, by taking the poor slop-workers of the East End, and comparing them with the operative tailors of the City, and West End, that is to say, members of our union. One of the latter can take a lodging—it is very rarely that he goes into the full dignity of a house—he takes a lodging in some of the outskirts; he takes a pride in educating his children, and having his domestic economy so regulated as to be a credit to himself. On the other hand, with regard to the man in the East End, I think it would be altogether out of place for me to attempt to describe to this Commission, whose experience must have been great, what that man is like. He works at home; he may have one room; in addition to its being his kitchen, sitting-room, and bedroom, he turns that one room to the convenience of his employer by taking his work home. Of all the businesses in which a man can engage there is none perhaps so much calculated to disturb the equilibrium of his comfort as the tailoring business. He wants all the space; he monopolises all the light; he monopolises all the fire; and in addition to that he has to supply by his wife or children, if he has any, the duties that ordinarily devolve upon the class of persons known as " trotters," whose essential business it is to attend to these matters. Hence, looking at the man who has more wages, who is a member of a

Mr. G. Druitt.

23 June 1868.

union, and can hold his own against the selfishness of a certain class of employers, his social position must, perforce, be very superior to anything that can be expected of a man who has only his individual self to oppose to the wealth and influence of an employer for whom he may work, no matter how unscrupulous that employer may be in his demands. Furthermore, I would just mention that on my communicating with a trade unionist in some part of the country, he declared to me that he owed the whole of his educational position (and it was not much at the best), and that of his family, to being a unionist, to mixing with other men, and to taking example of other men; and he assured me that prior to being a member of the union to which he belonged he could not so much as write his name; and though the letter in which he was detailing to me the advantage which he had gained from association with his fellows was not such as perhaps would pass a civil service examination for a Government office, it was nevertheless a very creditable composition. The effect of the action of our association upon the "individual relations of employers and workmen" is the next point. I have certainly taken a very prominent part since I became acquainted with the working of unions in promoting their interest and influence. I worked for many years in what is ostensibly called the first shop, not only in London or in England, but the first shop in the land. Now it was well known right through the firm what part I individually had taken; it was known, moreover, that the men there to a man were members of the association which I now represent, and, though to give you an idea of the number of persons employed there, I may state that at the time of the strike 500 men were called out of that firm, I never heard of a single instance in which there was anything like dissension or bickering, if we may so term it, between the principals of that establishment and their men in consequence of their being attached to a union. In the fourth section of the paper we have "the practicability of establishing courts of arbitration." Now the only objection that I have ever found raised against courts of arbitration has been raised by the employers themselves. I remember on one occasion, when engaged with a sub-committee of the masters in an attempt to settle some dispute that had arisen, a copy of the laws and constitution of the association which Mr. Mundella has brought to its present perfection was placed in my hands by the president of the masters' association, Mr. Lewis, for my opinion. I looked carefully over them, and on returning him the copy, I gave him as my candid opinion, that such a constitution was calculated, beyond all other measures, to put an end to the many disputes that must necessarily arise in a trade of such complexity as the tailoring trade. We, during a strike which lasted over 26 weeks, were continually urging that the matter might be settled by arbitration. It involved a principle, and we were perfectly prepared at any moment to lay the whole of the minutes of that dispute before arbitrators who should decide, and, whether that decision was for or against us, we were perfectly willing and anxious to abide by its results. I may say (as the gentleman is not present now I will mention it, as I might not have done had he been present) that a member of this Commission had also interested himself in this matter, and had offered to be an arbitrator.

18,219. Was that Mr. Hughes?—That was Mr. Hughes, and he was backed up, I may say, by Mr. John Stuart Mill. Another gentleman, a very influential member of the Saint James's vestry, came to me and asked the question, Will you arbitrate? I replied that nothing was nearer our most sanguine wish and expectation than that the matter should be settled by arbitration; and so anxious were we that the matter should be arbitrated upon that we would even accept the editor of "The Times," with all his known proclivities against unionism, and, as working men interpret it, against their interests generally, provided that the case should be fully arbitrated upon before several gentlemen whom we could rely upon. I therefore hold (and it is the opinion held by over 860,000 unionists in the three kingdoms), that the establishment of courts of arbitration in which both parties had confidence would do more to settle the differences arising (and no matter how well regulated either the employing or the operative portion of a trade may be, they must arise between employer and employed), and would be more effectual in settling disputes, than all negociations of any other sort whatsoever. We therefore are firmly of opinion that the establishing of courts of arbitration is quite practicable, and it certainly is within the province of reason that those appealing to them should take the decisions given, whether for or against themselves.

18,220. That being your statement, and that being the statement of your feeling, how do you explain the fact that occurred during this arrangement that was proposed in January 1867? I am told that there was a meeting between the masters and the operative tailors in London, and that at the first of the negociations the chairman of the masters' committee introduced a proposition for arbitration in case of disagreement, and pressed it upon the workmen's committee, who, however, stated that in their opinion it would prove impracticable and useless?—It was especially by that portion of Mr. Lewis's paper that I was taken by surprise, as I stated just now, and it was in reference to that that I stated that it would be necessary that I should produce documents to explain the facts. I will give you a cursory explanation now, but his statement is so at variance with what I hold to be the facts of the case, that I would sooner substantiate it upon documents exchanged at the time. I would explain it in this way. During that interview I took shorthand notes of all that transpired. I took Mr. Lewis's suggestion down, "In the event of a hitch occurring what course should we pursue?" when it was unanimously agreed that arbitration should be resorted to. Now the sitting was nearly at an end; there was a member of the men's committee, who in a very courteous manner suggested that the confidence he held in the gentleman deputed by the masters to settle this matter was such that it would not be necessary to make any formal resolution to that effect; but it passed as an understood thing, that in the event of a hitch occurring arbitration should take place. That was the last business of the evening, and we left the meeting with that firm conviction, that in the event of a hitch occurring arbitration should take place. Subsequently, when the strike was threatening, I wrote to Mr. Lewis asking that the thing might be settled without the use of such means as a strike. I offered him the use of my own shorthand notes, subject to the scrutiny of his own shorthand writer; and a copy of that letter I now have in the copy-book of the association, but I received no reply to it. As I have said already, before the strike took place we made repeated appeals for arbitration, in order that such a course might be avoided, and it was never adopted.

18,221. Then I gather from your statement that you entirely dissent from the accuracy of that statement of Mr. Lewis's, and say that the direct contrary is the truth?—Yes, I dissent from that statement as positively as a man can dissent, and, of course, subject to the arrangement that was made just now, I propose putting in a paper upon the whole of that evidence. I wanted to give the Commission my opinion or evidence upon the circular sent to me. If you have no further questions I will proceed to the next item, and then I shall have done. I have said that in the opinion of our trade, also in the opinion of the 860,000 unionists, courts of arbitration are necessary.

18,222. From what do you derive that number?—860,000 is a rough average of what we call the trade unionists of the kingdom; there may be more, but not less. The next section refers to "the working of co-operative societies and industrial partnerships." I am not prepared to offer any definite evidence upon that, any more than to say that several such societies have been established as the result of strikes, and that they seem to work very successfully. The sixth and last section is "the adjustment of the law affecting trade associations." Now this number of men that I have

already spoken of feel very strongly on this question. They feel that the law, as affecting combinations, is certainly against the operative in every sense. The 5th of George IV. is a law enacted certainly to suppress many of the combinations, and no less than 13 Acts of Parliament, dating from the 33rd year of Edward I. up to his then Majesty's reign, have been enacted to meet the case, but the worst part of those laws still exist.

18,223. What do you call the worst part?—The worst part is simply this, that as we tried the case in which we made Messrs. Lewis and his friends the defendants, it was held by Mr. Tyrwhitt, the sitting magistrate at Marlborough Street, that the law under which we laid the indictment, the Act of 6th of George IV., was only one that affected employed, and would not affect employers as subjects of the Queen.

18,224. How did you lay your information before the magistrate, and what was it that you complained of?—The complaint was this. There was one shop in the city that was struck, or rather not struck at that date, but about to be struck in consequence of its having been found that, though they professed to employ non-union men, (to which we had not the slightest objection,) they were employing union men and getting union men to do the work in their shop that union men in another part of the town refused to do. It was held that under such circumstances those men should be struck. It had not come to the fact that they were struck, but the employers taking advantage of information that they had received, issued a circular to say that such and such men employed by such and such firm should not have work given them by any other masters. They had no complaint with any other master, but the masters had entered into what we understood we were indicted for, namely, a conspiracy; two or three had planned together that they would deprive two or three men of the means of subsistence, because those two or three had acted in a contrary direction to the will of the two or three masters.

18,225. That is the conspiracy you complain of on the part of the masters?—Yes.

18,226. You think it wrong?—Yes.

18,227. Then it is wrong on the part of the men, I suppose?—The law has proved it to be wrong.

18,228. All that you want the law to do is, that the law should be applied to the masters as well as to the men?—No, we do not want anything of the sort; we want the law to be so regulated that each man and each master shall know his exact position with reference to combination, and that is what does not exist now; for though there is a combination law existing now it is only on one side.

18,229. That is a very wide statement, but what I want is what you complain of; do you complain of the law which applies to the workman not applying to the master?—Just so.

18,230. You, therefore, not complaining of the law as it applies to the workman, but your complaint being that it does not apply to the master also, do not want the law altered with regard to the workman?—We want the law to be altered in every respect as applying to both. We want them each to understand their respective positions.

18,231. I want to know what you want the law to do; do you want that law entirely repealed?—We want, if the law applies to us in a certain form, that without reference to being employers or employed, as subjects of the Queen, it should apply to employers in the same sense.

18,232. That is what I put to you. You do not want the law to be repealed as regards the men, but to be applied to the masters?—That is a subject to be taken under consideration in another place; we apprehend that the law is not equal.

18,233. (*Earl of Lichfield.*) In what respects does it not apply to the masters?—I have shown that we take the two cases to be similar. For instance, I and my colleagues were indicted for conspiring against certain master tailors, and a certain claim was put in that they had lost so much money in consequence of the conspiracy originated at our hands.

18,234. (*Mr. Roebuck.*) What was that conspiracy?—As far as I could understand, it was being chairman of a meeting of over 8,000 beings, and hearing resolutions put, and submitting those resolutions to the meeting, and those resolutions being acted upon.

18,235. It makes all the difference what the resolutions were, because you might have met for dethroning the Queen (I merely put that as an illustration). What was the resolution?—That is just where I was taken by surprise by Mr. Lewis's paper, and in my paper those resolutions have to appear. I could tell you the spirit of the resolutions. The first was, that those assembled heartily endorsed the action that had been taken by their appointed delegates, and they were willing to abide by the result.

18,236. What had the delegates done?—That would be another part of the paper, into which I am not now prepared to enter fully. The delegates had done this: they had seen by a report of the meeting held by the masters, at which their association was organized, that the masters were of opinion that a time-log was abolutely necessary. Now it must be borne in mind that a time-log was absolutely necessary for the welfare of the trade. We had felt it for many years, but had made no advances towards the masters until we saw their opinion so clearly and unmistakeably expressed. When we saw that we sent a communication which is given in the appendix B. of the paper that Mr. Lewis read from:—"At your "meeting you generally expressed a desire for a fair "time-log to become general in order that the same "time be paid for making a garment all over the "country irrespective of what amount is paid per "hour in the different places. We fully agreed with "those principles, they being an exact expression of "resolutions previously come to by the members of "our associations, and we have here to request that "you appoint a meeting with us to make arrange-"ments for the carrying out of those principles."

18,237. Was that the delegates' conduct which the meeting endorsed?—Yes.

18,238. (*Earl of Lichfield.*) You are referring to a case which was tried, and in which the men were convicted of conspiracy. What was the case, and when tried, and before whom?—The case tried was that I and two others had conspired to injure certain master tailors in carrying on their business. It was tried at the Central Criminal Court on the 21st of August. It was tried before Baron Bramwell; he was not the judge on the rota for that month, but it was tried before him, and a verdict was given against us. We discovered the next day that though the jury was trying us for a conspiracy to injure two or three individuals, the very jury had in itself the elements of perjury, and a conspiracy to defeat the laws of the land.

18,239. (*Mr. Roebuck.*) Do you not consider that that is very strange language to use?—I simply use it as it was used in the press at the time. I will explain how it was. A man attended on that jury in the name of his master; the warrant officer detected him in the fact, and he positively swore that he was the man. He sat upon the jury, he heard all the evidence, and he gave of course his portion of the judgment of the twelve. The man was subsequently indicted before the Recorder, the clerk of arraigns using the very words that I have used, that the jury who had tried us had been guilty—or rather, as far as this man was concerned, had been guilty—of perjury and a conspiracy to break the law of the land. But at all events by such a jury as that we were convicted of conspiracy.

18,240. (*Earl of Lichfield.*) You have also referred to a case which was dismissed when the men took proceedings against the masters; what case do you refer to?—I was interrupted in going into it just now; it was Mitchell and Harris, I believe, a firm in Cornhill. Their men being members of our association it was notified through a circular issued from the masters' association to other masters that they were not to be

Mr. G. Druitt.

23 June 1868.

employed, because they had taken certain action against Mitchell and Harris.

18,241. By whom was it tried?—It only came for hearing before Mr. Tyrwhitt of Marlborough Street, and he refused a summons giving us leave to move under the vexatious Prosecution Act. We consulted Mr. Coleridge and Mr. Ribton, and under their advice we acted. We held by virtue of that fact, as by judgments given in other cases, that the adjustment of the law affecting trade associations is essential.

18,242. (*Mr. Roebuck.*) You have not explained the conspiracy that you were charged with?—The conspiracy was this: I as their president, another man as secretary, and another man as assisting us as president of another association, were charged with conspiracy against Poole, Stulz, and Lewis, and several other firms named.

18,243. What was the conspiracy? The word "conspiracy" is merely a legal term for certain things to be done. I want to know the things that you were charged with doing?—We were charged with interfering with these masters in the performance of their trade.

18,244. That was the general phrase; but what was the act with which you were charged?—The only fact that I can ascertain at all was, that we were nominated as leaders of a certain action, a strike for instance.

18,245. What was the evidence given of the acts that you had done?—The only evidence that was given was deposing to police-case facts, of men who had committed assaults and had been already punished for those assaults.

18,246. Then you were charged with instigating men to commit breaches of the peace?—Yes, just so.

18,247. Were the masters ever charged with anything of the same sort?—Well, that is a matter of opinion.

18,248. Were the masters ever charged with instigating persons to commit breaches of the peace?—They were not charged with that, but they were charged with being the instigators of men losing their daily sustenance.

18,249. That you know is one of those rhetorical phrases to which I am very much unaccustomed. I want to know what the masters were charged with. Was it with saying this: "That man has been upon the "union; I have discharged him, or he has discharged "himself; we hope that you will not employ him." I suppose that is all the masters did?—I am not certain that the circular was qualified with any hope of the sort; as far as I recollect it, it went out as a fiat that they were not to be employed.

18,250. You know that a fiat can only be made by superior power; what superior power was there on the part of Mr. Lewis to compel others not to employ certain people; it could only be the expression of a desire or wish that they would not employ people who had done certain things?—Exactly.

18,251. That is what you liken to a conspiracy, instigating the people to break the peace?—We had not instigated people to break the peace; the indictment, as shown by the summons granted against us, was that we were guilty, so to speak, of ruining these master tailors.

18,252. I suppose that you were charged with conspiring to injure certain persons, and in proof of that the evidence was given that you had instigated people to break the peace, to prevent people from going to serve these gentlemen whom you were charged with conspiring to injure. Was not that the case as a matter of fact?—That was the evidence given, and this was his lordship's remark upon it. He said, "Brother Ballantine, you are now giving evidence "as to that with which these men are not charged; "they are not charged with assault."

18,253. Why did he not stop that evidence?—He withdrew it then, and gave no more of the same kind of evidence; but it was upon evidence of that kind that the jury gave their verdict.

18,254. I want you to make that clear as a matter analogous to the charge that you brought against the masters of issuing a circular to other masters, which was simply to say that they hoped they would not employ certain men. I want you to make out the analogy between the two cases?—I have made that out clearly as I apprehend; it clearly appears to me that if I am charged with conspiring with other persons to injure the pockets of Mr. Poole and other masters, and we charge the masters by their circular with conspiring to injure the pockets of Joe Brown and others, it is the same thing; it is only a question of degree.

18,255. But if the men were charged with conspiring to break the heads of other men for instance, that would not be an analogous case?—We were not charged with that; we were charged with conspiracy to injure these people in the progress of their trade by holding meetings and passing resolutions. Of course with reference to Mr. Lewis's paper itself, I will prepare one on the subject; but that I think is all the evidence I am prepared to give now.

18,256. In the earlier part of your statement you made use of something like this phrase: you asserted that the trade had been absorbed by adventurers and capitalists, and therefore you struck?—We did not strike on that account; that was part of the system that led to the association. I will just explain that a little more in detail. There are several of the principals of the West End firms that are not tailors at all.

18,257. That is to say, they choose to use their capital in the trade?—Yes.

18,258. There is no harm in that, is there?—Not the slightest, but what I object to is this: a man employing his capital and embarking in a sphere of industry of which he is totally ignorant, offers me prices infinitely below the real value of my labour. I have a perfect right to refuse them, and by myself of course I have no power individually as an employed man against a wealthy employer. Now it comes to the question, Shall we allow this trade to which we have been bred and born, and which we have practised so long and made a living by it, to degenerate, so that no man can possibly get a living; or shall we take any means to show these people that they are really not acting in consonance with their own interests, and certainly are acting in opposition to ours?

18,259. Supposing that A. and B. being tailors want capital, and C. D. lends it to them, is there any harm in that?—No; but that is not the case.

18,260. What is the case?—That instead of the tailor going to the capitalist, the capitalist turns tailor himself.

18,261. What harm is there in that?—No further harm than that it deteriorates the price of the labour.

18,262. Suppose I bring in a certain quantity of capital into the tailoring trade, what have you to do with that?—Nothing in the world.

18,263. And suppose I say to A. B. and C. D., "I "want you to make this garment for me, and I will "give you so much for it, under the price that you "have been accustomed to;" if those men accept it what business is that of yours?—Not the slightest.

18,264. Then why use those hard words, "deteriorating the trade," and "taking the bread out of people's mouths." The man merely uses his capital in the way that he thinks the most beneficial to him, does he not? What has a third party to do with that?—A third party has nothing, I apprehend, to do with that, but a man may say, "I cannot get a living "at the prices you offer, though previously, when this "trade was in the hands of a man who understood it, "I could. Individually we are powerless against "you, hence we combine."

18,265. Why can he not refuse to work for him?—Because he will go to the next place.

18,266. Those people you will picket?—Not at all; picketing has nothing whatever to do with the question as to the history of the origin of this association,

and that I shall show in my paper. I am convinced that the masters present will bear me out in this, that there are now firms in the west end of London that are injuring their trade by this line of conduct, going into the trade of which they are totally ignorant, and making things at infinitely less price than they should and than their real value, because they take it out of the labourer's mouth or hands, and the other men who are paying proper prices are undersold by this system of trading.

18,267. That is competition, is it not?—You may call it what you like, it may be competition; but it is starvation to the men made the subject of it.

18,268. Would you have the Legislature lay down rules for trade that should subject people to certain penalties if they competed one with the other?—Certainly not; we would not have the Legislature interfere in this special point; we would say this, Let the master and the man make such arrangements between themselves as they feel to be right on both sides, and then let us both try to keep to those arrangements.

18,269. Is not that shutting out the world at large from interfering with your trade? Is not that making you a sort of monopoly, and saying to the world, "At "least do not bring in any capital, we will keep the "monopoly to ourselves"? is not that the result?—I apprehend that that is not the result at all. It is simply saying in plain terms that twelve pence is the value of a shilling, and that a shilling is of the value of twelve pence.

18,270. To go to another matter. Before the strike what was the number of the unionists?—I have already noted that in my statement as 7,000 members.

18,271. What was its number after; what is it at the present time?—I also stated that, about 1,000.

18,272. If that has been the result of the strike what good has the union done?—Just this. The question which I shall have to take note of more fully was in two parts. We wanted a uniform time-log. The masters prepared a time-log, and said to us, "Here is the log, you must accept it as it is, subject only to very slight modifications." Now that log on the whole was a reduction; it has been estimated at 25 per cent., but it was not so much as that. I think the reduction might safely be estimated at 15, or between 12 and 15 per cent. Now it was understood that that was to be the log to which we were to work. When the strike was over we certainly had not got a uniform time-log, which was more a masters' matter than ours, but we had resisted the masters' log; hence whatever per-centage there was of reduction we had saved that to the members of our association. I have not heard of a single instance in which the masters have put forward their log.

18,273. Before the strike there was a certain price for a certain garment, has that price been changed?—Yes, in many instances it has. And here is one case that I was going to allude to with regard to arbitration. There was one employer that took part in compiling that statement, but as soon as the statement got into full operation he said plainly to us, "Well, I do not care what Poole or Lewis pay, I will not pay it." The Commissioners are of course aware that a gentleman may have two or three tailors; so that this man was working for the same customers as his fellow-tradesmen, and he said positively, "I will not pay so much as the price that we have agreed to in the log." Now it was our duty as an association (as I apprehend that the masters' association would have backed us up in this if we required it) to see that he paid the same as they did according to agreement. Now one firm had a military job not reckoned in the log at all (and here is the great bone of contention that the log made did not calculate for), and when the man, after carefully considering the time and labour in it, charged 1*l.*—a charge which other firms which I know personally in the same trade would have paid, and less than what any of the gentlemen here to-day would have paid—the master scratches this amount off and puts 9*s.* instead of 1*l.*, as the value of that man's labour.

18,274. You have gone a great way from my question. I asked you if the prices that were paid before the strike were not the same prices as were paid after it?—Just so.

18,275. Therefore that strike did no good whatever?—I hold that it resisted a reduction.

18,276. Was there any attempt at reduction before the strike?—The log in itself was such an attempt.

18,277. But the log was what you asked for; there was no pretence on the part of the master to make a log unless you asked for it, was there?—I beg your pardon, I have already shown that the proposition for a log originated with the masters.

18,278. Then I am to understand that you assert in contradistinction to Mr. Lewis that there was a determination on the part of the masters to lower the prices of wages before the strike?—Just so, by the substitution of their own log under the guise of a time-log.

18,279. And you will bring evidence of that?—Yes, that is what I must have time to do, to produce those various documents.

18,280. Then I may draw this conclusion, that in your view the strike really resisted a lowering of wages, which did not take place after the strike, but which would have taken place in your belief had there been no strike; that is your estimation of the good done by the strike?—Yes.

18,281. (*Chairman.*) What branch of the trade were you bred in; you have worked as an operative tailor, have you not?—Yes, in every department. I am acquainted with every garment that the human form wears, either man or woman, that is made in the tailoring trade.

18,282. It seems as if there were different classes of employers, and different classes of workmen, and different classes of wages. Some garments are extremely cheap, for instance, in the outfitting shops in the east end of London. You have never had any work of that sort, I suppose?—Nothing of that sort.

18,283. You have always been in the fashionable part of London?—No, because I have an interest in a business of my own, which is a second-rate business, for clerks and middle-class people that do not come up to the west end trade.

18,284. You can get a coat in Fleet Street, for instance, for 2*l.* 10*s.* Do you make such garments?—I do not know that ever I was engaged in so low a trade as that. I could undertake, however, to make such a contract that I would not lose anything by it; but I do not regard those as a fair sample of the tailoring trade.

18,285. (*Mr. Roebuck.*) Is that second-rate business you speak of in the west end or in the east end?—It is in neither, because it is one of the southern suburbs. I also hold an interest in a West End trade of a similar sort, but it is not of such an extensive nature as to come up to what I have worked at as an operative. For the last several years that I have been engaged in that way I have worked, as I said before, in Poole's. I was in the firm at the time the strike occurred. I was in the firm at the time of the last arrangement.

18,286. By "in the firm" you mean in the shop?—It is the phrase we use. I worked for the firm as an operative.

18,287. (*Chairman.*) Therefore you must have had experience of very different rates of wages, as it seems to me?—Yes, in every part of the kingdom. The proposition that I have alluded to will, of course, have to appear with regard to a question mooted by Mr. Harrison, in respect to a uniform time-log.

18,288. How do you reconcile that fact of different rates of wages with a time-log?—We hold (and it was a proposition first held by the masters) that if it takes 30 hours to make a coat in London it will take 30 hours to make the coat in Liverpool, Glasgow, or Belfast (those are their own words). Now, of course, the surrounding circumstances (as set forth in this paper of Mr. Lewis, in regard to the farmer's coat, for instance) are different. The time paid is the same; but in London we are supposed, for our extra care, to have 7*d.* an hour, while in Chester they only have 3½*d.*

18,289. Is that the same article when it is finished?

Mr. G. Druitt.
23 June 1868.

—Essentially the same, if the customer demands it. I know many customers for whom I have worked at Poole's, who also have things made at Smith's in Chester; but living is much cheaper in Chester than in London, in that whereas we get 7*d.* in London they get 3*d.* or 3½*d.* in Chester; while with regard to the class of trade spoken of in Mr. Lewis's paper, namely, the farmer's coat, I may say that in Suffolk the tailors do not get above 2½*d.* or 3*d.* an hour. But the same number of hours are paid; it will take the same number of hours, but the quality of work put in is not up to the standard as required in West End firms. So, not by taking off the number of hours, but by reducing in many instances more than by half the price paid for the hour, the thing is brought to an equality.

18,290. Does it require greater skill to do work in West End houses than elsewhere?—No question of it. It is manifest from the very fact which I have set forth in a previous answer, that very frequently 30 hours' work has to be done in five. Now if the men engaged upon that work were not very skilful men indeed the garment would never be done for the amount which it should be.

18,291. (*Mr. Roebuck.*) What do you mean by 30 hours' work being done in five?—The coat is just roughly put together; a gentleman comes in at 12 o'clock in the day, tries it on, and says, "I want it by 5 o'clock." At 12 o'clock nothing more has been done to it than roughly tacking it together. As many men are put upon the coat as will get it done by near about the time mentioned. In fact I have been engaged with three others in sewing up one seam. Now, unless each man knows his place, and just the length and sort of stitch he ought to draw, you may imagine what that seam would be when completed.

18,292. Then, when you say that 30 hours' work must be done sometimes in five, you mean to say that you increase the number of men, and thereby increase in fact the number of hours?—Not necessarily increase the number of hours at all—there is only 30 hours paid for it; if 10 men can be put upon it there is still only 30 hours paid for. Now any of the gentlemen present will bear me out in saying that, unless these men are skilled and well-trained men, trained to the ways of the firm, that amount of work could never be done in the time.

18,293. (*Earl of Lichfield.*) You stated that the strike of 1867 prevented a reduction of wages?—Yes.

18,294. What ground have you for stating that?—Simply from the presentation of the masters' log (which I will file in my paper) in comparison with our own.

18,295. But you did not strike to prevent a reduction; you struck for an increase of wages, did you not?—No, quite the reverse. I will show, I hope conclusively, that the last lock-out reduced us, as Mr. Lewis hinted this morning, in Poole's, in many instances, considerably. The arrangement suggested by us (and in stating this it was the only justice "The Times" ever did us throughout) would in those tweed suits that gentlemen go to the sea-side in have been a saving to Mr. Poole on every suit of about 6½ hours, that would have been 6½ sevenpences saved to him on every suit. Now it happens often in the season that in that firm alone 70 or 80 orders are taken in a day for such things as that, and there might have been 70 or 80 times the amount I have stated saved to the firm. The trade had got into that confusion that it was necessary some general arrangement should be made with reference to the time to be paid for these various articles; but the rate per hour was always to be a matter regulated between the employer and the employed; as long as he paid the time it was quite a matter of indifference to the association, whether he paid 6*d.* or 7*d.*, if the man liked to take it. There are other details with regard to the arrangement of 1866 that it will be necessary for me to go into when I deal exclusively with that subject.

(*Mr. Lewis.*) I would observe, in order to put the Commission right, that remarks made at a public meeting to form an association, our Master Tailors' Association, by casual attendance generally invited, are constantly alluded to as being the decisions of the Master Tailors' Association, and Mr. Druitt has done so to-day in every instance. The remarks made at a meeting called to form an association which was then commenced to be formed are a very different thing from what that association is responsible for after it has been formed. Some gentleman made a speech and expressed his views upon the country, whom we had never seen before and have never seen since. Mr. Druitt has attributed all this pertinaciously to the Master Tailors' Association. Mr. Druitt, in another part of his remarks, has talked about a reduction that the masters wished to make. Now we pay up to this time what we have always paid, and we have never asked for any reduction—the log agreed upon between the masters and men at St. James's Hall in 1866. It never entered into the thoughts of the masters in any way to make a reduction of 6*d.* The masters never thought of doing it, and when the masters submitted their log they never dreamt of entering into the preparing of a log except for this reason, that having to confer with the journeymen about the details of a log, they were obliged to prepare some memorandum to talk about, but they had nothing to ask in the way of a reduction. To corroborate that view I may state that our at annual meeting that took place in February this year one of the sentences introduced into the Report was this: "The committee, "notwithstanding the losses and annoyances to which "employers have been put by the late unreasonable "demands of the operatives and the unwarrantable "measures by which these have been attempted to be "enforced, would nevertheless earnestly recommend "a strict and honourable adherence on the part of the "masters to the terms agreed to between them and "the journeymen at St. James's Hall in April 1866, "which terminated the then pending dispute, and "yielded a fair and liberal rate of wages, far above the "average rate paid anywhere else but at the West "End of London." That was in February. A great many of our members were anxious that expression should be given to a thought like that of which I have been reading the words. But we thought that that perhaps was hardly enough, and after the general meeting had been held, one of the committee meetings afterwards, to which committee the management of the affairs of the association has been mostly left, passed this resolution: "That whereas this committee "finds that many members wish to embody fully in "practice the principle so long and so successfully "contended for by our association, that masters should "be able to employ what men they please, such men "being willing to work for them, and on terms such "as they themselves and their workmen mutually "agree upon, it is desirable that, simultaneously with "the closing of the guarantee fund, all those who, "during our struggle for freedom from the dictation "of the trade union in April 1867, signed the paper "pledging themselves not to exceed in their payment "of wages the terms agreed upon in April 1866, at "St. James's Hall, be now held to be free from any "obligation involved by their signatures to the pledge "of 22nd April 1867." Thus setting them free to pay as much as they pleased. Now that does not at all chime in with the view enunciated by Mr. Druitt that we were seeking for a reduction of wages.

(*Mr. Druitt.*) I cannot answer for any resolution passed by the masters of which we had no cognizance. The fact, as declared on the log I qted omfruo just now, is clear that in the arrangement of this log the two associations agreed. Consequently I hold that it was quite incompatible for one association to say, "We look upon that arrangement as so much "waste paper," without consulting the interest of those who took part in making it law. If they are not responsible for this log, and they enter into an arrangement that gives them liberty to pay more, they consequently give their members liberty to pay less, which is now being done in many firms, even those whose names have been attached to this document.

(*Mr. Lewis.*) The first resolution that I read strongly recommended the members of the Master

Tailors' Association not to depart from the agreement, including the advance at St. James's Hall. The first resolution strongly recommended nothing less to be paid, and the second allowed more to be paid. As I said in an early part of my evidence, we do not take upon ourselves to put any coercive pressure on any of our men; we want to maintain our own individual independence. We recommend them not to pay less than the St. James's Hall agreement.

(*Mr. Druitt.*) There was one question asked me as to the number of the members of our association. Now, Mr. Lewis will agree with me that their association is called the Master Tailors' Association of the United Kingdom. I did not notice that the Commission asked him the number of their members.

18,296. (*Chairman to Mr. Lewis.*) How many members have you?—I should not be able to answer the question accurately, but I may say roughly and generally that I think they never exceeded 200, or something of that sort.

18,297. (*Mr. Roebuck.*) Are their numbers now as large as they have ever been?—Not quite, I should say; but the only rule by which we have to estimate the numbers would be the subscriptions paid last September, so that we cannot answer exactly for the numbers now. We might answer upon that list of subscriptions indeed, for they are members still.

18,298. (*Mr. Booth.*) I understand you distinctly to contradict the statement of Mr. Druitt that the strike of 1867 had any effect in preventing the master tailors making a reduction of wages?—No doubt a reduction might have been made among the aggregate numbers, for of course we cannot answer for the way in which any individual man whom we do not take cognizance of conducts his business. A few of us in the neighbourhood who had the same sort of business merely associated for the purpose of advising one another to adhere to that advance which was granted in 1866, and it never entered into our heads to make a reduction, or talk about a reduction even.

18,299. So that, as far as your knowledge extends, the strike was entirely without beneficial effect to the men?—Entirely; it was very detrimental; there must have been thousands and thousands of pounds thrown away.

18,300. But nothing gained?—Nothing gained.

(*Mr. Druitt.*) Mr. Lewis is of course perfectly aware whether the log was ever presented. I am speaking upon that log of which I have a copy, and which was given to me by the secretary of the masters' association, and the only data I can produce before this Commission are in comparing the time with that and the rate paid not by time but by money of this log, that was agreed to in 1867. Now, of course if Mr Lewis says that they prepared a log and never intended to hold by it after presenting it to the men's committee, I am not responsible for that.

(*Mr. Lewis.*) I would just remark upon the principle of the preparation of this log, which I said was prepared not with the desire of asking anybody to work on it, because we had no wish to stir in the matter, but the consideration of that question of the log having been forced on us we were obliged to have some data to enable us to talk about the various details (and they are very numerous and some of them very small, coming down from 7*d.* to $3\frac{1}{2}$*d.* and so on, and even $1\frac{3}{4}$*d.*) We simply produced that printed log that Mr. Druitt talks about as having been put in his hand by our secretary for our own use (just as the copy of the evidence might be printed here for the use of the gentlemen round the table) to enable us to talk to the journeymen's committee about the various questions. We had no idea whatever of making a log or asking for a log to be adopted. But further than that, I may just say that that log itself, if it had been put forward as a log to be adopted, which it never entered into our heads to do, was in every respect simply this; it was adopting the present number of hours allowed for making the respective garments without any change; it was adopting them as they stood, and it was simply apportioning to them 7*d.* instead of 6*d.*, so as to put the log into a reasonable form according to the then circumstances, to be similar in every respect in point of principle to that which existed two years before at 6*d.* an hour; we made no change whatever.

18,301. (*Mr. Roebuck to Mr. Lewis.*) Then I understand that that log was not a lowering of wages, but in fact a raising of wages from 6*d.* to 7*d.*?—The rise had taken place the year before, and we were merely reducing it into terms to suit the present, 7*d.* per hour instead of 6*d.* per hour. If we had been asked by the journeymen's committee at that time to show them that we intended no reduction, we should have been most happy to do so; and the best proof that nothing of the kind was intended is the fact that nothing of the kind has taken place—not a farthing reduction. I can speak for my own house and my friends here positively. We have not had a thought of paying less than 7*d.* an hour, but simply a rearrangement as to the number of hours.

18,302. So that when the negociations commenced there had been no suggestion on your part of any intention to lower the rate of wages?—Not the slightest.

18,303. Therefore with regard to the suggestion that you had made an attempt to lower wages, that suggestion as a reason for their entering into the negociation is an incorrect one?—Quite so; it follows I think very clearly and unmistakeably from the way in which I have shown you the fact.

(*Mr. Druitt.*) Mr. Lewis says that the log proposed was simply turning this log before me into a log of time. Mr. Lewis knows that while there are not more than 15 or 20 items here, the log proposed occupies 24 pages; while there are a number of garments, habits, and so forth, that custom has set a price upon which are dealt with in that log which have not come into this log at all.

(*Mr. Lewis.*) There is this fact that enables us to walk out of court, that we did not put it forward, and had not intended to put it forward.

18,304. (*Earl of Lichfield to Mr. Lewis.*) Have you any documentary evidence to substantiate your statements with reference to the men having refused arbitration?—It was just as I said just now in allusion to another point. Mr. Druitt, and the gentlemen who speak generally and write in the newspapers on that side, attributed the remarks made at the public meeting to form the association (by the gentlemen who came there accidentally from Edinburgh, and Manchester, and Liverpool, and Birmingham) to our association, and placed the responsibility of those remarks upon us. With regard to the question of arbitration, it was mooted at the log committee. I happened to be present on the part of the masters and of the persons who were appointed to attend the log committee, and Mr. Druitt was present on the part of the men. Early in the business, at the time that Mr. Druitt has alluded to, I thought if a matter of that kind was to come to anything, we had better start with an article for arbitration. I thought that a practical way of going to the business, and I stated as much. I held in my hand an article for arbitration that I had drawn out with a view of proposing it, provided that it was received favourably. I hold the same paper in my hand now that I held then, as containing suitable articles for arbitration:—"Both parties hereby agree "to refer any disputed points to an indifferent person, "whose decision shall be final, and abided by by both "parties; such person to be chosen at the beginning "of the conference, under the signatures of both com- "mittees." That was objected to. I have got some memoranda here as to the words used, but it is not of consequence to read them; it was objected to, and passed over. Then Mr. Druitt says, "It was agreed "that all disputed questions should be referred to "arbitration." How that comes as a sequel to the other I cannot imagine, only in this way, that

Mr. G. Druitt.
23 June 1868.

the rule existed in the protective association which Mr. Druitt represents to-day, and he alludes to it as having been agreed to by our joint committee in 1867.

(*Mr. Druitt.*) No, distinctly not.

(*Mr. Lewis.*) Then it does not come into the question in any other way, because there was certainly no arbitration agreed to except the allusion in the rule.

(*Mr. Druitt.*) I think that the gentlemen on the Commission will remember that what I said was this: Mr. Lewis suggested that some provisions should be made in the event of dissension arising with reference to arbitration, of which I have a note, and a person then on the committee said that he thought we need not make any provision, as it would be distinctly understood that in the event of any hitch arising arbitration would be the best means of settling it, prior to which it would be competent for Mr. Lewis and me, as representing the two committees, to try and settle it by ourselves, and if we could not agree the arbitration would then take place. Mr. Bowater, on the masters' part, replied that he was very satisfied with the first day's work, and had not the slightest doubt that each day would be as satisfactorily concluded. The documents have been asked for. I would undertake to say that Mr. Lewis has none of the sort. I have only the shorthand note that I took at the time; but it was distinctly understood by the parties there engaged that arbitration should be the course resorted to if the suggestions of Mr. Lewis and myself for settling the matter should fail.

The witness withdrew.

Adjourned to Tuesday next at 11 o'clock.

1, Park Prospect, Westminster, Tuesday, 30th June 1868.

PRESENT:

The Right Hon. Sir WILLIAM ERLE.	JAMES BOOTH, Esq., C.B.
The Right Hon. The Earl of LICHFIELD.	FREDERIC HARRISON, Esq.
Lord ELCHO, M.P.	WILLIAM MATHEWS, Esq.

THE RIGHT HON. SIR WILLIAM ERLE IN THE CHAIR.

Dr. G. Lloyd.
30 June 1868.

Dr. GEORGE LLOYD examined.

18,305. (*Chairman.*) You are of the firm of Messrs. Lloyd and Company, of Birmingham, are you not?—Lloyd and Summerfield.

18,306. Are you acquainted with the Midland Association of Flint Glass Manufacturers?—I am chairman of that association.

18,307. When was it established?—In 1858.

18,308. Was it established in consequence of a strike coming on?—Yes.

18,309. How long had that strike been going on?—Perhaps two months or thereabouts.

18,310. Were the proceedings in the course that we have heard of, namely, the men striking against one or two particular firms, and in consequence of that leaving the workmen of the other firms to support the men that were on strike?—Yes.

18,311. In consequence of that did the employers form the association of which you became the chairman?—They did.

18,312. Did they resort to what has been called on the part of the employers the "defensive measure" of a lock-out?—Yes.

18,313. To prevent firm after firm being broken by being taken singly?—That was the case.

18,314. How long did the hostility continue between the masters and the workmen?—The strike had continued from two to three months before the lock-out was resorted to, and about three months after that the matter was by compromise terminated.

18,315. What was the immediate question in the strike?—It was chiefly concerning the number of apprentices employed by the masters; the workmen insisted upon a more limited number than the masters thought it desirable or necessary to employ. In consequence of some of the employers having more apprentices than the union recognized according to their rules those houses were put upon strike, as it is termed.

18,316. What was the number that the unions recognized?—One apprentice to three chairs (as it is technically called) or sets of men who are employed together. In that branch of the glass trade four persons, that is two full aged men, and a young man, and a boy, constitute a set or a chair, and it is necessary in the performance of their work, so it has hitherto been considered, that those four should be associated together in order to make any article small or large. That is the custom of the trade, and an old one.

18,317. And as I understand you, three chairs were to be allowed one apprentice?—Yes, three of those sets were to be allowed one apprentice.

18,318. Then the masters resisted that, and the strike came and the lock-out?—Yes.

18,319. And after the period that you have mentioned what happened?—A compromise took place by which it was arranged that the trade should have one apprentice to two chairs, which was a gain on the part of the employers of one apprentice, that is to say, from one to three to one to two.

18,320. Have things gone on peaceably from the time that that arrangement was made?—There has been no strike or lock-out since that time. There have been occasions of disputes and threats of strike; but nothing that I am aware of has occurred within the experience of the Midland Association.

18,321. And have the apprentices been continued in that proportion of one apprentice to two chairs?—In that proportion.

18,322. The chair consisting, as I understand you, of two effective workmen and a young man and a boy?—Yes.

18,323. Have the trades unions of the working men produced any effect that you have noticed upon wages and hours, and the supply of workmen?—Yes, a very considerable effect. The influence of the union has been such as to raise the price of labour during the time that it has existed. Perhaps it will be better for me to state our experience since the termination of that lock-out for the last 10 years. It is estimated, but I am not sure, that such a scale would be applicable to the whole of the trade, although, as far as the experience of the Midland Association goes, I believe it would be substantially correct that there has been a rise of the wages of the skilled hands and those more or less skilled, of from 5 per cent. to about 20 per cent., that is to say, the wages of the skilled hands have been raised to the extent of 5 per cent., those of the next grade to about 10 per cent., and those of the next grade below to about 20 per cent.

18,324. Are the last grade children?—Yes, little boys either treated as apprentices or actually apprentices—their wages are nominal often.

18,325. Have these different classes of workmen separate unions, pursuing their own distinct interests?

—There is only one union in the kingdom of flint glass makers, but there are branches in various districts. For instance, there is a branch in Scotland, and in the northern counties of England, and there are districts, as they call them, in the Midland counties and in London.

18,326. And are each class of these workmen, both the skilled workman, the middle workman, and the boy, all members of the union?—Not all members, because there are some who are not members at all, that is workmen of the inferior grades, but the majority are members of the union.

18,327. I want to ask whether they were all admissible to the union, because it would seem that they were persons who could not subscribe at the same rate; a skilled workman would be capable of subscribing a larger sum than a boy, would he not?—Yes, their subscriptions are regulated according to their grade.

18,328. Has there been an alteration in the hours of labour?—The nominal hours of labour remain the same, that is six hours at a time. The custom of the trade is to work six hours, with an intermission of six hours for rest, and then to return to work for six hours, so that in the 24 hours 12 hours are occupied with intermissions of six.

18,329. (*Lord Elcho.*) For how many days consecutively?—Four days, or perhaps four and a half days, that is beginning with Monday morning and terminating on Friday morning or Friday at noon, rarely working after time.

18,330. The furnace is kept up, I suppose?—It is always kept up, because after working preparation is made for melting the glass to commence on Monday morning, so that the operation goes on uninterruptedly from Monday morning till the time of leaving off. There are two sets of men; one is on for six hours and goes off for six hours, and then another comes on for six hours, so that intermission that I spoke of is brought about.

18,331. Do those who prepare the furnace for the next Monday's work work on the same system?—They work 12 hours, they are treated as labourers and they are not glass blowers, they work for 12 hours and go away for 12 hours.

18,332. (*Chairman.*) Are the men paid chiefly by piece work?—By piece work, that is the rule of the trade, which is calculated according to the number of different articles produced in a given time.

18,333. So much for each class of article?—Yes.

18,334. You name an article, and so many of those articles are paid for at a certain rate?—Yes.

18,335. Does each article go through the hands of different sets of men or is the article completed by one chair?—It is completed by one chair.

18,336. Then it goes to be ground?—That is another operation.

18,337. Has the number of workmen been diminished; has this process of making labour scarce by keeping out apprentices succeeded in Birmingham so as to make the supply of labourers scarce?—There has been a scarcity of labour up to a very recent period, and it has been increasing ever since the termination of the lock-out which has been spoken of.

18,338. (*Mr. Mathews.*) You speak now of skilled labour?—Yes, and even of the unskilled, that is the third grade. With regard to those who are employed in glass blowing, there is first the skilled man who is the workman; the next grade is the servitor; and the third is called a foot maker, a name which does not exactly describe what his operation is except as regards one particular article, which is making the foot of a wine glass, for instance, or a goblet; but he commences the first stage of gathering out of the melting pot the piece of glass finally to be produced as the finished article; passing through his hands to a certain extent it is then handed over to the servitor, and from him it is handed over to the workman, and it is rather in the second and third grades that the increase in the price of labour and the scarcity of it has occurred.

18,339. (*Mr. Harrison.*) You were, I think, going on to say by what the scarcity has been caused?—That has been brought about partly by skilful management on the part of those who regulate the supply of labour, I mean the union, and partly by other causes, such as other countries, America for instance, requiring them, and their having been induced to emigrate. It being a skilled trade, a workman is not to be made in a few days or in a few weeks, or even in a very few years, but it takes time; and if a large number think it right to emigrate, the spaces that they occupied will not be filled up very easily. Consequently a scarcity is felt, for after all the flint glass trade is a small trade as compared with some other trades, and being skilled labour a man in that trade is a long while in perfecting from the commencement to an accomplished workman.

18,340. (*Chairman.*) Is there hereditary transmission; do many of the sons follow the same trade for generations?—Sometimes they do.

18,341. Not to a great extent?—No, I have known many instances in which the sons have not followed the trade of their parents for some reason or other.

18,342. Has the manufacturer been able to raise the price of the article in proportion to the increased price of labour?—The price of produce has very uniformly receded, that is to say, it has been diminishing at the same time as labour has been advancing.

18,343. (*Mr. Harrison.*) What as to the cost of production?—The cost of production has increased.

18,344. I mean excluding labour?—The materials fluctuate. I think that there is not any very material difference in the cost of materials now compared with what they were ten years ago.

18,345. Then profits have diminished?—Profits have diminished, but I would not represent it as altogether due to the price of labour or the scarcity of labour, because foreign competition is an element.

18,346. (*Chairman.*) Has that come in to any ascertainable extent?—Very much so, and is increasing daily almost. There are many articles now which are introduced from the continent in flint glass which formerly were inadmissible partly because they were of inferior quality, and partly because they were inapplicable to the English market and were more expensive. Now the quality is improving, and the cost of production and labour is greater in England than it is abroad.

18,347. (*Mr. Mathews.*) Have you any idea of what the proportion in the value of an average finished article is between the raw material and the labour?—About two thirds would be labour and other charges, and one third the raw material.

18,348. The raw material is cheap?—The bulk of it is sand, which is rather less in value now than it was 10 or 15 years ago; but then it is of very superior quality, hence the quality of glass now is very superior to what it was 10 or 20 years ago.

18,349. Chiefly from the better quality of the raw material?—Yes, and that particular material.

18,350. Labour forming that proportion of the value, anything which interfered materially with the price of labour should operate in raising the price of glass?—Yes.

18,351. But if it does not raise the price of glass owing to other circumstances, any interference with the value of labour is an important element in the case?—Yes.

18,352. (*Chairman.*) Have the terms upon which the employers and the employed deal with each other within the period of the last 10 years changed according to your judgment, because it has been said that the relation between the employers and the employed in the experience of many employers was much more amicable a few years ago than it is at present?—There is an improvement certainly in that respect, but there is very great room for still further improvement. The relations are still often very unsatisfactory, indeed, antagonistic, and there is wanting a greater degree of cordiality and mutual interest in order that each should be placed relatively in a position in which they could feel more satisfaction in working together. I daresay that there may be grounds of discontent on

Dr. G. Lloyd.

30 June 1868.

the part of the men towards the masters, but there is certainly still existing considerable ground of discontent on the part of the masters towards the men in consequence of that absence of mutual interest; so that there is a feeling rather of apprehension frequently if not constantly before the employers' minds of something that ought to be removed, which is an obstacle to their carrying on their business satisfactorily and successfully.

18,353. Have you any apprehension of being deprived of labour by a sudden stoppage of your men; is that the feeling of anxiety that exists in the employers' minds?—Not a sudden stop of the whole number of men. I should first state that in working those sets which I have spoken of it is absolutely necessary, if we are to work profitably and advantageously, that the whole of the chair should be completed. Now we are very apt to have broken chairs, that is to say, one or two of the set may be absent for a considerable time. We feel that a constant source of inconvenience and a source of loss. We feel, too, that this is an evil. It frequently happens that a man is suddenly called away, or he gives notice without giving any ground of dissatisfaction that he is about to leave, and on making inquiry he perhaps may inform his employer that he leaves because he is about to better himself and go elsewhere; he does not allege that he is other than satisfied with his then employment, but that he is, I may say, desired to go somewhere else; he is wanted somewhere else and he goes. When a man leaves in that way we may be kept and are kept frequently a very considerable time before we can get one equally satisfactory to the one that has left; and when one does come to fill the position he is invariably desired to apply for an advance of wages. It is ascertained what the wages were of the man who has left, and it is the policy of the union that the man who is to replace him shall require as much wages as the man who has left; and experience very often unfortunately proves that he is not worthy of the amount of wages that he receives, and consequently great dissatisfaction is felt, and it becomes frequently necessary that he should retire; and then the same difficulty occurs over again.

18,354. You attribute that to the action of the union?—I do.

18,355. A skilled workman without any reason that the employer knows of wishes to better himself, and goes, and the substituted workman though inferior in skill requires higher wages?—Yes.

18,356. And you suppose that that can be arranged so as to be profitable to the men by the aid of the union?—Yes, we consider that it is done by the skilful management of their own affairs.

18,357. You only know the result; you do not know what the arrangements are which the union makes?—No.

18,358. (*Mr. Booth.*) The union objects to your taking in a man's place another man at a lower rate of wages than he was receiving?—Yes.

18,359. (*Chairman.*) It is one union for the United Kingdom, as I understand you?—Yes.

18,360. And the workmen almost all belong to the union?—A very considerable majority. The number of non-union men is comparatively small. In certain districts there are almost no non-union men, in other districts there are more or less; but I imagine that, taking the whole country throughout, a considerable majority in every manufactory consists of union men.

18,361. (*Mr. Booth.*) Do the non-union men work in sets of their own?—They are mixed sometimes, that is to say that one or two members in a set may belong to the union and the others not.

18,362. Do the union men object to working with non-union men?—Sometimes they will not do it. I believe I may say mostly they object to it.

18,363. (*Lord Elcho.*) Have you found less objection to working with union men since your association has been formed?—The objection always did exist and it exists now.

18,364. Did the objection that the union men had to working with non-union men ever lead to a strike?—Yes.

18,365. Was that before your association was formed?—Before our association was formed.

18,366. Has it led to strikes since your association was formed?—I think not. There has been no general strike, nor I think any actual strike in our association that has taken place since that was terminated.

18,367. Were master manufacturers obliged before your association was formed to turn off non-union men on account of the objection of the union men to working with them?—Yes.

18,368. Have they since that association was formed been obliged to do so?—I am not aware of any case since.

18,369. (*Mr. Booth.*) Are you now allowed freely to take in non-union men?—I should say not freely; that is to say it is a hazard, and a master having but few non-union men would be careful of introducing another even if he could find another suitable to his purpose.

18,370. (*Lord Elcho.*) What is the subscription to your association?—10*l.* a year per member.

18,371. Are you bound to contribute to the funds of your association a certain sum for every man in your employment?—No, the subscription to the masters' association is 10*l.* a year only.

18,372. How many members of that association are there?—About 19 or 20.

18,373. So that your funds really amount to 190*l.*?—Yes.

18,374. (*Mr. Harrison.*) Is there no defence fund besides?—There is no defence fund now. At first we had a fund of 100*l.* at the strike that occurred in 1858; but since then the defence fund has not been maintained or increased.

18,375. (*Lord Elcho.*) Was that a fund of 100*l.* from each subscriber?—Yes.

18,376. At present you have no fund to support each other in case of difficulties and lock-outs?—No, excepting this way: there will be a small sum accruing because our annual expenses are much smaller than the annual subscription of 10*l.* each member, so that we have a few hundred pounds in hand.

18,377. Are you aware that the shipbuilders in the Clyde have an association consisting of 23 members, each of whom subscribes to the general fund at the rate of 4*l.* per head for every man and boy in his employment?—I was not aware of that.

18,378. You have nothing of the kind in your trade?—No.

18,379. And there is no question of establishing it at present?—No.

18,380. (*Mr. Harrison.*) You could call up the defence fund, could you not?—We are not pledged now. If a defence fund were required to be raised it would be necessary to form a new resolution. In fact I may say that the association when first established was intended to be only temporary; we only contemplated defending ourselves through that strike; and then it was a question whether we should dissolve, but the aspect of affairs was such that we did not think it necessary. At the same time we have never taken any step which could be considered hostile or in any way provocative of enmity as far as we know.

18,381. Have you a copy of the rules of the society?—I have put one in.

18,382. Are they the same as those agreed to in 1858?—Exactly, with very little alteration—no material alteration.

18,383. Does the rule with respect to the employment of fresh hands hold good now? "No member "of this association shall take into his employ a new "hand in any capacity as a glass blower without a "written character from his last employer; nor "shall he treat with one unless the man offering "shall have previously given to his then employer a "fortnight's notice of his intention to leave, and in "making an engagement with a new hand, it should "be stipulated in writing that a fortnight's notice

" should be given on either side either of leaving or " dismissal, excepting in case of dismissal from gross " misconduct" ?—That rule is in force with reference to the fortnight's notice; it is recognized throughout the trade in the Midland district.

18,384. Is any list of men who have been dismissed from their employment sent round to members of the association ?—No.

18,385. Was there any list of the kind sent round during the time of the strike ?—During the time of the strike there was.

18,386. But there is no standing list ?—No, there never has been any since.

18,387. (*Chairman.*) Is there in the carrying on of work on the premises any restriction upon the amount of production by each workman ?—Very considerable restriction, that is to say, a restriction to a certain amount of produce in a given time : it is considered that that should be strictly adhered to and not exceeded. If it is exceeded the workman who does so exceed is liable to a heavy penalty being imposed by the society, and that penalty I believe is inflicted.

18,388. Is it a considerable loss to the manufacturer that when he has all the expenses of the manufactory going on the produce is restricted in the way you have just described ?—Yes, it is a very considerable impediment in the production of the manufactory, and also in the way of meeting the competition which we are experiencing now from the foreign introduction of cheaper glass ; that is to say, if we were allowed to make as much as could be produced in the ordinary hours of labour, we should be upon very much better terms to meet that competition.

18,389. What does the workman gain by being restricted ? Say, for instance, that he is restricted to a dozen articles in the six hours, though he could make 18, what does he gain besides saving the muscular action by being prohibited from making more than 12 ?—I do not see myself what he does gain, unless it be considered (if that is a legitimate gain) that he prevents his master from producing as much as he desires to do. But it is clearly and demonstrably the workman's loss that he is not permitted to work as well as he can in the time during which he is employed ; he would earn more wages if he were. That makes it to the employers the more striking that such a regulation should be submitted to by the men themselves.

18,390. The men, we may presume, intend it to be for their own interest. Is that upon the assumption that there is a limited amount of demand, and that their employment depends upon that demand being only supplied in a graduated degree; is it any such idea as that ?—I am not capable of explaining their motives, but I only speak of the result. It is a manifest injury to the workman because it reduces the skilled and industrious man down to the level of the less skilled and idle.

18,391. (*Mr. Booth.*) Is it not from some notion of the unions that there ought to be what they call a fair distribution of the work amongst the members of the union, each getting an equal share ?—That is to my mind unintelligible. I do not see the sense of it.

18,392. You think it is only for the advantage of the inferior workman ?—Yes, but I believe that the gifts of nature or God ought to be appropriated to enable the well-conducted and industrious man to have the opportunity of enriching himself rather than that he should be impeded as he is by carrying the additional weight of the burden of those who are of the opposite character.

18,393. You think that he should be allowed to make the most of the gifts that God has given him ? —Yes.

18,394. (*Chairman.*) Is the limitation of the number of articles produced governed by the average skill, or by the skill of the inferior workman, and then is the man of the greater skill brought down to the same level ?—Clearly, in my mind; and it can be shown as often as there is opportunity of showing it, that the amount produced is only what can be produced by very inferior hands with very few exceptions. There are some technical bad jobs as they are called, in which it would be difficult for a man to exceed, but the greater part of the articles produced I am of opinion could be shown to be producible much within the nominal hours of labour, and by inferior hands; so that the superior and the highest of all are hampered and impeded in producing what they otherwise might do in order that they may be put upon the same level with the inferior ones. That seems to me the policy of the principle of restricting the amount of production that it is for the sake of the many who appear to be unskilled, and also not to be as industrious as they should be.

18,395. (*Mr. Booth.*) I suppose that the more unskilled workmen form in general the majority of the union ?—Certainly.

18,396. So that if there is universal suffrage amongst them they naturally would rule in that direction ?—Yes.

18,397. (*Chairman.*) I observe you have mentioned in your paper furnished to me that in the case of promotions that are unsanctioned by authority penalties are imposed ?—Yes, in the case of promotion without permission of the society.

18,398. What is the exact meaning of " promotion " ?—The rising from an inferior grade (I have described these grades) to the superior or second grade and to the highest. That is restrained not according to the ability of the aspirant young man but according to the policy in accordance with which the union think it necessary to direct their affairs ; so that a young man must, let him be ever so skilful, wait his turn until it is thought right that he should assume the higher rank and consequently the higher wages which the trade is capable of affording him.

18,399. As far as you understand it is another application of the same principle to keep the workmen on a level ?—Yes, exactly.

18,400. And as far as you understand it upon the level of the inferior grade ?—Unquestionably.

18,401. Would that be below the medium line between the least skilful workmen that will be taken into your factory and the most skilful one ?—Below the medium line.

18,402. (*Mr. Mathews.*) So that the master has no voice in the promotion of his men without consulting the union ?—He may do it sometimes and he does do it, but there is a risk.

18,403. Of getting his shop struck ?—Yes, or blocked ; that means an impediment put in the way of employers or workmen filling up the vacant situation.

18,404. So that the union assumes the power of control over the advancement of the men, irrespective of the wishes of the master ?—Entirely.

18,405. (*Chairman.*) Has there been any objection made to the improved procesess of manufacture and any impediment placed in the way of bringing them into use by the action of unions ?—I believe that the general experience is very much in accordance with my own observation, that any alteration is received with more than a want of alacrity to take it up, indeed with opposition. A suspicion seems to arise whether the improved process will not eventuate in more advantage to the employer than the employed, and unless an advantage to the producers can be clearly shown it is discouraged. I have known many instances, indeed so many instances that I have myself very often abstained from proposing and urging improvements which I see in my own mind are capable of benefiting both parties, because of that opposition, which is for the most part selfish or senseless.

18,406. Does the same feeling show itself when new patterns for articles are proposed ?—I think that as a rule a new pattern is received unfavourably, and it is generally considered that fewer articles of it can be produced ; that is to say, when the question is put, " How many can you make of these? " the disposition is to prevent the introduction of the new pattern rather than to encourage it.

Dr. G. Lloyd.

30 June 1868.

18,407. (*Mr. Mathews.*) So that you, as a scientific man, frequently seeing, I suppose, means of improving the processes in your trade, are interfered with in that by the action of the unions?—Yes.

18,408. You are afraid to persevere in the object you have in view in consequence of such interference?—Yes; I could mention one or two instances. I would mention one more particularly in regard to the introduction of a new furnace which I undertook some years ago, Siemens's furnace; and without wearying the Commission with details respecting it, I may say in a few words that I was strongly impressed with the principle of the thing being sound, and was induced to undertake it, perhaps it might be considered rashly, because it was the first introduced in England, except a small experimental one, so convinced was I of its economy and of its general utility; and I met with the very greatest opposition from my own men in carrying it out, so much so, that if I had not had rather more obstinacy in persisting in what I supposed to be right than they had in the opposite direction, I must have put it out and abandoned it.

18,409. (*Chairman.*) Did you succeed in that case?—I succeeded.

18,410. Have you a family capable of working with you, because we have had it stated in some of the trades that the employer has been able with his family to make the article and show its practicability, and so take the first step towards succeeding. Who are the men you get to work with you when the workmen in general are averse to a new proposal?—I am not describing now a manufacturing process as being objected to, I am describing simply the introduction of a new kind of furnace in which the glass is melted, not a mode of manufacturing articles but a mode of heating or melting the material to be worked into articles.

18,411. (*Lord Elcho.*) What was their objection?—I am not quite sure. The chief objection seemed to me to be that it was something new and that it might be adverse to their interests; the representation I had made to me was that the general feeling was that it might be adverse to the interests of the men themselves.

18,412. Who made that representation?—Men upon the spot.

18,413. Men deputed to confer with you upon it?—No, there was nothing of that kind. I had no formal representation of its being likely to be injurious, or any opposition in that way. It was what I should call a secret opposition.

18,414. They did not complain?—They did not complain except occasionally. I think they said that they were exposed to more heat, and that some inconveniences were caused in consequence of the shape of the furnace being different from what they had been accustomed to. But the heat was not greater than the heat in an ordinary furnace, and the inconvenience was, as I was satisfied at the time, very much exaggerated, because the shape is now precisely the same and no objection is made.

18,415. Did it effect the purpose of doing more work with less labour?—No, not in the way of making glass, but the effect was obtaining a higher heat, and consequently more rapid melting of the glass if wanted. but the great principle was economy of fuel.

18,416. So that it would not have diminished the labour of making the glass?—No, not in the making; there was no reason to be jealous of it in that respect.

18,417. (*Mr. Harrison.*) Did the objection come from the furnace men?—No, from the glass blowers, who have nothing to do with the management of the furnace.

18,418. Did they put their objection in any specific form?—No.

18,419. They did not state the ground of it?—No. I only mention that as an instance of impediment perceptible on the part of the men without sufficient ground.

18,420. And you work that now?—I work it now.

18,421. (*Mr. Mathews.*) The value of that furnace has been proved by its application to other purposes besides yours, has it not?—Yes.

18,422. It has been used for melting not only flint glass but plate glass, and steel, and anything in fact where a high and sustained heat is requisite?—It is so used.

18,423. Nobody now contests the value of the invention, I believe?—No.

18,424. I suppose that the use of refined flint glass, and table glass, and ornamental glass of every description, has enormously increased in this country as well as abroad?—Yes.

18,425. And the returns as given in the official table before us clearly show that there is a considerable increase of foreign glass, and a very large importation of English glass, into different European countries and Eastern countries for ornamental and other purposes?—Yes.

18,426. Coupling that fact with the fact of the restriction in the employment of labour, that has given the advantage to the workmen of dictating their own terms to a greater degree in your trade than in almost any other trade, has it not?—I fancy that is the case.

18,427. The only means of supplying the labour in the glass trade is, I suppose, through the means of apprentices?—Yes.

18,428. And if there is a greater demand for labour than has risen in other trades, and at the same time a restriction of the education of apprentices for skilled workmen, naturally the supply of labour is very materially restricted?—Yes.

18,429. And that restriction is controlled by the union, so that the master has been obliged to apply to the union for any hands he may want?—Yes.

18,430. The restriction upon the apprentices has been a material impediment to the glass maker in carrying on the trade?—Certainly. There is no possibility in the glass trade, as there is in other trades (in some branches of the iron trade for instance), for a man to go from one to the other. In those trades which are little more than mechanical that might be done, but no man could possibly come into the flint-glass trade after he had passed the years of youth, or say the age of 15 or 16, and acquire it; he must begin very young. So that if there is any amount of labour in other trades out of employment, those men could not come into the glass trade and acquire efficiency.

18,431. They could not acquire the necessary skill?—No.

18,432. So that the restriction of apprentices throws this impediment in the way of the operations of the glass maker, that if he wants additional labour he cannot go into the open market and say, "I want so many hands," but he has to go to the union to provide him with hands?—Yes.

18,433. Having provided him with those hands, if they are not of sufficient skill he is entirely at the mercy of the union to supply him with those they think fit?—Yes.

18,434. Do you see any way of the employers getting emancipated from that description of thraldom, except by throwing open the education of apprentices unlimitedly?—I see no other possibility of accomplishing it.

18,435. If you could bring in an unlimited number of apprentices, and educate them for artisans, it is the only chance you have of getting a sufficient number of skilled labourers to supply the demand which these exports and imports seem to indicate?—I see no other means.

18,436. How many houses are there in Birmingham connected with your association; I suppose almost all are?—Half of the Birmingham houses belong to the association.

18,437. They are not numerous?—The whole number is about 23 or 24 in Birmingham and the neighbourhood.

18,438. Embracing Stourbridge, Dudley, and Birmingham?—Yes.

18,439. And what number of skilled glassmakers' workmen are there, do you think, in the district?—It

is necessary to have a definition of "skilled" to answer that question.

18,440. I mean the ordinary glassmakers, such as you are obliged to go to the unions to supply in case you want more men?—"Skilled" is a comparative term, and I do not know how to obtain a standard, unless you take the medium between the highest wages and the lowest wages of those who are occupying the same grade. For instance, there are workmen varying from 25*s.* to 40*s.* a week. If we take the number of those in a manufactory, and multiply it by the number of manufactories, we might get at it.

18,441. If you take 25*s.* and 40*s.*, all between those extremes would be skilled labourers?—Yes.

18,442. An unskilled labourer would not get 25*s.*?—We should not call him skilled as a glass blower. They begin at 25*s.*, and they expect to rise to 40*s.*, but they are not all capable of doing so.

18,443. I want to ascertain whether the bulk of the men under the control of the union are necessarily men employed in the glassworks?—Yes.

18,444. And all the men whom you employ in your glassworks are more or less under the control of the union?—Yes, with few exceptions.

18,445. That makes the union, taking the circumstance of the restriction of apprentices into account, entire masters of the situation?—Quite so.

18,446. And you have no control over the labour market?—No.

18,447. You, in fact, are the instruments of the union for carrying on the operations of the trade at the artificial prices that the restriction of labour amongst your men necessarily involves?—Yes.

18,448. (*Lord Elcho.*) Is there any reason why the masters should not form as formidable a combination as the men? They have capital on their side, and the men have not, and if they choose to stand by each other, and subscribe for a defence fund, as the Glasgow shipbuilders have done, would not such a combination of capitalists be able to control the combination of working men?—There would be this objection probably in the first instance in proposing such a thing, that the master glassmakers are scattered over the kingdom at large intervals, consequently communication with one another would be difficult, in order to regulate by frequent meetings their affairs. Between London and Glasgow and Edinburgh there are dotted about districts in which the glass trade is being carried on; and again there is some variation in the modes of working, which seems to be admitted as constituting exceptions in the administration of the men's society, and it is difficult to understand how those exceptions are allowed to occur, because from what I have already stated, the whole trade being under the direction or influence of one union or society, we might expect that the same rule would be applicable to all the districts, but that is not the case. There is a variation in the amount of produce as well as in the value of labour in different districts; more produce is allowed to take place in the North than in the South or in the Midland districts, that is to say, the Scottish and Lancashire masters are, I may say, permitted (because I proceed upon the presumption, or rather the proof, that the whole is more or less under the immediate influence of the union) to produce more, consequently to have an advantage over the Midland and Southern houses.

18,449. Your own union is only local?—Ours is only local.

18,450. Is the union of the men general?—The union of the men is general all over the kingdom.

18,451. But if the men can form a general union, do not you think that the masters could equally form a general union, regulating it and modifying it according to local circumstances, as I assume the men do theirs?—There is a reluctance, I think, generally on the part of the masters to associate for the same objects that the men have in view. Whether it is want of confidence or what it may be I do not know, but there certainly is reluctance. And the masters' associations are comparatively very modern institutions, and I believe that the association of the masters in the glass trade in 1858 was the first example of anything of the kind.

18,452. (*Mr. Mathews.*) They are defensive, in fact?—Yes.

18,453. (*Lord Elcho.*) I am speaking of them defensively; why could they not form a general union?—There was even a reluctance to that, a reluctance amongst ourselves, and we would have abstained from it if there had been any other means of persuading the men to abandon the hostile position that they had taken, rather than imitate them in forming an, in some respects, equally objectionable association of masters.

18,454. Assuming that other means, such as co-operation and arbitration (which we will not touch upon now) fail, and that it is a question of a defensive association being formed, do not you think that a state of things might and probably will arise which might necessitate on the part of the masters an action similar to that which has been taken on the part of the men?—I think I can foresee that rather than the trade should be abandoned to the foreign competitors either altogether or very much more than it is at present, masters will be driven to something of that kind unless the unions abstain from interfering as they now do with the supply of labour and the amount of production.

18,455. And if masters are of necessity driven to do what you have described, and form such combinations, is it not probable that in such a war between capital and labour the capitalists would gain?—I fancy that it must be so in the end.

18,456. You have said, "failing other means." I presume that when you talk of "other means" you refer to the question of arbitration, for I see that you have put in a report here dated 17th September 1860, signed by yourself as chairman and by Mr. Green as secretary, which contains a proposal for a system of arbitration?—Yes.

18,457. Did nothing come of that?—Nothing.

18,458. Why so?—We found it impracticable as we believed, in consequence of the necessity of conflicting interests uniting voluntarily to obtain that, and we thought it was hopeless to attempt it.

18,459. Where did the hopelessness arise; did it arise on the part of the masters, or was it possible to get the masters to agree but the men would not agree to it?—We thought that a difficulty would arise in carrying out such a plan; that whatever decisions would be come to would want the force of law and compulsion, and that we should get into more complication, and not be able to arrive at anything like a just settlement of the dispute from the want of force. I believe in France, where, however, they are on a totally different footing from anything hitherto proposed in England, the decisions of the councils of arbitration are enforced immediately and summarily by the magistrate. Penalties or imprisonment are immediately enforced on conviction in consequence of the decision of the council of arbitration. But there all disputes relating to wages are excluded.

18,460. (*Mr. Mathews.*) Are you speaking of *Conseils des Prud'hommes*?—Yes; but it is the wages question which is the general source of dispute amongst us, so that if we excluded that subject we should have very little to deal with.

18,461. (*Lord Elcho.*) Have you yourself in questions of dispute with your men, or questions likely to give rise to disputes with your men, been in the habit of meeting them?—Yes.

18,462. Collectively, or certain men that you selected or they selected to confer with you?—Since the termination of the strike in 1859 I have been engaged in one or two disputes with my own men.

18,463. Were those disputes about wages, or modes of working?—About both; but chiefly about production. And I have also assisted in the settlement of disputes that have arisen in other manufactories, and I believe to the satisfaction of the parties concerned, the masters as well as the men. Though that was in a very humble way it seemed to my mind rather

Dr. G. Lloyd.
30 June 1868.

encouraging, as showing that private arrangements of that kind might be resorted to. But then those questions were not of a serious nature.

18,464. In your own case did you meet the men collectively?—I did not.

18,465. How did you meet them?—A body of them selected amongst themselves.

18,466. Were they the recognized organs of the union, or were they selected amongst themselves by the men at your works, unionists and non-unionists together?—By the unionists only.

18,467. And did they confer with you through any recognized officers of their union?—No, they did not.

18,468. Was it a question of wages?—It was a question of mode of working and of production.

18,469. And they came to your office and talked the matter over?—I required of them an increased amount of production in the shape of an increased number of articles produced in a given time, which they objected to. I gave them a list of what I considered I was entitled to as compared with other houses.

18,470. That was after you had met together?—Yes, and they considered that and also conferred with the officers of their union, and they came to the decision that no concession could be made, and upon that we joined issue.

18,471. (*Mr. Mathews.*) Were they your own men exclusively?—My own men exclusively who attended.

18,472. It was not a general question for the whole of the trade?—No.

18,473. (*Lord Elcho.*) Then that conference failed?—That conference failed.

18,474. Has it succeeded since?—It has not been attempted.

18,475. Have you known other manufacturers follow that course with success or failure?—I have not known any instance. There is a frequent subject of difference and a source of difficulty in the want of uniformity even in the same district.

18,476. Does your experience lead you to think that in cases of difference by bringing employers and employed together round a table to talk the matter over, without any legal power or means of enforcing decisions, disputes may be avoided?—I think they might.

18,477. In spite of this failure you have mentioned, you think that that might lead to a friendly settlement of the question?—I think it might, and it ought to be attempted.

18,478. That is a remedy, supposing it to be a remedy, which might be applied at once without any legal sanction, and might succeed immediately, whereas co-operation if it is to succeed would require years and years before it can become general?—Quite so. In addition to that I may say that I think that the proposed scheme which has originated with Mr. Mundella is the most practicable that I have ever seen, and is worthy of trial in any and perhaps every trade in existence.

18,479. Mr. Mathews asked you just now about the limitation of labour through the limiting of apprentices, and earlier in your examination our chairman asked whether in the glass trade there was such a thing as hereditary labour, men training their children to the trade. If apprentices are so limited can a man if he chooses at the present moment bring up his sons to the glass trade?—I think that he may do so.

18,480. But if there were in any factory as many apprentices as the union would admit, there might not be the opening for his son as an apprentice?—There are instances, and I have known instances, of men in the trade who, from a private opinion probably of the advantages offered by the trade in their own view not being sufficient, have preferred putting their sons into other trades rather than endeavour to keep them in the glass trade. I think it very probable that the union is decidedly in favour of admitting the sons of those already in the trade in preference to other persons. As a principle, they wish that it should be so continued, and a very proper feeling too, I think.

18,481. (*Mr. Booth.*) But do they admit any number of the sons of union men?—No.

18,482. They do not relax the restriction in favour of the sons of union men?—No, I never heard that.

18,483. (*Lord Elcho.*) So that practically it might come about that if I, being in the glass trade, wished my son to be in the same trade, there might be no opening for him?—Just so; he might be superannuated before there was an opening for him to be admitted.

18,484. He would be past the age of 15, which you say is the highest age at which he should enter?—Yes.

18,485. (*Mr. Mathews.*) So that there is a disposition to place the boys in a trade where they can find an unlimited field for their labour?—Yes.

18,486. (*Lord Elcho.*) You said that the foreign trade has been pushing out our trade. To what do you attribute that, assuming it to be the case?—Is it that the foreign article is a better article, an article better in design or material, or is it that it is cheaper?—I believe chiefly because it is cheaper.

18,487. Have you at all endeavoured to ascertain the cause of the comparative cheapness, assuming that it is cheaper?—My opinion is that it is chiefly on account of the difference of labour being against the producer in this country; that is to say, labour and its consequences, the price of labour, and the restricted amount of work, by which the English manufacturer is placed at such a disadvantage that he cannot in a given time produce the quantity or at the price that he ought to do to be in competition with the foreigner.

18,488. Have you any certain knowledge on those points?—I think so.

18,489. Have you yourself made any inquiry abroad?—I have not.

18,490. Have your association?—No; we only get information second hand—from hearsay. We have not made any special inquiry.

18,491. You are not aware whether it arises from the causes that you have given or from improved processes of manufacture?—Now that you put the question in that form, I do know that there are processes abroad which are the means of enabling them to produce better and cheaper articles in many instances than we are in the habit of producing in this country.

18,492. That very furnace that you have mentioned, Siemens's furnace, was a foreign furnace?—A German one; it was first introduced in Germany.

18,493. I think you said that you were the first person that introduced it into this country?—Yes.

18,494. So that it was a foreign furnace introduced by yourself?—Yes.

18,495. (*Mr. Harrison.*) But it had not been much used in Germany, had it?—Yes; for glass, and steel, and iron.

18,496. (*Mr. Mathews.*) Previous to its use in this country?—Yes, in Styria. I know that several furnaces were in existence there before 1860, which is the time that I commenced mine.

18,497. (*Lord Elcho.*) If you say that in addition to the causes which you first mentioned as giving the foreigner to a certain extent the command of the market in this country, there are such causes as improved processes of manufacture, and that you yourself have introduced one of these improved processes, namely the Siemens furnace, why are not these other improved continental processes introduced in your trade?—There is another which I have been anxious many times to introduce, but I have always been obliged to give it up; and though I could not probably, to the satisfaction of a jury, or any number of persons who might sit in judgment on the subject, prove to demonstration that obstructions are made on what I call union principle, yet I felt that I was not sufficiently encouraged in the introduction of the new process, and I have been obliged to abandon it.

18,498. Obstructions made by the men?—By the men. I allude to what is going on in France in the making of articles in wooden moulds, which are never used in England but are used most successfully abroad, and are the means of producing cheaper and good

articles, which we are obliged to make by hand in smaller numbers here and at a larger price.

18,499. The objection to that on the part of the men would be that it was doing away with skilled labour I suppose?—That a second-rate hand would be able to do what is now being done by a first-rate hand.

18,500. Have you proposed to introduce that, and has it been objected to?—Yes.

18,501. Do you know any other instance of an improved process which has been objected to in the same way?—I cannot call to mind any other now.

18,502. (*Mr. Booth.*) You have no doubt that in the absence of the interference of unions with your mode of carrying on the business, you could conduct it more profitably than at present?—Unquestionably.

18,503. That you could produce the articles at a lower price?—Yes.

18,504. And that you could more easily stand the competition of foreigners?—Yes.

18,505. And that would lead to an extension of your works and the employment of a greater amount of labour?—Yes.

18,506. So that, looking to the interests of the labouring class, that interference is injurious to themselves?—I believe that it is the interest of the employers and the employed that the trade should be conducted entirely free, and without restraint on the part of the unions as now exercised.

18,507. Taking a large view of it, you have no doubt that this kind of interference is injurious to the workmen themselves?—Quite so.

18,508. (*Lord Elcho.*) But it is the case, is it not, that in spite of the scarcity of labour which you have described as arising from the regulations laid down by the union, and from emigration, and in spite of this foreign competition, and the difficulty that you have, as you say, of introducing improved processes, the glass trade in this country has increased, and according to what has been put in my hand has increased by 75 per cent. in the last 10 years?—I am not able to answer that, because I do not know the figures. Does that mean the flint glass trade, may I ask?

18,509. The flint glass trade. I think it very likely that it requires discrimination. The great increase in the flint glass trade has been in a particular branch of it called the press trade. There are large houses in the North occupied only in the manufacture of pressed glass, glass pressed in a mould by which the cheapest glass is made, and a great proportion of that is sent abroad; and I think without being able to state precisely the figures, that it will be found that the bulk of that increase in export is in that kind of glass.

18,510. But assuming that this statement is correct, and that generally speaking the flint glass trade has increased 75 per cent., I presueme your conclusion would be that if it had not been for these restrictions on improved processes of manufacture and restrictions as to the particular way in which labour is to be employed, the increase might possibly have been 100 per cent.?—Yes, very likely.

18,511. (*Mr. Harrison.*) Do you work with a set of rules as applying to your particular district respecting wages and other matters between the employers and the employed?—The employers have no rules limiting the amount of wages.

18,512. There has been no written code of rules agreed to by both sides?—No, not agreed to by both sides.

18,513. But I suppose that there is an understood current rate of wages?—Yes, but there are exceptions.

18,514. As to the rule with respect to the employment of apprentices, you say that it was modified at the termination of the strike of 1858, and that then employment was resumed upon a new basis with respect to that?—Yes.

18,515. And that has not been altered since, has it?—No, it remains now as it was then.

18,516. The employers agreed at that time that that should be the number of apprentices?—Yes, but at the same time as that apprentice rule, as it is called, was so modified, there was an understanding expressed that at any future time it was open to further negotiation. It was not expected to be binding for ever, and there is a dissatisfaction on that point, that is to say, we are now urging, and have been for a considerable time, a further extension of that.

18,517. Did you consider it unreasonable at the time?—We found at the time that it was the best means of ending the dispute.

18,518. Do you consider that the number of glass workers in the trade, now, directly through the operation of that cause, is yearly reduced?—There are more manufacturers, and some works have been extended and new ones have been introduced, which have assisted very much, in conjunction with emigration, in making the hands scarce, because, as I said before, in the glass trade men cannot be made into anything like skilful workmen except in the course of years.

18,519. But the number of glass workers is not reduced since 1858, is it?—No, I should think that it has increased altogether.

18,520. Therefore the operation of the apprentice rule, whatever it may be, has not prevented the number of glass workers from increasing, it has not diminished the supply?—No.

18,521. Are you prepared with any suggestion as to an improvement in the law which would do away with the difficulties that you speak of; can you suggest any local court or any other machinery for that purpose, or what is the nature of the remedy which you would suggest?—I can say nothing excepting that we hold that employment of labour ought to be perfectly free and unrestricted; how that is to be accomplished I am not able to say. I do not wish to trench unreasonably or unfairly upon the action of those men who have found, and I believe originally with perfect justice, that it was necessary to combine together in order to defend and assert their own rights. I think that the unions originally had very just grounds for adopting those measures, but I think that of late years they have been exercising them in a way which is injurious to themselves as well as to the employers. I think that they have perfect liberty to unite together to value the price of their labour, and that only, that is, as to what wages they will choose to work for, but not to interfere with others; that is to say, that all men should be at perfect liberty not only according to the recognized laws that the unions may think it right to adopt themselves and to make public, but that even those laws which are not written, the unwritten laws, should be such as that the men by no interference indirectly or secretly should influence others by force or otherwise, who are not members of the union, so that there should be freedom on both sides.

18,522. It is perfectly open to you of course to employ anybody you please?—Not exactly.

18,523. Why not?—Because if we do not employ those who offer themselves and who are directed by the union to offer themselves we may go without; unless we agree to the terms of the union we may be left without men at all.

18,524. If you can find men willing to work on your terms, supposing that they are not members of the union, the union would not interfere with you?—No, because they are nearly all members.

18,525. But supposing that you intend to take somebody else, it is open to you to employ others?—They are not in being.

18,526. You mean that the glass workers think proper to work upon certain conditions, and if you do not accept those conditions they will not work for you?—Just so.

18,527. But it is perfectly open to you to employ any other people that you think fit?—If I were to exclude in my own long-established manufactory all union men, and determined to have none but non-union men, I could not maintain my manufactory.

18,528. Why not?—Because there are not the non-union men in existence. There are some in other manufactories, but they would not come to me unless

Dr. G. Lloyd.

30 June 1868.

I offered them, an extravagrant inducement to come to me.

18,529. That is only saying that the men in that particular trade are not willing to accept your terms, but I will not pursue that further. You spoke just now, as I understood, positively when you said that the trade might be largely increased and fresh appliances introduced, if it were not for the opposition of the union. Do you mean that that applies to the opposition of the union and not to the sort of opposition that is often formed from workmen apart from any association?—Combinedly.

18,530. If you introduce a new process, the probability is, I presume, that the men will have difficulty in working it quite as easily as the old one with which they are familiar, that it will take them more trouble and take time. Is it not your experience that workmen of all kinds are rather slow to adapt themselves to a change of plant which involves an increase of labour or trouble?—Undoubtedly.

18,531. So that in truth it is a general fact which is to be seen wherever men work at all?—Yes.

18,532. Do you mean that in introducing these new processes or new machines the men have objected to try them where a compensating equivalent in wages has been offered, an increase for the increased trouble or loss of time?—I should not apprehend that such would be necessary, because the object was rather to diminish than to increase the trouble.

18,533. No doubt it would be so ultimately. But, for instance, in the case of a new pattern, men, you say, have an objection to work a new pattern. I suppose it may be presumed that they could not at first work the new pattern quite as readily as the old?—No.

18,534. Would you in such a case offer increased wages or some compensation?—In such a case as the introduction of a new pattern something like this arrangement would take place. "This is new, and "it will require some time to get into the way of it; "and allowance shall be made for you to make a "smaller number for some time, until it is found that "you can produce the number required."

18,535. Do they object to it, then, in your experience?—Yes, there is generally a disposition to object to any alteration.

18,536. (*Mr. Mathews.*) Are these matters all referred to the union in the first instance?—Before any decision is come to they are.

18,537. (*Mr. Harrison.*) This objection you have spoken of is what we find in workmen in most parts of the kingdom, whether in union or not?—Yes, from those common causes of resistance, want of intelligence or appreciation.

18,538. The workman without scientific knowledge is very slow to see the value of an improvement?—Yes.

18,539. (*Mr. Booth.*) Do you think that those questions, when they from time to time arise between the employers and workmen, would be more satisfactorily adjusted if there were not the union between them?—Undoubtedly, there would be more disposition to meet the views of the employers.

18,540. (*Mr. Harrison.*) Supposing that there were no restriction imposed by the union or anybody else upon the employment of apprentices, do you think that there would be no disposition on the part of a certain class of employers or a certain number of employées to throw an undue proportion of the work upon boys partially skilled, and so to increase the labour and responsibilities of the higher class?—I think that such a temptation might present itself, and it would be irresistible, and that certain employers would be induced to do so.

18,541. Then you think that an understanding that there would be some reasonable limit in the proportion of apprentices to skilled workmen, if it could be agreed upon by the employers and workmen, would not be a bad thing to hold up as a standard?—I think it would be advantageous.

18,542. You only think that the union has pressed it too far?—Yes.

18,543. What proportion do you think would be desirable without infringing upon the present position of the superior workmen?—I do not think that I can at present form a judgment of what would be effected in the course of time. If we formed a practicable reasonable principle now, perhaps in a few years from the increased demand it would be necessary to alter it again.

18,544. At the present time the rule is one apprentice for two chairs, you say?—Yes.

18,545. And you think that the main result of that is to check the introduction of fresh hands into the trade, to limit the field?—Yes.

18,546. Do you think that one apprentice to each chair would be a reasonable limit?—I think it might, and that it would be reasonable for a considerable length of time.

18,547. Without throwing any fresh labour upon the workman?—Yes.

18,548. (*Mr. Mathews.*) As a general principle, is it not in your opinion objectionable to have any restriction whatever upon the education of labour?—I do think so as a principle, but there may be reasons why at the present time it would be more advisable to admit a certain amount of restriction which has been alluded to, than to go to the full extent of abolishing all restrictions.

18,549. As a rule, you would consider an unlimited supply of labour the proper state of things, and the exceptions should be such partial exceptions as you now allude to?—Yes.

18,550. (*Mr. Harrison.*) Do you not think that an entire freedom to introduce apprentices or boys without limit might lead to an inferior quality of work in the long run—cheap and inferior work?—No, I do not think that, because I think that the wants of the consumer would be an effective check upon that; that is to say, that there would be a certain demand for the produce of skill as well as the cheaper thing. The tendency has been for a great many years, it is true, in the direction of cheapness; that is pervading all classes of consumers. So that the thing will answer the purpose, cheapness seems to be the primary element in inducing persons to become purchasers. Taking things that years ago used to be considered fit for a certain class of consumer, now that same class of consumer is content with a shabby inferior article.

18,551. Then the tendency is towards an inferior article?—Yes; but then I hold that in many instances a skilled hand is cheaper than an unskilled one, because he could produce the article cheaper if he were unfettered.

18,552. Still that is not the opinion which is held by every employer of labour, is it?—No, perhaps not.

18,553. (*Lord Elcho.*) You say that the tendency in glass manufacture is to produce an inferior description of glass. Surely there has been a great improvement in the glass trade in this country as well as in others during the last 15 years?—Yes, in the higher branches.

18,554. So that you have two tendencies; a tendency to improve in the higher branches, and a tendency to cheapness in the lower?—Yes.

18,555. (*Mr. Mathews.*) You were asked by Lord Elcho whether these combinations on the part of the men, more particularly as regards education of apprentices, could not be met by counter combinations on the part of the masters. Do you think that any scheme of combination on the part of the masters could control this restriction of the education of apprentices?—I cannot contemplate it.

18,556. There would be no means of increasing the supply of labour by any scheme that the masters could devise if that restriction prevailed?—No, I do not see how it could be accomplished, particularly if it is objected to by that class from whom the apprentices will be obtained.

18,557. And generally speaking these associations of masters, not only in the glass trades but in other trades, are associations of a defensive character and

not for the purpose of making any aggression on the rights or liberty or freedom of the workmen in any way?—Quite so.

18,558. Still the difficulty remains of the supply of labour if there is restriction in the education of the apprentices?—Yes.

18,559. You were asked about the comparative prices abroad, in Belgium, and France, and Germany, compared with England. I suppose that the raw material is pretty much the same in those countries as in England?—I fancy it is.

18,560. The raw material being of a simple character, and easily accessible, it does not vary much?—No; I have purchased raw material and brought it into this country from Belgium in this state, the elements, the sand, and all the *et ceteras* melted together partially so as only to require re-melting, but I did not find any advantage from that.

18,561. In the same way as pig iron is imported?—Yes.

18,562. When was the import duty taken off glass?—The final extinction of the duty was about ten years ago.

18,563. And when was the excise duty taken off flint glass?—It had been diminished at two periods previously, but the last was taken off in 1842.

18,564. So that the glass trade has been unfettered by restrictions on the importation or the excise duty since 1842?—Unfettered as regards the excise duty since 1842, and as regards the import duty about ten years.

18,565. It appears by returns which we have before us that the imports of glass have increased from 92,040*l.* in 1854 to 791,882*l.* in 1867; that is about 800 per cent. increase in the importation of glass in that period. On the other hand, the exports in 1854 appear to be 572,813*l.* and in 1867, 800,323*l.*, an increase of only something like 40 per cent. in the exports as against 800 per cent. in the imports. Do you consider that that enormous discrepancy between the two is attributable to the cheaper labour of Germany and Belgium?—I suppose so.

18,566. In point of fact we may infer from that that whilst the freedom of labour has been comparatively unfettered in those foreign countries, the shackling of labour by the operations of unions in this country has operated to enormously increase the importation of glass whilst it has limited the manufacture?—I think greatly so.

18,567. That is the natural inference from those figures, is it not?—Yes.

18,568. (*Mr. Harrison.*) Has not the home production increased?—I do not know to what extent, but it has increased with the population.

18,569. Are there any glass workers now out of employment in your district?—I am not able to say whether there are any out of employment that might be employed.

18,570. If you wanted men, do you think that you could get them at this moment?—I have reason to think that I could not get the class of men that I should want.

18,571. (*Mr. Mathews.*) Could you get them without application to the union?—No.

18,572. (*Mr. Harrison.*) Would you say that the union has no unemployed men, for instance?—I am not able to say so. I shall have an opportunity of ascertaining that immediately because I want one or two.

18,573. Do you think that you will get them?—I think it doubtful, I have lately had one or two that have proved most unsatisfactory, and I must get rid of them.

18,574. During last year has there been any number of men in the trade wanting employment?—There has been a scarcity of useful men. You may after a time receive an application from a man to supply a situation, but according to my own experience and that of others it has generally resulted in an unsatisfactory supply, and another change is necessary.

18,575. I am speaking of the workmen of the first class?—The first class are not to be had excepting at a considerable advance of wages beyond their probable merits.

18,576. Are there men unemployed of that class?—No, they would be taken from another set of men. If a skilled man is wanted he will not be tempted to throw up his present employment without an advance of wages, and would not be allowed to take a situation without an advance.

18,577. (*Mr. Mathews.*) If there are any men unemployed, do you think that it is owing to the fact of their not being good hands?—Yes.

18,578. If you want good hands you have no means of getting them except by getting them from the union?—No.

18,579. The consumption of glass for use on the table and other purposes has increased very much, has it not?—Yes.

18,580. And looking to the increase of its importation, do you not think that if it had not been for the restriction placed on the operation of making glass the trade would have increased very much more than it has in this country?—It would.

18,581. If there had been an unfettered supply of labour the trade would have been in a more prosperous condition than it is now in?—Undoubtedly.

18,582. And do you see your way out of that dilemma on the part of the glass trade, except by throwing open the labour market for the education of labour sufficiently to supply your purposes?—I see no other way.

18,583. And you see no means of doing it except by counteracting the action of the unions in some way?—In some way.

18,584. (*Mr. Booth.*) You attribute the state of things at the present moment to the operation of that rule as to apprentices?—To a great measure, and to other restrictions which seem to have the policy of raising the price of inferior labour beyond what it is in reality worth.

18,585. (*Mr. Mathews.*) I see that one of the rules and regulations of the flint glass makers' society is a rule to this effect. After reciting the rules, it says, "Rules 4 and 5 are not intended to compel a master to "engage any man to whom he objects, or who is incom- "petent to fill the situation required, and any master "may have any member he prefers by telling the "secretary whom he desires to have." That I believe confirms the intimation you have given the Commission as to the mode by which men are engaged, namely, that you have to communicate with the secretary, and he will provide you with such a man as you wish to have?—Yes.

18,586. And if he does not suit you, you have to apply for a second, who may be worse than the first?—Yes.

18,587. That is not a satisfactory condition of things at a glass work, or any other manufactory, is it?—Certainly not.

18,588. And do you attribute a good deal of the mischief and inconvenience and injury felt in the glass trade, as well as the restriction in its operations, to such rules as that?—Quite so.

The witness withdrew.

Mr. William Robinson examined.

18,589. (*Chairman.*) You are a member of a firm of glassmakers in Birmingham?—William Gammon and Company.

18,590. Is your establishment a large establishment employing many men?—We employ, when we are in full work, about 200 hands, about half of whom are employed in the manufacturing process.

Mr. W. Robinson.

30 June 1868.

18,591. Is that in the manufacturing of flint glass?—Flint glass, table glass, and lamp glass.

18,592. And is the mode of manufacturing the same as was described by Dr. Lloyd, men working in chairs?—Precisely in the same form.

18,593. And have your firm been under the same restriction as to apprentices as was described by Dr. Lloyd?—Yes, we have, and have suffered materially from it during the past few years.

18,594. I was going to ask whether the number of workmen has been restricted, so as to inconvenience you as an employer from the supply having been less than your demand?—We have been inconvenienced at times; indeed, I may say that for the past three years till a very recent period, during which there has been a slackness of trade, we have scarcely ever had at work a full complement of hands; we have generally been short handed.

18,595. That causes a useless outlay?—Yes; a diminished production and necessarily an increased cost as regards the expenses. I can give the Commission, if they desire it, just one illustration of the working of the matter which has come within my own experience.

18,596. You have heard the statement of Dr. Lloyd. We should be glad to be favoured with any observations that your own experience may enable you to make, in addition to what we have heard from him?—I will just give one illustration, with your permission, of the action of this restriction of labour. One of the men of the third grade whom we call foot makers left us; he belonged to an important chair engaged in the most important part of our work.

18,597. (*Mr. Mathews.*) When you speak of an important chair you mean a particular position in the glass works?—He belonged to a chair engaged upon the better class of work, the finer class of wine glasses and tumblers. It was very important for us when he left that that place should be filled up immediately, but there was no other man out of employment (so it was represented to us by the secretary of the union) to fill that place, and we wished therefore to put on an apprentice.

18,598. When you say it was represented to you by the secretary of the union, you mean that you applied to the secretary of the union to get a man to fill the place of the one who had left you?—That is the necessary course; we cannot engage any man without the practical consent of the men in the factory. The union is represented by the district secretary in committee.

18,599. So that you are obliged to have recourse to the same mode as Dr. Lloyd has described?—Yes. As there was no man at liberty we wished to put on an apprentice; we had a youth who was the son of the principal workman of the chair then in want of an additional hand. He was competent and qualified to go on to serve his father in that capacity. The boy was anxious to go on, and the father was also desirous that he should go, (the boy was between 15 and 16 years of age, I think), but objection was taken to that, and the union wished us to offer higher wages to induce another man to leave a situation at some other manufactory.

18,600. You having already a boy whom you thought competent to fill the vacant place?—Yes, and there being no man out of employ we did not propose to put on the apprentice till we had ascertained that there was no other journeyman out of employment, but we objected to induce a man to leave one of our neighbours by the offer of higher wages, especially as the wages given at that chair were high wages. The consequence was that for two months or so the matter remained open, and the chair was working with two hands and a boy, instead of with three hands and a boy. At length, as we declined to offer higher wages, assent was practically given to the boy being put on, subject to a two months' notice for the apprentice. That is one of the conditions of the union, that two months' notice should be given before setting on an additional apprentice. I may say that that regulation was agreed to by the employers with the representatives of the union some time previously, but agreed to as the best terms we could obtain in the matter, not as a matter of choice but as a matter of necessity. But we conceived that two months having elapsed in the vain effort to settle the matter, that might fairly be accounted as the two months' notice for an apprentice, and that when the objection to the principle of putting on an apprentice was removed he should have been placed on at once; but the men interposed then, and required that there should be the two months' notice in addition to the previous delay that had taken place; so that the consequence of that was this, that from the 10th of November to the 10th of March, an important chair to us was kept short-handed, and the production of that chair reduced by some 25 per cent., as we conceived needlessly, and solely through the action and influence of the union. That is one of several cases which have occurred, and which I quote as an illustration of the action of the union.

18,601. (*Chairman.*) A limitation of the number of workmen does really give the workmen a control in some degree over the employers?—Yes.

18,602. (*Mr. Mathews.*) What is the nature of the contract that you make with your men when you engage them?—It is a simple engagement for wages at a certain rate and subject to a fortnight's notice on either side. Hiring is not allowed by the union, that is, the men are forbidden to engage themselves for any specific definite time, as for a year or two or three years, to an employer.

18,603. So that when you want to employ a man you have no means of employing him under contract for a lengthened period? The unions prescribe that you shall only engage him subject to a fortnight's notice on either side?—Those are the terms on which all men are engaged.

18,604. I suppose that the limitation as regards the education of apprentices is the same in your works as it is in the works of Dr. Lloyd?—Precisely the same, the works are of the same character.

18,605. And that prevails generally through all the glassworks?—Yes, through all the glassworks in the flint trade.

18,606. Where are your works?—In Great Brook Street, Ashted.

18,607. (*Chairman.*) Is there a rule that no man shall work in any department under a certain rate of wages?—The action of the union is to fix a minimum rate of wages, below which no man is to be employed.

18,608. (*Mr. Mathews.*) So that if it were to happen that workmen either incapacitated on the score of disturbed condition of health, or of want of sufficient adroitness in the department, were to offer themselves to you at a less rate of wages than that sanctioned by the rules of the union, they would prevent you engaging them?—Yes.

18,609. The operation of the rule would be that if a man were below the condition of a full amount of talent, or were in failing health, he would be excluded from employment?—Yes, practically.

18,610. It would not answer your purpose to give such a man the full rate of wages, and you are precluded from engaging him at a lower rate of wages than the full rate of wages established by the union?—Yes, that is so. In some cases we have taken such a man, and engaged a man not fully competent for the place, being obliged to give him the wages as if he were competent, that being the less evil of the two.

18,611. Amongst the numberless difficulties and obstructions placed in your way, you are obliged to choose the least?—Yes, that is the position we are frequently placed in.

18,612. So that if a man is under the mark on the score of health or efficiency, he is practically excluded from employment?—Yes.

18,613. You are prohibited from engaging him at a lower rate of wages than the full rate of wages, and it would not answer your purpose to engage him at the full rate of wages?—That is so generally. There may be some slight exceptions occasionally with

Mr. W. Robinson.
30 June 1868.

regard to simple and very common work; for instance, we have now one or two men who are not competent for the work to which they have been accustomed during past years, and having been old servants on the place, we have retained them in some inferior capacity in a different branch of the manufactory, and in that case they have not received the same amount of wages.

18,614. They have gone out of the control of the union in some degree?—Yes.

18,615. Do you find that the moral and social effect of these unions, as respects the intercourse between you and your workmen, is prejudicial?—Everything, I think, in the nature of unpleasantness and difference with the workmen, so far as my experience goes, has arisen exclusively from the action of the union. With regard to the men individually, it is extremely rare that there is any ground or reason for a difference of feeling or dissatisfaction on the part of the employers.

18,616. Speaking individually of the men themselves?—Speaking individually of the men themselves.

18,617. So that in case of any difference or dispute arising betwixt you and your workpeople, if you were to call your workpeople and confer with them in a friendly spirit in order to overcome the difficulty or remove the obstruction, that might be interfered with by the union?—Yes.

18,618. If it were not sanctioned by the union, such an arrangement would be broken up?—Yes, in several cases that have occurred the men, most of them, if they had to be dealt with individually, would not object, but would willingly concur in arrangements, but they are not at liberty to do so except with the full concurrence of a factory meeting or under the authority of the committee of the union for that district.

18,619. So that you confirm the opinion Dr. Lloyd has given, that with this organization of the union and control over the employment of men, they are masters of the situation; they dictate to you what men you shall employ, and will not allow you to employ any men that have not had their previous sanction?—That is so in effect.

18,620. (*Chairman.*) Is there anything else that you think would be of importance for us to know?—I think that in the questions which you put to Dr. Lloyd almost all the topics that require to be mentioned have arisen and have been discussed. I may say that in my judgment the action of the union is prejudicial to the interests of the best, most industrious, and steadiest workmen; that is my firm conviction, and it is prejudicial in this way—the action of the union limits the amount of work which may be produced in a given period in a turn of six hours. Supposing that the number of the article is 100 say, as an illustration, there may be ten or a dozen sets of men working upon that same article. They are bound not to exceed that number. It is quite practicable in many cases for 25 per cent. and even in some cases 50 per cent. more to be made within the same time, and the experienced and quick and diligent workman is precluded in my judgment by the action of the union from turning those qualities to an account which would benefit himself and also promote the interests of his employer.

18,621. So that if the interference of the union were to be restricted in regard to the operations which you are now speaking of, it would be beneficial to the workmen equally with the masters?—Yes, I have now a superannuated man who is in fact pensioned. He is past work, and as he has been on the premises a good many years, we allow him a small pension and he does nothing. In his younger days he worked frequently for weeks together at one article, namely, tumblers (of which we make a great many). The number which the men make now is 220 in a turn of six hours. Now for weeks together the chair in which that man worked, working the same number of hours and taking ample time out of six hours for refreshment, produced 300. And that applies to a great many other articles.

18,622. So that if a man were paid by the piece, taking away all restrictions upon the full operations of labour, he would be able to get more wages than at the present time?—He would be able to get considerably more wages. I believe that the earnings of the men, without increasing their hours of work, might be increased from 15 to 25 per cent., of course to the great advantage of the men themselves as well as the manufacturers.

18,623. (*Mr. Booth.*) And you would be able to produce the article at a lower rate?—We should be able to produce the article at a lower rate, because the expenses of the establishment are precisely the same upon 200 articles as upon 300.

18,624. (*Mr. Mathews.*) So that *pro tanto* it would operate in excluding the importation of those articles?—Yes, it would tend to that.

18,625. Do you confirm the view which Dr. Lloyd has expressed with regard to the education of apprentices and the necessity of increasing the area of education in order to supply skilled workmen?—Yes; I believe also that the action of the union, while it is prejudicial to the pecuniary interests of the best workmen, has also, generally speaking, as regards some portion of the men, a deteriorating influence in this respect, that the men of less steady habits and diligent disposition are more indifferent as to the style and character of their work and the desire to do it well than they would be if they did not feel as I am persuaded they do, that, come what may, they have the union to fall back upon to secure them a certain rate of wages or pay in the event of their being out of work. And we have had repeated instances of that sort of feeling.

The witness withdrew.

Mr. Thomas Joshua Wilkinson examined.

Mr. T. J. Wilkinson.

18,626. (*Chairman.*) You are the secretary, I believe, of the Glassmakers' Society of Birmingham?—Of the United Kingdom.

18,627. And the head office is at Birmingham?—Yes; it is at Birmingham.

18,628. Have you given in the rules of your society?—I have handed them to the secretary.

18,629. How many are the members now?—About 1,700 paying members.

18,630. And what is your rate of subscription—is it 1*s.* per member every week?—There are two grades of payment; 1*s.* 3*d.* is the high grade, and 1*s.* is the low.

18,631. Who pays the shilling?—The foot maker, the third hand in the chair. There has been a misrepresentation by Dr. Lloyd upon that matter. You must understand that there is more than one grade or set of glassmakers. There are some chairs that employ skilled foot makers or the third hands; and some chairs that employ very unskilled foot makers; consequently it might create a confusion in the matter when put in the comparative manner that Dr. Lloyd has done. In fact the whole is thoroughly divided according to the class of work the man makes. You get a first, second, and third-class man at a wine glass, and the same at almost every article throughout the trade.

18,632. It is 1*s.* 3*d.* a week that is paid by the first-rate workman?—It is 1*s.* 3*d.* for the workman and servitor, that is for the first and second man; and 1*s.* for the third, let his abilities be what they may.

18,633. And the boy you do not take in?—No.

18,634. (*Lord Elcho.*) How many workmen of those three classes are there in the United Kingdom, unionists or non-unionists?—Non-unionists we do not take into consideration at all.

18,635. But I want to know how many there are of that class of non-unionists similar to those paying to

Mr. T. J. Wilkinson.

30 June 1868.

your union?—Those who pay in our society as workmen and servitors number over 1,390.

18,636. Out of the union do you mean?—No, I do not know anything about those out of the union.

18,637. (*Mr. Harrison.*) You could not tell what proportion of the workmen in the kingdom the union forms?—No, we take no statistics of the non-union men at all.

18,638. (*Lord Elcho.*) Have you no idea on the subject?—I have a belief that quite nine-tenths are union men.

18,639. And they amount to 1,700 you have said?—Yes.

18,640. (*Mr. Mathews.*) So that there are only 2,000 men employed at the glass trade altogether?—Not more, I think, that you can term glass-makers.

18,641. (*Chairman.*) How long have you been secretary?—Twelve months this month. There is a change every three years.

18,642. Did you know anything about the strike that was brought about 10 years ago?—Some little.

18,643. Were you in Birmingham at that time?—Yes. To my knowledge the account of the first commencement of the strike given by Dr. Lloyd is a misrepresentation.

18,644. What would you say was the subject of contention between the two parties, the employers and employed?—In the first place Mr. Glazebrook, before the strike commenced, applied for a workman or a servitor, and we sent for a man from Edinburgh, and paid his expenses to Stourbridge, and when the man came he refused to employ him but wanted to employ an apprentice, after putting us to the expense of sending for the man.

18,645. According to you, Mr. Glazebrook applied to you, the union, for a man, and you offered to furnish him one, and instead of taking the man sent by the union he said, "I will employ an apprentice "because my apprentice can do the work," and then the union said, "You shall not?"—You must understand that he first applied to us and put us to the expense of sending for the man, and then afterwards repudiated the man when he came.

18,646. Supposing that the man had been on the spot, and the master had applied to you, and you had offered him a competent man to be servitor, and he had said, "I would rather employ my own apprentice," you would have objected to that, I suppose?—Yes, it is the understood rule of the union that we combine to protect the interests of the members. Consequently if a man is out of work we consider that that man is entitled to have the work that he is competent to do in preference to the apprentice, according to the law of supply and demand.

18,647. If you have a man that can supply that labour, the employer must take the man you offer?—Well, we consider he ought to do so; we do not make it an imperative duty always that he should do so.

18,648. The way in which your laws are enforced is, if it comes to the ultimate step, to "strike" that man?—Not always. It simply happened in Mr. Glazebrook's case that a certain amount of prejudice sprung up between the men and the employer, and if two men fall out it is very often the case that they cannot see reason where if a third party is introduced as in the courts of arbitration and conciliation, matters may be rectified; but in the unsettled state of mind of the two parties they could not see reason and they both turned stupid, and hence the strike.

18,649. (*Mr. Mathews.*) But in the case of your sending a man to an employer, as in Mr. Glazebrook's case, and his not being satisfied with the man, would you allow him to choose any man he wished, whether apprentice or otherwise, without the concurrence of the union?—I cannot see how we can allow him without the concurrence of the union, if he applies to the union.

18,650. Supposing he were to say, "I will take "such a man as offers himself, and as will suit my "purpose," what would the union do in that case?—Leave the matter open; as a number of men combined, we leave the matter an open question whether or no the set of men he goes to work with, shall work with him.

18,651. Your experience would be that the union would interfere and say to the men, "We part with "this man, and so you must not work with the man "any longer"?—Not so. We leave it an open question. I may say before going any further, in reference to the evidence of Dr. Lloyd, that the employers are too vague and too general in their imputations; and there is a vast amount of misrepresentation, and mixing up the truth with untruth, and that gives rather a strong impression against the society; whereas if the charges made would take a definite form we could easily answer them.

18,652. (*Chairman.*) The substance of Dr. Lloyd's evidence is that the trade union does really regulate the supply of labour, and I suppose the union is established for that very purpose. He would rather have the opportunity of going out and hiring anybody in his department he likes, but the union object to that and say, "There are certain men that you must take your labour from"?—At the same time Dr. Lloyd tells you that nine-tenths of the men belong to the union, and that of course none of those men are sent for unless through the officers of the union, consequently he can only get at them by acquainting the secretary that he requires a man, and we promptly supply him if the man is there to be supplied at all. The question of whether his abilities suit or not we cannot decide until he is tried. We do not interfere in any shape or form as regards the discharging of the man if he is not suitable for the work.

18,653. (*Mr. Mathews.*) In the event of your recommending a man to Dr. Lloyd or anyone else, and that man not suiting the views of the parties to whom he is recommended, and of their choosing to engage a man themselves, what in your opinion would be the result on the part of the other men with whom he is engaged; would they strike against him or continue to work in combination with him or not. I do not ask your rule, but your opinion as to the course the men would adopt?—A great deal depends upon the surrounding conditions attached to that case.

18,654. (*Chairman.*) The facts, I suppose, would be brought before the board or rather a lodge at Birmingham. If a question arose at Birmingham you would not submit it to the whole of the glassmakers' society, but you have a body at Birmingham to which you would submit it?—The great bulk of labour differences that come before the men in the trade are settled by the men and the employer in their own factory. I may say that 19 cases out of the 20 are settled by the men and the employers amongst themselves, and we do not know anything about it.

18,655. Is there an executive committee?—Of course there is an executive committee. If there are any appeals to be made they are open to receive those appeals.

18,656. Is there an executive committee for the district of Birmingham?—There is always an executive committee belonging to each district as well as the executive of the trade.

18,657. (*Mr. Mathews.*) What I want to ascertain is this. Dr. Lloyd has stated in his evidence that he could not get workmen, and that it is not the custom generally for the master glassmakers to engage workmen except by the instrumentality of the officers of the union, and you state in one of your rules that application must be made to the secretary of the union whenever a master wants a man, is not that so?—To the factory secretary upon the spot.

18,658. If a master were to engage a man without referring to the secretary of the union, what would be the result of the operations of the union in that case; would they sanction such an engagement, or overrule it, or recommend the men to strike against it?—I may say that a number of cases have come before my own individual notice where employers have engaged men in that manner, and there has been no interference by the society, and there have been cases where the man

they have been required to work with they have objected to work with, not because the employer engaged him for that situation, but because they had some special reason of their own why they objected to work with him.

18,659. Is that the special reason of their not belonging to the union or not ?—You will see that their not belonging to the union is so rare an occurrence; but most likely it would be from want of ability to perform the duties he is engaged for by the employer.

18,660. Is it rare because nine-tenths of the men in the glass trade belong to the union ?—Yes ; I must say that the skilled workmen belong to the union and the unskilled do not.

18,661. You think that the men not in the union are generally unskilled ?—Generally the men not in the union are unskilled—there may be one or two exceptions, but very rare exceptions.

18,662. (*Mr. Harrison.*) Is it the practice when an employer is in search of fresh workmen and applies to the union, that he applies to somebody outside his own works, or to somebody inside his own works ?—The system of the society is this : There is a central secretary and executive ; and a district secretary and district executive ; and each manufactory has a factory secretary, and if there is anyone wanted in that manufactory, if the employer just informs the factory secretary that he wants such and such a man he immediately applies to the district secretary to see if there is a man upon the roll competent to take the situation. This is done simply to facilitate the obtaining the man required.

18,663. But the employer practically deals with his own men ?—With his own men. We keep a roll of unemployed men, and the first man upon that roll who is competent or supposed to be competent to undertake a situation when there is one applied for is the man we send for, if it is from the other side of the three kingdoms, and we pay his expenses to come to that situation.

18,664. (*Chairman.*) Then the practical course is for the employers to speak to the factory secretary and the factory secretary to the district secretary ?—Yes ; if there is a man upon the roll he is sent for at once.

18,665. (*Lord Elcho.*) I suppose that the lists are mostly kept by the district secretary ?—They are printed often by the central secretary and forwarded to the district secretary, and if there is no man upon that printed list that the district secretary can write for to fill the situation he immediately writes to the central secretary to see if there are any that are not printed.

18,666. (*Mr. Harrison.*) Do you find then at present that you have men in want of employment ?—We have something like 130 men out of employment.

18,667. Then probably you might be able to oblige Dr. Lloyd ?—A great deal depends upon the class of work he wants done. I may say that latterly a great demand has sprung up for the first-class workmen, such as those making the finest wine glasses, and there are none of them out. There are very few that are really good at that process, and those men do not become unemployed very often.

18,668. What is the average number of men you have had at any one time out of employment within the last 10 years ?—I think the last six months we have averaged from 100 to 130 men out of employment. For five years the payment by the employed has averaged something like 16*s.* a man to the unemployed members that have been walking about. I am under the mark if anything in saying that 16*s.* a man has been paid per annum by the men employed to the men that have been unemployed, consequently showing that, although there has been an extraordinary trade a portion of the time, still there has been a sufficiency of labour.

18,669. (*Lord Elcho.*) And are some of those 130 who are now unemployed unemployed in consequence of the strike ?—None.

18,670. But through want of demand ?—From want of demand, or some such cause.

18,671. Or is it that they are not skilful enough ?—One of the principal causes, I may say, has been the pushing forward of the young hands before the apprentice law came into operation in 1859. It creates a kind of mushroom glassmaker that they push forward as servitors and workmen, some who in some of the better class of work are not competent footmakers. They are pushed forward to undertake the work of a first or second man, though they are not competent to take the position of a third.

18,672. (*Mr. Booth.*) Does your society make an allowance to all the members out of work ?—Yes.

18,673. Is that 16*s.* a week ?—No, it averaged that to each employed man per year.

18,674. (*Chairman.*) How much is allowed to men out of employment ?—We pay the workman and servitor who pays 1*s.* 3*d.* a week, and the footmaker who pays 1*s.* a week, two-thirds of the following. Rule 11 says : " Any member being sick or unemployed shall " receive 12*s.* per week for 13 weeks, 10*s.* for 13 " weeks, 8*s.* for 26 weeks, 6*s.* for 26 weeks, and 5*s.* " for 26 weeks." Those who pay 1*s.* per week receive two-thirds, and then they come upon the superannuation rule in accordance with the number of years they have been members.

18,675. (*Mr. Harrison.*) Has the number of workmen in the trade increased within the last 10 years ?—Something like 70 or 75 per cent.

18,676. Although the limitation upon apprentices has been in operation for 10 years ?—In 1859 the first law was agreed to by the employers and ourselves in Dudley, but afterwards there was a memorandum agreed to by Dr. Lloyd on behalf of the employers and Benjamin Smart, then the executive secretary, on behalf of the employed. That was agreed to more recently, somewhere about 1861.

18,677. Notwithstanding the operation of this limitation upon apprentices for 10 years the number of workmen in the trade has increased 70 per cent., and at the same time you have had a very considerable proportion of your men unemployed ?—Not in the 10 years ; we have not had a considerable portion unemployed ; it was a running number, has been from something like 40 up to 150—it fluctuates.

18,678. But I understood you to say that the average was represented by the 16*s.* you spoke of on each man ?—For the last five years.

18,679. Would it be more or less for the preceding five years ?—A little less, perhaps.

18,680. (*Mr. Mathews.*) I think you said that the subscription to your fund was 1*s.* 3*d.* for the higher class of workman and 1*s.* for the lower ?—Yes.

18,681. What is the amount of reserve you have now ?—A little under 9,000*l.*

18,682. And that is invested, I suppose ?—Yes.

18,683. And that becomes the security for payment to those people out of employment and the people who have an allowance for old age ?—Yes, and the current income.

18,684. (*Chairman.*) If a person is out of employment by reason of want of demand then he has so much ; if he is out of employment because he is out of health has he an allowance ?—Yes. Two years ago we paid 1*s.* 9*d.* for the trade fund alone. Then we incorporated the sick section, and last June we amalgamated the two sections, simply made them into one society. Now the 1*s.* and the 1*s.* 3*d.* also includes a sick payment. This rule has been altered in regard to the sick payment ; it is reduced to 9*s.* for 13 weeks, 7*s.* 6*d.* for 13 weeks, 6*s.* for 26 weeks, 5*s.* for 26 weeks, 4*s.* for 26 weeks, and 2*s.* per week (supposing that the man has not been a member 10 years) as a superannuation allowance as long as they are ill.

18,685. (*Mr. Mathews.*) Do you consider that your investment of 9,000*l.* is sufficiently strong to guarantee the payment of those sick allowances, as well as the payments in old age ?—The alteration in the sick allowance was brought about because we found from

Mr. T. J. Wilkinson.

30 June 1868.

examination that the 3*d.* extra paid per week was not sufficient to support that sick payment. Although we have amalgamated the two funds, yet it is the duty of the executive to take care that the expenditure of the sick fund does not exceed the income of that particular section, that is the cause of the alteration.

18,686. In case of a strike or a lock-out you would pay to your members a certain weekly allowance out of your reserve fund?—Yes.

18,687. Supposing that were to extend over any considerable period there would be nothing left in that case, I suppose, for payment of the sick benefit, would there?—That is a condition that I really cannot answer for.

18,688. There is nothing to prevent such a thing happening?—It is possible.

18,689. Your reserve fund of 9,000*l.* would be liable in the first place to the payment of men unemployed; and secondly liable to this superannuation and sick fund. Do you consider that the reserve fund is ample for both those purposes?—I do not, we are increasing it.

18,690. (*Mr. Harrison.*) Has it ever failed?—No.

18,691. How long has it been established?—Since 1849.

18,692. And since 1849 you have uniformly met your liabilities?—Excepting the short period of the strike that unfortunately occurred in 1858 and 1859.

18,693. (*Mr. Mathews.*) You consider that reserve fund hardly competent to discharge the obligations upon it without further payment from the members?—As far as we are able to judge, we think that we shall be able to meet all the liabilities of the society.

18,694. If you were to have any doubt upon the point, you would immediately increase your annual payment or have a levy?—Yes. You see we have not only the money invested, but also the responsibility of the members in work at the time, they are liable to an increased payment.

18,695. Supposing a man is excluded from your union, what particular grounds are there upon which you would exclude him?—Non-payment.

18,696. Or supposing that there was an order to strike, and he refused to concur in the strike, you would exclude him then, I presume?—We never have done so.

18,697. Is it one of your rules that you should?—No.

18,698. You would not consider him excluded by taking any action of his own, independently of the union?—No.

18,699. There is nothing that would forfeit his interest in the fund, except non-payment?—No.

18,700. (*Mr. Booth.*) Do you know how much the strike of 1859 cost the reserve fund?—No, I would not attempt to give it from memory, because I had so little to do with it myself. I was out of work at the time, not from the dispute but prior to the dispute.

18,701. Did it make a considerable inroad upon the reserve fund?—It did so, but we found sufficient to meet the demand.

18,702. Did you find it necessary to make a special call?—No, no special call was made at the time.

18,703. Whatever was necessary to draw was drawn from the reserve fund?—I believe so. My friend, Mr. Leicester, corrects me and informs me that there was 5*s.* a week paid during the time of the strike, by the men that were employed at the time. Being out of work myself at the time I could not say.

18,704. (*Mr. Harrison.*) You were not secretary then?—No.

18,705. (*Mr. Mathews.*) You cannot speak from your personal experience, as you have been the secretary only 12 months, of what took place previously?—Not very accurately.

18,706. (*Chairman.*) Are you aware of the rule which Dr. Lloyd mentioned, that the workmen of considerable skill are not allowed to produce above a certain quantity of work in the time? For instance, 100 articles only may be produced in the turn, when if the men had their will they could produce 120, but the union forbids that. Are you aware of any such rule as that?—I am not. There is no rule in connexion with our society at all that enforces anything of the kind. In reply to that imputation I may simply say that the old custom of the trade, independently of the union, before the union came into existence, in a great measure brings about the two moves or journey system, and it regulated a certain amount of produce per turn, that is according to a given time. Since then these matters have been altered, and I may say that throughout the 22 districts or branches of our society there are 17 unlimited in produce, and I may also say there are more than two or three employers that object to having more than two moves made in the six hours journey, because they say that hurrying of the work deteriorates the quality of the articles produced.

18,707. You say that before unions were known that custom was introduced?—Before our union was in existence.

18,708. The usage of the trade was that a workman should not put more than a given number of articles in the turn?—In the journey.

18,709. What was the reason for the workmen restricting themselves, because it seems to be against their own interest? If you were in one chair and I was in another and you could produce 120 and I could produce only 100, why should not you get the amount of profit that there would be upon 120?—I admit that, but why they did 20 years ago do these thing I cannot answer.

18,710. They always act upon a notion of their own interest, we may presume, and the working men in a skilled trade have very clear notions many a time of their own interests, have they not?—Yes; but sometimes, like the employers, they are apt to mistake even their own interest.

18,711. You do not see any advantage to the workman in restricting a man of skill who can produce 120 in saying, "You shall not produce more than 100"?—No; I may simply say that, in regard to the district where the restriction has been more lax, perhaps, than in any other district, that is in Manchester, instead of the trade condemning that laxity, we rather applauded it, and recommended other districts to adopt a similar course at our last conference held last June in Edinburgh.

18,712. (*Mr. Harrison.*) The policy of the society since it has been in existence has been to diminish existing restrictions upon production, and not to increase them?—More to diminish them than to increase them.

18,713. How long in custom or in fact has there been a limitation upon the number of apprentices; I do not mean any written rule signed by parties, but how long in fact or in custom has there been such a limitation?—Speaking from my own individual knowledge, I can say that I commenced work when very young in the trade myself, and I know I was kept back, not from any rule of the society, but from the understood custom of the trade, and that is 30 years ago. I was kept in the position of a taker-in till I was pretty nearly 20 years of age, not from any law of any union but from the custom of the trade.

18,714. You mean to say that the custom of the trade has imposed limits upon the apprentices which, so far as the union have dealt with, they have merely reduced to writing and a system?—They have merely reduced to a system what the employers themselves had agreed to.

18,715. Is that restriction more stringent now than it was 20 years ago?—I think not.

18,716. You have reduced the limitation?—Yes, we have reduced the limitation.

18,717. What is the ground for the policy of restricting the number of apprentices which in your judgment made it desirable?—The limitation of apprentices is simply because we consider that as working men who have been brought up in the trade, and devoted a number of years to learn it (as Dr. Lloyd has told you it takes 20 years to produce a

glassworker), we have a right in a certain measure to limit the supply in accordance with what the demand may be, and you can see in the rules that the employers themselves also agree to that limitation.

18,718. Have you found that there had been or was growing up a tendency to employ apprentices unduly, or what was the evil against which you directed that movement?—Our idea is that we support our own poor; we spend a large sum of money in supporting both the superannuated and unemployed belonging to our trade, consequently we consider that we have a right to regulate the in-coming labourers in accordance with what the demands of the trade may be. You will observe that our trade is peculiarly situated by the men working in sets, and no man being strictly accountable for his own labour individually, everyone is either hampered or assisted by those who work with him. And as regards the apprentices there is no particular profit that accrues to the man for learning the apprentice; the profit goes to the employer's interest, not the man's. Thus it is that we believe we have a right (in fact I affirm that we have a right) to regulate the supply in the trade according to the demand.

18,719. Supposing that the limit which Dr. Lloyd suggested of one apprentice to each chair were carried out, or supposing that it went wider than that, and that there were three apprentices to two chairs, what do you suppose would be the effect of that upon the skilled workmen? Supposing the limit were extended, and double the number of apprentices were brought into the trade, would that increase the work of the workman who had so many more apprentices?—Of course it would.

18,720. And ultimately diminish his employment?—It would ultimately diminish his employment and affect the quality of his work immediately.

18,721. What do you consider is the maximum number of apprentices with which a set of men can efficiently work?—That is rather a peculiar question for me to answer.

18,722. (*Chairman.*) There is a boy we have been told in every chair; is the boy always an apprentice?—No, the boy is not recognized in any shape or form until he comes into the third position, and that is the time when he becomes apprenticed to the trade. The minor boys are continually coming into the trade and going out of it.

18,723. (*Mr. Harrison.*) The apprentices are only the foot makers?—The apprentices are the foot makers.

18,724. Do you consider that if the present rule were relaxed, so far that there were more apprentices, the work would at once be inferior?—The work would most decidedly be inferior. You cannot turn out so good wine glasses with an inexperienced apprentice foot maker that you can with a journeyman foot maker, and that would apply to many other articles in the same way.

18,725. (*Mr. Mathews.*) Should not that be a question for the master rather than the workman?—No.

18,726. If the master found that those men did not turn out the articles for the credit of his factory could he not discontinue employing those men?—The fact is that the apprentice earns about half the amount of wages, and frequently hampers the other two men he works with.

18,727. (*Mr. Harrison.*) You mean that where they are both working together the deficiency of the third man, the apprentice foot maker, would be made up by the superior labour put into the article by the other?—It would have to be made up or the man would suffer in his wages.

18,728. If you are driving a pair of horses and one is an inferior horse, you can get the carriage drawn by putting more work on the willing horse?—Yes.

18,729. (*Mr. Mathews.*) Would not the driver soon discard the bad horse if not up to his work?—They do not give him the power to do so. The employers do not limit it to the foot maker. It is carried further, nearly to the middle age of the man. As he advances from stage to stage in the work he is expected to serve a number of years before he is entitled to the full understood wage in that class. I know a young man who has produced goods at 10*s.* a week less than another man, and yet produced them of the same quality; and the only reason given is the one I state.

18,730. (*Mr. Harrison.*) Why is that?—From the understood custom of the trade.

18,731. Dr. Lloyd has complained of that, and says that that man is kept down by the action of the union. You do not admit that?—Of course not. Our idea is that if the man is competent when moved from serving to working to do as well as the man before him he is equally entitled to the same amount of money according to his ability.

18,732. (*Mr. Booth.*) Is the master to judge whether he is entitled to this higher wage?—The work shows itself.

18,733. But who is to judge, the master or the workman, of the quality of the work?—That enters into another question which Dr. Lloyd raised about a man leaving without a dispute. Dr. Lloyd said that a man without any disagreement will be ordered to leave, which I say is a misrepresentation. He will not be ordered to leave his situation and go elsewhere for more money. I say this, that it often has happened, and does happen, that a young man will get advanced to be a workman, and that he has the abilities to produce the same quantity and the same quality of work as the man who preceded him, and yet the employer will want to keep him there three or four years before he gives him full journeyman wages to produce that; and if that man is offered another situation by another employer at a fair rate of wage, is it not a part of natural political economy that he should accept that higher rate?

18,734. (*Mr. Harrison.*) I understood that Dr. Lloyd considered that course a mistaken policy; that where a man was competent to be advanced to a higher stage, and the employer was willing to advance him and desired to do so, the union put their veto upon his advance into the higher rank?—There you confuse the two questions.

18,735. (*To Dr. Lloyd.*) That is as you stated it, is it not?—Not exactly.

18,736. Would you be good enough to explain it a little further; I understood you to say this, that where a workman of a lower grade was competent to be advanced to a superior grade, and the employer was willing to employ him in that way, his "promotion" (I think that was the word you used) could not be managed except with the assent of the union, and that that was not always given, but the union put a bar upon the man passing from a lower class to a higher?—If it is done without their consent there is a penalty attached to it.

18,737. (*To the witness.*) What have you to say on that point?—Promotion from one stage to another, and a rise of wages in accordance with abilities, are two different questions. The question that I was speaking upon before you introduced the other point was the rise of the wages. Promotion from one class to another is different.

18,738. On what ground do you interfere with that promotion?—The only ground upon which we interfere is this: if there is a servitor required, that is a second-class man, and we have (and this does happen frequently) several men competent to fill that situation walking about doing nothing, we consider that a man has a right to that situation before a boy is put into it.

18,739. What you mean is this, that when there is a vacancy in a certain class you consider that the unemployed old workman of that class has a right to that employment before a new man is introduced into it?—Yes.

18,740. That whilst there are unemployed members of a class the class should not be increased by fresh hands?—Just so, or otherwise it would create a greater supply than the demand required. If a man has been brought up into the middle of a trade and

Mr. T. J. Wilkinson.

30 June 1868.

has a wife and children depending upon him for subsistence, it is a hard case if a boy is put into that berth that he ought to occupy.

18,741. Had that been the custom of the trade, or was it introduced by the union?—It has been an understood custom ever since I have known the trade.

18,742. (*Chairman.*) Have you a rule about it amongst your rules?—No, there is no rule at all amongst them about it.

18,743. (*Mr. Harrison.*) Have disputes which have stopped works partially or for a short time been more frequent or less frequent since the establishment on a large scale of the general union?—I really do not know of any individual dispute or collective dispute since 1859 that has resulted in the stoppage of any works. In fact I may say in reference to disputes generally that for the last 16 or 18 years we have endorsed the idea of courts of conciliation and arbitration. It is the custom of the trade, and the usage of the society, and the understood law of the society, that whenever disputes arise, if they cannot be settled amicably between the men and the employer on the spot themselves, a deputation should be sent by the society to try and arrange matters in an amicable way; and I am happy to say that in quite 99 out of 100 cases the deputation has been able to settle the dispute satisfactorily.

18,744. (*Mr. Mathews.*) You have never been obliged to go to a court of arbitration?—No further than that. I may say as to those deputations, that the intelligence and good feeling of the men has always accorded the power of settling the disputes to those men.

18,745. The disputes have all been settled previously to going to a court?—They have not gone directly to the court—in a measure our deputations partake of the same spirit as a court of arbitration.

18,746. (*Mr. Harrison.*) Have you any district in the kingdom in which there is anything like a working code of rules like that in the Midland counties in the building trade, rules signed by both employers and employed?—No, none but those in this book.

18,747. Those are your own rules?—Yes.

18,748. Did they receive any assent from the employers?—Only as far as the apprentice limitation is concerned.

18,749. Hours of labour and things of that kind are entirely regulated by custom?—Yes.

18,750. (*Chairman.*) You say that you have sent deputations when there has been a dispute. Have certain men been very frequently sent, that you have considered to be men of remarkable temper and discretion and qualified for that task, or have you chosen them at the moment?—Chosen them at the moment, not always the same men.

18,751. Who chooses them?—The men themselves that send them.

18,752. If there is a dispute in the factory, the men of the factory choose three or four men to represent them with the employer; do you mean that?—No.

18,753. In what way does it act?—If a dispute occurs that cannot be settled, they generally bring it to a district meeting, and then they all without any more to do about it, elect a deputation from that meeting to wait upon the employer to see if they cannot adjust the dispute.

18,754. How many factories are represented at that meeting?—The whole of the factories in the district are represented at that meeting.

18,755. How many are there in the Birmingham district?—14.

18,756. And how many are at the board, may all the subscribers come?—It is open to anyone belonging to the society.

18,757. But you have a committee?—Yes, but that election takes place at a general meeting, it is an open matter altogether.

18,758. These men that go upon the deputation are chosen by the meeting?—By the meeting.

18,759. (*Mr. Harrison.*) It is the action of the workmen in the trade, not of the union specifically?—It is the action of the workmen.

18,760. As a fact they are members of the union, but it is not the specific act of officers of the union, but the act of a meeting called for that special purpose?—As I said before, when a dispute arises and they cannot settle it amongst themselves, they generally bring the dispute before a district meeting, and for the satisfaction of ourselves, the officers of the society and the members generally, we elect a deputation to see the employer to see if the men's version of the story is true, and to see if we can settle any misunderstanding that arises.

18,761. (*Chairman.*) About how many are on the deputation in general?—It will vary from one to three or four.

18,762. Is the secretary for the time being frequently on the deputation?—Frequently so.

18,763. The secretary is elected, he does not come in by rotation, but is chosen to be secretary on the ground of his being supposed to be a fit man?—Yes.

18,764. And then the secretary is very often on these deputations?—Very often elected to go on them, he does not go on them by virtue of his office.

18,765. (*Mr. Harrison.*) With regard to the history of the strike of 1858, will you be able to speak to that or Mr. Leicester?—I know but very little about the strike itself.

18,766. (*Chairman.*) In reference to the minimum rate of wages, is it the rule that no servitor shall be allowed to take less than the general amount?—No, we have no rule.

18,767. Then is that the usage?—The usage of the society is simply this, that if a man applies for a situation to do a certain class work, and the employer offers him a certain class wage, it is most frequently left an open question whether he accepts it or not. But we do not force the man to accept the lower wage; he is still, if he does not accept it, open to receive from our fund. If he does accept it there the matter ends.

18,768. You have no objection to the man working cheaper than the established rate?—In some cases we have an objection, but as a general rule we leave it an open question with the man and the employer. If he does not accept the offer we still support him, but if he does, we do not banish him from amongst us.

18,769. (*Lord Elcho.*) You heard what Dr. Lloyd said about the desirableness of employers and employed, in cases of difference, instead of resorting to strikes or lock-outs, meeting in a room, or round a table, and talking the thing over, and communicating with a view to try and get the question settled without a resort to strikes and measures of that kind. Do you agree in that?—Our actions endorsed that before the doctor recommended it.

18,770. From your knowledge of the feelings of the men, do you think that there would be a general desire on their part that instead of having this war of classes between capital and labour, some such steps should be taken to bring about a better understanding between capital and labour than appears now to exist?—I do.

18,771. And do you think that it would work well?—I do think that it would work well. In fact, I may say, that recently I have not only offered to have a number of men delegated from the workmen to a number of employers, but I have also offered to throw open the pages of our magazine to any employer that likes to write any article he thinks fit upon the action of the society in reference to themselves.

18,772. (*Lord Elcho to the witness.*) Do you think that if such a system were adopted, questions which now lead to disputes, questions as to the rate of wages and questions as to the introduction of cheapening and improved processes, instead of leading to disputes, might be amicably settled by the employers pointing out to the men that in the case of wages the state of trade abroad and in this country really did not admit

of their paying what they had been paying, or of their raising wages, if there were a demand for a rise; and in the same way, by their pointing out that although apparently the introduction of such and such a process might have the effect of putting an unskilled man where a skilled man was, yet upon the whole it would be beneficial to the trade, and would enable the trade to compete with foreign countries,—do you think on the whole that if such questions were so reasoned over with the men they would be amicably settled?—I must remark that the example you have given me of the probable questions that may be brought forward between employers and employed bears a very strong aspect.

18,773. But are not those the questions that will and do necessarily arise in the course of trade?—Yes. Of course they would open a wide question. I may say, in reference to foreign competition, that we have gone further than perhaps any other society. We have suggested a deputation of both men and employers visiting these foreign sites, and reporting themselves from the individual knowledge they may acquire, what will be the probable result of the competition between the foreign glass manufacturers and themselves.

18,774. That they should send a joint committee, as it were?—We have suggested such an idea as that.

18,775. Has it been proposed?—It has not been openly proposed, but they know that if it were suggested we should be prepared to carry it out.

18,776. (*Mr. Harrison.*) Would it be any part of the policy of your society to support men who had resisted the introduction of a new process, or a new machine, or a new pattern, where there was no grievance? Supposing for instance a case in which they had carried that resistance to the point of striking, would it be any part of the policy of the society to countenance that?—No. I thank you for introducing the question, as it enables me to refute the imputations cast upon the society by Dr. Lloyd. I am sorry that he should have proceeded in his evidence as he did in reference to the introduction of improved methods of working or patterns. It is entirely erroneous. Unions, so far from being adverse to the introduction of anything of the kind, have always supported them. I may give as an instance what is called the press trade, belonging to the glass trade that is carried on so extensively in the North of England, and the immense amount of goods that are produced by a portion of the unskilled labourers that work at this press work produced by iron moulds.

18,777. Will you explain what is press work?—They are pressed in an iron mould by machinery, and they are only fire polished; they are not manipulated by the tools.

18,778. That is the introduction of a process by which things are much cheapened?—Yes, such as tumblers and goblets. And also there is another little improvement that has been introduced of late years by some employers, that instead of being opposed by the union has been encouraged. This wine-glass which I have in my hand was made on the gadget, a small piece of machinery that does away with the necessity of cutting in the centre of the foot. The old original process is the punty, or piece of glass fastened to the centre of the foot, and the top part of the wine-glass is finished whilst it is in that state. The new process cheapens the wine-glass something like 3*d.* or 4*d.* a dozen. Also it lessens the amount of accessory labour necessary in handing from place to place, and the loss of time in getting up any orders for the article. I introduce that to rebut the imputations of Dr. Lloyd in reference to the opposition of the unions against improvements.

18,779. What part had the union to do in the introduction of that?—The union did not introduce it, but they have done a great deal towards fostering it and throwing it open to the trade, instead of prohibiting or acting against it. As regards the wood moulds, my employer, who is here, knows that I introduced the matter to him myself in reference to the wood mould that is used upon the continent. Having had the honour of being sent by the Society of Arts to Paris, I had occasion to go, or rather I forced myself in a great measure into a glasswork, for the purpose of seeing their process of producing glass; and so far as the hand work is concerned, the danger of the competition to England is very small indeed; but in the wood moulds I must say that they have an immense advantage over a great many goods produced in England by the ordinary tools. That is one of the cheapening processes introduced by the foreigners. Another is the use of spar instead of red lead in the material used in the manufacture of glass. The labour abroad may be cheaper, if wages are put against wages in England; but if the amount of benefits bestowed upon the employed by the employer is put alongside their wages in comparison with ours, I contend that they are better off than we are ourselves in that respect.

18,780. (*Mr. Robinson.*) As Mr. Wilkinson has alluded to me in the matter, I very cheerfully acknowledge the correctness of what he stated, that he did suggest to me two or three months ago, with reference to one particular article made on the Continent with the wood mould, the desirability of following that.

18,781. (*Chairman to the witness.*) Taking the production of a French labourer with the price of his labour, and putting that on one side, and taking the production of an English labourer with the price of his labour, and putting that on the other side, do I rightly understand you to say that the English employer has a better bargain than the French employer?—No. I say that the condition of the French workman, as far as the pounds shillings and pence question is concerned, if you take besides his wages the benefits he would receive, is better than that of the English workman with his wages only.

18,782. (*Lord Elcho.*) What are those benefits of the French workman?—These, so far as I was able to ascertain: there are various things that are distributed; for instance, the refuse of the furnace is cleansed of its dirt and filth, and distributed amongst the men to use for fuel in their own houses; plenty of them live rent free, or have a monthly allowance in lieu of house room; and if they stay in the employment until they become old men they are superannuated by the employer, and have an allowance; and if they are in sickness part of their wages is paid them.

18,783. Do you know what proportion is allowed them?—I do not know the exact proportion. Not understanding the French tongue I had some difficulty in getting even what I did ascertain.

18,784. (*Mr. Harrison.*) The employer there answers some of the purposes of the union?—Some of the benefits of the union he does afford.

18,785. Did you ascertain whether by custom or in any other way there was any restriction on the number of apprentices?—I was just going to refer to that question. I could not obtain any positive information relative to the number of apprentices except from Government statistics, which I have given in one number of our magazine, in which there is a passage extracted from a Government book published every 10 years, showing the number of apprentices to the number of men employed in the trade in Paris. But I may say as regards the production that I saw them making a commoner article than this glass in my hand, somewhat similar in shape; there were three men and five boys engaged in the occupation, that was their set, eight of them, and they produced according to their own information 30 more in six hours than we produced with three men and one boy. Now, whether the production of that chair was more profitable than ours is for you to decide.

18,786. (*Chairman.*) How many do you put down in England as the number to produce in six hours?—Of the wine-glass that I mean, a set of four produces in Birmingham and in some of the other districts, to my own certain knowledge, 160, and these men

Mr. T. J. Wilkinson.

30 June 1868.

produced 190 with eight pairs of hands instead of four as we have.

18,787. (*Mr. Mathews.*) With double the labour they only produced 30 more wine-glasses?—Yes, and they have five men there.

18,788. (*Mr. Harrison.*) You mean that you found there a great diminution in the actual produce?—Yes, according to the number employed. That was at the works of M. Monot, at Aubreville, outside the fortifications of Paris.

18,789. (*Earl of Lichfield.*) Does not the greater part of the glass imported into this country come from Belgium?—I will not undertake to answer that question; I am not sufficiently informed.

18,790. (*Chairman.*) You say that in the glass trade the apprentice begins at a higher stage than in other trades, and you take longer to train him?—Yes. Four of these boys were taken in as assistants; they assisted the men; they were not what we call foot-makers. There is this difference in the apprenticeship of France and of England, that a boy is out of his time at something like 16 or 17 years of age in France; he is not out of his time here till he is 21; and I have an idea that this restriction in the Factory Acts, of not allowing boys to go into the trade till they are 13 years of age will really put aside some of the necessity of the limitation of apprentices. If you put them to begin five or six years later in life you cannot produce them so fast. Of course it remains for time to show whether that will be so or not.

18,791. (*Mr. Harrison.*) I see by this list to which you have referred me, that out of 604 workmen there are 79 who receive nine francs, and in the case of nine of them 10 francs a day; those are wages at least as high as are paid in this country, are they not?—It varies so; there is such a variety of classes and stages in the trade that it is a very difficult matter to get the average amount. There would be some difficulty in ascertaining the real difference between the Frenchman and the Englishman. As far as that table is concerned, those figures do not give us the workmen servitors and foot-makers, so that we could make a comparison between the three stages, but they lump the men altogether; whereas, to get at an accurate statement, it is necessary to divide them into various classes.

18,792. It is stated here that there are nine men that receive 10 francs a day, that is 60 francs a week, which is 2*l.* 8*s.* Would there be, out of 600 men here, 10 men who receive 2*l.* 8*s.*?—Yes, if they work the same. The rate is 15 per cent. higher in Paris than it was 10 years ago.

18,793. (*Chairman.*) We understand that the wages have risen 20 per cent. for boys, 10 per cent. for servitors, and 5 per cent. for first-class workmen. How is it that those at the head of the union have taken so much more care of those boys than of themselves?—There there is a mistake. The bulk of that third class that have received that 15 or 20 per cent. rise of wages are foot-makers; and the bulk of them are married men with wife and children. Previous to this rise they had only been getting 16*s.* to 18*s.* a week if they worked the four days.

18,794. Then it is the fact that the union thought that one portion of the workers were unduly kept down, and they used their efforts to raise that portion?—Yes. Although the weakest, they gave to them, or assisted to get for them, what they considered to be a just amount.

18,795. (*Mr. Harrison.*) It partly also fell in with the policy of restricting the number of apprentices, because it would tend to make the employers less willing to increase the number of that class?—Yes.

18,796. Is this a monthly magazine of which you have spoken?—Quarterly.

The witness withdrew.

Mr. J. Leicester.

Mr. Joseph Leicester examined.

18,797. (*Chairman.*) I believe you have some statements to make to the Commission with reference to the evidence which we have just heard?—Yes, I should like to say one word with reference to the raising of the wages 15 or 20 per cent. for the lowest grade, whilst they were only raised five per cent. for the highest. I should explain that many of those foot-makers (who are in the third grade), really are men, and not boys, and they are men with families. The Commissioners might go away with a wrong impression that these people are really boys, but there are a class of men in the third grade that do what is in truth boys' work. There are some forward boys that can do the work of those men, but still as they have been brought up to the trade you cannot throw them aside, they are men with families, and the trade thought that this useful arm of the trade should be properly helped. They had perhaps only 12*s.* a week in 1859, and the conference then held recommended the masters to raise their wages, and there has been an agitation for a rise in reference to that class which accounts for the fact spoken of by Dr. Lloyd. Then with regard to the necessity for the apprentice rule, I may state that previous to 1849 that rule did not exist. In Manchester, it was notorious that masters there always kept a large supply of boys in the factory, and when there was a man that did not suit them they sent him out directly and took one of those boys. The consequence was that we had a great number of men on the unemployed list, and the men endeavoured not so much to interfere with the law of supply and demand as to modify it, so that it should not work any mischief, and they made this apprentice rule, which is rather stringent; but we have offered to modify that rule over and over again if the employer will take the responsibility of the bad work of the boys. A proposition has been made in our quarterly magazine in this way: In consequence of the unskilled boys working with the men, and their work being mixed with that of the men, it would spoil the men's work; but if the masters would take the responsibility of the bad work of the boys, and pay the men for the work they did, we would throw away that apprentice rule altogether. But they have never met that offer, and I think it is a monstrously unjust thing that an employer should put a boy with me and make me lose my wages for teaching that boy.

18,798. How would you lose your wages?—For instance, the boy that is put on makes the foot; the foot is the most important part of that glass (*holding up a wine-glass*); if that foot is badly made it spoils the bowl and the stem, and the master says to the man, "You should have seen it."

18,799. You mean that that wine-glass would not count?—That wine-glass would not count, and that might be a diminution of half the man's wages.

18,800. (*Mr. Harrison.*) You would lose time in teaching the boy?—Yes. Mr. Gladstone told us the other day that he would not teach a boy unless he were paid for it. I work at Messrs. Powell's, in Whitefriars, and I have worked there for 20 years. He behaves in a generous way to us. When he puts a boy on he gives us 10*s.* 6*d.* per week for six months, till he is fit to do the work; I have one under me now who is a clever boy, and I am allowed extra for teaching that boy, for my loss of time, and so I have an interest in teaching him, and of course I am responsible for the bad work, but I take care that there is no bad work.

18,801. (*Mr. Booth.*) That is the arrangement between you and your employer?—That is the arrangement between me and my employer; and if the employers generally would do the same, there would be no difficulty about this apprentice rule.

18,802. Is it not best that such a thing should be

left to be matter of arrangement between the individual workman and employer?—If human nature were perfect it would be so, but the experience of the last 20 years seems to teach one this, "I must get as much out of you as possible."

(*Mr. Robinson.*) With reference to the practice in my own factory, and in Birmingham generally, I may be allowed perhaps to state, that there is a fixed scale of compensation to the workmen for teaching the boys; and with regard to the foot-makers, when a boy is taken from the fourth grade and made a foot-maker, an allowance is made to the workman for teaching him of a sum of 40*s.*

(*Mr. Leicester.*) There are degrees in that kind of thing; there is such a thing as an unjust remuneration; there is something that is not quite what it ought to be. Now I am quite content with mine because I see it is adequate.

18,803. (*Mr. Mathews, to Mr. Leicester.*) Is your objection in regard to the employment of apprentices limited to the remuneration; should you object to an increased employment of apprentices, provided the workmen to whom those apprentices were assigned were properly remunerated?—I believe that the evil of restriction with regard to the limiting the number would be reduced to its lowest possible point if that principle were adopted.

18,804. There would be no objection, then, on the part of the union to extending the employment of apprentices?—It would destroy that feeling, I think. With reference to what the colleague of Dr. Lloyd has said about the man in the union leaning upon it for support, and not looking to his trade, I repudiate that altogether. Only yesterday a manager came to me and told me that a firm in London had been broken down, in consequence of the dissipation of non-society men. Now we hold a man responsible for his conduct. We say, "If you are drunk or idle we will not support you." Here was a place broken up entirely in consequence of the inebriety of the men, who were responsible to no one; and the employer came and asked me if I could get him better men in the society. And I could enlarge the experience of Dr. Lloyd and his colleague very much, by stating other facts of a similar nature.

18,805. (*Chairman.*) Is it not your experience that there are society men of both kinds; men whose influence is for good as well as men whose influence is for evil?—The decalogue can be no incentive to wrong doing when it says, "You shall not do so and so," on pain of suffering for your bad conduct. We say the same. If that is moral influence we use it to influence their conduct in the right direction.

18,806. You have found some of the members of the trades unions use their power to torment others, though other members are of the opposite character?—Still I believe that by no process of *bonâ fide* reasoning can a trade union be condemned.

(*Mr. Robinson.*) I may say on this point also that I am responsible for the remark to which Mr. Leicester alluded, and I wish to state that I by no means intended to convey that the intention and direct influence of the unions was to encourage irregularity and laxity and idleness on the part of the men. I am free to admit that the design and intention of those men who now have the control of the union is the other way, and I am also free to confess that I believe that the general tone and feeling and conduct of the men as a body has improved of late years. In that respect I believe there has been an advantageous influence exercised, and designed to be exercised by the action of the union. But that does not alter at all the fact which I stated that men of indolent and bad habits, men not diligent or ambitious to make progress in the trade, practically rely on the support that is behind them, and manifest a degree of indifference with regard to the character of their work or the opinion of their employers; and we only retain such men because if we dismissed them there would be great difficulty in obtaining others, and it is a choice of the least of two evils. I do not for a moment insinuate that the action of the union, that is to say, of the officers of the union, is to encourage that conduct.

(*Mr. Leicester.*) There is another point I should like to refer to, namely, with regard to that dictatorial rule, as I have no doubt the Commissioners are under the impression it is, where the masters are compelled to apply to the union when he wants a new man. We have not made that rule from any spirit of wishing to make the masters in any way subservient to the men, but as the easiest way for the master to secure the man he wants. Here is a peculiar trade. There are but few men really skilful in it. The master wants a skilful man. If you take a cartload of potatoes through the street it is remarkable how soon the littlest ones get to the bottom, and by the process of natural gravitation men always find their level in the glass house. We know where to pick out the man wanted because we keep a roll, and we say to the master, "There are so "many skilled men, if you will give the price you "shall have them." There is nothing whatever like tyrannising over the employer. The rule says, that he shall apply to the secretary or district secretary. That was made merely that the master might have a better method of obtaining the man he wanted, because we pay for all these men coming, and I think when you see a body of men taxing each other for each other's good, you might trust to that progress in humanity which will result in finding things better by-and-by.

18,807. (*Lord Elcho to Mr. Leicester.*) You have heard what has been said with reference to this question of arbitration, the employers and employed meeting and talking over their differences instead of fighting. Do you think that it would be desirable to bring about such a state of things?—I do.

18,808. And from your knowledge of your fellow workmen in your own trade generally, do you think that if masters and men could be brought together, to talk over their differences, it might lead to happy results?—You see that ignorance possesses very little sense to which reason can appeal; you will always find that, I believe. But I may mention that when I went down two years ago to a large meeting of that kind in Yorkshire, I told the men there that I must concede something, that I would not go in saying, "I must have this and that," because I found that sort of notion prevailing.

18,809. Did you find any difficulty in getting the men to agree to that?—No, we had to concede something and the employers did the same, and we dined together and it came off perfectly well, and the men were satisfied.

18,810. You being a person chosen by the men to represent them?—Yes; I might refer to the case of the Nottingham operatives. Mr. Samuel Morley, speaking there lately, said that previous to the time of the Court of Conciliation there were always contentions, but now that they have got the Court of Conciliation or Arbitration they have never had one case where the law was ever required to bring into force the decision of the court. The men would always willingly bow down to that decision because they have great confidence in it, believing it based in justice.

18,811. Do you think that any attempt to bring about such a state of things would meet with a ready response on the part of the men in your trade?—Yes.

(*Dr. Lloyd.*) There are two or three points which I should like to state in the way of rejoinder to the contradiction which has been offered by the last two witnesses to some of the statements I made. I think it but right that such a reply should be made; in the first place it was stated by Mr. Wilkinson that there was no fine or penalty attached on the part of the society to the men for increasing the amount of their production if they thought it right and advisable to do so.

18,812. (*Chairman to Dr. Lloyd.*) I think what we were told was that there was no rule of the society against that, was it not?—The written

Mr. J. Leicester.

30 June 1868.

law or book is what Mr. Wilkinson avails himself of, I suppose.

18,813. I understood Mr. Wilkinson to say that there had been a limitation in force before the trades unions came into operation, for some reason or other best known to the workmen, that there should not be more than a certain amount of produce within a given time, but that the tendency of the unions has been rather to a relaxation of that prohibition than to an increase of it, and that in 17 districts out of 22 there is now no prohibition against a workman producing all that he can in his six hours, that for five districts out of that number there would still remain a prohibition, but that the union has done what it can to relax the prohibition?—If it is said that there is no rule against that I am afraid that advantage is taken of the printed rules. I say that there are actions which are attributed to rules on the part of the society by which there is still a restriction of that nature, and I would simply put this question to Mr. Wilkinson before I state an example on my side of the question in refutation of what he says: Are my men at liberty to make more work than is now laid down according to the rule of numbers, that is to say, for example, can I require my men to make 120 jet moons instead of 110 in a given time?

(*Mr. Leicester.*) Dr. Lloyd wishes to put 20 more moons for the men to make for the same sum; of course that will not be agreed to.

(*Dr. Lloyd.*) It may be the sum or it may not be the same sum. What I ask is, "May they make them if I pay them?"

(*Mr. Wilkinson.*) According to the usage of the district of course not. Where this restriction has been taken off by the various districts it becomes the custom of the district, not an isolated fact applying to an isolated individual. Where the society acknowledges it we do not admit that a single individual out of 300 or 400 men should go and do it directly opposed to all the rest, but as I told Dr. Lloyd last week, we had a special meeting on Saturday night last to consider the question whether we should bring into operation in the Birmingham district the unlimited production of work in the six hours. It is in operation in London, Manchester, Newcastle, York, Rotherham, Hunslet, Leeds, and all the other districts, with the exception of Birmingham, Stourbridge, Shelton, Longpart, and Dudley, and in some of those places the employers themselves object to have more than a given number made because the men produce an inferior article by having the number altered.

(*Mr. Leicester.*) I may just state this fact, that I was allowed to make 20 hours myself last Monday afternoon. In the factory where I work you are allowed to make an unlimited amount. These things are not to be fathered upon the union; they are coincident with but not caused by the union.

(*Mr. Wilkinson.*) I must say that one of the principal causes of the objection amongst the men is this: they object to producing an unlimited number of goods (from an ignorant feeling it may be, perhaps, or there may be some cause for it), from a fear lest the employer should want to claim the greater number instead of the less as the quantity made upon a given price.

18,814. (*Mr. Harrison to Mr. Wilkinson.*) Is it the case that the authorities of the union and you as the secretary are at present recommending the Birmingham district to adopt the "unlimited" rule?—Yes; we are advising it, and trying to press the matter. As far as the union is concerned we are trying all we can to take off that restriction.

18,815. (*Lord Elcho to Dr. Lloyd.*) What has just passed here is an instance of the good of opposing parties meeting, and talking the matter over, is it not?—Yes, I think it is. Then there was another statement of mine which Mr. Wilkinson endeavoured to refute by instancing the manufacture of this wine-glass (*holding it up*). I did not say that it was the rule of the society, but I said that there was clearly a disinclination on the part of the society men (I did not say at the immediate instance of the committee or authorities) to adopt new things, or facilities by which production can be increased. Mr. Wilkinson instanced a machine by which this wine-glass was made. Now I am informed that that machine is not generally introduced by any means, and in perhaps the most important districts of the flint glass district in England, that is to say, the Stourbridge district, the men have prevented the use of it by breaking the machines, and so preventing the masters from using it.

(*Mr. Leicester.*) I may explain that the gadget being cold when this foot (*pointing to the wine glass*) is hot cracks the foot, and it requires great nicety in adjusting the temperature between the cold iron and the hot glass; and the men say, "Pay us for the cracked ones till we get used to it." I am authorized to say that the men have never refused to work this gadget, and to introduce this improvement in England, when the employer will allow them for the cracked ones in cases where the cracking has been caused by the machine. The injustice is all the other way.

18,816. (*Lord Elcho to Dr. Lloyd.*) This is another instance, is it not, in which communication between the two sides is beneficial?—Yes. Then Mr. Wilkinson denied my statement that on a change of situation according to the instructions of the union the wages have necessarily to be advanced; but he stated that it was left to the workmen to make their own bargain. I would put this question to Mr. Wilkinson: Do I understand it to be the case, that if a person applies to me on your recommendation for a situation, and I ask him what wages he expects to receive, and he says, "So-and-so," and I tell him that that is a higher rate of wages than in the position which I intend him for according to my notions he would be entitled to, and ask him whether he will take less, he is at liberty to do so? I am not now speaking theoretically, but of my actual experience. I put such a question to the man, and the man says, "No, I cannot take less," and after a little hesitation he will say, "I am not permitted to take less." Therefore I conclude that he acts upon instructions when he tells me that.

(*Mr. Wilkinson.*) The general rule is that when an employer applies to the factory secretary for a man to fill up a certain position, he tells him what amount of wage he will give. We write for the man at that wage. Then the man comes, and if the employer objects to give him that wage he most decidedly objects to accept what the employer offers. But that is not from any instructions of the union; and there is no doubt at all in my mind that in many instances little things of that kind are fathered upon the union that do not belong to it.

18,817. (*Chairman to Mr. Wilkinson.*) You say that in many instances where a man has been offered less and has said, "I cannot take it," the union has left him free to take it if he chose?—It has left him free.

18,819. His mode of speaking to the employer is what you are not answerable for—that is what you mean?—Yes.

(*Dr. Lloyd.*) That no doubt may be the case. The men may take advantage of their position, and intimate to me and other employers that they are not allowed to do it.

18,820. (*Lord Elcho to Mr. Wilkinson.*) There being in the factory a factory secretary, could not Dr. Lloyd in such a case as that apply to the factory secretary to know whether or not this demand would be supported by the union?—According to the order of things, if the man tells the factory secretary that the district secretary says so and so, and he does not himself know to the contrary, he will not go opposite to the men in the works. But very often the man says that it is the action of the union when it is his own action.

18,821. (*Mr. Leicester.*) I would add that there is such a thing in any district as wages finding their own level independently of any society whatever, that is to say, for a certain quantity of work done there is a certain amount paid. By some process or another this

always finds the lowest point, and a man when put on to a vacant place, though not instructed to do it by the union, generally asks for the amount paid in the district.

18,822. (*Dr. Lloyd.*) There is one other little matter to which I would refer. Mr. Leicester said that a proposition had been made to the employers to throw open the question of the number of apprentices altogether, provided that the employers would take the responsibility of inferior work. I wish to say that I have never heard of such a proposition, and I think it has never been made to the association.

(*Mr. Leicester.*) It was made to the whole trade by the then executive secretary, Benjamin Smart, at Glasgow. He said that the trade were willing to see it fairly tried, if the employers would take the responsibility of the bad work caused by the boys.

Mr. J. Leicester.

30 June 1868.

(*Dr. Lloyd.*) But have the employers had the opportunity of accepting that or rejecting it? I have never heard of such a thing. The only other matter to which I wished to allude is perhaps a trifling one, but it sounded to me very strange that Mr. Leicester should say that the making of the foot was the most important part of the glass, considering that that is done in practice by the least skilled hand. If it is the most important, I wonder why it is not put in the hands of the man of the most skill, whereas it is generally considered the least skilled work.

(*Mr. Leicester.*) Dr. Lloyd knows that a bad foot spoils the best glass.

The witness withdrew.

Adjourned to to-morrow at 11 o'clock.

1, Park Prospect, Westminster, Wednesday, 1st July 1868.

PRESENT:

The Right Hon. Sir WILLIAM ERLE.	THOMAS HUGHES, Esq., M.P.
Lord ELCHO, M.P.	FREDERIC HARRISON, Esq.
JAMES BOOTH, Esq., C.B.	WILLIAM MATHEWS, Esq.

THE RIGHT HON. SIR WILLIAM ERLE IN THE CHAIR.

Mr. CHARLES FREDERICK BEYER examined.

Mr. C. F. Beyer.

1 July 1868.

18,823. (*Chairman.*) You are a member of the firm of Beyer, Peacock, and Company, of the Gorton Foundry in Manchester?—I am.

18,824. About how many workmen have you employed?—It varies according to the state of the trade. I think we never reached quite 1,800, or I think that is the highest number that we ever did reach.

18,825. Had you a considerable strike lately?—About two years ago; in 1866.

18,826. What was the cause of the strike?—Our strike was a very simple one. In our smithy we had two foremen, and we wanted an additional foreman, and we engaged one, that is to say, a man over these two men to look after the smithy; and this man made his appearance, I think, on the 5th of March 1866.

18,827. You appointed Samuel Hall foreman, I find from this printed paper in my hand?—Yes, he was to be head foreman over the smithy.

18,828. Shortly after he was appointed did you receive a letter from the men?—Yes, which I have here. Hall entered on duty on Monday, March 5th, and it appears that as soon as he came into the works some kind of a noise or whistling passed through that part of the works. The men put on their jackets, and they all walked out in a body. I happened to see them going out of the place, I had something to do in my office, and I saw that there was a great commotion in the works, but did not know what it was about. Soon after somebody came to my office and said, "Mr. Beyer, do you know that all the men have left the "shops?" I went across to my partner's office and said, "Peacock, what is the matter in our smithy; I understand our men have struck work?" When we went down to see, the whole of our smithy was empty. About an hour or an hour and a half after the men had left we had a letter which is printed on that paper, the original of which I have here.

18,829. It is in effect: "We left off work this morn- "ing because you made Samuel Hall foreman." And the reason is, "Because he is not a man of experience, "and we believe that he is not qualified to give satis- "faction either to you or the men. We do not want "to dictate to you who is to be foreman, but Hall had "a similar situation at Longsight, and he changed "more hands than any other firm, and we believe that "there is nothing more injurious to a firm than "changing hands"?—Yes.

18,830. Had you a good character of Hall before you engaged him as foreman?—Yes, I had.

18,831. And you did not at first discharge him, I understand, on receiving this letter?—No.

18,832. Did the whole of the smiths that left your works as a body stay out?—Yes.

18,833. Did you endeavour to replace them by other smiths?—No, not for some time. For about a fortnight we really took no steps. I could not believe that men would be so unreasonable as to be in earnest in such a step, because it was a case in which they had nothing to complain of in the works; they were perfectly satisfied, but they found fault with this man Hall.

18,834. (*Lord Elcho.*) How many smiths had you altogether?—At that time about 200.

18,835. And how many men in the works altogether?—Nearly 1,600.

18,836. And did the stoppage of the smiths stop the rest of the works?—Not for some time.

18,837. But it would naturally have done so if continued?—Yes. We could carry the business on for a few weeks without them till we wanted fresh smiths' work.

18,838. Do you know if the men in the other departments of the works approved of the strike of the smiths?—That would be a mere matter of opinion on my part. I should say of course they did. The reason I say that is this, the two foremen that we had before who were to act under this Mr. Hall remained about a day or two after the strike. In coming into the works I saw one of these foremen dressed up in his best clothes walking about the shops. I said, "Hallo, "I should think you would find a little bit of a job to "do, some small things that are required in the fire," and I said, "I say, had you not better pull off your "jacket and make yourself useful." He told me very plainly he never would pull off his jacket. I said, "If you think the men are right I must be in the "wrong, and if you think the men are right in turning "out in the way they did, the sooner you go the "better;" the man took my hint, and he walked off. All the rest approved of the strike.

18,839. (*Chairman.*) He was a foreman of the smiths?—Yes.

18,840. (*Mr. Mathews.*) What is the nature of the contract in engaging the smiths?—We have the same

Mr. C. F. Beyer.

1 July 1868.

rule for all the men. The understanding is one week's notice.

18,841. Have you any understood contract with them in the presence of witnesses so that you could prove a contract, or do they consider themselves at liberty to leave when they choose?—We always consider that it is a week's notice on either side.

18,842. When you engage a man do you engage him on any specific understanding, "You shall give a week's notice"?—I believe so, but that is more than I could tell you, because I am the engineer of the works. I understand that there is a week's notice either way.

18,843. If you had a contract with them for a week's notice, did you not summon them for a breach of contract?—No, we should have had to summon 200 men.

18,844. You might have summoned ten as representatives, might you not?—I thought better of the men, that they would have good sense enough to come back.

18,845. You did not think it requisite to take legal proceedings?—No, on the contrary, we had nothing against the men, except that they ought to come back to work.

18,846. (*Mr. Booth.*) Had the other foremen made any objection to this man Hall?—No.

18,847. You heard nothing of any objection till the men struck?—Not until the men struck.

18,848. (*Chairman.*) Did you proceed after some time to get new smiths in their place?—Yes, about a fortnight after. We had no wish or intention to discharge all the rest of the men; but a mechanical establishment cannot be carried on without smiths, and it was a question either to send the rest of the men off, or to get other men to replace the smiths. After a fortnight we commenced to get men; we advertised in a great many newspapers, and in time we got men sufficient to carry on our works. I think altogether that we got about 160 or 170. But these men were not safe. Our place was watched outside, and whenever any of these new hands appeared they had the men on strike against them, and it obliged us to protect these men on our own premises. The consequence was, that for these 170 men (I think it was that number) we got bedsteads. I think that we had about 70 or more iron bedsteads for men to sleep in; and we made preparations and provided meals for these men.

18,849. (*Lord Elcho.*) When once you got the men there, they lodged and boarded in your works?—Yes. The police outside were not sufficient to protect them.

18,850. They dared not leave your works?—No, because their lives were not safe.

18,851. (*Chairman.*) After a little while, did a deputation come purporting to come from the Amalgamated Society of Engineers?—Yes, the society in Manchester. The chairman and secretary and one of the men waited upon us on the 31st of March. By that time we had got a sufficient number of new men to carry on our works, and accordingly they began to see that they would not carry their point, that is to say, that we could do without the old men. Then, as I say, this deputation of the chairman, secretary, and one of our old men made their appearance for the purpose of coming to some arrangement, that is, that such men as there was room for might come back again. We never made any objection to the men coming back; on the contrary we wished them to do so; only they would not.

18,852. (*Lord Elcho.*) How long would this be after the strike?—The strike was on the 5th of March, and the deputation waited on us on the 31st of the same month, nearly four weeks after.

18,853. (*Chairman.*) Did you agree to take the men back?—Yes, we agreed to take the men back. Then there were various deputations as to arrangements.

18,854. When you say that you agreed to take them back, you mean to take back as many as there was room for, I suppose?—Yes, such vacancies as we had we were going to fill up with our old hands. Then they came to make arrangements so that the men might have nothing to complain of amongst themselves. The smiths work each at a certain place with two or three men as strikers, and they agreed that as to such of the fires as had not been filled with new men, the men who had formerly worked at the fires still standing, should come back again, so that we might have no choice among the men. We even agreed to that. That was settled on April the 5th and April the 6th, and it was finally settled that ninety of our old men should come back to the old fires, and that 23 more should come to new fires which we had been building, and altogether we undertook to take 113 of our old men back again. That was on Friday, April 6th.

18,855. (*Lord Elcho.*) With the same foreman?—One of the old foremen had left, the other was there.

18,856. Was the foreman about whom the strike was, there still?—Yes.

18,857. And they were to come back under him?—Yes. That was on Friday, April the 6th. Now this is the important point in this matter. Up to that time clearly it was simply a question between the smiths and ourselves as to this new foreman. On Saturday morning, April the 7th, after making all these arrangements, when everything had been settled, and that the men on the next Monday morning should come back to their work, 113 in number, we received a letter from them declining to commence work on Monday morning, unless Mr. Hall, this new foreman, was discharged, a demand which they had never made before. I ought also to have mentioned that when the deputation from the Manchester society waited upon us on March 31st, the chairman admitted that the men had done wrong, that they had no cause to strike, and that if they would strike they ought (according, I suppose, to the society's rules) to have done it with the consent of the society; and therefore they were wrong both ways according to his views; and he recommended the men to come back again. Now on Friday, April the 6th, all this was settled. But clearly on Friday evening there was a meeting, and as far as we know one of the head centres from London came down and a change took place; the wind changed altogether. We were going on very nicely until then, but there is the turning point. Evidently we had beaten the men so far, and I suppose the head centre would say: "Now this will not do, we "will not be beaten by anybody. We are strong "enough and we will fight; these are your directions." The men accordingly wrote to us on Saturday morning the 7th, that they would not go back to work unless this man Hall was discharged, and all the men taken back in a body. Now we were on a new field of action altogether. We had to deal with the society at large, and the matter was managed at head-quarters.

18,858. (*Mr. Mathews.*) Do you consider that this course was adopted as the result of advice given by people from the head-quarters in London?—Yes, from the head-quarters, wherever that is. There is no doubt about that.

18,859. The Manchester association being a branch of the general association of which the head-quarters are in London?—Yes, the Manchester society is a branch like any other. I myself saw the chairman of the Manchester association on the 31st March as being one of this deputation, and they did not approve of it, and the Manchester society or branch did not approve of it. The men used their reason, and arranged to come back to their work as many as could.

18,860. They changed their mind in consequence of directions, as you say, from London?—Yes, between Friday evening and Saturday morning; and instead of going back to their work, they made conditions upon which the matter was to be settled.

18,861. (*Lord Elcho.*) And was this change, which you attribute to the action of a head centre, brought about by a letter from the head centre or by the pre-

sence of the head centre?—From his presence, and I have their letter also.

18,862. (*Chairman.*) Things were going on rationally up to Friday afternoon, I understand you?—Yes, and on Saturday morning we got a communication from the men; they made some shuffle that we were not disposed to carry out the arrangement, and said, "We will not come back unless you dis- "charge this new man, and we will go back in a "body or not at all."

18,863. (*Mr. Booth.*) Was that a communication in writing?—Yes, this is the letter of the 31st of March:—"Gentlemen, we have been appointed "by the smiths late in your employ to seek an "interview with you for the purpose of trying to "bring about an amicable settlement of the pre- "sent dispute; we shall be glad to see you and await "your orders. We are, yours respectfully, ROBERT "AUSTIN, WALTER IDEN, and CHARLES ROCK- "LIFFE, one late in your employ." Here is another letter, dated the 7th of April. This is the intimation of the change:—"From the report of the deputation "who waited upon Mr. Holt, your manager, yester- "day, we find you decline to carry out the arrange- "ment which you previously agreed to in respect to "the smiths and strikers late in your employ resuming "work. Such being the case, I am directed to re- "spectfully inform you that the workmen decline to "commence work again before a satisfactory settle- "ment of the question takes place; at the same "time we are prepared at any time at a moment's "notice to make arrangements on behalf of the men. "—By order of the committee and men late in your "employ, C. ROCKLIFFE, Chairman." In reply to to that we put up this notice outside:—"April 7th. "Messrs. Beyer, Peacock, and Company are pre- "pared to carry out everything they have promised "to do, and the arrangements concluded yesterday as "to which of the men were to return to work will be "strictly adhered to; but if the men named on the "list do not commence work on Monday morning "next, all further negociation with the men on strike "must end. No deputation will again be received, "and B. P. and Company will fill up the vacancies "in any way and with whom they please.—BEYER, "PEACOCK, and Company." That was the change in the state of affairs, and on Saturday morning, when we received the note showing that the change had taken place among the men, we put up our notice as the reply, that we adhered to the arrangements that we had been making on Friday, April the 6th, in which we settled that 113 of the old men were to come back. After this, as we would not discharge Hall, and as we would not discharge the new men that we had engaged, matters went on in this way until Friday evening. The orders then were that Hall must be discharged with all the new men, and the old men must come back in a body, or they would not come back at all; in case we should not comply with that, all the other men belonging to these clubs would be withdrawn at a week's notice.

18,864. The club men in every department?—Yes, unless we complied with these decisions the club had decided to withdraw every club man at a week's notice.

18,865. (*Mr. Mathews.*) That is, they would strike the shop, as they term it?—If you take so many men out, then you must stop the whole. My partner took a great deal of trouble to persuade the men to act according to common sense, and he addressed a meeting on the 11th of April, that was on the Wednesday after the day that I have been speaking of. But it was to no effect; there was no recalling the decision of the club; the men must leave. On Thursday, April the 12th, all the club men, 238 in number, that is, of the remaining club men in the works, by the direction of the club, gave individual notice; each man came and gave notice without exception that a week after, dating from the 12th, unless we complied with the terms, they would leave. Well, we did not comply with the terms, and the consequence was that when the day came they all left us in a body. We could not work without men, and we saw clearly that we could not fight the club. In my opinion it would be folly for a single establishment to fight the club. We had no alternative but to close the works, and we closed them altogether. We gave a week's notice that on such a day a week later the works would close altogether, and so they did.

18,866. (*Mr. Mathews.*) About how many additional men did that throw out of employment?—I think about 1,400, not altogether, because 238 club men had left a week before, and we carried the business on with the men remaining for another week, so as to make up this notice. As the men are under a week's notice we thought it right to work that week in order to comply with the ordinary conditions, and then we closed altogether.

18,867. (*Lord Elcho.*) May I ask what your wages account is weekly when in full work?—I have a statement here of what it was the week preceding the strike. During the week ending I think on the 3rd of April the wages we paid were 1,982*l.* 16*s.* 8*d.* and the total number of men 1,586; that is to say, the Saturday before the strike we paid that amount in wages, that is 1*l.* 5*s.* per head as the average.

18,868. Are there any boys?—Yes.

18,869. Does that calculation include boys?—Yes, there are a good many apprentices and labourers.

18,870. (*Chairman.*) Those works were shut up?—They were closed altogether.

18,871. How long did they continue closed?—I think we closed them between one and two weeks.

18,872. And then what men did you get?—Well, we got all our old men back again because we were beaten, all the club wanted was to beat us, and to have their own way, and they got it; they drove the new men away.

18,873. (*Mr. Mathews.*) They compelled you to discharge the others?—Yes, and got their own way, and when people get their own way they are always pleasant.

18,874. And they became masters of the situation?—Yes, now the Commissioners might like to see the character which I had with regard to this man Hall. Our paper does not give the motive of the strike. I think that the drift of the strike is this, they complained of Hall not being a competent man. Now I may tell you that this man Hall served an apprenticeship of seven years on the London and North-western Railway as a smith. I think that for some six years he worked as a journeyman, and behaved himself well, and in consequence he was made foreman. He was foreman some seven or eight years before he came to us from the London and North-western Railway Company. And this is the man our men struck against, and the man who does not understand his business; that point therefore wants consideration. With reference to his character, the man was recommended to me by Mr. Ramsbottom, the mechanical engineer of the London and North-western Railway, and upon that recommendation we engaged him. Afterwards my partner expected to have to appear before you, and in consequence we wrote for a character, and this is the character that Mr. Ramsbottom gives in writing: "London and North-western "Railway Locomotive Department, Crewe Station, "May 15th 1867, Gentlemen, I have your favour "of the 13th inst. to hand, and in reply beg to say "that Samuel Hall came to Longsight about 20 "years ago, that he served a full term of apprentice- "ship in the smithy and proved himself to be a very "effective, sober, and industrious workman, so much "so that he was put in charge of the smithy as "foreman in October 1860. I had arranged to remove "him to Crewe to take a more important appointment "which he accepted. This he afterwards begged to "decline on the ground that he had property in "Manchester and preferred to reside in that neigh- "bourhood. I should have still retained him as fore- "man at Longsight, had his successor there not been

Mr. C. F. Beyer.

1 July 1868.

" appointed in the interim. — Yours faithfully, " J. RAMSBOTTOM."

18,875. (*Chairman.*) When the men objected to him, it was on the ground " that he changed more hands " when he was at Longsight than any other firm." Therefore the substance of their objection was that Hall had discharged some men who in their opinion ought to have been retained; that is what they alleged? —Yes, that is what they alleged.

18,876. They also said that he was not fit for the situation?—Yes, and this is the character from the London and North-western Company's mechanical engineer, Mr. Ramsbottom.

18,877. You think that the ground that they put forward was only a pretext and not the real one?— I not only think so but I am certain of it.

18,878. Then what was the real reason if the man was a competent workman and a faithful man?— Probably you are aware of the real tendency of the trades unions as they are constituted, that they are an impediment to trade, that a man is not allowed to do as much as he can, but merely as much as the rules permit him to do; and a man if he becomes a member of the union has a right to so much wages; the union find him a shop somewhere; if he is not in some place they get him into one. The consequence is that there is no reason for a man to exert himself; a bad man is just as well off as a good one, he gets the same wages. Now Hall, like an honest man, did do his duty towards the London and North-western Railway Company; I believe that he was a judge of the work, and that he took care that his men did a proper amount of work, and that, the union did not like.

18,879. (*Mr. Mathews.*) They consider him too vigilant?—He was too honest and too clever for them, because he was a judge of work, and they did not like it.

18,880. (*Lord Elcho.*) Did he belong to a union himself?—No.

18,881. And never had belonged to one?—I believe not. I questioned him upon the point and could find nothing else but that he, Hall, when he found an inferior workman, would not keep him, and that is the crime he had committed.

18,882. (*Chairman.*) You have given us the course the union took about it; at the end of a week your works were open again, were they not?—Yes.

18,883. Since then you have been able to go on, that is to say, letting the union dictate to you whatever the interests of the union required?—Yes.

18,884. (*Mr. Hughes.*) May I ask how long you have been in business at Gorton?—14 years.

18,885. Have you had any previous communication with this society?—Yes, I had one at Gorton, with the Manchester chairman. Speaking from recollection, it might be some five or six years ago. I found that there was something the matter with a man in our works, that the men did not like a man because he was not a club man, and he could not do his work properly, they said, and he was not a fit man, and they would not work with him. There seemed to be some hitch, and I got a letter from the Amalgamated Society in Manchester, that they wanted to see me. I have been accustomed all the time that I have worked among mechanics (and that is now a good many years) to settle my own business. I think that the proper way is to settle accounts between man and man. However, the chairman and somebody else wanted to see me. I told them if they would come and see me at my own house I would be glad to see them. They did so, and I must say that I found the chairman a very nice man. They came to see me about this man, and to tell me that he was not fit to do certain work. I did not agree in that. I am the head of the establishment, I know when a thing is right; that is my business. I merely told them or tried to convince them that I must judge of what a man is able to do, and that if his work pleases me, it ought to do. I think no more came out of that; they were quiet about this man and did not carry it any further.

18,886. They accepted your judgment?—At all events they did not carry it any further, it ended there. I should like, if I am not out of order, to draw your attention to this book in my hand, which the Chairman presented to me with a report of the Amalgamated Society. I just looked at the preface, I did it in their presence.

18,887. (*Mr. Harrison.*) Are those the rules of the society?—Yes, and there are some strange things in it. First of all the motto of that society is, " All men are brethren." Now, at the time of our strike in 1866, we had a great many nice men in our shop; I said to them, " Now look at this motto; what do you call poor Hall?" I never got an answer, because club men have no opinion—the head-quarters have the opinion. Now, with regard to the restriction of trade, if you look at the preface of this book you will see their great argument for strikes. They are very nice people if they have their own way, but if they have not they will fight, and they can fight anything and anybody, they are so strong. On page 6 you will find, " Our object is not to do anything either indiscreet or " illegal; but if constrained to make restrictions " against the admissions into our trade of those who " have not earned a right by a probationary servi- " tude" (now that is rather a strange term), " we do so " knowing that such encroachments are productive of " evil, and when persevered in unchecked result in " reducing the condition of the artizan to that of " the unskilled labourer, and confer no permanent " advantage on those admitted." You do not probably care about my opinion, but, gentlemen, I have been among the mechanics for 34 years, and I think I can say of myself that in Manchester no one has done more to raise the mechanics than I have done, and I do not believe that there is a man in Manchester who could say the contrary. I am of opinion that this is a most degrading rule, that unless a man has served an apprenticeship he is not fit to do certain work, and therefore they will not allow a man to work unless he has served an apprenticeship.

18,888. Do you think that a bad provision?—I think it decidedly bad; the man may be a much more clever man who has not served an apprenticeship than the man who has.

(*Mr. Allan.*) I should state here that as far as the engineering trade is concerned, we have no rule for a man to serve, nor do we require a man to serve a positive apprenticeship. If a man has not commenced at the trade until he is 25 or 30 years of age, and he has been five years at the trade working, we do not object to him. He must have been five years at the trade before we admit him into our society, but we do not strike against him if he has not been five years at the trade. We have no rules regulating apprentices at all.

(*Mr. Beyer.*) May I ask Mr. Allan this? Supposing I find a man that can do the work that I require as a fitter, but he never served an apprenticeship, would his club object to my employing that man and call him a knobstick?

18,889. (*Chairman to Mr. Beyer.*) Mr. Allan says that they would work with that man; that is not your experience?—Well, on that occasion the Manchester chairman made a mistake, because he called on me about a man that had not served a proper apprenticeship.

18,890. (*Lord Elcho.*) Was that the objection that was stated?—Yes.

18,891. And then did you show him his work?— I said that the work he had to do he did very well, and I heard no more of that. If a man has got the skill, I think that he is a proper man to be employed.

18,892. Irrespective of how long he may have been in employment before?—Yes. Now here I have a key (*producing it*), nothing else but a simple handle for opening a small cock of a locomotive engine. I found that in the machines we built these things were very unsatisfactorily done, at least unsatisfactorily to me, and I thought that I would get one made as it ought to be made, so as to serve as a pattern. I selected a

mechanic, the best that I knew, and he fitted up two or three; but they were so far from what they ought to have been that I would not have them. I then made a very exact drawing of what I wanted, but still I was not suited. I picked the best man afterwards that I had in my shop, and he set about it and did not succeed much better. So I got a model made in wood, and said to the fitter, "If you make "this thing in iron just as it is in wood, it will do "for me." He tried, and after all this it was a bungling sort of an affair, and it would not do. Some time after, one of our pattern makers called me and said, "Mr. Beyer, will you allow me to show you something?" Well, he brought this thing which I now hold in my hand, and said, "This is one of the keys. "You know that I made you a wooden model, and I "have made you one in iron; here it is." That is a key that none of our fitters could make, and thus the best that I could get made was made by a man who never served an apprenticeship to learn the trade of fitting.

18,893. (*Mr. Hughes.*) He was a pattern maker, and a pattern maker is always almost the most skilful?—But he does not work in iron.

18,894. Pattern makers are all in the engineers' society?—They would not allow him to work as a fitter.

18,895. (*Chairman.*) What is the difficulty of making that key?—To do it well, and to do it skilfully.

18,896. (*Mr. Hughes.*) I will just call your attention to this fact, for your guidance in your future arrangements: "Any person not having served five "years before the age of 21, shall have worked five "years successively (planers and borers excepted) at "some of the branches mentioned in the preamble of "these rules, and shall be proposed and seconded by "two free members, at least one month before ad-"mission." So that it appears that five years' work is sufficient?—But supposing a man gets clever without working the five years?

18,897. (*Mr. Mathews.*) If you could have got your pattern maker to make things of that sort, would the union have allowed him to work?—I really do not know.

18,898. (*Mr. Harrison.*) What is your argument?—That a man ought to be at liberty to do what he can; there ought to be free trade. If I want a wall building I must employ a bricklayer, and if I want a piece fitting up I must employ a fitter, and if I want a thing turned I must employ a turner.

18,899. (*Mr. Mathews.*) Would you be at liberty by the rules of the union to put this man who was a pattern maker to work as a smith?—According to the rules he could not, because he has not worked five years at it.

18,900. (*Mr. Harrison.*) Do you remember an instance in which that has been refused?—I have mentioned the case of the man about whom the chairman in Manchester called upon me, because the man had not served an apprenticeship.

18,901. You say that you, having explained that the man's work was satisfactory, the chairman did not press the objection?—No. Perhaps it did not suit him to do so.

18,902. Do you know a case in which the society, or anybody recognized by them, have insisted upon it that you should not employ a pattern maker as a smith?—Well, I know that they will not allow us to employ whom we like.

18,903. (*Mr. Hughes.*) You say that you employ a great many apprentices?—Yes, like other works.

18,904. Do you think that there ought to be no limit to apprentices, that is to say, the power of employing boys?—No; I think that every one ought to learn what he likes. There is another point in which I think there is a mistake. The next passage in the rules to that which I just now read from the preface is, "It is our duty, then, to exercise the same care and "watchfulness over that in which we have a vested "interest, as the physician does who holds a diploma, "or the author who is protected by a copyright." Now that is clearly a mistake.

18,905. That is a matter for difference of opinion?—I give you my reasons; if my reasons are not good I will submit to your judgment.

18,906. They believe in the organization of labour, and you believe in no organization at all?—Will you allow me to point out that this is no proper comparison. I am the judge of what is done, and therefore I hold a diploma; and as to those men that I employ, what our men can do I can do myself, and consequently I am the responsible person. I write the prescription and they merely use it, and I am responsible for the results.

18,907. That is the struggle between you?—Well, men are what you make of them.

18,908. They endeavour to make one sort of thing and you wish for another?—I want to make them good men.

18,909. So do they; but they want to make themselves good men according to their notions, and you according to yours?—But I am the judge of the work they do.

18,910. (*Mr. Mathews.*) You think that as a rule, being the principal of the work, and responsible for the finished article to your customers, and finding all the capital for employing these men, you are the proper judge as to the fitness of the people you pay and the acquirements you think necessary to enable them to fulfil the duties they have to discharge towards you?—Yes.

18,911. If you were to leave your men to exercise a judgment, to the exclusion of your judgment, as to the nature of the men you should employ, do you think that it would be practicable to carry on your business?—No.

18,912. (*Lord Elcho.*) What became of Hall?—I believe he tried a situation somewhere else as a smith, but they drove him away, and I have heard since that he is trying to get a living as a contractor.

18,913. He has been out of his trade?—Yes.

18,914. (*Mr. Mathews.*) The labour of a man being his property and his capital, anything that interferes with the employment of that labour is a destruction of that property and capital; that is, if you interfere by the dictum of the union to say, "That man shall not be employed," you confiscate his labour?—They have done so in Hall's case; they have driven him out of the trade.

18,915. Having confiscated his labour you destroy his property?—Yes; for 20 years he worked at the trade and is driven out of it. Of course he must live the best way he can, but the man is certainly worse off than he was before.

18,916. If the unions are generally as they have been described to us, he would not be allowed to be employed in any works where they had influence?—I believe he tried and they drove him away from it.

18,917. (*Lord Elcho.*) The smiths objected to him because he changed hands at Longsight; but you say that he changed hands because he applied more stringent tests than another man would have done?—He was a judge of work. He said (I found this out after the strike), "I do not object to paying the wages, but "I will see to it that you do a proper amount of "work for it."

18,918. Did you make any inquiry when you received this letter from the men as to this point they raised of his having dismissed men at Longsight?—I had a character of him from Mr. Ramsbottom.

18,919. Who is there now connected with Longsight that would give evidence on this point if required?—Mr. Ramsbottom or any of his foremen at Longsight.

18,920. Do you know where Mr. Hall himself is?—No, I do not.

(*Mr. Robinson.*) Perhaps I may state that Mr. Beyer, Mr. Ramsbottom, and a foreman at Longsight, and I, travelled together to London. Naturally this subject came up, and both Mr. Ramsbottom and his man, Mr. Rigg, who is the running foreman, said

Mr. C. F. Beyer.
1 July 1868.

that they never heard of such a thing as was objected by the club against Hall, namely, that he changed hands. This was said in my presence yesterday.

18,921. (*Lord Elcho to the witness.*) May I ask what part of Germany you come from?—From Saxony.

18,922. Were you in this same business in Saxony before you came here?—I was a pupil of the Polytechnic School at Dresden from 1828 to 1832, and I came to Manchester in 1834.

18,923. Are you acquainted with the state of engineering in Saxony?—I was for two years at Chemnitz, which is the Saxon Manchester.

18,924. Have they trouble with their men?—No, not yet.

18,925. Do you anticipate that they will?—It is sure to come.

18,926. Do you know anything with reference to the state of the law in Saxony on these questions as to employers and employed?—They employ just whom they like at present in Germany; they would settle these things in a different way from us.

18,927. Why have they not had trouble hitherto in Germany, and why do you think that troubles are impending?—The reason of it appears to me this. In this country we are so concentrated and there is so much of manufacturing all in a little space, whereas in Germany, though there are several centres where there is a considerable amount of manufacture, they are spread far apart, and in proportion to the population the number of people employed in manufacture is small, and there is such a large supply of men that if one does not do right there is always somebody to take his place.

18,928. Have they unions there?—That I do not know.

18,929. (*Mr. Harrison.*) It is contrary to their law, is it not, for men to form unions there?—Probably they would not allow it.

18,930. (*Mr. Hughes.*) They would have the troops out?—They would settle it in a different way.

18,931. (*Mr. Harrison.*) Do you wish to see that way introduced into this country?—No.

18,932. (*Lord Elcho.*) I suppose you know the quality of work that is done in Germany, and that which is done in this country?—Yes.

18,933. Do you apprehend that the work done in Germany will oust our work from the market?—I think it is doing so every day. For instance, I am a locomotive engine maker. When I came to Manchester and for years after we supplied the continent with locomotives. Now they do not want us, and we can scarcely compete with them.

18,934. To what do you attribute that?—Well, they have made very great progress in Germany in proportion.

18,935. The labour is cheaper, I suppose?—Evidently labour is cheaper; and there is another matter, namely, that in some branches of manufacture they have outstripped us.

18,936. In your own trade?—Yes.

18,937. In what branches have they outstripped you?—For instance, in iron and steel it is very clear that they are in advance of us; and I will give you my reasons for saying so. For example, in the way of making steel Mr. Krupp seems to be doing extraordinary things. I will give you only one instance. I was formerly at Sharp, Roberts, & Co.'s, and at that time they were beginning in Germany to manufacture for themselves. Speaking from recollection I should say that at one of the largest establishments on the continent, that of Borsig, at Berlin, they could not make a crooked, that is, a crank axle, and they began to make their locomotive engines with a straight axle instead of a crank or bent one. That was probably in 1837 or 1838. Now things have quite changed. When we want a really good axle we are obliged to send to Germany, they make it of such a superior material.

(*Mr. Robinson.*) We have paid the highest price for German axles.

18,937*a*. (*Lord Elcho to the witness.*) It is not the quality of the metal, it is the process in working that makes the difference, I suppose?—They understand it better than we do; they do that which we cannot do.

18,938. (*Mr. Matthews.*) The crank axle is made with steel?—Yes, but it is such a superior quality, and we have not kept pace with Krupp's.

18,939. I want to ask you whether the distinction that makes that crank axle preferable is, that the one is made with steel and the other with iron?—Yes.

18,940. That the crank axle can be made properly with steel and not with iron, and that a better crank is made by Krupp than can be made by us?—A better one than has been made by us up to this time.

The witness withdrew.

Mr. W. Allan.

Mr. William Allan further examined.

18,941. (*Chairman.*) Have you heard the statement of Mr. Beyer about the strike at the Gorton works in consequence of a man named Hall being employed there?—I have.

18,942. And you heard his account of the progress of that strike, that at first the Manchester branch were in treaty with the employées at Gorton, and matters were coming to amicable terms?—Yes.

18,943. Then according to Mr. Beyer's account of it a head centre came down from London, that is to say, some manager came down and there was a change to less amicable terms. Will you state to us what you know on that subject?—Yes. If you will refer to the evidence that I gave on a former occasion before this Commission you will there find that the case of Hall was gone into by the Commission and myself, and that I then stated, in answer to a question put by Mr. Mathews, No. 973, "The union men had no "more to do with it than the non-union men. The "man in question went in there as a foreman and "some of the men knew him by experience, and they "knew that if he got a footing in there he would "upset that establishment, in the same way as he "had done the establishment at Longsight; and the "result was that the men struck against him." Now I believe the statement that I then made in answer to the question of Mr. Mathews was perfectly correct, and that the men objected to Mr. Hall from their past experience of him. Many of them had worked with him formerly, and when he made his appearance in the works they struck. I am not saying that it was right on their part to do so, because an employer has a perfect right to employ such foreman or manager as he may think proper; but, however, they did strike, and I believe that that was the reason why they struck against him. Now this was done, I may state, without the knowledge of the executive council that I now represent.

18,944. (*Lord Elcho.*) Of the London executive council?—Yes, the executive of the whole society.

18,945. Was it done with the knowledge of the Manchester officials?—It was done by the workmen employed there without any instructions whatever from the district committee of Manchester. The society men and non-society men struck work altogether, they were both of one opinion so far as Mr. Hall was concerned, and it was done entirely without the sanction or even the knowledge of the district committee of Manchester. The district committee of Manchester, finding that a dispute had taken place, stepped in, and endeavoured to arrange the matter with Messrs. Beyer and Peacock. They had some interviews with those gentlemen, and as Mr. Beyer has stated, arrangements were made for a certain number of men to resume work, and it is quite true that while negociations were going on, I arrived

in Manchester on the Thursday. The men late in the employ of Messrs. Beyer and Peacock hearing that I was in town waited on me on the Saturday morning; they produced the list to me, and those marked with red ink were the parties who were to return to their work, and out of the whole number that had come out in consequence of the dispute, only nine names were there marked with red ink to resume work, and to the best of my recollection two out of the nine had commenced work elsewhere, one at Doncaster and one at some other place the name of which I now forget. When the deputation waited on me and handed me the list, and gave me to understand the exact position of affairs, I said, "I think the better plan will be, if "there are only seven to resume work out of the "whole number that came out, for you to acquaint "Messrs. Beyer and Peacock very quietly and res- "pectfully that you will decline to render your services "to them." If they only wanted nine out of nearly 200 as Mr. Beyer says, we could certainly as a society afford to refrain from sending the nine back.

18,946. (*Lord Elcho.*) Did you know how many there was room for?—I do not know.

18,947. Did the men tell you?—No.

18,948. Did you inquire?—No. I believe the men were not in a position to say how many could be employed there, or how many fires were filled up; they had no knowledge of that because they were all out, and therefore they could give no information on that point.

18,949. But did not the whole thing, as a matter of common sense, turn upon the number that could be admitted, that is to say, upon the number of fires that were to be filled up?—I cannot exactly say that. If nearly 200 men were employed there, and out of those 200 about 100 smiths, or rather more, have left their employment, the number that I mentioned would be but a small one to resume work.

18,950. Mr. Beyer has given a statement to this Commission, according to which, I believe, on the Friday 113 were to come in; that is to say, he had his works filled with a certain number of non-society men, or men he had obtained after the smiths struck, but when he came to an understanding with these men there was still room, with the additional fires put on, for 113 men. What I want to know is, how this statement of his tallies with what these men stated to you, because you say that there was some mark made with red ink upon some list which only made out that nine could be admitted instead of 113, as stated by Mr. Beyer to have been agreed between him and the men, and that even of those nine two were employed elsewhere?—There were but nine of the skilled men as smiths that were to resume work immediately.

18,951. Nine skilled men, but how many men to be employed under them?—I cannot exactly say, because it would depend on the description of fire; at one description a smith would have three times as many as at another.

18,952. But do not you think that you, going down there as the representative of the society, should have ascertained that?—I want to show you that I did not go down there on this matter at all. I happened to be in that neighbourhood on other business, an affair that occurred in that part of the country, and called at Manchester on my way home. Then the deputation waited on me on the Saturday morning, as I have told you, at our office, where I happened to be at the time, and presented a list to me. I simply said then, without any instructions from the council or anybody else in connexion with the society, that if Messrs. Beyer and Peacock only wanted nine, and two out of those nine had commenced work elsewhere, I should respectfully inform them that the men would decline to return to their work.

18,953. That is exactly what I come to. You did not go there officially, but you were an official and found yourself there?—Yes.

18,954. These men knowing that you, the head of the society, were there, naturally, under these circumstances, came to you for counsel and advice, and the counsel and advice which you gave to these men was that they should not go into the works because there was only room, according to the list shown to you, for seven or nine skilled smiths?—Yes.

18,955. And your reasoning was based on the fact that 200 had gone out. It strikes me that before you gave that advice, as their friend in the interests of peace, the natural thing would have been to inquire how many men there was room for, not what number went out originally, how many of those men were skilled men, and altogether what grounds there were for believing that more men than these nine so marked, or whatever the number might be, could be admitted in justice to others. That you did not do?—I want to show you that as only nine were wanted back, it would be to the disadvantage of the company, and also to those nine men, to resume work there amongst so many as have gone in as what we call knobsticks. These nine men would never have felt themselves at ease and comfortable where there were so many knobsticks as were employed by Mr. Beyer. Allow me to say also, on the Saturday morning before I gave this advice, the men themselves had held a meeting (I mean the smiths who were out), and had declared their intention of not resuming work, seeing that there were so few in the list to resume work, and I quite agreed with them; and I am sorry that I have not the list with me. All I can say is that the list given by Mr. Holt was a list containing a certain number of names, and that they only amounted to nine, and I recommended them not to resume work under the conditions.

18,956. But if Messrs. Beyer and Peacock had turned off 50 or 60 of these men whom they had got to come into their works when your men left them, you would then probably have recommeded your men to have gone in, and would have thought that that was a fair and right thing of Messrs. Beyer and Peacock to do?—I should not think it a right thing to do. I think if Messrs. Beyer and Peacock had got men that suited their purpose they had a right to retain their services in whatever number they thought proper. But on the other hand I thought we had a perfect right to say whether it was worth our while for so small a number as nine or seven to resume work.

18,957. (*Mr. Hughes.*) You advised your society to the best of your ability?—Decidedly so.

18,958. And the result of that advice was that your society recovered the position they held with Messrs. Beyer and Peacock?—Yes. Mr. Beyer alludes to the disputes that took place; that is, in the shop, including fitters and turners, and so on, giving one week's notice. Now, permit me to say that that notice was given by the men employed there without the sanction of the executive council or myself. The affair was conducted by the men at a meeting in Manchester, and they felt so much aggrieved at the terms not having been carried out by the firm as agreed on, (I do not charge Mr. Beyer or Mr. Peacock with it because I believe the officials were more to blame than the firm themselves,) that a week's notice was given without the sanction of the executive council; in fact, it was given without my knowledge.

18,959. (*Lord Elcho.*) Supposing that instead of there being room for nine there had been room for 90 or 100, there being 200 men employed altogether, would you in that case have given different advice?—In all probability I would have given very different advice from what I did.

18,960. (*Mr. Harrison.*) You considered that the offer to take the men back was illusory, not a *bonâ fide* affair?—Not a *bonâ fide* affair.

18,961. (*Lord Elcho.*) The principle would be the same, would it not, as to working with knobsticks, whether 100 knobsticks remained in the smithy or 190 remained in it?—The principle would be the same, but then the proportion of the knobsticks to our members would not be the same.

18,962. The principle of working with knobsticks would be the same?—There rests and hangs the whole affair. If a dispute took place where there were 200

Mr. W. Allan.
1 July 1868.

society men, and an arrangement was come to that some 10 might return to their work, we would say to them, "You 10 can do very well without it. If the "firm only require 10 men we can do without the "firm."

18,963. (*Mr. Harrison.*) There was no absolute objection to work with non-union men in that shop?—No.

18,964. They were working there?—And are now, and that Mr. Beyer knows.

18,965. (*Lord Elcho.*) Provided it is in a certain proportion there is no objection?—We have no restriction of that kind.

18,966. Not any rule, but practically there appears to be such a restriction?—I say that we have no restriction, nor yet does the council, or any governing body that I know of in our society, interfere in this matter; if they do, they do wrong.

18,967. That is to say, you have no rule, but practically we have just got an instance of the proportion of society to non-society men not being such in those particular works as to satisfy you as secretary that the men should go into the works?—I beg your pardon. It was not because they were non-society men, but because they were knobsticks. A man that goes in, and fills up the position of a man on strike, that goes to work during the time that a dispute is pending in any establishment, on any terms that the employer thinks proper, in opposition to the wish of the men, we call a knobstick, or a black-sheep, if you think proper.

18,968. Whether the dispute is a union dispute or a general dispute?—No matter what it is; if there is a dispute with the firm, and a man goes in at the time the dispute is pending, the man is called a knobstick, and forms one of the black list.

18,969. (*Mr. Harrison.*) With regard to another remark of Mr. Beyer, would you or your society prevent a member of one branch of the trade in his shop, supposing he found him competent to the work, doing another?—You will find that one of the rules here states that every member of the society is to confine himself as near as practicable to the particular branch of the trade to which he belongs, and I think that the employers as a rule will not object to that, because it would be no advantage to the employer to put a pattern maker to a smith's fire, or *vice versâ*. I think Mr. Robinson here would complain bitterly of any foreman who shifted the men in that way. Now with reference to Mr. Hall, Mr. Beyer has stated that he had a very excellent character with him. I do not doubt that he had a good character from Mr. Ramsbottom.

18,970. (*Mr. Mathews.*) Mr. Ramsbottom is a man of too high a position in the country, is he not, for it to be supposed that he would give a good character to a man not deserving it?—He holds the first position as locomotive superintendent in the kingdom. At the same time I may just mention that I have been informed that this Mr. Hall is a cousin of Mr. Ramsbottom. Mr. Hall, I believe, served his time at Longsight, and was employed there by Mr. Ramsbottom, and was recommended by him to Messrs. Beyer and Peacock; but he did not remain there long.

(*Mr. Robinson.*) Perhaps I may be allowed to say here that there is probably a misapprehension in Mr. Allan's mind. The Commissioners will have noticed that he has spoken of Mr. Holt and also of Mr. Hall, and that his pronunciation of the two is very similar. Now Mr. Holt, the manager of Mr. Beyer, is a cousin of Mr. Ramsbottom, while Mr. Hall is the one they took on as foreman. I think that Mr. Allan is very likely confounding the two men Holt and Hall.

(*Witness.*) I was informed that Hall was Mr. Ramsbottom's cousin. Mr. Beyer has stated here that "the poor fellow" has been driven out of the trade. I can only say that I wish some hundreds of others were driven out of the trade in the same way, because as far as I can learn he is in a very good position as a manufacturer of bricks and a contractor; and so far from starting in another shop after he left Longsight, he started in the business I have now mentioned. Then again, if Mr. Ramsbottom had such a high opinion of him, Mr. Ramsbottom has had ample opportunities of employing him himself since that time at Crewe, because several foremen have been appointed for the smithy department since then.

18,971. (*Chairman.*) Can anybody take him into a factory if he is branded as a knobstick?—Hall was not what we call a knobstick. He was employed as foreman there. The men struck work against him, not because he was a knobstick, but from the simple facts previously stated, that from their experience of him they were of opinion that he would upset Beyer and Peacock's establishment, as far as the smithy was concerned, in like manner as he had done at Longsight.

(*Mr. Beyer.*) I should like to add a few words here. On the 31st of March when we had a deputation from the chairman and secretary of the Amalgamated Society in Manchester, in talking this matter over, the chairman admitted that the men were in the wrong, and that the best thing they could do was to go back to their work, and the chairman himself volunteered this remark. He had said, "Well, "they give him a bad character." Now that was one man that had been working under Hall at Longsight, and he complained of him, and the chairman said, "I "asked this man 'How is it that you complain of "'Hall? I understand you went to him a second "'time; either you left or were discharged, and you "'went there a second time. What made you go "'there a second time?'" The only answer that the man could give was this, "I went back again a second "time because Hall promised to do better." Now the chairman himself in Manchester was astonished if Hall was such a bad character that a man should go twice to him.

18,972. (*Mr. Hughes to the witness.*) You thought that if you could get the whole hundred who were out back it would be better for you than to get back seven?—Yes. There is another statement that was advanced by Mr. Beyer that I must notice, and that is, the humane part of the question. I mean with regard to providing those men with some 70 or 80 iron bedsteads. I want to show why it was that those men had to be lodged on the premises. It is simply this, that there was a very strong feeling on the part of the people living in the neighbourhood, and they would not give them lodgings, and hence it was that Messrs. Beyer and Peacock were obliged to accommodate those men in the works; and so far from the police force not being sufficient in Manchester, why they have a police force sufficient for not only keeping his premises in order but ten more of the same size. I want to show that they were lodged on the premises simply from the fact that there was no possibility or probability of their getting lodgings in the immediate neighbourhood. The feeling was so strong in opposition to knobsticks that nobody would accommodate them. The consequence was that they slept on the premises, and their meat was cooked for them, and I think the firm was exceedingly glad when they saw the last of them. I am only giving it as my opinion, but I believe that the closing of the works for some week or a fortnight was only a pretext to get quit of those men that went in there as knobsticks.

The witness withdrew.

Mr. JOHN ROBINSON examined.

Mr. J. Robinson.

18,973. (*Chairman.*) You are an engineer of the Atlas works at Manchester?—I am.

18,974. Is it a private firm at the present moment?—It has become a company, and I am one of the directors now. I was formerly a proprietor.

18,975. Earlier in life were you a working engineer?—I was. I served my time.

18,976. You were apprenticed as an engineer, and worked as an engineer, and in course of time you have come to the position that you occupy at this

moment?—I was what was called a premium apprentice. I went into the business for the purpose of becoming a master. I do not know that I ever joined a club, though I was offered to do so many times.

18,977. You had always your destiny before you; a master to be?—Yes.

18,978. During the time that you have been in the Atlas works, have you had much experience of the effect of trades unions?—During the whole time until very recently I have been constantly in contact with the working men, both the foremen and the men themselves, since the year 1839. In 1839 I went there, and I was of course among them very much during my apprenticeship.

18,979. (*Lord Elcho.*) What was the length of that apprenticeship?—I served three years. I had the intention of being a civil engineer afterwards, but I then took to mechanical engineering more permanently and remained there.

18,980. (*Chairman.*) Have you been long enough in business to have noticed any difference in the feeling and manners of the men now compared with what they were before trades unions had as much influence as they have had lately?—I thought in 1851–52, which was the time of the great lock-out or strike, as it may be termed, as viewed from either side, that then was the turning point in the amicable personal relations which one had with one's workpeople, and since that it has been rather dealing with a corporate body than with individuals. Before 1851–52 one knew almost every workman in the place by name, and dealt with him individually. Since that we have always had in our eye at a distance the controlling influence of a club that sits in London.

18,981. Dealing with individuals you acted under the tie of humanity towards them?—Yes, and I think that it was rarely that any dispute arose.

18,982. I mean dealing with them individually as compared with corporate bodies, because we are in the habit of saying of corporate bodies that they have neither soul nor conscience?—It is rather this, that in dealing with a man since that strike, we have always had in view the effect which any arrangement made with that man would have upon the corporate body, and the advice that would be given or the course of action that would be taken by the corporate body. Before that time it was an affair between man and man.

18,983. (*Mr. Booth.*) I suppose the men look more to the union than to their employers now?—Certainly, as regards their conduct.

18,984. That was the nature of the change?—Yes.

18,985 (*Chairman.*) You think that you have seen in your time a change come over the spirit prevailing between the working men and the employers?—I feel confident of that.

18,986. The description that you have given is the result of that experience?—Yes.

18,987. You have been good enough to supply us with a paper answering several of the questions that have been sent round?—Yes, that paper contains answers to the printed questions as far as I felt competent to reply to them.*

18,988. I do not know that we would ask you about the effect of unions upon the various matters specifically mentioned in your paper, as we have had a great many witnesses whose evidence is to the same effect as your answers, giving the employers' view on that subject; but I would ask you whether, according to your experience, the unions have substantially altered the rate of wages?—I think not. I have got a table which is referred to in my paper of answers, showing the rate of wages which existed some years ago and the rate of wages which exists now in the same establishment; and I think that all the changes which are to be discovered from that table are due not to the action of the unions so much as to the demand for labour in those particular branches, and if you would allow me I will just draw that conclusion. This table I shall be happy to put in, showing the rates of wages, with the averages, paid to skilled workmen at the end of the years 1851 and 1861, and so on. And the result of this table, taking the period from 1851 to 1861, is that the increase, for instance, of the wages of fitters and turners has only been 0·12 of a shilling; in grinders', there has been no change; in joiners' there has been an increase of 1·50; in pattern-makers' only 0·12; in painters' there is a rise of 2*s.* a week in 1861 as compared with a similar class in 1851 (I take 1851 because that was the time at which Mr. Allan began to develop the position of trades unionism); then in coppersmiths' there has been an advance of 2·65; in planers', slotters', and shapers', an insignificant decrease of 0·36, and so on. But, in order not to occupy the time of the Commissioners, I pass on to a trade the wages of which have very much increased, that is to say, the boiler makers' trade. I find that among what we call, in Manchester, platers, that is the skilled class of boiler makers, who prepare the plates of the boilers to be put together before the riveters come to fasten them together, there has been a rise of 6·34, that is nearly 6*s.* 6*d.* per week; in riveters' wages there has also been a rise of 6*s.*

18,989. Upon what was that rise?—6*s.* upon 24*s.* perhaps. And in the holders up, there has also been a rise of 6*s.* These are the three classes of boiler makers. Now that is the most remarkable rise that occurs in my paper during that term of from 1851 to 1861, and the question that I put to myself, was, How did it arise? I think it arose from the fact of the demand for iron ships. The trade in that time began to change from wooden shipbuilding, to iron shipbuilding, and these are the men who could obtain work at iron shipbuilding.

18,990. (*Mr. Mathews.*) Does your paper extend subsequently to 1861?—Yes, it takes the whole of the time since 1851 up to the present time. I believe that that rise has been caused by the demand for the employment of these men in iron ships and perhaps in girder bridges, things constructed lately for railways instead of stone or wooden structures.

18,991. That is to say, the general application of wrought iron instead of cast iron for various purposes has caused an enormous increase of demand for labourers in that particular department?—Yes.

18,992. Hence you consider that there has been a rise of wages?—Yes. That is more remarkable, because the boiler makers, I believe, are not members of the Amalgamated Society. So that this very class of men who have had the largest rise of wages in a given period, have not been in the society which Mr. Allan represents; I believe they have a society of their own.

18,993. That society of theirs is one of a recent creation, of subsequent creation to the Amalgamated Society, is it not?—No, I think it is an old society, but that it did not amalgamate at the same time as the others. My answer was meant to show that the Amalgamated Society have not succeeded as they think; they have not succeeded in raising wages to the amount that they think fit.

18,994. (*Chairman.*) The boiler-makers being out of the Amalgamated Society have had a larger rise than the others?—Yes, by the force of circumstances.

18,995. What would enable a man to become a boiler maker? If there is an immense demand for boiler makers, and a rise of wages, a man could not obtain that rise unless a gifted man, could he?—A boiler maker is made by apprenticeship, similar to the other trades, but a riveter is one who grows up rather. The holders up and helpers are men who assist a man and lift things for him, and these men, holders up and helpers, have gradually grown into

* This paper, together with the tables appended thereto, will be found at the close of the witness's evidence (p. 55).

Mr. J. Robinson.

1 July 1868.

riveters. Of course, the greater the numbers of holders up and of helpers the greater number of riveters.

18,996. You have also the wages since 1861 shown in that table, have you not?—Yes. My table shows all those classes from 1861 to the present time also.

18,997. Is that at all in the same proportion of increase?—It is not so great from 1861 to the present time as it was from 1851 to 1861, but it shews the same results in proportion, that is to say, that that very class of labour is the class which has had the greatest rise in the period from 1861 to 1867. That table I shall be very glad to put in as supplemental to the paper.

18,998. What has been the rise since 1861?—Since that time the rise has been 2·5 in shillings in angle-iron smiths' wages, 2·23 in platers', 2·13 in riveters', and 3*s.* in those of the holders up.

18,999. (*Mr. Booth.*) Those you describe generally as the boiler makers?—Yes, men employed in the construction of boilers.

19,000. (*Chairman.*) The action of trades unions, I understand you to say, has not accelerated that rise of wages. Has it been at all effective in keeping men, as skilled workmen, from obtaining the best reward? According to your paper the skilled man reached his reward by reason of his skill?—I think that the most skilful man has reached his reward by his skill and by his industry, in that particular trade especially. We give to a boiler-maker, that is to say, to the man who has the most responsible part of the work in putting it together, almost any price we will from 36*s.* to 38*s.* and 40*s.* a week according as his skill enables him to shew us that he is a competent workman. I should add, perhaps, that in our works we are altogether on piecework. Therefore when we rate a man 36*s.*, 38*s.*, or 40*s.*, he is able to earn a considerable sum larger than that according to his ability.

19,001. (*Mr. Mathews.*) Are you aware that the trades unions set their face against piece-work?—Yes.

19,002. (*Mr. Harrison.*) Do you say that the unions universally are against piece-work?—I say that that is the tendency in all societies. Many times the boiler makers have tried to do away with piece-work. They have tried to do away with it in our own establishment, and we would not admit of it.

19,003. (*Chairman.*) The boilers differ in dimension, I suppose?—Yes, and we give a larger price for a more complicated boiler than a less complicated one. We take into account the number of rivets.

19,004-5. (*Mr. Mathews.*) That is, you would not put so large a number of rivets in proportion into a small one?—No, but sometimes the plates may be thicker and the number of rivets smaller. It is a question of bargain between us. We come together and this passes. "How much is this?" "We will "have 3*l.* or 4*l.* for this boiler, and we have had so "much for it before." I say it is a question of bargain at the time.

19,006. (*Chairman.*) Your evidence is that piece-work pervades boiler making. Does it pervade other articles?—Almost everything in our establishment is on piece-work, except pattern work, which is a different class of work and cannot be estimated in that way.

19,007. (*Mr. Mathews.*) All your moulding and casting is done by piece-work?—All our moulding is done either by the ton or by the piece.

19,008. (*Chairman.*) Have you had any difficulty in having non-union men work with the union men?—We have had this experience. After the strike of 1851–52 we required every man who came into the works to sign a declaration that he did not and would not belong to a union. Since that time I believe, I would not quite say all, but very nearly every man in the place has by degrees joined the union, and every apprentice when he comes out of his apprenticeship is solicited to join the union, and if he does not join the union, I think, generally speaking, the place is made too hot for him.

19,009. (*Mr. Hughes.*) Do you insist on that declaration still?—No, it was dropped many years ago.

19,010. (*Chairman.*) The result is that the large majority of the workmen are unionists?—Yes, almost universally; there are exceptions, but they are scarcely tolerated. It is very easy to make the place uncomfortable for a man, though he may not be asked to walk out.

19,011. (*Mr. Mathews.*) Most of the men belonging to the union, in case of any dispute with your people, do you communicate with the officers of the union or the men individually?—No, we do not recognize the union.

19,012. You ignore the union; you do not admit the functionaries of the union to any conference with you in any question between you and the men in your employ?—No, none at all.

19,013. (*Chairman.*) At the time when union men and non-union men were nearer together in numbers, I suppose there was a great contest between the workmen themselves as well as between them and their employers. But since the majority of the workmen have been in union, have they become more quiet and more amicable towards each other and towards their employers?—I think I may say that we have a periodical disturbance, and at that time hostile feelings are engendered, and they endure for a little time, and then we go on amicably for a time. On the whole, since 1851–52 our disturbances have not been large. Mr. Allan knows that since that time we have fought several battles, and sometimes won them. If we have not won them we have held our peace.

19,014. There has not been a return to that mutual confidence which produces the greatest satisfaction in intercourse as between man and man?—No, I think that always now, in our arrangements when we have an alteration to make either in piece-work prices or in the rate of wages that we propose to pay per week, when we come a to conference, before seeing our men we inquire what effect it is likely to have upon the union, and whether the union is likely to interfere with the proposal we make.

19,015. The recommendation has been given, so to speak, to your friend as if he were sure to be your enemy. Is intercourse between you and your workmen something of that kind?—Yes, too much so.

19,016. (*Mr. Booth.*) During the period of which you speak were there any strikes against your works?—We have had strikes, but what I should rather call departmental strikes, not of the whole works. For instance, the moulders have struck; the men have struck against our employing so many boys; and we have had strikes of the hammermen, and a strike in the smithy, and a strike of pattern makers; small strikes that have lasted a little while and have not stopped our works.

19,017. Were they generally successful in attaining their object?—I do not think so; not in our own case. We have, generally speaking, fought them single-handed and won.

19,018. Generally speaking, they have failed?—Generally speaking they have failed, at least that is my impression of the result; they may look at it from a different point of view.

19,019. (*Chairman.*) Has the operation of trades unions had any effect upon the competition of English manufactures with foreign manufacturers?—I think that it is exceedingly difficult to trace what has been the cause of the increased competition between ourselves and the foreigner. It has just arrived at this point: supposing that we can make an engine for 2,000*l.*, and that the foreigners can make it for 1,980*l.*, in all human probability they would get the order. Now everything that contributes to the fact that ours costs us 20*l.* per engine more of course gives them a facility in competition, and among the list of things that contribute to increase our price in this country of course there is the question of wages. Now, as you heard Mr. Beyer say, the foreign manufacturers also produce

some material used in the construction of engines, certainly of a better quality, and very often at a more reasonable price than we have done in England, and the consequence is that these things together cause them to be able to compete and take orders now, especially for a neutral market, where formerly we actually supplied the country itself. And I can hand in a table which gives a statement of the delivery of locomotive engines and their destinations from the year 1834 to 1866,* in which I think it will be plainly seen that where at one time we had the control of certain markets we have lost it, and these very people, for instance, Prussia and Wurtemberg, and France and Austria, to whom we formerly sent locomotive engines, have now become manufacturers themselves for their own countries, and very important competitors with us for neutral markets; I mean, excluding their own country and ours, such markets as Russia, Spain, Portugal, Italy, and so forth.

19,020. (*Mr. Mathews.*) Taking an engine at the value of 2,000*l.*, what proportion of that 2,000*l.* do you think is composed of the cost of labour, and what of material?—I should say perhaps 400*l.* would be paid in wages; it is a round guess.

19,021. (*Chairman.*) Would you state one or two results of that table?—In the year 1839, for instance, our supplies of locomotives for foreign countries began to assume a large proportion to the total production. In 1839 we made for England 21 locomotives, and for foreign countries we made 26, so that you see we made more for abroad than we did for England. In 1840 we made for England 26, for foreign countries 18, and so we go on. Taking the year 1841, Holland then begins to be the customer as her railway system gets developed and buys locomotive engines. Then in 1842 Italy begins. In 1843 Russia begins. Then in 1844 Russia ceases entirely for a time, her railway system does not get developed. And now France and Germany compete with us for Russia, and beat us in nine cases out of ten out of the market. Then in 1846 France ceases to be a customer, and begins to make her own engines. In 1847 Germany which had been one of our best customers, entirely ceases, and we have no demand either from France or Germany after that time, except for perhaps one or two engines. I am speaking in general now. In 1855 we began with such countries as Egypt; then Prussia again, then South America and the colonies. But it will be found on looking at all these figures that the proportion of engines supplied for abroad since the year 1855 or 1856 has been constantly diminishing as compared with the number supplied for England, indicating what in fact the actual returns show, that the foreigners are becoming not only manufacturers for themselves, but manufacturers for other countries than their own, and therefore competitors in neutral markets.

19,022. Is there any way of ascertaining, within your cognizance, whether they compete with England in supplying the English market?—There have been several cases, and one in particular, which was referred to in Mr. Allan's evidence, namely the case of Schneider and Company, of Creusot, who took an order from the Great Eastern Company for 40 locomotives in the year 1865, and they delivered a certain number of these engines, and I believe that those engines were pronounced (in fact, I put it in evidence) to be of a most satisfactory construction, and the workmanship was excellent, in fact, equal to the average of English manufactures. In the specification which was issued by the engineer of the company at that time, Mr. Sinclair, and which I have with me, a very large proportion of the materials specified for those engines were to be of the steel of Krupp, of Essen, of whom you have already heard from Mr. Beyer's evidence. Mr. Allan put it in evidence that he thought a great amount of those engines was made in Yorkshire. Now what I merely wish to say in reply to his statement is that a large portion of the material was specified by Mr. Sinclair to be of this manufacture at Essen; the crank pins, tyres, axles, piston rods, slide bars, slide spindles, and tender tyres, which are all important parts of an engine, were to be procured from Mr. Krupp of Essen. Therefore, neither an Englishman nor a Frenchman had the supply of these, but the contractor, whoever he was, had to go to Mr. Krupp, and buy them from him. And with regard to the boiler plates, which are perhaps the most important part of an engine, they were specified to be Low Moor, what we know technically as the best Yorkshire iron; but I believe Mr. Schneider made those boilers from the iron constructed by his own firm; he is an iron-maker as well as an engine-maker. I merely say this to show those engines were absolutely not made in Yorkshire but made in France, and one of them was exhibited in the year 1867, at the French Exhibition.

19,023. (*Mr. Mathews.*) Can you tell us the eventual history of that contract?—I believe that only 15 of those engines have been delivered, and I attribute that fact to the financial position of the Great Eastern Railway Company.

19,024. It is a matter of general notoriety, and therefore I suppose it is within your knowledge, that the only thing in the way of the fulfilment of that contract is that they cannot get the money for them?—Yes, I know that we have a contract and could at first hardly get paid ourselves. I believe that Mr. Schneider is able to make his engines quite as satisfactorily as English firms; and I know to my own cost that last year when negociating a contract for 40 engines for Russia, when I thought that I had the thing in my own hand, Mr. Schneider walks in and takes it off.

19,025. So that instead of England supplying all the continent of Europe, together with a part of the East, with locomotive engines from this country, you wish to convey to the Commission your opinion that that demand has ceased, and that the continent is actually supplying this country?—I would not go so far as that. I do not think that with the specifications made by English engineers people on the continent are likely to supply this country with engines. But what seems to me grievous is that such firms as ourselves and Beyer's having had large contracts with the continent are now beginning to find that market cut off. I may say this, that a number of engines have been ordered by East India railway companies (I do not mean only that particular one called the East India Railway Company) from abroad as a question of price. The English specifications have not hindered such firms as Esscher and Wyss of Zurich, and Kessler of Wurtemburg, taking orders for Indian railways, which is in fact coming to our own home market.

19,026. Do you know the establishment of Esscher and Wyss of Zurich?—I have not been there for some years.

19,027. You cannot therefore state the reason of their succeeding against you?—No, but I consider that Schneider and Company are even more serious competitors with us.

19,028. (*Mr. Hughes.*) How do you account for the fact that in the tables published by the Government the steam engines exported by British manufacturers have steadily risen, and that even in the year 1867 there is upwards of 200,000*l.* in the value of the exports over the year before?—Does that include the export to India?

19,029. Articles from the United Kingdom; and the book summarizes every article, and there is an analysis of the countries to which they go, but the rise has been gradual and steady right through. In 1866 the total export value was 1,760,000*l.* odd, and in 1867 1,994,000*l.*, so that somehow or other we get rid apparently of more steam engines than ever?—That (*handing a paper to Mr. Hughes*) is my digest that I got made for me by a man accustomed to that sort of thing in Manchester.* But even such a development of railways as is now taking place in Russia and India might account for that. It might be

* See the witness's statement and tables at the close of his evidence (p. 55).

Mr. J. Robinson.

1 July 1868.

that not only would the Continent be busy but we should be busy too. When those engines were taken, for instance, by Schneider and Company at the Creusot works, all English locomotive builders were very much occupied, and their prices of course were naturally higher prices. On the other hand the development of the trade of the French manufacturers by the extension of their works had been so large that they were slack at that time, and the consequence was that they were glad to take work at almost any price. At the present moment I consider that the position of employment on the continent of Europe in our particular trade is exceedingly brisk, and we can now get orders for other countries, such as Russia and Holland, which last year we could not have taken.

19,030. It is veer and haul?—It is not so; if you take long runs, at least, I do not think that that is the fact.

19,031. (*Mr. Mathews.*) Do not you think that the increased exportation of machinery is to be accounted for by the very large development of the railway system in all parts of the world now?—Yes, certainly.

19,032. And that the exportation is not equal to what it would be if we were better able to compete with foreign manufacturers?—It strikes me that the progress of exportation in different years, beginning at the year 1849 as the starting point, has not been nearly so great in late years as it was in the previous years.

19,033. You attribute that, I suppose, to the establishment of locomotive manufactories abroad?—Yes, we have now competitors in almost every country in Europe where before we had the market in our own hands. From 1849 to 1854 there was 665,000*l.* worth of steam engines and other machinery exported. In the period 1855 to 1860 it had risen from 665,000*l.* 1,610,000*l.*, an enormous rise in the value of the exports. Whereas, taking the period from 1861 to 1865 it had only grown from 1,610,000*l.* to 1,862,000*l.*

19,034. And that notwithstanding the development of the railway system?—Yes.

19,035. (*Mr. Booth.*) Does it appear to you that you would be able to compete with foreign countries with better chance of success if you were not subject to the interference of trades unions in your works?—I should scarcely like to say that, because part of my evidence has gone to show that I do not think the trades unions have done very much to increase the rate of wages.

19,036. In other respects they have not interfered to prevent you developing your works?—Not very much. We have always had the fear of their interfering, but generally speaking when they have interfered we have beaten them; and large establishments like ours have a better chance of fighting a battle than a small one.

19,037. You have not been obliged to give in in a battle the same as Mr. Beyer has?—No, and I do not know that I should have done it then; but it went against his grain, no doubt, to do it.

19,038. (*Lord Elcho.*) You have had no opposition to the introduction of improved processes of machinery, have you?—No; our men are of the better class of workmen, and I do not think that we have had any interference in such things. But reverting to the question of foreign competition, I should say that at Creusot the average of the wages of all the men (they employ, perhaps, about 2,000) in their engine factory only comes to 2*s.* 11*d.* per day of 11 hours; whereas in our own works it reaches 3*s.* 10¾*d.* for the same number of hours—(with us they work 10 hours, but I have calculated it for 11 hours, to make it proportionate), and including the piecework balances that we pay, it actually reaches 4*s.* 5¾*d.* as compared with their 2*s.* 11*d.*

19,039. What difference does that make in the price of an engine?—It almost doubles the wages paid.

19,040. (*Mr. Mathews.*) You have taken analogous occupations, and that is the result of the comparison?—That is the result of the comparison.

19,041. (*Mr. Hughes.*) You do not want to see wages in England go down to the Creusot level, do you?—Do you speak to me as an employer or as a man?

19,042. Whichever way you like; as an Englishman?—I want to see all Englishmen having better wages. The operation of my management at Manchester has been this; when we have reduced our artizans in consequence of a diminished trade, I have never touched the labourers' wages. I think that the labourers are underpaid, and I think that in some cases the artizans, especially the boiler-makers, are overpaid in proportion. If all the world rises it is nothing to me. That is what Mr. Allan may get accomplished perhaps. The point that we have got to consider is how we can best pay the whole of our population, not the artizans and unionists only, and how easily we can attain that end; and if we do not get foreign orders we must close our shops, and if we do, is Mr. Allan able to take all the labourers, as well as others, on his books?

19,043. (*Mr. Mathews.*) Although we should all like to see a greater rate of wages paid, is not that controlled in a great degree by competition?—I think that the rate of wages, if let alone by the unionists, is controlled by demand and supply.

19,044. Is not that consideration paramount to any artificial system that you may adopt for regulating wages?—Perfectly. We do not adopt any artificial system.

19,045. It is beyond the control of employers or men?—Yes.

19,046. However we may try to nullify that law, it will act in spite of us?—I believe in the long run it will.

19,047. (*Lord Elcho.*) Can you say how many men you employ?—About 1,600 men when in full work. I daresay that we have that number now.

19,048. (*Mr. Mathews.*) Since the establishment of trades unions, and the control of these unions by officials, has there been any greater difficulty experienced by you in communicating with your men, and making arrangements with them upon any disputed point, than there was before you were acquainted with trades unions?—I believe that when we have any difficulties between us, instead of settling them at once between our men and ourselves, they have first of all a shop meeting of the men, and then they refer everything to the Manchester committee; and then, if the case is of sufficient importance, they refer it to the London executive.

19,049. That loosens the tie, does it not?—I think so. We are always looking at a power beyond our control.

19,050. Does that state of things amount to something like this, that the workmen get as much as they can out of you, and you get as much as you can out of the workmen?—I daresay it is so. In fact Mr. Allan has said, I think, that they get as much as they can out of us.

19,051. Assuming that to be the condition of things, does it not follow that all that sympathy and good feeling and good fellowship between the master and workman which used to exist has been broken up?—I think it is simply a question of political economy now.

16,052. And is political economy very easily reconciled with Christian principles?—I do not know that they are altogether irreconcileable. I think you must do the best you can for a man who has met with any misfortune.

19,053. When things are on that footing, preaching a sermon to the trades unions and the masters has not much effect?—You may say that of society in general. If we were all perfect we need not have any trades unions.

19,054. (*Lord Elcho.*) Or police?—Or police.

19,055. (*Mr. Mathews.*) Do you think that trades unions are likely to remove any of this objectionable feeling in society?—No, I think that they are based on a bad principle, that is to say, that they will not allow anybody to work that does not belong to their own creed, in opposition to the principles which they put forth on the title-page of their book of rules, that "all men are brethren."

19,056. If that principle which you have described is the right principle, then the repeal of the corn laws was a mistake?—Yes. Mr. Allan says that it is a mistake to say that that is their principle. I say it is the fact, whether they avow the principle or not.

19,057. (*Mr. Booth.*) They aim at raising wages through the instrumentality of a monopoly?—Yes; and if I am not in their trade they will not allow me to come in and work at the trade, though I may be able to make a better key, for instance, than any of them can.

19,058. (*Mr. Mathews.*) With regard to the limitation of apprentices, have you had any difficulty in that respect?—We fought a battle with them and beat them.

19,059. And you have retained the privilege of educating apprentices to any extent you think right?—So far as we know that is so; but the foremen sometimes do things that we are not cognizant of. With regard to the principle of these societies, I may call attention to the fact that Mr. Allan's club has a rule which I think is one of the things that ought to be objected to if the Legislature is going to recognize trades unionism. They say in rule 15, section 9, "That the contribution of members "shall be held for the objects contemplated by the "rules, or such as the majority of members may "sanction." Now we know very well what a majority of railway shareholders is against a compact phalanx of directors, and therefore the executive in London, by getting a vote of the society, can apply the funds of the union to any purpose they like.

19,060. You think that whatever the feelings of the local branch, if our friend Mr. Allan in his peregrinations were to come to Manchester, his advice would overrule the Manchester branch?—Yes, just in the same way as the chairman of the board is the most influential man on the board.

19,061. What are the "au bois" boiler-plates to which you refer in your statement?—They are charcoal boiler-plates. I have made a statement there of the cost of boiler-plates in France, and actually delivered at our works from France, as compared with a similar quality made in England.

19,062. You cannot make a similar quality in England, can you?—We have a similar quality in this sense that it corresponds in the minds of engineers with the other.

19,063. There are no charcoal boiler-plates made in England, are there?—No, but supposing that you are an engineer and specify a boiler of a certain quality, we may fairly say that "au bois," the French charcoal plate, is equal to Low Moor, and I say that the French charcoal plate we can buy at 26*s.* a cwt., whereas the Low Moor, a similar size, costs us 30*s.* a cwt. delivered at Manchester.

19,064. If it were not for the imperative character of the specifications which oblige the English locomotive makers to use Low Moor plates, as good a quality might be obtained at 26*s.* from Staffordshire as you pay 30*s.* for here?—That I, as a locomotive maker, cannot admit. All I have to say is that locomotive boilers are made in England of that quality at that price. I would most willingly go to France, by permission of the engineer, and get the "au bois" because I have tried it. That is exactly the question which M. Schneider asked me at the French Treaty Committee, whether we always made our boilers of Low Moor, he having in view the manufacture of his own iron. At all events it is quite clear that we are just on the balance with them as regards competition.

19,065. (*Lord Elcho.*) Have you anything like a union amongst the masters?—We have a union which was created about two years ago to resist the encroachments of the iron moulders, but it is called a defence association. I shall be glad to put in the rules of that association if it is desired. It merely sits to give information. We have no rule that compels us to take any course of action; each man can do as he likes.

19,066. How many joined that association—is it an association confined to your district?—It is an association confined to our district extending to Blackburn in the north and to the district round Manchester; perhaps 50 or 60 firms join it.

19,067. Do you think it possible or probable, assuming that there is an aggressive tendency on the part of the unions of men in your business, that a general defensive association could be formed on the part of the masters?—I think it is utterly impossible. There are a great many masters in our trade who are very small men, men who have been workmen themselves perhaps within a recent period, and employ only half a dozen men. Supposing that we agree against an aggression of the society to have a lock-out, those men cannot afford to stand out, and unless we all stick together we cannot beat them. The only plan that we adopt now is for each to fight his own battle on his own hook.

19,068. Do you think that the large firms cannot combine?—I think not.

19,069. But they have done so in other trades, why should they not in yours?—Our interests are so diverse, and our trade so different from others.

19,070. Why should your interests be more diverse and your trade be more difficult in that respect than the shipbuilding trade, for instance, on the Clyde, where masters have combined?—They have combined just for a time.

19,071. No, they have a permanent association which was formed in consequence of the strike two years ago?—All I have to say is that it will not be permanent; my experience is against the possibility of getting a number of men with diverse interests (one having a locomotive trade, another bridge building, another stationary engines, and so on) to stick together.

19,072. (*Mr. Mathews.*) You think that a combination of that sort may be good for a time for a special purpose?—I think it may endure for a time for a specific purpose.

19,073. But that it cannot maintain itself in permanence?—No.

19,074. (*Lord Elcho.*) And that because of the discordant interests of the different individuals?—Yes.

19,075. Have you had experience either in the way of communicating with your men collectively, or in the way of communicating with chosen representative men in cases of dispute?—I have.

19,076. What has been the result generally?—The result is always now "that they take time to consider," which I know means a reference to the Manchester committee.

19,077. Do you think that it might be desirable to try and bring about such a state of things as that, instead of striking, masters and men should meet and talk their disputes over round a table (I do not mean with any legal powers)?—May I ask if you mean courts of conciliation?

19,078. Courts of conciliation, or a certain number on each side meeting to talk the thing over?—I would not have the slightest objection to do that to-morrow, if you would remove the action of the trades unions.

19,079. Supposing that instead of removing the action of the trade union, it was an understood thing that the two sides would meet in this way, and that you accepted the union as the organ of communication on the part of the men?—I think you must get a new generation before you can get employers to accept the union as a power or as an authority to discuss any questions of that sort.

19,080. Even as the representative of the men?—Yes, I think so. We are too far apart in our prejudices; at all events I admit that we have all one interest, although Mr. Allan does not think so. Foreign competition has affected the men as well as the masters.

19,081. (*Mr. Mathews.*) You think that the encroachments of foreign trade have already had the effect and will continue to have the effect of throwing the skilled engineers out of employment?—I think so.

Mr. J. Robinson.

1 July 1868.

19,082. (*Lord Elcho.*) But I understood you to say that it was not the action of the union that caused those encroachments of foreign trade?—Yes, but I think that whatever tends to keep up the price of labour in this country puts us in a worse position to compete with a foreign country.

19,083. Do you believe that if as much as possible is done by introducing improved machinery, that will improve our position, because I have heard it stated that the cases where foreign trade has taken such a start have been cases where the manufacturers abroad have used new machinery, and that for instance there is not such a thing in America as a horseshoe nail made by hand, and that iron goes out from England to America which is there made into locks, and comes back here in the shape of locks?—I think it quite possible that improved processes do go on in some countries as long as the demand for labour is equal to the supply. We perhaps above all other houses in the trade, being both locomotive engine makers and tool makers, have been tempted to step ahead in that direction, and have made a great many machines for facilitating processes which perhaps would not have been made otherwise, though lately there has been rather a standing still in that respect, but that has induced an application on the part of all other competing firms in England for the same machines, and we are constantly supplying them to competitors abroad. We are sending out materials to cut our own throats, as some would say.

19,084. (*Mr. Mathews.*) If you did not do it other people would?—Yes, I am a freetrader. I make for any man what he asks me for.

19,085. (*Mr. Booth.*) Your defensive union which has been mentioned, I suppose, never attempts to control firms that are not parties to that union; you do not interfere with them?—Not at all. And in order to free myself from any possible inuendo against our union, I would rather put in a copy of the rules, as the association has been mentioned in evidence, because you will see that it is perfectly harmless; that in fact it is rather for consultation than for any other purpose.

19,086. (*Lord Elcho.*) But as regards its being harmless, there would be nothing morally wrong, would there, in masters forming combinations the same as the men do?—Nothing morally wrong, but I think that it would put us in a position of antagonism which I should not like to see.

19,087. (*Mr. Booth.*) But your union does not interfere with persons not parties to the union, while the trade union does?—Just so. You will perhaps allow me to read the only rule at all binding even upon members of the union, rule 3: "The basis of action "of this association shall be that of mutual agreement "and engagement of the members of the allied asso- "ciations to abstain from giving employment to "workmen who are on strike against such employers "as are members of any branch association," so that if Mr. Beyer had a strike I would undertake during the strike not to employ the men on strike against him, and *vice versâ* he would undertake the same if I had a strike. That is the only rule compulsory on the members.

19,088. But the firms that are not members of your union and that do not act upon that rule you do not interfere with?—Not at all; and the amount of interference is not much if that is the only rule that really binds the members. I have had put into my hand some observations which I have made upon Mr. Allan's evidence; perhaps the Commission will allow me to call attention to them. At question 678 Mr. Allan is asked by Mr. Merivale: "Is there any "complaint of the work being inferior in places where "piece-work prevails?" and the answer he gives is, "Yes; as a general rule I think it is inferior." Now I want to put to Mr. Allan, through the Commission, whether he thinks the work at Manchester, at such shops as our own, and Beyer's, and Whitworth's, is inferior to any work in the kingdom, because at those shops I think we all work piece-work.

(*Mr. Allan.*) I give credit to Sharp and Stewart for producing perhaps the best locomotives of any firm in England; but in speaking with regard to piece-work I say that not only in Sharp, Stewart, and Company's place, but in all other places where piece-work is worked, there is a tendency on the part of the working men to slide over the work. I have found it from my own practical experience, and I believe that that experience proves this, that not only does it exist in Mr. Robinson's firm, but that it exists in all other places where piece-work is worked. Again, if you will refer to the report of the Select Committee of the House Commons at the time of the Russian war, with regard to the gunboats that were made, you will find that piece-work is condemned throughout the whole affair as being inferior work to day-work; and I believe that the same thing exists not only in one firm but in all firms where piece-work is practised.

19,089. (*Mr. Booth to Mr. Allan.*) That is a principle of human nature?—Yes, the men that are on piece-work just try to do as much as they possibly can; but now, to take the Crewe engines, for example, I will undertake to say that at the time I was there they made a superior class of engine to any other engines, for this simple reason, that it was all day-work. Mr. Robinson found a little fault about my statement as to these 15 engines which have been supplied from Schneider and Co. to the Eastern Counties Company. Those engines, as far as I can learn, are exceedingly good engines; but when I made the statement about that portion of the material being furnished from Yorkshire, I stated that I would not vouch for the fact, but that I had been informed that the boilers, the wheels, the cranks, and axles were furnished from Yorkshire; and I said, taking these into consideration, they formed an important part of the engine. Now what Mr. Robinson has stated here to-day does not disprove that statement, indeed it goes to show that my statement was correct with regard to some portions of the engine.

(*Mr. Robinson.*) I believe that what Mr. Allan has now stated is entirely a misapprehension. When he speaks of boilers he leads the Commissioners to conclude boilers manufactured here?

(*Mr. Allan.*) No, I mean boiler-plates.

(*Mr. Robinson.*) I say it is probable that the boiler-plates were not made in Yorkshire. I say that boiler-plates manufactured by the Creusot firm themselves are equal in quality to Low Moor, and there is no other part of the engine of which Mr. Allen speaks, which could have been made in Yorkshire, because those other parts were specified to be the manufacture of Krupp and Essen; and the only thing he can speak of as being made in Yorkshire is the boiler-plate, which is a different thing from any part of the engine being made in Yorkshire. Then with regard to piece-work, from which we have wandered a little, I have to say that the plan of doing piece-work in an establishment like ours, and in Whitworth's, and Beyer's, has led to such a reputation for our work that we can get a higher price than other firms.

19,090. (*Mr. Mathews to Mr. Robinson.*) You are satisfied with the quality of the work which is produced under the piece-work system?—Yes, and there is a check in this way. A smith, for instance, does his work by piece-work, a turner or fitter comes after him, and if the piece-work is bad, it is sent back to the smith to be replaced without cost. The man in the after process is always ready enough to find fault with the man in the previous process if he has not done his work well. I say that it is far easier to check the quality of work done in a properly organised establishment, than it is is check the amount of the work.

19,091. (*Lord Elcho.*) If the work is properly checked under the piece-work system and the man is properly paid for it, there is a greater inducement to him to work well under the system than under the day-work system, because under the day-work system he does not have his day wages interfered with; while under the piece-work system they may be interfered with?—Yes, and that is why every time that these gentlemen try to do away with piece-work I fight.

19,092. An idle man, working by the day, has an interest in doing as little as he can; an idle man,

working piece-work, if he wishes to have his wages at all, must work up to the mark which the superintendent thinks necessary?—Yes; and he will first of all try to do his work quickly, perhaps, and at first it may be badly; but if it is badly it comes on his own head, because the next man finds fault with the work and he has to do it again for nothing.

(*Mr. Allan.*) Let me ask Mr. Robinson to look at the answer given by me to question 918.

(*Mr. Robinson.*) "I have been informed (I do not "vouch for the correctness of it), that not only were "the tires completed, but that the cranks and wheels "were completed, and the axles as well, in this "country, and those form a very important part of a "locomotive." I have to say that the crank pins were very likely completed at Essen, that the tires were very likely completed at Essen, and that neither axles nor wheels were in this country till they came in with the engine in a completed state. I cannot vouch for the thing further than this, that I know the practice of the Great Eastern Railway Company. We have made engines for them, and they would not be accepted if those specifications were departed from; but that is a fact which can be easily ascertained from the Great Eastern people themselves.

19,093. (*Lord Elcho.*) Where does Krupp's iron come from?—I fancy that he has a mixture of Swedish and Westphalian. I do not think that he gets any English iron.

19,094. (*Mr. Mathews.*) There is no Bessemer process there?—He has lately put up a Bessemer.

(*Mr. Allan.*) I may add that the question was put to me by Sir Daniel Gooch, a gentleman who from his position could have refuted any misrepresentation of mine.

(*Mr. Robinson.*) I have the specification for the engines, which I shall be very glad to put in (*handing in the same*).

The following statement and tables (referred to in the foregoing evidence) were handed in by the witness:—

I.—Statement by Mr. John Robinson, Engineer, (of the Atlas Works, Manchester,) in reply to questions issued by the Commission.

Objects of Trades Unions.

My conviction from an experience of at least 25 years is, that the relations between workmen and their employers in the engineering trade have been much disturbed by the existence and extension of trades unions.

Before the great strike and turn-out of 1852 I knew almost every man at the Atlas Works by name and appearance, from their having continued steadily in the service of the firm for a very considerable number of years. The struggle of 1852, ending in the discharge of all the workmen, and the refusal to re-admit them without their signing a declaration that they were not members of a trades union, brought in a new set of hands who gradually joined the unions, and since then the bond between employers and employed has been much relaxed, since the employers feel that in dealing with their workmen they cannot expect confidence or decision, so long as the results are directed by irresponsible committees, personally unknown to the employers, and therefore beyond the reach of any moral or social influence which might be brought to bear upon the men, if they held the simple relation of employed to employer.

I have always declined in any way to recognize the existence of a club for trades union purposes, as I have held, and still hold, the opinion that they exercise a bad influence on the men, and consequently on the trades which they seek to regulate.

Regulation of the Rate of Wages.—The minimum rate of wages being fixed for a certain district by the committee of the union, all men not able to obtain that rate, if members, are liable to be fined, and so the inferior workman is in this respect punished for his inferiority, but on the other hand the clever, persevering, and industrious workman is prevented from gaining the advantages due to his skill, because the employer well knows that if he is advanced in pay, in proportion to his abilities, an application for a similar advance from all the men in the same branch of the trade would sooner or later follow.

Limitation of the Hours of Labour.—The limitation of the hours of labour, if followed by no similar reduction of wages is simply another way of gaining an increase of pay, and it has in my opinion a most serious influence upon the British manufacturer in the presence of foreign competition, inasmuch as it is even more easy to reduce wages when trade is bad than to increase the number of working hours under any circumstances, and so the foreign competitor, having no such restriction, has cheaper labour, and a larger amount of work produced per annum, for a certain amount of capital invested, and fixed charges incurred, than the British manufacturer.

Restriction on the Number of Apprentices.—Restriction on the number of apprentices employed serves two ends in the trades union point of view; first, it tends to secure that men shall be paid for work which could be done by boys at a cheaper rate; and second, it prevents the admission into the trade of too many competitors. In this matter labour should, in my opinion, be perfectly unfettered; any boys able to procure work should be admitted to a trade, and the demand for labour should be left to regulate the supply of operatives.

Piece Work.—This mode of working has been objected to by the unions for fear of getting too much work done for too little money, or in too short a time, and to prevent inferior and idle workmen being placed at a proper disadvantage by the skill and exertions of the more active workman.

In my opinion piece work is the fairest mode of securing the payment of a workman, in proportion to his skill and industry, since it is easier in our business to watch the quality of work produced than to watch the efforts of every workman in the establishment, and I see no difference in principle between my being bound to make a locomotive engine for a sum fixed beforehand, and a workman being bound to produce a certain part of it at a price fixed beforehand; the profitable result to each depends upon the amount of exertion used in executing the work.

Overtime.—When, as in our trades, almost all our productions are made to order, and contingencies arise preventing their completion at the anticipated time it becomes almost a necessity to have the power of working overtime, in order to catch a vessel, or to prepare for the opening of a railway, or to anticipate the closing of a northern navigation. Should overtime be entirely stopped the English manufacturer will be in a worse position to meet foreign competition than now, for the reasons given already against the limitation of the hours of labour.

I am averse to systematic overtime, but I find that when trade is brisk it is sometimes difficult to retain skilful artizans in our service unless they are allowed to work overtime, since they are anxious to get all the money they can when opportunity offers.

Employment of Non-union Men.—In large establishments the unions almost always succeed in preventing the employment of non-union men, because, when a foreman wants an additional hand, he generally asks some of his men if they know a good one: application is then made at the club room, and one of the members out of work or in receipt of inferior wages is recommended for the job, and probably succeeds in obtaining it, to the exclusion of a non-union man of equal or greater ability.

It is becoming more and more the practice to prevent union men from applying for work at the large shops, lest the appearance of a number of men seeking work at the doors should produce the impression that workmen are more plentiful than work, and so lead to a reduction in the rate of wages.

Employing unskilled Workmen on Machines.—The dismissal of all unskilled workmen, *i.e.*, all workmen not mechanics by trade, was attempted to be enforced in December 1851, but as the unions at that time were unable to accomplish their object, in consequence of the opposition of the employers, men and boys not members of the amalgamated societies have since been allowed to work planing machines, drilling machines, boring machines, shaping machines, slotting machines, screwing machines, &c.; but these men so employed have been induced to form another society with objects similar to other trades unions, and doubtless to league with them whenever occasion requires. Men of this class are as capable of producing as good work by the use of the machines they are employed upon as "mechanics" who have served their time at turning or fitting could do, and of course at a cheaper rate.

Mr. J. Robinson.

1 July 1868.

EFFECTS OF POLICY OF TRADES UNIONS.

I do not believe that these unions have done much on the whole to advance the rate of wages in their respective trades, but I have a very strong conviction that their tendency is to diminish the amount of work produced for a given sum paid in wages, and so to increase materially the cost of the production of labour. In many isolated instances the threat of all the men leaving a shop together has no doubt induced the employer to give an advance of wages rather than close his works, but in such cases he feels wronged, and takes the first opportunity he can to regain his former position.

I hand in a table (see *post*, No. II.), showing the relative rates of wages paid to the various classes of operatives at the Atlas Works in 1851, and from 1861 to the present time, and I think it will be admitted that the gain generally has not been greater than that obtained by agricultural labourers, and cooks and other domestic servants, during the same period, though there has been no such union amongst them.

In consequence of the trade union regulations the clever, industrious, man suffers because he cannot obtain from his employer a higher rate of wages than an incompetent man in the same trade, since if the employer gave him an advance every other man in the same branch would feel discontented until he obtained a similar rise.

Abolition of Piece Work.—The abolition of piece work is sought for the same reason, lest by its adoption more work should be done in a given time than the trade committees think prudent, and it is therefore sought to debar the skilful workman from exerting the powers which nature and education may have given him, and thus all stimulus to exertion is removed until the man is demoralized and sinks to the level of his fellows.

By shutting out non-union men from employment a monopoly of the trade in the hands of their own members is sought by the unions. It is allowed on all sides that this would be inexpedient for the interests of trade generally, and if so would ultimately prove detrimental to those of the workman.

Skilled Labour on Machines.—The retention of machines such as I have just mentioned in the hands of skilled artizans, members of the trades unions, is sought with the same object as shutting out non-unionists from employment on such machines, and would result in an unfair monopoly by members of the unions.

The interests of the operatives, in their ultimate development, are identical with those of the employers, inasmuch as if the restrictions on labour sought to be imposed by the unions result in increasing the cost of the products of their labour to such an extent as to allow foreign competitors to obtain orders, whether in their own, our own, or in neutral markets, the country loses the trade, and the workman his share of the wages which might otherwise have been his.

The employer, having taken large contracts, is often met by the workmen, who having learnt his position, with a demand for an advance in wages, so that the rates calculated in his estimates have to be exceeded, and he becomes to that extent the loser. In future, therefore, he tries to protect himself against this risk by seeking a larger rate of profit to cover contingencies, and probably thereby loses the contract for himself and his workpeople.

If because of the limitation of the hours of labour the employer asks a certain period for the accomplishment of the work which he tenders for, while a foreigner, unrestricted by such limitation, offers a shorter time, he may in like manner lose the work for himself and his operatives.

Number of Apprentices.—The restriction in the number of apprentices simply obliges the manufacturer to employ mechanics at from 25*s.* to 35*s.* per week upon work which to a considerable extent boys paid at the rate of from 7*s.* to 20*s.* per week could do as well, and so the cost of his productions is unduly increased, and he is less able to compete for contracts than his more fortunate foreign competitors.

Abolition of Piece Work.—The abolition of piece work I look upon as another mode of keeping down the skilled and industrious workman to the level of the idle, incompetent, and careless one, since a good man working by the piece simply earns a higher amount of wages in a week than an indifferent man, and in exact proportion to his ability and industry, but if hindered from doing so his employer as well as himself is prevented from reaping the advantage of his superior skill, and so from producing the work at the lowest possible price.

Effects of Policy as regards the Interests of the Employers of Labour.—The restriction on the employment of non-union men removes from the wages competition all men included under that description, and so the employer is prevented from going into so large a labour market as would otherwise be at his command. If he were at perfect liberty to select any workman he chose, the probability would be, not that wages would fall, but that more and perhaps better work would be produced in a given time.

The same observations would apply to the employment of artizans on machines, except that the wages do not and would not rise so high for that class of labour as they do for that which is more distinctively "skilled."

Effects of Policy as regards the Interests of Trade generally.—The result of all these restrictions sought to be imposed upon workmen is, that trade is driven from those neighbourhoods where the unions are strong, to those where they are less active; as from London to the Clyde, Leeds, or Newcastle; but worse than this, that formerly, when these restrictions were less oppressive, England supplied certain kinds of machinery, for instance, locomotives, to France, Germany, Austria, Holland, Russia, Italy, Spain, and other European countries; whilst now France, Germany, and Austria, not only supply their own wants, but have become important competitors with us in Russia, Spain, Italy, Egypt, and even in India and in England herself, and as a palpable result of this competition I have to state that during the past two years 40 locomotives have been ordered in France for an English railway, of which 15 have been delivered according to specification, and are reported to be equal to the average standard of English make, and that for one of our Indian railways 20 locomotives have been ordered from Wurtemberg, and 10 from Switzerland, all of which are in course of delivery, so that the employers of England are certainly not beyond the reach of the competition of those countries to which they were formerly exporters of similar articles.

The export also of workshop tools to France, Germany, Austria, and Belgium has much diminished since these countries have formed the means of manufacturing these machines for themselves.

The table which I hand in (see *post*, No. III.) shows the enormous progress in our exports of machinery and engines exhibited by comparing the six years included from 1855 to 1860 with those from 1849 to 1854, while from 1861 to 1865 the increase has been very inconsiderable.

Effect of Trades Unions on Character of the Men.—My opinion of the effect of trades unions on the character of workmen is, that as they are compelled when joining them to submit to a great number of restrictive rules regulating the rates of wages, amount of work to be done per diem, obligation to leave work when called upon by the club, discouragement to work piece work, contributions to maintain men out of work for trades purposes, &c., the individual character of the man is lost, stimulus to individual exertion is removed; and frequent contributions to maintain men in idleness have the effect of making the man less careful with his work, less anxious to keep his place, and is likely to bring him to the conviction that it is of no use to put forth the efforts for which his education, his abilities, or his energy may have fitted him, because he finds he cannot rise above the level of those around him, and he falls back, perhaps demoralized, into the rank and file of his club.

AMALGAMATION OF UNIONS.

The disadvantages to employers of amalgamation of trades unions are that in case of a dispute with his men in one trade, that trade is able to call in the assistance of the other associated trades, so as by a larger array of numbers to force the employer to submit. These associated trades are brought into action without any knowledge of the question in dispute, save such as is given by the workmen or their unions, which is necessarily "ex parte," and they have not therefore the means of forming a correct judgment of the merits of the case.

The advantages of amalgamation of trades unions are not affected by the proximity or remoteness of amalgamated unions. As they are universal they act from one common centre and through one organized association; they can thus enforce their dictates against the workman who has offended in whatever district he may apply for work, by the circulation of black lists and other similar means.

Operation of Trade Councils.—I am of opinion that trades councils become simply a bar to the relations which ought to exist between the employer and his workpeople, since the employer usually declines to recognize the right of the council to interfere and deems its influence antagonistic to

his own, so that if once the workmen of his establishment put themselves under the guidance of the trades council, the employer feels that he has lost all personal and moral influence over them, and resists any application which may be made to him by them for either an advance of wages or a modification of existing arrangements.

Law relating to Combinations.

Defective Points of present Law relating to Combinations.—I am of opinion that the law should not permit the present combination of trades unions with benevolent objects in societies formed ostensibly for benevolent purposes.

The payment for many years by industrious and independent workmen into the funds of these societies naturally renders the men unwilling to forfeit all the advantages thus fairly gained for themselves, which they would do by seceding from the union whenever an attempt is made to take steps which their judgment disapproves. I would especially refer to the hardship imposed upon a man who has joined his society for prudent and provident reasons, being at the mercy of the trades council of the Amalgamated Society of Engineers, whose rule 15, sect. 9, states "that the contri- "bution of members shall be held for the objects contem- "plated by the rules or such as the majority of the members "may sanction."

Proposed Amendments to present Law.—I should propose to make it penal for any benevolent or friendly society, whether registered or not, to appropriate its funds or to employ its organization for trades union purposes (*i.e.*, for the restriction of trades), or for any purpose whatsoever not fully and openly stated in its rules or in its byelaws; as, for instance, I should confine the action of the Amalgamated Society of Engineers, Machinists, &c., to the objects stated in the preamble to their rules, and preclude them from exercising those restrictions on trade implied at pp. 4 and 5 of their preface.

I would also suggest that picketing during a strike at any establishment be declared illegal, and that in case the proprietor or his representative knows by his own observation that such a thing exists, it shall be competent for him to swear a declaration to that effect before a magistrate, who shall thereupon be empowered to issue a warrant for the apprehension of such men as may be pointed out to the officer as acting in the capacity of picket, and on conviction to punish them as the law may direct.

Effect of Trades Unions on the Rate of Wages.

I am disinclined to the conviction that by their means wages have been raised to a higher point than they would have reached without a union for that purpose, and I refer to the table already mentioned (No. II.), to show how little has been done in that way in our own establishment during the last 16 years.

I am free to admit that in the case, especially of employers on a small scale, the dread of a strike of the workmen may have induced an immediate advance in wages, but generally the scale of wages is regulated very accurately by the demand for work and the supply of labour in the market.

In my own experience I have known the rate of agricultural labourers advanced from 10*s.* and 11*s.* per week to 15*s.* and 16*s.* per week in 15 years, and in another neighbourhood affected by iron, copper, and slate mining, I have now to pay 18*s.* per week for a good labourer; this rise has taken place without any combinations or union whatever.

The rise in the rate of wages of domestic servants during the last 25 years must be within the knowledge of all employers, and they certainly have gained it by the simple law of supply and demand. I am disposed to think that individual exertion to deserve and gain higher rates of pay would tend more rapidly to the raising of the rate paid to the operative classes generally than the present mode of combination, since where piece work is in vogue the individual receipts of the workmen are considerably higher than where ordinary day wages are paid. The country would reap the advantage of producing more work per head of population.

Effect of Uniform Rate of Wages on Character of Workmen.—I am of opinion that a uniform rate of wages discourages the intelligent, well-educated, and industrious workman, brings him down to the level of the incapable operative, and removes every chance of provoking, by the stimulus of good example and higher wages, the inferior man to endeavour to raise himself in the scale of society, to their deterioration morally and intellectually. Instance a barrister paid at rates applying to all barristers, what effect upon the advocacy; the stimulus to exertion in their case is larger practice and higher fees than could be gained by an inactive and incompetent advocate.

The tendency of unions to render the wages more equal in different districts would seem to exist; but I have never yet been able to understand how wages continue to exhibit such discrepancies in various parts of the country as is shown by Table No. IV.

Difference in the Treatment of Union and Non-union Men.

I find that non-union men have the utmost difficulty in getting employment in any large shop; the foremen who engage the men not unfrequently sympathize with the unions, and as it is the custom in all large shops for the foreman to ask the workmen already employed to recommend an additional "hand" when he needs one, the result is that none but union men are recommended or employed.

I hand in for inspection a copy of the carpenters' byelaws,* to show that in this trade at least rules exist to keep out union men. I believe them to be practised by all clubs, as I know from long experience that it is extremely difficult in large establishments to retain the services of non-union men, however efficient they may be.

Strikes and Lock-outs.

The lock-out of 1851–52 arose from certain demands made I think on Messrs. Hibbert, Platt, & Co., of Oldham, who were and are large machine makers. The men demanded (see "Manchester Guardian," December 24th, 1851):—

"1st. That no workman shall, after the commencement "of 1852, work any overtime, except in cases of accident, "and then be paid double wages, and that piece work be "entirely discontinued.

"2d. That all planing, shaping, and boring machines "be worked by mechanics or apprentices, or taken up by "them as they fall vacant.

"3d. That the labourers hitherto employed on those "machines be not unduly interfered with before the begin- "ning of the year 1852, when the machines shall fall "entirely into the hands of mechanics."

The employers felt that these demands were unjustifiable, and decided to close their works in the middle of January 1852, and they remained closed for about four months.

On the 5th April 1852 the Amalgamated Society, through Mr. Allan, their secretary, withdrew the resolution for the abolition of piece work and overtime, and asked the employers to withdraw the "declaration" proposed for the signature of the workman when taken into employment. In most cases the declaration was retained, and the unionists were thought to be beaten.

At the end of the year 1865 the moulders of Manchester struck for an advance of 2*s.* per week, under the direction, as I believe, of the Moulders Society; and in consequence of our refusal to comply with a demand which we thought unreasonable, for many weeks our establishment suffered great inconvenience for want of moulders. We procured a supply after the lapse of some weeks, but our loss was considerable.

In the month of August 1866, while we were building a new boiler shop, the carpenters of Manchester struck, also for an advance of 2*s.* per week; and the progress of our building was delayed for at least six weeks, to our great loss and inconvenience.

In the month of June of the same year the pattern makers in our employ and in Manchester generally struck for an advance of 2*s.* per week; all our pattern makers left, except the apprentices and one man who was already receiving the rate demanded, and for many weeks we were unable to make any satisfactory progress with such patterns as we were needing; the rest of the works were consequently put to inconvenience and the number of men reduced.

Whenever partial strikes happen in large establishments like the Atlas Works the rest of the men employed suffer by the delay and loss of time involved, even though they may not absolutely be discharged; the fulfilment of contracts in due time is not unfrequently rendered impossible by these proceedings.

Machinery.—I know of no strike in our branch of engineering to resist the introduction of machinery.

Picketing and Intimidation.—Picketing and intimidation always existed, and I continually observe pickets when there

* *Bye-laws of the Manchester and Salford Lodges of the General Union of Operative Carpenters and Joiners*, which state (section 33) that members of the society taking contracts must "in all cases employ society men."

Mr. J. Robinson.

1 July 1868.

are strikes, but I do not remember any very serious acts of violence and outrage to our own workmen, due perhaps to our position in the middle of a town well supplied with police, though I have known a man to be assaulted at our own door.

Effects of Strikes.—In the general strike and lock-out of 1852 no advance of wages was sought, nor, as far as I remember, gained.

At the iron-moulders' strike against piece work, in April 1862, the weekly rate of wages was 34*s.* per week; when other men came in the wages were reduced to 32*s.*, and did not rise to 34*s.* again until 1865.

After the strike of iron-moulders in 1865 no weekly rate of wages was paid in our establishment to iron-moulders; the men were simply paid by the hundredweight or piece of work done, and I have the impression that they gained no advantage by their strike.

At the pattern makers' strike of June 1866 for an advance from 32*s.* to 34*s.* per week no such advance was obtained at the Atlas Works, though I understand that the advance was given by many of the other employers.

Effects of Trades Unions upon Trade.

In my opinion the effects of trades unions upon the engineering trades has been the imposition of such restrictions upon the employer as to rates of wages to be paid, classes of men to be employed, and discouragement of piece work, as seriously to endanger the continuance of that growth of prosperity which up to that time Great Britain has enjoyed; the absence of this prosperity would naturally be as disastrous to the interests of the operatives as to those of the employers. (See *ante*, for further remarks upon effects of trades unions.)

Foreign Competition.—I wish to state that since I have been engaged in the manufacture of locomotive engines a great change has come over the trade in this country, as will be shown in the table which I hand in (see *post*, No. V.) relating to the business of the Atlas Works in that particular branch.

As a further illustration of this subject, I have to state that during the negociations for the Treaty of Commerce with France, in 1860, an order was given out for a large number of locomotives for Russia, through the Credit Mobilier of France. The order was actually taken by an Austrian firm at a price less than those quoted either by England, France, or Germany, showing that price only, and not national predilections, guided the destination of the order.

During the last year the East Indian Railway Company sent out specifications for a large number of locomotives for their railways; one result of the competition was that 30 of these locomotives were ordered from Messrs. Kessler & Co., of Esslingen, in Wurtemberg, and 10 from Messrs. Esscher, Wyss & Co., of Zürich, at prices lower than were offered by English makers.

During the year 1865 the Great Eastern Railway Company issued specifications for locomotives, and so low were the French offers that 40 of these engines were ordered from Messrs. Schneider & Co., of Creusot, although a large part of the material was required to be procured from England; 15 of these engines have been delivered, and I know from the railway authorities, that the workmanship and finish are reported to be "equal to the standard of good English makers."

The trade in workshop tools for Germany and Austria has almost entirely ceased, and that for France has been reduced to very small proportions.

I refer to the table already mentioned (No. III.), showing the exports of engines and other machinery to Russia, Sweden and Norway, Prussia, Hanover and Hanse Towns, Holland and Belgium, France, Austria, Canada, and United States, from which it will, I think, be seen that the progress of our trade in machinery and engines has been by no means proportionate to the general progress of civilization in those parts of the world, and I am disposed to attribute this want of advance in our trade to the competition of foreign countries, to which I have already alluded, and which is further illustrated by a comparison (see Table No. VI.) of the exports of machinery, &c., for first three months of 1865, '66, and '67, and of the exports of unwrought iron and steel during same periods, the one showing an increase, and the other a decrease, in the three years.

The effect of this competition will, I think, be clearly seen from Table No. VII., showing the imports of unwrought iron from 1851 to 1866, which progresses steadily; but an alarming feature is the commencement and rapid, yet steady increase of the importation of manufactured iron since 1860, indicating an advance of foreign competition in a trade which we have been accustomed to look upon as peculiarly our own.

I may mention the fact that during the strike of June 1864, amongst the ironworkers of the West Riding of Yorkshire, my firm were driven to procure the best quality of iron for boiler plates from France; others procured it from Sweden. We also obtained iron of large dimensions for frame plates from France. The relative prices of these irons were:—

	Per cwt. s.	d.
French boiler plates, say 4½ cwts, "au bois"	26	0
English do. L.M.	30	0
French frame plates, say 1 ton each	15	6
English do. South Staffordshire	24	0

All prices delivered at our works.

We still continue to procure frame plates from France, as some sizes are much cheaper when delivered at our works than the English sorts, and the quality quite equal. We should doubtless buy iron sheets of large size also from France and elsewhere on account of their cheaper cost, but the specifications of purchasing, engineers generally confine us to certain English brands.

A most important trade in which I am interested is that of steel tyres for railway engines. These were offered in England, when we began to purchase in May 1862, at the price of 85*l.* per ton delivered by a Prussian house. Soon after an English house came into the market with a quality not then quite equal, at a price of 65*l.* per ton. The competition between the Prussian house and the English manufacturers has reduced the price to 40*l.* per ton delivered in Manchester.

Our purchases from Prussia since the first year of the general adoption of cast steel tyres to March 31st, 1867, have reached in value 19,521*l.*, while from England they have been only 8,746*l.*, or less than half the foreign value. I attribute the whole of this successful competition of foreigners to the fact of their progress and development of manufactures by their growing intelligence and increasing leisure to give attention to manufactures, which their comparative immunity from war and from protracted misunderstandings with their workpeople for the last 30 or 40 years have afforded them; while in England, notwithstanding the repeal of the corn laws, the price of food and of most kinds of commodities are continually advancing, due in a great measure to the increased price paid for labour in the various branches of construction and manufacture. So that the time may be rapidly approaching when the mineral wealth and commercial and mechanical education of our foreign neighbours may reach such a development as to enable them to supply themselves and others with the various articles required by countries of advancing civilization at prices at which Great Britain finds herself unable to compete, and so capital as well as labour, whether of the head or of the hand, may seek in vain for employment in those branches of industry in which we have been accustomed to look upon ourselves as paramount.

Arbitration and Co-operation.

I am of opinion that courts of arbitration are not required, as my experience is that no disputes arise between employers and their workmen individually, except such as have relation to questions of fulfilment of engagements as to wages and piece work balances, and which existing courts readily and I believe satisfactorily deal with.

The only co-operative or industrial society with which I am acquainted is our own company, which, having 88 members, includes 24 who are in one way or other working for the interests of the establishment, our object being in this way to get the largest possible number of clerks, foremen, &c., interested in the success of our business in the same way as the manual workman becomes interested by the system of piece work adopted, *i.e.*, "the more work the more pay."

I have not a strong opinion, but I lean to the idea that in consequence of the difficulty of securing the services of efficient and high principled managers, together with the disinclination to submit to restraint on the part of those operatives who are partners, they are not likely to be able to compete with those establishments where the employers interest is either paramount, or at all events largely in excess of the interest of those employed, since this gives him a proportionate influence in the management of the business, and his intelligence and experience become available for the advantage of the concern.

The witness withdrew.

Adjourned.

1, Park Prospect, Westminster, Tuesday, 14th July 1868.

Present:

Right Hon. the Earl of Lichfield.
Lord Elcho, M.P.
Herman Merivale, Esq., C.B.
John Arthur Roebuck, Esq., Q.C., M.P.
Thomas Hughes, Esq., M.P.
Frederic Harrison, Esq.
William Mathews, Esq.

HERMAN MERIVALE, Esq., C.B., in the Chair.

Mr. James Nasmyth examined.

Mr. J. Nasmyth.

14 July 1868.

19,095. (*Chairman.*) You have kindly favoured the Commission with a statement of your views on paper, I believe?—In order to make out a groundwork for the Commissioners to found their questions on, I have set down the points that struck me as being the most prominently important.

19,096. I think that we shall most probably arrive at your views more easily, if you will please to state them generally in the same way in which you have put them here, beginning with the relation between employer and employed?—My view on this subject is that the true basis on which all transactions in reference to it should be conducted is that of free trade, the non-intervention of any third party between two parties who wish to treat together. For instance, if there is an employer who wishes to employ a workman, those two, it occurs to me, should alone judge of their respective capability of dealing with each other; the intrusion of any third party is, I consider, derogatory to the interests of society at large, and to trade in particular.

19,097. (*Mr. Roebuck.*) I should like to know how far you would carry that out. When men are making a contract I think that you are quite right that there should be only two parties to it; but supposing, for example, that in a workshop there was a common opinion, should you not think that that public opinion of the workshop might be brought in some way to bear upon the master without giving offence to the master or being derogatory to him?—No, I think that the best interests of society in general, and of the workmen themselves, would be promoted by a strict adherence to the fundamental principle of the non-intervention of third parties. I look upon that as the great foundation stone upon which the whole superstructure of any legislation or any fair dealing between man and man should be built.

19,098. That is quite true when the parties are both equal, but do not you think that by the position of circumstances the working man alone is not equal to the master?—I do not see that.

19,099. Do not you think that the master is a much more powerful man than the workman is, if dealing with him alone?—Unfortunately the present circumstances show that it is quite the other way.

19,100. He does not deal with him alone now, but in combination with his fellows. I want to know if the almost helpless working man might not get the assistance of his fellow men so long as he only brings to bear upon the master the public opinion in his workshop; do not you think that it is fair that he should bring to bear the public opinion of his fellows when entering into a contract with his master?—I do not think so when the whole area of employment is open to him. If a workman is dissatisfied with the conduct of his employer or the quality of the work put before him, he is free any day to remove his labour to where he can meet with something more satisfactory to him; there is no compulsion, the workman is a free agent.

19,101. Do not you think that the poor working man who did that might starve?—No, by no means. There are no signs of starvation among working people who conduct themselves properly. It is quite notorious all over the country that the demand for working men is ahead of the supply, and that lies at the basis of all this trouble. I believe that if there were three working men applying to one master for work they would be thankful and content to get any employment, but the moment three masters or two masters are seeking for one man, then, according to the common principles of supply and demand, the men who are sought after perhaps become a little outrageous in their demands.

19,102. I think in your paper you say that you think there ought to be some penal law to prevent the interference of a third party in a contract?—Yes.

19,103. I want to know what sort of interference you would render an offence?—For instance, to put it in the shape of a common commercial transaction, supposing that I wished to go into a baker's shop and buy loaves that I saw were in quality and price what I wanted. Supposing, in attempting to deal with the

Mr. J. Nasmyth.

14 July 1868.

Baker, a third man came and stood on the doorstep, and said, "You shall not go into the shop."

19,104. Supposing he said, "I recommend you not to buy that loaf"; would you allow that?—No, because we must look at what is behind that recommendation. My 30 years' experience of trades unions shows me that even under the smoothest language there is a most terrible power which few employers have the boldness to face.

19,105. I am looking at the matter as a legislator, and I want to know how to frame a law for that?—That is a point which I have not given minute attention to, and it requires a great deal. We have made a great step this year in reference to picketing. In the year 1836 or 1837 I was exposed to a most formidable turn-out, the details of which I could give the Commission presently, and I have had two subsequently to that, and we should have had no trouble in getting over the difficulty if it had not been for the picketing of the avenues of my establishment for two or three miles around. I allude to the Bridgewater Foundry at Patricroft, near Manchester.

19,106. (*Mr. Harrison.*) What trade were those men engaged in?—In mechanical engineering.

19,107. The Amalgamated Society of Engineers was not then in existence?—No.

19,108. Were there any unions then?—Yes, there were unions; the men turned out under the dictation of some society in Manchester. They sent delegates down to us to try and talk the matter over, and I was perfectly firm on the principle that I took up in resisting the first beginning of this strike, which was caused by the employment of a man who had not served a regular apprenticeship to the trade. These unionists wished to cause me to discharge this man. We were perfectly satisfied with him, and we would not discharge him.

19,109. What was the name of the union?—It is so far back that I do not remember the specific name. If they had any distinct name it was the Engineers' Society, or something of that kind.

19,110. Is that union in existence now?—It is merged into a very formidable one now, that of the amalgamated societies.

19,111. You are clear that it was one of the societies which have since become amalgamated?—Yes, I am sure of that; it was the Engineers' Society. I forget the exact title that they gave themselves. Seeing that we would not give in to the demand to turn away this man, they said that there would be a strike of our men, and the men struck, all except, perhaps, about 24 sturdy fellows, who remained with us, and we kept them together, and they were perfectly content. But in order to prevent any new hands coming in we were picketed round in every direction.

19,112. (*Mr. Roebuck.*) But did those pickets do any violence?—Every man that happened to be a working man, coming in our direction, was got hold of, and then they tried cajoling, and they were driven away from us; but some fought their way through and resisted all the blandishments of the unions and got to us, and so the new hands kept dribbling in, it might be one or two in a week or so, whereas we wanted a couple of hundred men to carry us on properly. This sort of thing went on for three months. It became very serious, and our customers, who were very patient at first, began to show a little impatience that their orders were not executed; and though we explained everything to them, there was evidently a great urgency brought to bear upon us to get to work and to deliver the orders in our hands as quickly as possible. It was then that I took a rather formidable, and as it turned out, a very successful course. I was determined not to deal with these trades unions or invite any people into our works who were not willing to enter the employment upon the principle that I laid down, namely, the perfect free choice of the employer and the employed, in fact the non-intervention principle. I then went into Scotland and made a statement in the public papers in Glasgow, and Aberdeen, and Dundee, and various other localities there, because I knew that in my own native country the unions had less power. At that time the men there were working on a perfectly free individual principle, and after hunting up and down the country for some time we got together about 64 first-rate men, who had been wheelwrights and carpenters, smiths and stonemasons, and that were likely to prove themselves intelligent men, though not bred to my business. I had a steamboat in Glasgow for them, and appointed a rendezvous for them to meet on a certain day; and 64 of those men with their wives and families, and chairs and tables, &c., were brought up in one body, and brought into the establishment at once. This was such a formidable way of meeting the turn-out that they withdrew the pickets. These men were such sturdy fellows that they challenged the other men to a fair stand up fight if they wanted to prevent them.

19,113. Supposing those pickets not to have employed any violence, and simply to have confined themselves to the blandishments of which you spoke, if they did not commit any breach of law, do you think that there ought to be a law made to prevent a man explaining to another what he thinks to be his duty?—Yes, under these circumstances I think that there ought to be, or I think it would be ignoring the absolute state of facts of the case. If you were to say that we must wait until there is a broken head before the law can interfere, I think you would fail in giving the necessary protection to the working classes who desire perfect freedom of labour. As I said before, you may have a deputation that may come from the union to talk with the employer and try and reconcile parties, but every employer of that class of men knows perfectly well what is at the back of that deputation. In the smoothest way they talk of brotherly love and utter all sorts of fine sentiments; they are pleasant men to talk to in their way, and very often intelligent men and clever fellows, and I daresay they skilfully advocate their views of the matter; but at the same time it is quite well known to all who have these workmen in their employment that behind those smooth blandishments there is a most formidable cause of loss and annoyance to meet.

19,114. Now supposing that I as a legislator am asked to grant a law to prevent that being done, what would you say the law should be?—To give the greatest facility to the working man who is subject to this sort of interference of bringing any case of interference before the magistrate.

19,115. Then you see I want the law?—It is for you legislators to find that out.

19,116. There really arises the difficulty. I want to know how I can prevent half a dozen men talking a matter over, and saying, "We will talk to their man and tell him not to go to Mr. Nasmyth's." Would you make that an offence?—It would be very difficult to prove that it was an offence. It is one of those nice points where you get to the boundary of what is right, legitimate, and proper, but the next step after that may lead to what is very improper.

19,117. Legislation consists in those nice points. I being a legislator should feel it exceedingly difficult to draw a line of that description, and I want your assistance to tell me how I should do it?—It is a very difficult matter indeed, and I am quite aware that till there is a broken head, a breach of the peace, or some overt act of intimidation, or something against the usual laws of the country, the magistrate cannot interfere.

19,118. I am not quite sure of that. My belief is (there is a lawyer opposite to me who will correct me if I am wrong) that the net spread by the word "conspiracy" is a very wide one, and you might make out that those 12 men had conspired to do a thing contrary not only to your interests but to those of the public; and if you could bring them before the magistrate, and if you could establish that, you could bring them under the law?—Yes, and in the tailors' strike lately they did not wait for breaches of the peace. The judge in that case defined what he considered as a breach, not perhaps of the peace, but of the liberty of the subject in going to seek for employment from

those who were desirous of employing him. There was an intervention of a third party; there was picketing. There was no open violence, but still it was such as to be put down as being contrary to the law.

19,119. I think the law was stated to be applicable to people conspiring together to prevent people exercising their free will as to their engagements. I want to know how I can put it into any more specific words than that, for those words are so dangerous, they would give such a wonderfully large power, that I rather shrink from using the words?—I should like to go upon the definition given by Mr. Baron Bramwell. His handling of the subject seemed to be founded on the most common sense principle in defining what is obstruction to the free exercise of a man's will in bringing his labour to market.

19,120. (*Mr. Harrison.*) Then if Mr. Baron Bramwell laid down the law satisfactorily, you do not recommend any alteration?—No. I think that is sufficient; and there was action taken on it, was there not, in that case?

19,121. (*Mr. Roebuck.*) It put an end to the strike, you mean?—Yes; I looked upon that as one of the most successful exhibitions of the powers of the existing law that we ever had.

19,122. What I wanted to bring you to was just what Mr. Harrison has asked you, whether you thought the present law enough?—Yes, if that decision of the judge in that tailors' strike can be upheld. If you can withdraw the picketing system, and put an end to that system of either active or passive annoyance towards men who were going to seek employment, in their passage between their houses and the employer who is desirous to give them employment, I think that you have attained a very great point in arriving at what I would call the free trade in labour and employment.

19,123. But there is a system with which I have no doubt you are conversant, namely, sending men to Coventry?—I know it too well.

19,124. Would that be an offence, in your view, to be put down by law?—Decidedly.

19,125. If a man conspires together with A, B, and C, not to speak to that man, would that be an offence in your view?—No; mere silence would not do, but anything like calling out opprobrious names, and flinging things at the man, and getting his tools broken, should be an offence; yet most difficult is it to trace who did it, they are so exceedingly clever in concealing such offences.

19,126. (*Mr. Harrison.*) What would you do if you could not trace who did it?—You must wait till you have some fact that you can lay hold of.

19,127. (*Mr. Roebuck.*) Putting a man into Coventry is simply determining to have no communication or converse with him, is it not?—It requires to be very skilfully managed, it is so apt to assume a more practical form. I have known instances of men who have taken employment and have been quite satisfied with it, and have been put into Coventry in that way, and their lives rendered so utterly miserable that they were obliged to give it up, and yet you could not put your finger on anything that you could call a breach of the peace.

19,128. I can perfectly understand that. If a certain number of people conspire together, that is a thing which you can prove, but unless you can prove a conspiracy I do not know how you could make out my not talking to A. B. to be an offence?—That would not be an offence, of course.

19,129. If a man were working at the next bench to him, and he said, "Give me that tool," the man would say nothing, but not give it him; you would not make that an offence, would you?—No, still we all know that that silent mode is more intolerable often than an overt act of insolence.

19,130. (*Chairman.*) Supposing that a number of men were to combine and say, "We will not associate "with another man who has taken too low wages," that would be oppressive, and in your opinion it ought to be punishable?—I do not know how such passive offence could be punished.

19,131. Supposing the same men were to combine together and agree, "We will not speak to so-and-so, "for he is a bad character, and has committed a "felony," would you say that that should be punishable?—I do not know that you can legislate upon the subject, it must be left to discretion.

19,132. (*Mr. Roebuck.*) If they conspire to do anything that should be adjudged in contravention of the interest of trade, that should be an offence; perhaps you would draw the line there?—Yes, on the same principle as truth is said to be a libel, you may speak the truth and yet commit a libel. The court must decide what has been the *animus*, that dictated the thing. If you can prove a bad *animus*, or desire to injure, the person ought to be made amenable to law.

19,133. (*Chairman.*) You have favoured us in this paper with a summary of your views on the subject of apprenticeship; will you state them?—I have a very strong opinion about apprenticeship, and I back these opinions by my own practice. After the great turn-out, or lock-out of 1851, when the Amalgamated Engineers' Society tried to get the upper-hand of all the employers, there was a formidable resistance made to it by the employers, and I saw clearly that one of the most probable ways of resisting their encroachments upon the liberty of employment was to do away with apprenticeship *in toto*, and practically ignore the apprenticeship system, because in my previous experience of seven years, bound apprentices, I generally found that the lads, after they knew that they were bound by indenture, both you to them and they to you, took advantage of that fact. Whatever was their idleness or misconduct, you could not punish them for it, unless there was something so serious as to bring it before a magistrate by which you can break up an indenture. All the while a lad may be doing no good to himself, and he may be annoying every one around him, so that when that turn-out occurred I was determined to put an end altogether, so far as I was concerned, to the apprenticeship system; and I took all the boys I could get, and filled the works with as many clever lads as I could pick up here, there, and everywhere. The system on which I employed them was simply from day to day; that whatever was the worth of their labour, they got wages according to their worth. We generally commenced with them at 3*s.* a week when lads of 14 or 15. If in the course of a week or so they showed themselves worth 6*s.* they got 6*s.*; their remuneration was measured by their value to me, not by the length of time they took to learn the trade. It is remarkable, when they have emulation before them, how very rapidly those younger boys will get to great excellence in the management of machinery. I may make the remark in passing that one great feature of our modern mechanical employment has been the introduction of self-acting tools, by which brute force is completely set aside, and the eye and the intellect of the workman are called into play. All that the mechanic has to do now, and which any boy or lad of 14 or 15 is quite able to do, is to sharpen his tool, place it in the machine in connexion with the work, and set on the self-acting motion, and then nine-tenths of his time is spent in mere superintendence, not in labouring, but in watching the delicate and beautiful functions of the machine; and a boy with quick intellect can do it; he does not need to labour with chisel and file, and so weary himself out.

19,134. (*Mr. Roebuck.*) So that a boy of 16 is really as useful as a man?—I was fortunately the contriver of several machines for giving geometrical forms to metal work with such precision and rapidity, by certain modifications of the planing machine, that all that class of men who depended upon mere dexterity were set aside altogether, and I was able to move on with these lads. Instead of having the old proportion of one boy to four mechanics, I had four boys to one mechanic nearly. There were an im-

Mr. J. Nasmyth.

14 July 1868.

mense number of labourers in the neighbourhood, bargemen and others, the Bridgewater Canal Company's servants, and I got them into my employment, and in a short time they were as good workmen as could be desired.

19,135. Was there any action taken by the unionists against that?—Yes, but we defeated all their combinations; their funds were so low that our three months' lock-out used up their funds.

19,136. (*Mr. Harrison.*) When did that occur?—From December 1851 to March 1862.

19,137. (*Mr. Roebuck.*) How many men did you employ?—My highest number was 1,500. When I began to introduce those mechanical contrivances that facilitated the production of work, independently of dexterity, enabling me to do the work with boys and labourers, I reduced the numbers fully one-half.

19,138. You have stated that the number of your own employés was reduced, do you believe that the number of those people employed in the same business as yours was decreased generally?—Not in the same proportion. I rather took the lead in this non-apprentice system.

19,139. I want to know whether your economy of labour really did not lead to a greater employment of profitable labour in other ways?—I should fancy that according to the usual principles of political economy it would be so, but I am not able to trace it out in that respect. Only my profits were so increased, that if I had wished to expand the establishment and build additional workshops, from the profits resulting from this new system, if instead of putting it into three per cent. consols I had put it into additional workshops, I might have taken on 400 or 500, or 1000 workmen, and expanded the business.

19,140. And would you have had work to do?—Plenty of work. The chief cause of the attempt on the part of the Amalgamated Engineers at that time to get the upper hand of us simply arose from there being two masters looking after one man; there was a dearth of labour in the market, and the consequence was that the men took advantage of that, finding that there was a great deal of trade going on and a great demand for their labour, to urge their unreasonable demands. The first open movement in the dispute of 1851 was a demand made upon Messrs. Platt of Oldham to discharge all labourers whatever from machines. They were going upon the same principle as myself, in respect of employing what was called unskilled labour to superintend those automaton machines, and this was a matter which gave great umbrage to the regular trade union workmen. They did not like it. They said, "If you have a machine that a labourer could work, you must not "employ a labourer but a regular seven years mechanic "to superintend or to stand and look at that machine."

19,141. Was not that in reality the same sort of dispute as took place about the hand-loom weavers?—I fancy it was, but I do not know the merits of that question. This demand was made on Messrs. Platt of Oldham. They were determined to resist it, but as they saw that the whole power of the union would be levelled against them, they called a meeting of the employers and said, "Will you make common "cause in resisting this most unwarrantable infringe-"ment on our liberties, that we are not to have the "advantage of our machinery; that the economy re-"sulting from those improvements is not to go into "our pockets but into the pockets of the union men."

19,142. You broke down the power of the society, as I understand it, by increasing the area from which you drew workmen?—Yes.

19,143. And whereas before there were two masters bidding against one and another for one workman, you turned the tables against them, and found so many workmen that the workmen were more numerous than the masters?—Yes, and the moment you have a natural balance of employers and employed you will have no strikes.

19,144. (*Mr. Harrison.*) Do you consider that a prosperous state of things?—Up to that point it is beneficial to the workmen.

19,145. You mean that is is beneficial that there should be more men seeking employment than there is employment to give?—Yes.

19,146. That it is beneficial in short that there should be a great many of them idle?—No, not idle, but not so many of them as to dictate terms to the employer. I would choose of the two evils the least, and the least of the two would be a little excess of the desire for employment.

19,147. Of idleness?—No, not idleness, want of work.

19,148. How are this proportion of men who are out of work (which you consider to be the normal state), in the absence of unions to support them when out of work, to live until you are ready with orders for them?—If they are careful in their husbanding of their results in prosperous times they will have no difficulty. Every man getting ordinary wages, if he conducts himself in such a way as I conceive he ought to do, ought to have some bank of his own, or else go into some society, by which he will have savings to maintain him during the slackness of trade. That applies, I may say, to employers as well as workmen.

19,149. You think that a good thing that employers as a class, say engineers as a class, should have their works standing still a certain portion of the year?—No.

19,150. Why not?—I do not see why they should. If you have your works standing still the interest of your money is running on and your machinery and a great deal of property are deteriorating in that way; and also the workmen themselves, if long out of employment, get into bad habits.

19,151. Why then is it a good thing for a working man to have periods when he is out of employment?—I do not say it is.

19,152. I understood you to say just now that you considered it was better that there should be more men seeking employment than there should be employment for them?—Any good principle may be put into an absurd position by exaggerating it. If a thrifty workman who is well conducted has been in the habit of receiving 30*s.* a week, and he has been known to live on 20*s.* he can be banking up 10*s.* a week, which many of them are quite able to do if they tried it; it would form a fund which would put them in a very different position in that way, and they would be able to do without employment just as a large manufacturer when trade becomes slack ceases to manufacture or else is able to stand the loss.

19,153. Do you think it good that a working man should come upon some reserved fund at different periods?—Yes, but my idea is that it should be an individual fund belonging to himself. I am quite opposed to these benefit funds.

19,154. Will you explain why in the same way it is not good that the employer who employs that man should not periodically come to live upon his capital?—So employers do.

19,155. You think it good for him not to be making any profit, but to have to live upon his capital?—Well, very often when bad times come upon him it drives him to consider where he can economise, where he can bring out a greater profit that would enable him to go on with less prices, and consequently keep his men longer at work. When a man is carrying on a very nearly losing trade, the moment it becomes losing there is a tendency to discharge the men; but if he so conducts his business that what would be otherwise a losing business is not so he can work along and keep his men together, and many an employer does that, and I think that that is a desirable mode of carrying on an establishment; not to let your men scatter all over the country, but to wait for the good times to come, which generally do come sooner or later.

19,156. (*Mr. Roebuck.*) I want to understand how you can make the position of the workman and the master nearly equal. You say that that sort of conspiracy which I have talked of, men uniting together for a

similar object, you would put down by law; would you apply that to masters also?—Yes.

19,157. For example, when Messrs. Platt wrote to you would you have stopped that by law?—Yes. They were obliged to write to us because it was combination meeting combination; they were resisted by an overpowering influence from the unions that if resisted by them alone would have been utterly fatal to them. If there had been a law against the combination of workmen I should have advocated a similar law against the combination of employers.

19,158. Then I understand you to disapprove of the repeal of the old combination laws in 1824 by Mr. Hume and others?—I do not know what those laws were, but I think too much was done then.

19,159. You think that the law as laid down by Mr. Baron Bramwell is sufficient now?—Yes, if carried out properly.

19,160. I gathered also from you that you object to what you call benefit clubs?—That is my own individual opinion. I think it is better for every man to be his own benefit club.

19,161. You should not take the advantage which nature gives you from the fact that when men combine together a certain number of men die out and the funds are not applicable for them, and thereby the remainder get a larger sum?—No, I would say not.

19,162. (*Mr. Harrison.*) You never insured your own life, perhaps?—No, I have gone upon my own legs.

19,163. (*Chairman.*) Do you object to the principle of life insurance?—I think you can insure yourself if you are prudent. When I came up to London first I got 15*s.* a week from Mr. Maudslay, and out of that I saved money.

19,164. (*Mr. Roebuck.*) When was that?—In 1829 to 1832.

19,165. You were born in Scotland?—Yes. I had made myself a good workman without serving any time at all. I had learnt to work in metal, and I was a pretty good draughtsman, and I came up to Mr. Maudslay and went a little beyond merely telling him what I could do. I brought up some cases of models and steam engines, and drawings, and other things I had done by myself in Robinson Crusoe style. I came with a hackney coach the next morning full of these things to show to Mr. Maudslay. They were all work done by myself, and such jobs they were that I would not be ashamed to put them down beside any piece of good work done this day. The moment he saw them he gave me employment at once of the most honourable and delightful kind. He made me his own private assistant. I was to sit at his left hand, and we worked together for nearly three years.

19,166. Where did you get what I may call your scholastic education?—I may say that my best school was my own home, my father being an ingenious man and an artist. He was a man that occupied all his leisure time in amusing himself, if I may say so, with very hard work, making models of all sorts of mechanical things and artistic models to paint from, so that from the earliest days I got used to tools. You will find all this in Smiles's book. I never was regularly bred, and I thank my stars I was not.

19,167. (*Mr. Harrison.*) You do not wish to see the Robinson Crusoe life introduced generally into society?—I would like to see the Robinson Crusoe feeling introduced into society.

19,168. (*Mr. Mathews.*) You mean you would like to see a man rely upon his own endeavours; you would like to see self-reliance rather than dependence upon other people?—Just so; it was always a maxim with my father in that matter, "If you cannot get a stick, make a stone do, but get the work done; do not sit down idle because you have not the exact tool supposed to be necessary to do it." Now, it would be a great thing if that principle were inculcated in the education of our workmen from their earliest days—what I call resourcefulness, shiftiness, self-help. The great distinguishing faculty between a first-rate workman and an indifferent workman is that happy faculty of resourcefulness. Any employer will see that one workman will have it and another not. One finds no difficulties in his way, the other is constantly complaining that he has not the right tools, and so on, but it is generally an evidence of a want of that important faculty the possession of which leads to great success.

19,169. (*Mr. Roebuck.*) I suppose, then, you would believe that what is called division of labour does not conduce to the strength of the intellect or the improvement of the artizan?—No, I think not.

19,170. Though you may get more work by it, you do not get so good a man?—Not so resourceful a man. I remember a favourite maxim of Henry Maudslay's. He said that to be able to cut a plank with a gimlet and to bore a hole with a saw (he had a very striking way of putting those things) was the great criterion of a thorough mechanic, a fellow that could not be beaten; and if that principle was inculcated from the earliest days of education, God only knows what a great nation we should be.

19,171. (*Chairman.*) Then I am afraid that any improvement in machinery must have the effect of diminishing the power of individual men?—Not altogether. I have often noticed the great effects of these improvements in intellectualizing a man. If you call for the brute force of a man you will degrade the man. He goes to his home so physically exhausted that it is an utter absurdity to say to that man, "Read and improve yourself." He would fall asleep immediately; he must go and take some excitement. But if you take the man who has been superintending some piece of mechanism all day, in which there is a very little or only a minimum of call for his brute force, you will find that that man's intellectual power if he has any at all, will come forth, and he will be a reader and a self-cultivating man. I have found that again and again. I think this is the result of machinery, that it takes away the necessity for brute labour, very much elevates the intellectual and moral position of the working classes.

19,172. (*Mr. Mathews.*) With respect to the division of labour, the labourer becomes part of the machine instead of an entire machine, but in the case of a man who has self-reliance enough to study his work, he becomes the machine in himself?—I do not say that exactly. The functions of all machines are most interesting, and after a time the men begin to feel it. Some of our modern machines are as exquisite in their structure and results as the finest astronomical instruments, requiring extreme accuracy and delicacy, and affording exercise for all the intellectual functions to meet the conditions constantly arising in dealing with the work, and that in itself is a most valuable kind of education. Then, again, there are the most beautiful geometrical forms always presented before the men, and the mere looking at anything absolutely correct or true in geometrical form, I think, has in itself a tendency to improve the mind.

19,173. (*Mr. Roebuck.*) In your experience of late years of the working man, have you seen any change in his manner and mind for better or worse?—Yes, I think a good deal for the better in regard to his habits of life.

19,174. And as to his intellect also?—I think so; but how to trace it and to what to assign such an improvement is a very difficult question. There comes in the question of *post hoc* and *propter hoc*. A man may be improving along with the current of society or in spite of the current of society, he may be improving in spite of his occupation or because of his occupation.

19,175. Do you think that these great improvements in mechanical power at all tend to deteriorate the intellectual and mechanical power of the men?—Far from it. The man ceases to be so muscular as before; he cannot file all day with a 14-lbs. rubber, sweating over his work, but he sits watching the working of his half-dozen machines perhaps. One of the results of these mechanical improvements is, that where one automaton machine was going on with its work, and would occupy six or eight hours to complete it, now,

Mr. J. Nasmyth.

14 July 1868.

instead of the man standing still, you give him another machine to look after. I had an instance in my own works where I gave a labourer a machine to bore the cylinders for steam-engines. In the first instance he had only one machine, and after the cylinder was put into the boring machine he had to stand with his hands at his back perhaps reading an old newspaper or a new newspaper as the case may be, and then putting a drop of oil now and then; he had such a surplus of time on his hands that I thought proper to give him another boring machine, and it ended by my giving him six, and with every additional machine I gave him a shilling a week extra. I do not mean to say that a shilling was a fair measure of the benefit that I got, but it was satisfactory to him and to me, and he got the shilling a week for each additional machine he superintended without any undue exhaustion.

19,176. This increase of wage, I suppose, eventually led to his receiving a large wage—how much per week do you think he received?—When I put this man to this work he got 15*s.* a week, and when I left business he had 21*s.* a week.

19,177. Did you remark whether that man saved money?—Yes, and he was always well dressed and got a superior house.

19,178. We have had evidence here of men getting 9*l.* a week and really not saving a penny; perhaps you have known such cases?—You will find that generally I think with men who trust entirely to handicraft.

19,179. But these men to whom I refer were employed in actually guiding others and pointing out what there was to do, and we were told that those men did not save money?—I think that must be exceptional; at least my own experience is that those men whom I promoted from mere labourers by teaching them how to work those automaton machines improved both morally and socially in consequence.

19,180. Were the large majority of the workmen in your employ English or Scotch?—The largest number were Scotch. In the first instance there was that importation of the 64 men to which I have alluded, and soon nephews, and brothers, and cousins came crowding up because they found that at last there was a shop open to them in England, without any of the union restrictions. Some of the finest of those men came from East Lothian. One man now at the head of a large establishment in London is one of them, that is John Dudgeon; he was brought up from Haddington, I think, and many of those men have now risen to superior positions.

19,181. (*Mr. Harrison.*) With regard to the man whom you subsequently employed upon six machines, what were his wages when he had one?—16*s.*

19,182. He was worth 16*s.* to you?—Yes.

19,183. Probably more, I mean that the profits derived from that man's labour were worth say 20*s.*?—Yes.

19,184. When you put him upon six machines his profits to you were therefore 6*l.* a week?—Yes.

19,185. And he received 20*s.*?—Yes, I was very niggardly in giving him only 21*s.* a week, but it is quite possible to spoil a man like that by giving him too much at once. If I had even halved the profit, I do not know that in such a case as that, it would have been to his advantage. However, he was satisfied. I was the employer and he was the employed, and we were dealing together to our perfect mutual satisfaction.

19,186. You think that for a man who managed six of these wonderful machines, and who was earning 6*l.* a week for you, to have received more than 21*s.* a week would not have been a good thing?—I think not, I should have liked to have tried the experiment, only the usual principle of business to get your work done as economically as possible deterred me, because any very unusual wages given to that man would have soon spread over the establishment

19,187. (*Mr. Mathews.*) If he had not been satisfied with the 16*s.* a week you could have readily got another man?—At once; even a boy could have done the work.

19,188. (*Mr. Harrison.*) You could only get some one else at that rate supposing that there was more labour in the market than there was employment to be had?—Labour of that kind.

19,189. So that in order to keep that 6*l.* profit to yourself, and not to divide it among the workmen who enabled you to attain it, it is essential that there should be a large margin of unemployed labour ready for employment?—And so there is always if you would open the alleys and allow that unemployed labour to come from every possible source.

19,190. You say that a boy could have looked after these six machines?—Certainly. There was no function requiring the action of a man. And I say that the day will come in which steam engines will be made by girls. There is as much mechanical skill required in superintending a power loom or a spinning jenny with its thousand spindles as a steam engine.

19,191. When you reformed your works you said that you had something like the proportion of four boys to one man, did you not?—As many as we could get.

19,192. Do you think that your neighbours, if they had introduced the same system into their establishments, could have done the work on it?—Yes, and many have.

19,193. Do you think that, supposing improvements go on, and the wonderful machines which you yourself and others have introduced become more common, practically speaking, the whole of the trade might be carried on in that way by boys and labourers, with a very small proportion of skilled men?—Not to the entire exclusion of men. I think that you would have to cheapen the work done by machinery, because a manufacturer after taking considerable profits from these economical arrangements takes the proper course of lowering his price to meet competition from various quarters, and then both the public and the working man partake of the benefit.

19,194. Still you think that in a system which you can conceive of as practicable, the bulk of the engineering trade could be carried on by boys and not men?—Yes.

19,195. You think that we are coming to that?—In certain departments of the work.

19,196. Have you thought what is to become of the men who have been brought up to middle age in the trade?—I think that they would get absorbed, particularly if they were of the Robinson Crusoe sort of shiftiness. It is the men who have been brought up to make the head of a nail or the eye of a needle only that have nothing to fall back upon. If it were made a branch of education even in our schools to make boys shifty and ingenious and to bring out their ingenuity (for lads are all naturally more or less so), you would be giving them the greatest benefit you could possibly do in the way of education.

19,197. When these skilful clever lads who have been bred up in your establishment grow up to middle age and have families, you would displace them and have fresh boys; what is to become of those who are displaced?—They would not be displaced if they were careful.

19,198. You would give only the wages of boys to them?—I do not think that the entire mechanical work of the world can be done by boys. I do not know what is to become of them in the case you put, but I should leave it to the natural operations of society. I think that they would find a field for themselves somewhere.

19,199. Do you think that the same process might be carried and is being carried into other manufactures, as glass making, for instance?—Yes. There are some trades where the application of machinery is comparatively limited, but even in glass making machinery is being introduced. Men could only be glass blowers a short time ago who had tremendous lung power, and could blow like bellows. Now that is all done away with, and they blow with a piston and a tube. There is a piston and a cylinder attached to the mould, one

man produces a force of blast that 50 men could not blow, and moulded glass, so produced, now takes the place of cut glass. I believe that blowing large glasses is now done by mechanical means in that way.

19,200. (*Mr. Roebuck.*) Those are some of the shifty men you have alluded to?—Yes; that is what has made us the country we are, and anything that impedes that and impedes the migration of a man bred up in one trade into another where he finds that he has a better chance, and for which his faculties are better suited, is mischievous. I would give every possible facility for that sort of migration of intellect in every branch of life, but especially in the mechanical, and that is what the unions impede, as I understand it, and as I found to my cost in the first turn-out when trying to employ a man that was a brass founder to work in iron. A man that works in wood is forbidden by the union to go into an iron shop. Now, why should not that man have the right of using his intellect in working iron if he finds that he can more profitably to himself employ it in working iron than wood? And I believe that even in the most strict unions if a man will pay a sufficient fine in money to the society he may migrate from the carpenter's shop to the smith's shop if he likes. It is a money question; it is not a rigid question of being bred to the trade; that is all nonsense. I daresay that Mr. Harrison could tell you whether a money fine will not admit a crossing sweeper, if he is able to handle the tools, to be received into an engineering shop to-morrow. So that the whole thing ends in a means of extorting money for the benefit of the lazy ones who hang like parasites on the industrious; and I believe that that is the principle of the trades unions, the lazy ones hanging like parasites and barnacles upon the industrious and active men. I would have no apprenticeship at all, and let lads get work where they can.

19,201. (*Chairman.*) Would you prefer in your trade the entire abolition of apprenticeship?—Entirely, in every branch of business; I think the apprenticeship system is the fag end of the old feudal system.

19,202. Do you believe that benefit would result, if you did not go so far as to abolish apprenticeship, from reducing the term?—No, I would do away with terms of apprenticeship altogether. If you are not satisfied with a boy you should have the right of putting him way at the end of the day, and if he is dissatisfied with you he should have equally the right of going away from you. I think that if you were to go on that principle all young people would be brought under the influence of emulation.

19,203. (*Lord Elcho.*) You have no doubt heard the union argument about apprentices, that their reason for limiting the number of apprentices is that they think it unjust that a skilled workman should at his own cost, as they express it, be training up and teaching a youth for the benefit of a master, when that youth is destined perhaps to supplant him or pull down his own wages. What do you say to that argument, which was used at the interview between the trades unions and Mr. Gladstone?—I think that it is founded not only on a fallacy but on an untruth. The working men do not need to teach the apprentices at all. A boy will teach himself. You have only to put him where he can use his eyes and hands and he will teach himself.

19,204. Is it not the case in a workshop that a boy is attached to the workman to learn the trade?—Not to learn it, but to assist the man.

19,205. (*Chairman.*) He is attached to the man?—That may be for convenience, because a boy can do many things more handily in mechanical processes; from the smallness of their hands they can act into intricate parts of the machine.

19,206. (*Lord Elcho.*) It is an interchange between the workman and the boy, you say?—Yes, a *quid pro quo*.

19,207. And that the workman, but for the assistance of the boy, would not be able to receive the wages he does?—Just so, especially in piecework.

19,208. (*Mr. Mathews.*) If there were any case where the boy benefited much by the instruction from the journeyman, you would have no objection to remunerate the journeyman for it?—If it were anything very definite, anything that he could withhold from the boy, he must have a price for it in some shape or other; but in any mechanical trade I am acquainted with, unless a workman takes undue means to conceal things, I defy him to prevent a boy learning the trade, provided he has intelligence and industry.

19,209. (*Lord Elcho.*) Irrespective then of a system of apprentices or training boys to become skilled workmen afterwards, it is absolutely necessary in your business, that there should be a certain number of boys in the trade?—Yes.

19,210. That is to say you require boys to do work which could not be done by men?—That is not the case to a very great extent, but their quick sight and activity, and nice feeling, and small hands in special operations come in very useful.

19,211. (*Mr. Roebuck.*) Would you extend your assertion about boys learning from associating with workmen to the higher class of art, say painting?—Yes.

19,212. Would you fancy that a lad putting himself under a great artist would learn a great deal from that artist?—No doubt.

19,213. Would you say that what the artist told him and the instruction he gave him was worth something and ought to be paid for?—Yes, if it were worth something he ought to be paid for it by the boy's zealous service.

19,214. You think that boys can learn a trade well without being apprenticed to it?—Yes; and if you were to look to biographies you would find that the most remarkable and distinguished men, the men who have served mankind in general, have been in the most important respects your non-regularly bred men.

19,215. (*Mr. Harrison.*) You do not draw an opinion hostile to systematic education from that, do you?—Anything but that. It depends upon what you call the system. Your system and mine might be very different systems, but I would have it systematic. The more systematic you have your education the better, but it depends upon what kind of system it is. I think that one of the greatest defects of our modern system of education in those intended to follow mechanical employments is the utter ignoring of one of the most important faculties of all men, that is the faculty of comparison by the eye. If you could get a a boy who would be able to lay a pea in the middle of two other peas, and in a straight line with those two, that boy is a vast way on in the arts, if the eye were educated, as it might be in every school in the country, you would have correct workmen produced in a short time, and men of more efficiency than years spent in learning grammar and geography would produce.

19,216. You think that that would be technical education in the best sense?—I think that it would be appropriate education, education that bears upon the after purposes in life that that education is to be applied to.

19,217. (*Mr. Mathews.*) Would not that be a very advantageous education for a military man?—Yes, I think it would be useful for men in all occupations. Whether you are putting nails into a door, or making a boat, or whatever work you are doing, the functions of the eye are of inestimable importance. When I have been watching men in my own work, I have noticed that at least two-thirds of their time, even in the case of the most careful workmen, is spent, not in working, but in criticising with the square or straightedge what they have been working, so as to see whether it is right or wrong. The work is not advancing all this while, but they are simply finding out whether they have done their work right or wrong. I have observed that wherever you meet with a dexterous workman you will find that he is a man that need not appeal in one case in ten to his straightedge or square; he goes straight ahead and every stroke is telling, whereas the cautious and incorrect man, a man I mean who has not correct eyes, gets fumbling away with the thing; he has to take it out of the vice and put it

Mr. J. Nasmyth.

14 July 1868.

into it again constantly, and time is lost in that way. Now that faculty of correctness of sight is a much more general one than people are aware of, and if you will only educate it you can do a great deal by means of it. Some people do not know that they have it, while other people have it to an almost morbid extent, so that if they see a picture on the wall not hanging level they are distressed by it. The teaching of the eye is in importance infinitely beyond the teaching of the ear or the tongue in mechanical employments.

19,218. In the case of skilled labourers being superseded by unskilled labourers or boys in the various departments of the trade of this country, would there be any difficulty in the skilled workmen finding labour in other departments?—I never heard of it.

19,219. Even in that case there would still be a greater field for those men than exists under the power of the union?—Quite so. I never once had an application from an able mechanic in these days of automation and perfect machinery, saying, "Will you "employ me, sir, for I cannot get employment else- "where, because my dexterity is no longer wanted." There is always a market for it somewhere if accompanied by good conduct.

19,220. So that the result of your experience is this, that notwithstanding the introduction of machinery, notwithstanding the introduction of juvenile labour, and notwithstanding the introduction of unskilled labour, there is still a greater field open for skilled labour now than would exist if the unions had full power?—Yes.

19,221. You think that the reputation of this country has arisen chiefly from the excellence of our machinery, and that we still maintain that?—Yes.

19,222. (*Lord Elcho.*) Do you think that the increased use of machinery and other causes that might tend to diminish the demand for skilled labour are due to the unions?—I think so; the annoyance caused by them is felt to be so insufferable, and there is a sort of passive persecution that the employer has to experience where the unions had the upper hand. Before he can introduce even some of the most obvious improvements he will have to consider, "Will my men like "this; will they turn out? Will Tom, Dick, and Harry "cause me annoyance in consequence of this?" and the trade is consequently restricted, and the progress of improvement is impeded. For myself I was so annoyed with walking on the surface of this continually threatening trade union volcano that was likely to burst out at every moment, that I was very glad to give it up and retire from the business at a period of life at least 10 years before the age at which I otherwise would have retired. I did so on account of the annoyance I experienced, and many a nervous headache have I taken home with me at the end of the day in consequence of such annoyance.

19,223. You withdrew your capital from a trade where otherwise you would have left it?—Yes, I saw such a storm of annoyance coming on, that in defence of my own happiness I gave it up altogether. And I am the envy of some engineers; they say, "You are a "lucky fellow, Nasmyth, you took down your sign- "board at the right time."

19,224. (*Mr. Harrison.*) Do you think it unreasonable, if you introduce a new machine and put men to a new employment, that they should consider how it affects their interests?—Not at all; they are quite welcome to do that.

19,225. Do you think it unreasonable that they should confer together as to whether it is a loss to them or a profit?—No, they are perfectly welcome to do that.

19,226. If they think it a loss, or if they think that it involves a lower rate of wages, do you think it reasonable that they should come to you and tell you so?—No; there I stop. I think that no set of men have a right under any circumstances as a body to come and tell me that, for I employed all my men one by one, and from the very first to the last I always resisted deputations.

19,227. From your own men, do you mean?—Yes. I said, "I did not hire you as a body, and I will not see you as a body; I will receive no deputations."

19,228. Do you not in any case deal with them as a body of men?—No. If two men came and knocked at the door of my counting-house and wanted to work for me I should say, "You must come one at a time."

19,229. Do you employ each man individually in the shop separately and give him separate instructions, so that he has no connection with any other man, or do you issue any general instructions or general orders?—Yes, I have issued general instructions.

19,230. Are there no common hours?—Of course there are.

19,231. Are there no two men engaged on the same piece of work?—Yes.

19,232. Several men, for instance, in working at a hammer?—There is the man that lets the steam on and off, and the other that handles the iron under it.

19,233. Do you not think that if men have a common interest in each other's work it is reasonable that they should combine?—No, there is no such common interest; at least, there ought not to be.

19,234. They have nothing to do with each other, in your opinion?—No, unless they voluntarily combine; but, as I tell you, my practice was, and I believe that it is the right basis on which to found your dealings with the men in your employment, to avoid anything like combination, not to recognize the men in any capacity except as individuals, that is to say, in that capacity in which you employ them.

19,235. Supposing that you had six men engaged on one machine, and that you put on a seventh man who, from being a very inferior man to the others in your employment, has very low wages—say, a third of the wages—but that you consider him quite worth that, do you consider it possible that that seventh man might cause a great deal of extra labour and annoyance to the other six men?—No, if there is a foreman properly looking over them. You would put this labourer, perhaps, to tighten up bolts and to perform many functions requiring what would not be considered the highest class mechanical skill.

19,236. But supposing that you put him to a function requiring skill?—If you, as a master, are satisfied, or if your foreman is satisfied, with the profit derived by his labour, that is sufficient. If you are paying this man 15*s.* a week, and you find that he is doing you a service worth 15*s.* a week, then the account is just balanced, but in all probability he will do you 18*s.* worth of service, then you will put the 3*s.* a week in your pocket, and that is your trade profit.

19,237. I want to know whether you consider that the six men have no sort of interest in the way in which that seventh man is doing his worth?—No, they have no right to have any interest in that.

19,238. Have they any interest, I ask?—No, unless he is a bungling man and lets a piece of iron fall upon them.

19,239. But supposing that he is such a man, what then?—Well, I may say that my experience of these shop assistants is, that they are a very careful class of men.

19,240. But if there is a careless man put among gang of men who are at work upon one particular piece of iron, each man in that gang has some common interest in the way in which the others do their work in regard to carefulness, has he not?—Such an evil as you refer to would soon cure itself, because a piece of carelessness would be a direct loss to the employer; a careless workman would break something and so cause a loss to his master.

19,241. Still it is a matter of common interest to them, is it not?—I do not know. If you have a gang of workmen all working together, it may be to their interest that all should go on agreeably together.

19,242. Do you consider that the six men have no right to come to you and say, "Employ this seventh "man if you please, but if you do we shall leave your "employment when our time is up?"—They are

at perfect liberty to go, but not to come and see me about it.

19,243. Supposing that they come and say to you, "We will leave your employment if you employ that man," what then?—In the first place I would not receive the deputation.

19,244. Supposing that the whole six came, you would not receive them?—No. One might come. I would deal with him if he came forward as an individual. He might be the nominee from the whole shop, in that case I would not recognize his talking to me as representing the whole shop, but if I thought it was anything reasonable and just that those men had to explain, and that there was a man working along with them that caused the risk of their limbs, and it was desirable for the sake of their safety that this man should be looked after, I would then institute inquiries through the foreman to see whether this representation was right or wrong, and if my confidential foreman said, "This is really an awkward fellow, running risk "to the men and the work," I would consider whether it was right to discharge that man.

19,245. You think that they would have a right to say, "We will not work for you upon those terms"?—They would have a perfect right to go away upon any consideration. It would be a balance of the attractiveness of my wages against the risk they were running, or (to put it in a more fanciful form) the degradation that they were undergoing, by working with an inferior man.

19,246. You consider that they would have a perfect right to come and tell you that?—No, not as a body.

19,247. Would you call that interference if they did?—Yes, because I know what is at the back of it.

19,248. Would it be a case of what you would call dictating?—No doubt of it, if this man was really doing his work well, and they have taken some umbrage that I could not investigate thoroughly, because it would involve a long course of inquiry to know whether they had justly taken umbrage at this individual or not.

19,249. Would you call that the interference of a third person, because you say that you would make it a penal offence for a third person to interfere?—Yes, but it is more in reference to a man desiring employment and coming to a master to be employed, that I said that.

19,250. Take the case that we are already upon of these six men. Suppose they say, "This seventh man "is a careless man, we object to him and will not work "with him, and we give you notice that we shall leave "simultaneously when our time is up if you continue "to employ him," do you propose to make that a penal act?—No. I would not make it a penal act in that case, because these men are absolutely by the supposition in my employ at that moment, and are in my establishment. I would not receive a deputation from them, but the representation would come to me through the foreman in the usual way.

19,251. Supposing you were satisfied that the man you employed was earning the wages you gave him, and the other six men struck, or the whole shop struck, do you propose to make that a penal act on their part?—No; they have a perfect right to strike and go away in a body to the last man in the works; but then if my employment was such as to attract other men to come to my works, and that self-discharged body of men stood between a man so desiring to come to me and my door, I should say that that would be penal; that is like your standing in front of the baker's shop door and preventing customers coming in.

19,252. Supposing we take another step. Supposing that one of their body stood within sight of your works, and when he saw a likely man coming for employment, went to him and said nothing but this: "We are on strike there; it will be for the interest of "our order that you should not apply for work until "the strike is over," and that simply by moral suasion he induced that man to leave your door, is that a case of interference which you propose to make penal?—I would look upon it as a case of picketing on the part of the man who stood and cajoled the other man.

19,253. (*Mr. Roebuck.*) Does not that come under what I put at the beginning of your evidence, that there are two questions; first of all, Was there a conspiracy? and the next, Was the thing done in restraint of trade? and that when both questions are answered in the affirmative a case of offence is made out?—Yes, decidedly. They may evade the law, and instead of sending a dozen of men round your door send only one man; but that one man lets it be understood that he is not there as an individual, but that he is an emissary, and therefore in the eye of common sense he is there as representing an unseen power behind him.

19,254. (*Mr. Harrison.*) Which may do something?—Which may do something very serious.

19,255. Do you propose to carry through the rest of society the rule that a man whom you suspect is likely to commit an offence should be punishable?—When you come to a point of law I cannot argue it with you; it is like asking me the distance of the fixed stars.

19,256. We will try to make it clearer. It is not now possible for a man who is suspected by a policeman of being the sort of man who might commit a burglary, when he has no evidence whatever of the intention of that man to commit a burglary, to be taken up on the highway as he is walking along?—That is done every day, I think. Here is a work on strike, and the men have all turned out. Here is a man standing at the avenue. The law, I should say, has a perfect right to ask, "What is your business "there?" Circumstances may exist to render it highly suspicious that he is there for an illegal purpose, and I think that under an apprehension of that kind there is sufficient ground to warrant that man being removed.

19,257. Supposing that a policeman asks him what he is there for, and he says, "I wish to tell any man "that comes here that there is a strike going on, and "to warn him peaceably without committing any "violence," and supposing that there is not the slightest proof that he is going to commit an offence, would you make that penal?—I think I would, because he is there under suspicious circumstances.

29,258. Why do you propose to make that penal in the case of a strike of workmen which is not penal under any other circumstances?—But if the circumstances are such as this that you are dealing with, an injurious and illegal state of affairs, a state of affairs that is contrary to the public interests (which I hold all strikes to be in a broad sense), then I think if you find any man contiguous to those circumstances, who cannot give a very clear and reasonable account of his presence there, he ought to be removed.

19,259. But if two railway companies having the sole command of a certain locality confederate together to raise their fares against the public, that is contrary to the interests of the public in one sense; do you propose to make that penal?—I have not considered the matter in its operation upon railways. I suppose it would be a conspiracy against the public interests, and if you could prove that it was a conspiracy against the public interests I should think you could bring it under the law.

19,260. (*Mr. Mathews.*) If there there was a conspiracy between two railway companies against an individual to raise the fares charged to him, that would be penal, would it not?—Yes, I should think so.

19,261. And is not that analogous to the case of workmen conspiring against particular works to prevent men going to it to seek employment?—Yes.

19,262. There are three modes of proceeding in the case of a strike which workmen adopt. The first is violence, and the law meets that?—Yes.

19,263. The next is threats, and the law meets that?—Yes.

19,264. The next is persuasion, and the law does not meet that. But from your experience can you draw

Mr. J. Nasmyth.
14 July 1868.

any distinction betwixt persuasion and threats; are they convertible terms, in your view, in the case of a strike?—We know quite well that they are convertible terms in the case of a strike.

19,265. If it is left open to other people to try and persuade a man not to come and work for you, does not that amount in the case we are supposing to threatening that man?—No doubt of it; it arrests the freedom of interchange of labour between a man and the employer.

19,266. And you would make such a persuasion come under the same category as threats or violence?—Yes.

19,267. (*Mr. Harrison.*) You said that it was your experience that "persuasion" was convertible with "threats," and then you said that you proposed to make it penal because it was contrary to the interests of the employer?—Yes, and contrary to the interests of the employed as well. I do not know what the strict definition is of "restraint of trade," but my idea of the definition of that term is that it is something injurious to society in general. I do not know whether I am right in that, but such persuasion is in restraint of trade as I view it. The stopping of free interchange between the employer and employed, who are both willing to deal with each other, by the interference of a third party, would be in restraint of trade.

19,268. When you said just now that you proposed to make simple persuasion penal, do you mean because it is an injury to the employer or the public, or because it is identical with criminal intimidation?—It is identical with criminal intimidation when a strike is in progress. I would not consider (I would even give them the benefit of this) anything like persuasion to try and instigate a strike as penal; but when the strike was in progress, and there was any interference by persuasion or otherwise that would prevent and force away from entering the service of the employer men perfectly willing to do so under the disputed circumstances, I would look upon that as penal.

19,269. (*Mr. Roebuck.*) But supposing that it were done by a newspaper; that instead of sending a picket these people used a newspaper or placard to effect the same object, would that be an offence in your view?—I think it would, but still I would let them do as they like in that way.

19,270. (*Lord Elcho.*) You look upon persuasion and intimidation as practically the same thing, as I understand you?—Yes.

19,271. I suppose it is in this way that you arrive at that view. There is, we will suppose, a strike at your works. You advertise for new labourers. I happen to be a mechanic who has been a month out of work, my wife and family will be very glad for me to get employment, and I shall be very glad myself to get it. I come to your works and you are ready to give it me, but I meet a man who tells me that there is a strike on, and persuades me not to go there. Do you think that, considering that I had been out of work a month, in spite of that persuasion I would go there if that were a solitary man unconnected with any union?—Yes.

19,272. The probability is that I would not be persuaded in that case?—Yes, that is the probability.

19,273. But if I knew that that man did not represent himself only, but that he represented the whole power of the Amalgamated Society of Engineers, we will say, then you think it is very probable that I should turn back and not go into your works?—Yes.

19,274. Therefore practically this persuasion by a single individual amounts in that case to the concentrated power on this person of the whole Amalgamated Society of Engineers?—Yes.

19,275. So that in your opinion practically the persuasion even of a single individual who belongs to a corporate body such as the Amalgamated Engineers, amounts to the whole power of the whole body, or as you put it, it amounts to intimidation?—It is practicaly intimidation.

19,276. (*Chairman.*) Supposing that an employer were to offer to any of his workmen unfair terms, terms which in your judgment would be unfair terms, and supposing that an individual were to come to those workmen and explain to them that the terms were unfair, and were to endeavour to persuade them not to accept them, would you make that penal?—Yes, I think I would if the men were quite satisfied with the terms themselves.

19,277. (*Mr. Mathews.*) The difficulty would be to know what were fair terms?—Yes, the proof of fairness of terms is a voluntary service, or voluntary acceptance of them.

19,278. Your proposition is this, that anything that interferes with the free employment of men should be made penal, as being against the welfare of society?—Yes, decidedly.

19,279. That there should be a free trade for the employer to employ any man whom he may choose to employ, and for the workmen to work for what employer he may choose to work for?—Yes.

19,280. And anything that interferes with the free course of that action on either side you would make penal?—Yes, and I would be equally strict in applying that to combinations of employers as to combinations of workmen; the general broad principle of non-intervention I think is the only safe basis on which you can rear the structure of legislation in these matters.

19,281. That is the principle upon which you found all the observations that you have made to us?—Yes.

19,282. (*Mr. Harrison.*) You must know first what the word "interfere" covers, must you not?—In all common sense when you find one man sent forward to talk to people who wished to come into your employment, and if either as the result of blandishments, or coaxing, or threats, you find that a man who was coming to your works ceases to come to your works, you know that that man must have been acted upon by some appeal to his fears that has frightened him away.

19,283. (*Mr. Roebuck.*) Might it not be that the blandishments were addressed to his intellect and not to his fears?—Yes, no doubt; it depends upon the natural constitution of the man whether he is more accessible to flattery or to personal fear. My own acquaintance with that sort of thing leads me to say that it is both; it begins with blandishment and ends with an appeal to fear.

19,284. (*Mr. Harrison.*) You propose to make both penal?—Yes.

19,285. (*Lord Elcho.*) Have you ever experienced picketing us a workman yourself?—Not as a workman, only as an employer.

19,286. (*Mr. Harrison.*) This is not merely your abstract opinion as I gather from you, but I understand you are prepared to give it as your experience that in all cases of picketing the picketing really involves the threat of a criminal act?—I think so, because I consider it criminal and penal to prevent a man bringing his labour and intelligence to any market that he things proper.

19,287. What I mean to ask is this, do you give it as your experience that there is no such thing as persuasion in cases of picketing unaccompanied with threat of violence upon life or outrage?—It begins with a mild persuasion, and talk, and cajolery, and glass of ale over the subject, and "Let us discuss this matter," and so on; and then if the man is not persuaded, and is not overpowered by these blandishments, but still desires to enter my employ, he tries to fight his way through these other men, and then begins the difficulty.

19,288. Have you known instances of it?—Yes, men have come into my employment with bleeding faces and torn jackets, after struggling in an heroic manner through all sorts of impediments. The man's reaching me is a mere measure of strength, for if the opposing force is sufficient he never gets to me at all. If he is a bold enough fellow to get through (which many men have done in that way, requiring surgical

assistance as soon as they had succeeded) the moment he enters my gates the man is safe.

19,289. Your experience of picketing is that violence of that kind is the rule?—It used to be.

19,290. Up to what date?—For instance, in the great lock-out, as it is called, of 1851 there was no violence. There was a marked improvement in the way of dealing with the subject. Both parties drew into their citadel.

19,291. (*Mr. Roebuck.*) Was there picketing then?—There was picketing then, but not accompanied with open personal violence.

19,292. Mr. Harrison has brought you to this point. He asked you if you believed that there was any picketing at all without violence, and I think that you might have said "Yes." But is there any picketing without violence in the background for enforcing what is intended to be enforced?—I say that that is always in the background; just as, for instance, you may pay your taxes amounting to 50*l.* to a poor old man, the tax gatherer; you do not pay them for fear of him, but you know what is at at the back of him, namely, the whole power of the law.

19,293. (*Mr. Harrison.*) You mentioned the strike of 1851, in which you say there was not this violence. To what date does your practical experience as a manager come down; when did you cease to be a manager?—In 1856.

19,294. You have had no experience since 1856?—No.

19,295. Between the great strike of 1851 and the year 1856, that is to say for the last few years of your career, was actual violence the rule in cases of strike?—There were very few strikes in that period.

19,296. Then you have not had practical experience of the outrages due to picketing since 1851?—Since 1851 I have had no practical experience of that.

19,297. Is not 1851 or 1852 the date at which the Amalgamated Engineers' Society began?—It began I think before 1851, and their first overt act, I think, was the shot fired at Messrs. Platt, of Oldham.

19,298. When you say "shot fired" you mean a strike?—Yes, they commenced a battle to see who was strongest.

19,299. Your experience as to the violence of picketing, and the outrages, and so on, relates to a time previous to the time when the engineers' trade had been organized on its present footing by the union?—Yes. After I got over that trouble in 1851, I poured in a quantity of lads into my place, and I soon weeded out the men that I did not want and took in able men of all kinds, and then all things went on as pleasantly as could be. But at the same time I heard the distant rolling of thunder, and saw that there was a storm coming on, and so I made a compromise between my desire to be very rich and my desire to be very tranquil and comfortable, and resigned the business into the hands of my sleeping partner, and appointed a practical manager to take my place. In point of fact the thing has gone on pretty well since, in spite of trades unions.

19,300. In point of fact, the men are not as docile machines as you could wish to move in the way you desire to move them?—There is no desire to take undue advantage of them. I always like to be upon pleasant terms with the men in my employment, and when they were left by themselves to deal with me everything went smoothly; but the moment that these emissaries came in amongst them you saw the difference at once. I should like to state here that I am anxious to rub out that fallacy about the necessity of apprentices and the men having a claim upon you for teaching apprentices. I do not think that there is any just claim of the sort. The boys will soon pick up knowledge, particularly if you give them the stimulus of paying them in proportion to their ability. If a clever lad in three years could do as much work and as well as a seven years' workman I would give him the same wages.

19,301. (*Mr. Roebuck.*) In your time have you had any experience of any attempt at a regulation to prevent men doing as much as they could under the notion that they were hurting their health?—Not that they were hurting their health, but that they were doing what is called "chasing." If a very active fellow got forward in that way, you generally saw the intimidation begin by the men jeering him.

19,302. That was in your time, was it?—Yes. I saw instances of it; but when it was very annoying we generally met it by displacing that kind of dexterity altogether and taking a machine. Dexterity has an unhappy knack of getting drunk (at least it had in my earlier days) and not coming to work till Wednesday, because a man knows that he can make a living by his three days' work instead of six days'. But when he finds that there is a machine rising in the background which will displace him altogether if he goes on with those tricks, in the first place there is a great tendency to check that man in his bad career, and in the next place if he perseveres it will displace him altogether. That is the history of nine-tenths of the improvements that we have got. This is just one illustration of the way in which good often comes out of evil. I believe that if there were a debtor and creditor account made up of strikes and lock-outs with the interests of society, up to a certain point they would be found to have been a benefit. Such has been the stimulus applied to ingenuity by the intolerable annoyance resulting from strikes and lock-outs, that it has developed more than anything those wonderful improvements in automaton machinery that produce you a window frame or the piston rod of a steam engine of such an accuracy as would make Euclid's mouth water to look at. These things are pouring in in quantities as the result of the stimulus given to ingenuity through the annoyance of strikes. It is not being coaxed on by some grand reward in the distance, but I think a kick from behind is sometimes as useful as a gentle leading forward in front.

19,303. (*Mr. Mathews.*) You think with Mr. Gladstone that strikes have been indirectly of some benefit to trade?—I think that they are one illustration of that glorious principle that seems to pervade all nature that out of evil springs good. But no thanks to the evil, otherwise we would worship typhus fever to-morrow.

19,304. (*Mr. Harrison.*) Do not you think that the workmen would be far more ready to introduce new appliances and machinery if he got something more out of the increased profit of the employer than the 1*s.* out of the 20*s.* which you told us of just now?—So he would and so he does. Look at the wages now paying to what are called skilled mechanics, in spite of all the competition and machinery, and even to unskilled mechanics, men who superintend machines. Mr. Robinson, I think, mentioned some facts on that subject the other day.

19,305. His evidence was that the increase is rather small, that the unions have not raised wages?—Speaking from my own experience, when there was not so much machinery used, we were paying for skilled mechanics somewhere about 22*s.* or 24*s.* a week, when I left off it was more like 36*s.* a week.

19,306. Speaking in the broadest way, do you not think that it would tend towards influencing the whole working class in every department of industry in favour of the introduction of new processes and new machinery, if they felt quite certain that a very much larger proportion than now comes, and than you think a fair proportion, of the increased profits would come to their share?—Yes, and that is what I am so anxious to see brought about, a sharing of the receipts between the employers and employed, dividing their advantages. I think that if there were more of that done, it would result in great benefit both individually and collectively to society.

19,307. (*Mr. Roebuck.*) Have you heard of the proposal of the Messrs. Briggs with that view?—Several have proposed it, but I think that they have gone beyond proposal.

19,308. You have heard of their limited liability society, in which the profits have been divided between the employer and the employed?—Yes. That I look

Mr. J. Nasmyth.

14 July 1868.

upon as even better than legislation upon the subject, if you could extend it.

19,309. I was going to ask you whether you approve of that plan which Messrs. Briggs have adopted?—Most warmly.

19,310. (*Lord Elcho.*) Do you think that there is any probability, assuming that that plan is an admirable one, and is perfectly sound, of its general and immediate adoption?—Neither of its general nor of its immediate adoption.

19,311. To become generally adopted it must be the result of great success in a considerable number of instances, must it not?—Yes.

19,312. To prove success you must have good times and bad times, and strike the balance of the general result?—Yes, strike the average.

19,313. And assuming that it is a remedy needed, the probability is that before such a remedy can become general a great number of years must elapse?—Yes. I think it will come creeping on, for reason and justice are on its side, and when reason and justice are on the side of anything it will prevail.

19,314. In the meantime, therefore, it would be desirable, if possible, to get some other system for more immediate action?—Yes, as the only way to deal with the present evil.

19,315. You have heard of what they call courts of conciliation and arbitration?—Yes.

19,316. Have you any faith in those?—No. I think that there is such a deal of fallacy mixed up both on the part of the employers and on the part of the employed on these subjects, that you might talk for months and not come to anything like a just conclusion. Different passions and interests get into the question.

19,317. Do you not know of instances where this other system to which I allude has been successful?—No, but I have been for a long time out of business.

19,318. I think I understood you to say that although in this question of apprentices it was an interchange really of benefit between the skilled man and the lad in a manufactory, if it could be shown that the lad derived some direct and immediate benefit from being taught any particular branch of his trade by the workman, in such a case as that you would not think it unreasonable that the workman should be paid?—Certainly not; there might be a mutual arrangement between them then.

19,319. You would not think it unreasonable in such a case that the employer of both should, in consideration of this teaching which is imparted to the boy by the good workman, add something to his wages?—And it practically exists in piecework now. When a man takes a piece of work on piecework he often stipulates that he shall have two or three boys. The cleverest boys in the works are picked out, and the men pay these boys 2*s.* 6*d.* a week extra of themselves. It is not the boy paying the man, but the man positively paying the boy, and the effect of that has been to make every boy emulous and anxious to make himself worthy of being picked out. Not only is there the honourable distinction that puts him above all his mates of being picked out by John Thomson, or whatever his name is, but it takes a more substantial form than that; they actually get a share in the profits of the men by rendering something more than their own natural assistance.

19,320. It is in piecework that this has happened?—Yes.

19,321. But now let us take the case of day work. Would you consider that in day work a man's wages should be raised in consequence of his teaching an apprentice?—No, I think not, unless, as I said before, it was some information that the man is able to refuse to the boy, and does refuse.

19,322. Information which that boy could not naturally have picked up in the shop?—Just so; but I never saw a shop in which there was any job going on where a boy would not pick up knowledge if left to himself.

19,323. You said that any law in regard to combination should apply equally to both parties, employers and employed. Do you believe, taking what was your own business, that there combination to the extent to which it exists in the Society of Amalgamated Engineers can exist on the part of employers?—It is quite impossible.

19,324. For instance, we have had it in evidence that 23 shipbuilders on the Clyde, in anticipation of a strike, formed a society, and that they established very stringent rules, binding them to act together on the basis of a union; that they undertook to frame a common fund for mutual defence, and that they now have a fund of 96,000*l.* which they can turn into cash at any moment, and it was said that the result of that has been that there has been no strike since. Do you think that possible in your trade?—I should like to have three years' experience of that. I think that the combination will melt away. It may meet a temporary emergency, but I do not believe that it will be permanent.

19,325. You think that the masters' wish to undersell each other and to compete would break up any such combination?—Yes.

19,326. Their interests are more divergent than those of the men, in your view?—I think so.

19,327. You talked of the wages that you first got when you came to London being 15*s.* a week, and you said that you saved considerably upon that. May I ask how much you could save out of 15*s.* a week?—I saved 3*s.* a week, and I got a little apparatus made to cook my dinner, which I have at home now.

19,328. You invented a little apparatus for that purpose, did you not?—There was no invention about it at all; it was so simple. It was heated by an oil lamp below the pan, like what they cook children's food with in the nursery now. It cost me a halfpenny a day for oil.

19,329. You put your dinner into that apparatus, did you not, when you went out at breakfast time, and it was so calculated that when you came home you found your dinner cooked?—Yes. I indulged in leg of beef. By walking across from Lambeth to Farringdon Market I could get it at 2½*d.* a pound instead of 3½*d.*, and it was stewed to perfection by my apparatus.

19,330. That little pot you show, do you not, as the foundation of your fortune?—Yes, that it was the spirit of self-denial and love of true independence that did that.

19,331. What did you pay, if I may ask, for lodgings?—Two shillings and sixpence a week.

19,332. With regard to food and clothing compared with the present time, was it cheaper or dearer?—One large commodity of my consumption was East India rice at 1½*d.* a pound; it was so cheap that the grocer would not give me a bag to put it in; that, with a few raisins in it and a little milk, gave me dinner for some days in the week, and then I indulged in leg of beef dinner the other days.

19,333. Nowadays if a workman were as careful and industrious as you were then, could he, do you think, with the present price of lodgings and food and clothing in London save 3*s.* out of 15*s.*?—No. I do not know what lodgings are now, but many other things are enhanced in price. Sugar and tea are cheaper, and bread is not dearer, I think, but butchers' meat is much dearer. Still he might save if he set himself to it

19,334. Have you turned yourself at all to the question of foreign trade, so as to know how far English trade has been injured by it?—I cannot say that I have had any practical experience of that, but I know that machinery is coming over, and material in a more or less manufactured form from abroad; there are some special beams used by builders, I believe, coming from the Belgium works, and the locomotive engines from Messrs. Schneider, at Creusot, and elsewhere.

19,335. I have heard it stated that it is not the action of unions that causes that result, but that manufacturers in this country do not make the most of their manufacture; that they might employ improved

processes of machinery to a much greater extent than they do. For instance, I have heard that in America there is no such thing as a horse shoe nail made by hand, whereas here for those nails to be made by machinery is the exception; and that it is in that way in great measure that foreign trade is competing in the market with English trade. Would you agree with that?—Well, I may say that I was some years ago at a certain ironworks in Wales, wher I saw the machine used called the Squeezer, and I put it to the gentleman who managed the works: "That is a bad "way of making iron, to put the puddle balls into a "thing that squeezes them like baker's dough;" and I said, "There is not half the scoria squeezed out of it." He said, "That is just because we want to sell scoria "for iron." There he was aiming at cheapness. Now, when you had got the hammer it drove out the heterogeneous materials and cleared the iron of them. It is in that respect that the great distinction is between the foreign iron and the English iron. In the foreign iron they not only use the hammer, but they work it with one or two processes more to squeeze out this heterogeneous material. The common test of an iron bar is not merely the breaking of it, but putting the end of the bar into a forge and making it red hot, and seeing if you can punch a hole near the end. If the tenacity of the iron will allow you to punch a hole through it, without splitting open at the end, that is good iron; but if you have not squeezed out all this material that is in it, it will not stand that test. When you want good iron you should have nothing but iron, and there is the value of the Bessemer process; all that other material is got rid of.

Mr. J. Nasmyth.

14 July 1868.

19,336. (*Lord Elcho.*) Have you taken any part in this movement for technical education?—No.

19,337. Do you believe that it will be desirable to promote it?—Yes; appropriate education I would call it.

19,338. Would you have a special education for all the different trades?—I would not carry it so far as that. I would carry it up to a certain point. I would be quite content with that education of the eye of which I have spoken.

19,339. You would go in more for general education than for education in any particular branch?—Yes; but let it be specially appropriate to the prospects in life of the pupil.

19,340. (*Chairman.*) Have you any further evidence arising out of your paper to offer to the Commission?—No.

The witness withdrew.

Mr. Anthony John Mundella examined.

Mr. A. J. Mundella.

19,341. (*Chairman.*) I believe that you have come to state to the Commissioners your experience with reference to arbitration?—I was requested to communicate something to the Commission on the subject of arbitration as we practise it at Nottingham. And I divided it in this way: Firstly, the state of the relations betwixt masters and workmen in the hosiery trade (which is my own trade) prior to the establishment of a board of arbitration and conciliation; secondly, the circumstances under which that board was established, and its influence on those relations; and, thirdly, the application of such boards to other branches of industry. That occurred to me as the proper order. In speaking of the first point, the state of the relations betwixt masters and workmen in the hosiery trade prior to the establishment of a board of arbitration and conciliation, I may say that that goes far beyond my recollection, because although I was born, so to speak, in the hosiery trade, and have been engaged in it ever since I was six years old, yet the dreadful state of the relations betwixt labour and capital is a matter of history. I have before me the best authority on the subject in the shape of a book by Mr. Felkin, a fellow of the Statistical Society, giving "a history of the machine-wrought hosiery and lace manufactures," published last year, and as that will in a few words state better than I can what were the previous relations of the trade, I will, if you will allow me, read the index to one chapter. "Luddism" (luddism is a technical term known in the hosiery trade as machine-breaking). "Stocking frame break- "ing, 1710, in London.—By Act of 1727, if frames "using woollen yarn, punishable with death.—In "1770 loom breakers hanged in Spitalfields.—Frames "and a house destroyed at Nottingham.—In 1773 "frame breaking at Leicester.—In 1811 stocking "makers much distressed.—Swept the streets for "food.—Several gangs of frame breakers organized. "—Frames broken almost daily.—One man shot.— "Magistrates' appeals unheeded.—An offered advance "in wages.—Secured a body of machinery.—Daring "escape of a Luddite.—Nottingham seemed in a state "of siege.—1812, Trentham, a hosier, shot.—Punish- "ment of death extended to all frame breakers.— "Lord Byron's speech.—General insecurity.—Gar- "ton's house attacked.—One man on each side shot. "—In 1816 Heathcoat's frames broken.—A work- "man shot.—Six of the Luddites executed.—Luddism "ceased.—This nefarious work done for hire.—Heath- "coat's awarded damages 1,000*l*.—Never received." And so on. The fact is that owing to disputes about the rates of wages and the introduction of improved machinery, the breaking of machinery was fashionable, so to speak; that is to say, it was the practice in Nottingham and Leicester up to 1820. Since that time machine-breaking has ceased. The trades unions have taken a different form. There has been a stricter and stronger combination and more frequent strikes; but generally without violence. A good deal of persecution against individuals, which is very much to be deprecated, and a great deal of personal abuse of manufacturers. I am only stating this in order that you may know what we had to deal with in the first instance.

19,342. (*Mr. Harrison.*) All that you have mentioned as historical was at the time when combinations were illegal by law?—When they were illegal; the moment that they became legal men combined openly. The disputes about wages and the resistance to machinery continued, but in a different form, from 1820 up to 1860. The hosiery trade may be said to be divided into three branches: the hand looms, which are the original old hand looms, narrow looms; the wide looms, also used in domestic manufacture, the workman employing them in his own house; and steam power machinery, an introduction since about 1848.

19,343. (*Mr. Roebuck.*) Had you not any steam before that?—None; there was no hosiery manufactured by steam power before 1848. All these branches that I have just mentioned had their separate trades unions, and their mode of regulating wages was simply by a strike on the part of the workmen, or a refusal of work on the part of the manufacturers. The system was simply this. In times of depression a manufacturer pressed down the workman as low as he possibly could; and the less conscience he had, of course the more he pressed down the workman; and when the time for an advance came, or better trade, although the natural state of things—that is to say, the natural demand for labour—would sometimes force up wages a little, yet it was always resisted as much as possible. The men sent deputations from trades unions round to the hosiers' warehouses. At one warehouse they would be told to walk downstairs, they would not acknowledge trades unions. At another they would be told, "Well, we shall wait till we see what our neighbours do." After going round to the different firms and being received in that way, the chances are that the men would go home and strike; and it would depend upon circumstances how long they could keep out. They would, perhaps, ask for more than was the natural rate, more than the trade could

Mr. A. J. Mundella.

14 July 1868.

fairly give. It was simply starving out the manufacturer or the workman till a compromise was effected. Well, in 1860, we had in a single branch three strikes, one of which lasted 11 weeks. There was rather a good demand for the American trade; when the time came for the delivery of our goods, we had no goods to deliver, the men having been out 11 weeks. The manufacturers came together to consider what we could do to completely change this state of things. We resolved to do something as we considered it in self-defence. I may say here that of course the one branch that was out was supported by the branches that were at work. It was only the Sutton branch as we call it, the wide hand frames, which require rather a skilled class of men, that were out, still a number of steam power men and narrow hand frames, and glove hands, all contributed their quota to maintain these men while they were on strike. It was proposed that we should lock out the whole of them, that is to say, that if these men would not come to work on our terms, we should cease to give them any kind of work, and we would stop the steam power frames also. We knew what this meant; it meant throwing the population on the streets, and we should have had a dreadful state of commotion. We were sick of it, and some of us thought that better means might be adopted.

19,344. What was the real subject in dispute?—The men asked a large advance of wages in one branch.

19,345. Upon that the whole subject turned?—Yes, upon that the whole subject turned. As I say, some of us thought that we might devise some better means of settling the thing. I had heard of the Conseils de Prud'hommes in France, and with one or two others I built up a scheme in my imagination of what I thought might be done to get a good understanding with our men and regulate wages. The result was that a handbill was issued (I have one of the original bills here) inviting the men to a conference. At a meeting of hosiers it was arranged that a number of middle men and workmen should meet together, at least we invited them to meet together with us, to consider the suicidal character of their proceedings, and three employers were deputed to confer with the workmen. We say at the end of the bill, "We hereby invite the workmen in the branches "referred to, to depute persons to take part in the "conference, and to arrange with us the time and "place of meeting. Signed A. J. Mundella, Thos. "Ashwell, J. H. Lee," those being three of the largest manufacturers. We met, and we debated in our Corn Exchange for two or three days.

19,346. (*Lord Elcho.*) Do you know what steps the men had taken?—The men consulted together and put out a handbill. They said that it seemed a fair proposal and they would meet it.

19,347. How did they choose their men?—They chose the leaders of their trades unions undoubtedly. We three met perhaps a dozen leaders of the trades unions, and we consulted with these men, told them that the present plan was a bad one, that it seemed to us that they took every advantage of us when we had a demand, and we took every advantage of them when trade was bad, and it was a system mutually predatory. And there is no doubt that it was so; we pressed down the price as low as we could and they pressed up the price as high as they could. This often caused a strike in pressing it down and a strike in getting it up; and these strikes were most ruinous and injurious to all parties, because when we might have been supplying our customers our machinery was idle, and the probabilities were that some part of our trade was going to our rivals in France and Germany, for we have constant competition with France and Germany, and we suggested whether we could not try some better scheme. Well, the men were very suspicious at first; indeed it is impossible to describe to you how suspiciously we looked at each other. Some of the manufacturers also deprecated our proceedings, and said that we were degrading them, and humiliating them, and so on. However, we had some ideas of our own, and we went on with them; and we sketched out what we called a board of arbitration and conciliation. What we were going to do was very indistinctly prefigured in our own minds, except that we had agreed that to this board we would refer all questions in dispute, and that an equal number of workmen and manufacturers should be elected annually, the manufacturers by their body and the workmen by theirs, and that we would bind ourselves to agree to the decision of the board; of course the parties selected to sit on the board being manufacturers and workmen in equal numbers.

19,348. And how was the chairman chosen?—When we came to make our rules it was agreed that the chairman should be elected by the meeting, and should have a vote, and a casting vote when necessary. I was chosen the chairman in the first instance, and I have been the chairman ever since. I have a casting vote, and twice that casting vote has got us into trouble. And for the last four years it has been resolved that we would not vote at all. Even when a working man was convinced, or a master convinced, he did not like acting against his own order, and in some instances we had secessions in consequence of that; so we said, "Do not let us vote again, let us try if we can agree," and we did agree. This (*producing it*) is a copy of our rules as originally formed, and although they are very simple indeed, yet we have never amended them from the day they were made. Our proceedings are exceedingly informal, they bear no likeness to a court. We sit down as you are now sitting, round a table, and the workmen and masters are often interspersed.

19,349. (*Chairman.*) Have they a secretary?—The men appoint their secretary and we appoint our secretary, and we pay the expenses between us. We pay our secretary 10*l.* a year, and they pay theirs for his loss of time. And we sit down and discuss all questions. At first we thought that our business would be merely to discuss any disputes that had arisen.

19,350. (*Mr. Roebuck.*) Why have you two secretaries?—Because the workmen like to report to their own body what takes place. We have only one secretary for the purposes of the board. He is not a member of the board. He is a young man who is an employé at one of our warehouses. The rules require that notice of subjects to be discussed at the board shall be given in writing, and we do not even enforce that.

19,351. (*Earl of Lichfield.*) Do you fix the days of meeting?—We fix that we shall meet once a quarter at least; but that on the request of three members on the committee of inquiry we shall meet oftener, as often as may be required, and we meet on the average once in each month. Originally we had on the board nine of each side, now we have ten. We appointed from our number two on each side as a committee of inquiry, and they try to confer on questions that arise, and settle them privately. Supposing that it is a question of wages, and we want to draw up a statement as to what prices shall be (we have what we call statement of prices for every class of work made in the trade), it is then referred to the board.

19,352. All the work in the trade is done by piecework, I suppose?—All the work in the trade is piecework from beginning to end. There is a statement of prices signed by manufacturers and workmen (*exhibiting it*).

19,353. (*Mr. Harrison.*) Is that a code of rules as well?—No, a statement of prices simply.

19,354. (*Lord Elcho.*) Is it a yearly or monthly statement?—It stands good till it is altered. These are statements of prices in other classes of work (*exhibiting the same*).

19,355. (*Mr. Harrison.*) They hold good for the future?—Yes, if we had only to discuss quarrels that have arisen about the past state of prices we should have almost nothing to do, because it is rarely that there is any dispute what shall be the rate this

week, but the dispute is what shall be the rate next week.

19,356. Is there any notice required for any alteration of the rates of wages?—Yes, it stands on our minutes that if the workmen require an advance of wages or a manufacturer a reduction, a month's notice must be given by either side.

19,357. (*Mr. Roebuck.*) Notice is given, say by the men, that they want an advance of wages on a particular class of work, that notice is sent to you, and then you discuss it?—That is given at a board meeting, and it is a month from that board meeting; when the month is up then the board meets to discuss the question.

19,358. Supposing that the board come to a decision that the advance ought to be given, and you issue that as your opinion, what is the result of that?—The result is that the manufacturers in the trade, universally in fact, give the price. If there are one or two that stand out (and there are some, I will explain that immediately) we wait upon them ourselves, and say, "Now for peace and quietness' sake, agree to "this; it has been agreed to by the other manufac- "turers, we are all willing to act by it, and why should "not you?" There are about 40 manufacturers in Nottingham. We govern by our board Nottingham and Nottinghamshire, Derbyshire and the whole of Leicestershire, up to Loughborough. Leicestershire on the south side we have nothing to do with; they have a separate board of their own which was established last year. There are two manufacturers who come from Belper to the board, and one from Loughborough, the largest manufacturer there, and seven Nottingham manufacturers; and we set out with 10 workmen representing the different trades unions, and we discuss these questions courteously and friendly. The men come to us perhaps and say, "We want an advance on this "class of work; the hand-loom work is the least paid "work in the trade." And so it is, because two men will sit side by side on the board, one earning 12*s.* and another 2*l.* a week, and the 12*s.* man may be as good a man as the 2*l.* man, and the 12*s.* man says, "Cannot you give me an advance?" "You know the reason why you are not paid more." We say, "Yours is a narrow machine, and if we were to "advance it to anything approximating the wages of "the man who stands next to you, we should shut out "that altogether; what we want is to keep the trade "in our town," and the men agree to that. We sent two of them to France last year and a third to Germany to see for themselves the prices paid there for that work. They came home and said, "It will not do, we must be content as we are for the present." We produce on the table the articles made in France and Germany, and the men are convinced by their own senses of the justice of what we say and by their knowledge of the laws that govern trade, because this system has been a complete educational process for our men; they know as well as we do whether we can afford an advance or not; they know whether the demand is good or bad, and at what prices the article can be made in France or Germany; and they are accustomed to consider the effect of a fall or rise in cotton just as we do; and when they think that things are going well they ask to share in the benefit, and when they think that things are going wrong they are willing to take lower rates.

19,359. They have, in fact, confidence in your board?—They have now. At first it was difficult to inspire that confidence, as we did not confide in each other; there were not above half the manufacturers that came into it at first, but when we put our names to these statements the others could not for shame stand out, and now we have only three or four who hold aloof, for there are men in our trade as there are in every other trade who for the sake of a few shillings a week would not hesitate to put a whole district in confusion—masters who are perfectly indifferent as to the effect upon the trade in general, so that they can gain a little more.

19,360. (*Lord Elcho.*) What number do the ten men on your board represent?—Fully 20,000 men.

19,361. (*Mr. Harrison.*) I think it might be convenient if you stated to us now what was the exact constituency of your board on each side; for instance, supposing you take the employers first, there was an employers' association, was there not?—There was. We got all the employers we could together and the Hosiers' Association was formed; it was not a combination and we were not combined for any purpose; for employers to be combined it is not necessary to have an association at all.

19,362. (*Mr. Roebuck.*) Ten persons representing the employers on the board were chosen by the employers?—Yes.

19,363. (*Mr. Harrison.*) Who has a right to vote for them?—The employers who are members of the Hosiers' Association.

19,364. Those outside of that association would not have the right?—We have only about three such.

19,365. And the ten men's representatives are selected by the men's different unions, are they not?—They are selected by the men's unions; and I believe the non-unionists voted for them in the first year. I believe it was by universal suffrage that they were chosen, they actually polled the number of votes. So many men were nominated, John So-and-so had so many thousand votes, and so on; and the nine with the highest number of votes were appointed.

19,366. Who had the suffrage?—Every man who worked at the trade.

19,367. Did they take the votes at central voting houses?—I think the votes were sent to the secretary of the trades unions.

19,368. Then the vote was collected by the trades unions putting themselves at the head of the working men of the town?—Yes, we could have done nothing without the organization of the union, and it was to deal with that that we adopted this plan.

19,369. What proportion of the men are in the union?—The great bulk.

19,370. Do you suppose that you could have got hold of them without such an organization as that of the union?—No; when we proposed to the men the formation of a board of arbitration they took our proposal back to the trades unions for consideration, and the trades unions determined to give it a trial. Here is the way in which it is worked in the lace trade. The third rule of the board of arbitration and conciliation for that trade is this: "The board to consist "of eight manufacturers and eight operatives, three "of each to form a quorum; the operatives to be elected "by a meeting of their own body, the manufacturers "to be elected by a meeting of employers. The whole "of the deputies to serve for one year, and to be eligible "for re-election." Now here is the men's circular: "The committee earnestly request that a delegate be "elected from every workshop, and those factories or "shops numbering more than ten workmen are "requested to send one delegate for every additional "ten workmen, to meet in the office, Rigley's Yard, "on Thursday evening next, the 4th day of July, at "7 o'clock, when it is intended to choose eight work- "men according to the above-named scale" (that is to say, that every ten men should choose one, and that out of that number they should choose the eight who should represent them) "to meet the same number of "employers to draw up a code of laws, and to form "the board for the ensuing year."

19,371. (*Lord Elcho.*) That is irrespective of whether they belong to the union or not?—That seems to be irrespective of whether they belong to the union or not. But this is my experience, that the men who are not in the union are always glad to take the advantages gained for the men by the union, and if you will deal with the leaders of the trades unions they will be glad for you to do so. If we were to attempt to adopt the principle which Mr. Nasmyth has been recommending to you this morning of dealing only with one man at a time I think it would be most unfair to the men.

Mr. A. J. Mundella.

14 July 1868.

19,372. (*Mr. Roebuck.*) I think Mr. Nasmyth's remark on that point applied to the contracts between employers and employed?—That is the rock on which I think employers split; and I think that Mr. Nasmyth only stated very boldly and frankly what many employers—indeed, the majority of employers—secretly feel; that is this, that they will not have anything to do with deputations at all, they want to deal with men one at a time. Now so long as there are 20 or 30 factories working in one town, and the men in one factory are getting 16*s.* a week and the men in the other factories 16*s.* 6*d.* a week, the 16*s.* men will not stand it, but they will form a combination with the 16*s.* 6*d.* men to get the extra 6*d.* and they will deal with you by their representatives, and they have a right so to do; because if I take men one at a time I being a large employer can trade upon their necessities and weed out the men that have any independence, and screw the rest down to any terms I may please. That is the rock on which too many of the employers split, and so long as we wish to make a world to please ourselves, and will not take it as we find it, I believe that we shall have these strikes and lock-outs. I see no way to avoid that state of things, but allowing men to avail themselves of the principle of association; although I believe there have been many wicked things done under it, and I always denounce in the strongest way I can any outrage, any intimidation, anything illegal or irregular, any opposition to machinery, any objection to work a particular class of stone; for instance at Bradford I have done so. I there told the men plainly what I thought of them and got them to go home and erase their rules the next day; yet I am quite sure that the men on the whole have benefited by their trades unions.

19,373. (*Mr. Hughes.*) You say that you quite admit the right of the men to deal with their employers by their representatives?—That is the only way of avoiding these difficulties.

19,374. And you have had great experience of the representatives of the men in your part of England?—Yes.

19,375. What sort of men have you found them to be?—I will tell you what has been the effect of our board of arbitration. The very men that the manufacturers dreaded were the men that were sent to represent the workmen at the board. We found them the most straightforward men we could desire to have to deal with; we have often found that the power behind them has been too strong for them; they are generally the most intelligent men; and often they are put under great pressure by workmen outside to do things which they know to be contrary to common sense, and they will not do them. They have been the greatest barriers we have had between the ignorant workmen and ourselves, and I know that is so. I have found it in my correspondence with trade union secretaries and leaders; all over England I have found that so. I know that they are opposed to most of the evils that pervade the trades unions, but there are some that are not so; it is quite clear that this Commission has developed that.

19,376. So that you consider them to be genuine representatives of the working men?—Yes, generally I do. I will now describe the first effect of this establishment of a board of arbitration. I must, although with a good deal of reluctance, put in a few handbills here. Our workmen do not like them to appear because they represent what was a very bad state of feeling in our district, but I have only selected a few out of some hundreds that came into my possession last year; they are by no means all, and what I have are not consecutive even, but they indicate what was the feeling between master and workman at the time that our board was established. Some of these handbills appeared just six months prior to the establishment of the board. The one from which I will first read was published only a month prior to the establishment of the board. It is dated September 6th, 1860, and our board was established I think on the 27th. "To the "trades of England we say, give us help and assistance "in the maintenance of our rights and liberties, and "show that you are determined to support those who "are prepared to sacrifice their all for the rights and "dignity of labour. To show you that the down-"trodden sons of toil in our society having done their "best to protect themselves against a conspiracy "which has been in existence for the last six months "to destroy us, we have expended near upon 1,000*l.* "in defending our wages" (this is this little branch of the framework knitters), "and as trade is flat, our "employers have taken the present opportunity (tiger "like) to pounce upon their prey, and by the offered "reduction to put, this present week, more than 700 "on strike and on our funds, and to give no work to "a larger number to keep them from paying to the "above men on strike." That, as I have said, is dated September the 6th, 1860. We issued our handbill at the end of the month, we got the workmen together, and that was the state of feeling in our district at that time. I believe the last handbill here is one dated September the 14th, in which my name is particularly mentioned as having deceived the other employers. It says: "Mr. Dobbs of Skegby is giving the price for "what he is making to Mr. Ashwell, and Mr. Wells "and Mr. Mundella are paying the prices at Lough-"borough and Sheepshead; therefore these manu-"facturers are getting their orders accomplished, and "gulling the rest of the hosiers that are acting with "them, making them believe that they are not giving "the price for anything they are making; at the same "time they are having immediate orders done and "giving the price for them, and laughing in their "sleeves to think how craftily they are doing all the "respectable houses in the trade in paying the price, "and do not want any alteration." The object of that was to sow dissension amongst us. That was the last bill ever published. There has been no attack upon an employer since.

19,377. How is it they came to make a set against you?—I had gone out of my own district to give the full price in order to get my work done, and I was gulling the manufacturers in the same district, they say. I must say this, that since I was a child I do not know that ever I walked the streets without seeing some of these handbills up to 1860; and since the formation of our board not one has been published. I was born amongst the working men, especially amongst the stocking makers, and the feeling on their part was that it was impossible for a manufacturer to be a just and honest man. The feeling at the present moment is more cordial, and more loyal and friendly, than I ever could have believed it possible to have realised. We have carried on the trade during the last eight years on this principle. When this Trades Union Commission was first constituted the Christmas before last, I must say that we never expected we were coming into publicity by our system. We simply adopted it for our own wants, but it attracted a good deal of attention, and the Speaker of the House of Commons was so delighted with it that he spoke in favour of it, and some others begged us to give some account of it. Up to that time we had never published an annual report even; the manufacturers simply gave their account to the manufacturers, and the workmen to the workmen. But in 1866 we published one signed by both masters and workmen. This is the report (*producing it*). It says this: "It affords the "Board much pleasure to report that the past year has "been, on the whole, a prosperous one in the Hosiery "Trade, employment in nearly all branches having "been abundant. The Board has met eight times "during the year for general and special business. "The Committee of Inquiry has also met on several "occasions, and all matters in dispute which have "been submitted to it have been speedily and amic-"ably arranged. The Board having now had six "years' experience of the practical working of the "system of arbitration, as opposed to strikes and "lock-outs, is thoroughly convinced that in a free "country where the workmen and capitalists have

" a perfect right to enter into combinations, the " simplest, most humane, and rational method of set- " tling all disputes betwixt employer and employed is " arbitration and conciliation. The Board is strength- " ened in this conviction by the fact that during the " past two years the demand for Hosiery has been in " several branches of an exceptional character and " labour in some departments usually scarce; and " notwithstanding the workmen have preserved their " Trades Unions by having a central authority to " to appeal to, composed equally of employers and " employed; all questions calculated to produce " irritation and lead to disputes have been promptly " settled; all inequalities in the rates of wages have " been adjusted; the manufacturer has been enabled " to accept his contracts without apprehension, and " execute them without delay; and the rights of " workmen have been jealously looked after and strictly " preserved. Whereas in neighbouring counties and " throughout the country a chronic warfare has ex- " isted betwixt labour and capital to the great injury " of both, owing to the want of some court of appeal " commanding alike the confidence of employer and " employed. It is with much satisfaction that the " Board is able to report that at no previous period in " the history of the Hosiery Trade has there existed " such a cordial understanding betwixt employer and " employed as at the opening of the present year, and " the Board trusts that this may long continue, " believing that it is calculated to advance the interests " of the trade, to improve the condition of the work- " men, and to further the progress and well being of " the community."

19,378. You report here that in 1866 the employment in the hosiery trade was abundant?—It was very abundant.

19,379. In 1866 there was a general slackness in other trades, was there not?—Not in 1866 I think. During the American war we suffered frightfully, but in 1866 we had a very large demand for America and for the Colonies, because our staple is chiefly cotton, and it was then coming down to a reasonable price; that is the testing time; the time when it is difficult to keep the peace is, when there is an unusual demand; and we never had a machine standing the whole of that time.

19,380. Do you find that the board has any effect on the regularity of the work in your trade?—Yes, we find that what is called the market price (I am speaking now with great deference to political economists, because I believe in political economy strictly, still I believe it is carried too far) is not always the market price, but in flat seasons the price is governed very much by the unscrupulousness, if I may say so, of certain manufacturers; for instance, one manufacturer, who is a very honourable man, will be content to pay 7*s.* for a certain article, another is not content unless he gets it at 6*d.* less than his neighbour, and takes advantage of a flat season to screw his men down. Now though we do fluctuate up and down under this board, we never fluctuate to the same extent as we did under the other system.

19,381. (*Lord Elcho.*) How often in the seven or eight years during which the system has been in force have you had a rise or fall; that is to say, what has been the number of times in which this board has regulated the wages either rising or falling?—I should think every year probably.

19,382. More than once a year?—More than once a year generally.

19,383. But you cannot say how often?—No. We have nearly 5,000 different articles to deal with and have to regulate them all. We are continually fluctuating up or down, but not down much, because the tendency of wages has been slowly upwards for the last 500 years. Men require higher money wages because the purchasing power of money gets less. Instead of the wages fluctuating downwards we generally let things remain as they are, and that has made things much more equal. I will give you an instance of that. Mr. Samuel Morley, who is one of the largest employers in our trade, for he employs 5,000 people, has told me over and over again: "In " good times I can lay up stock now; before I could " not do that, because I was always afraid of some " unscrupulous employer cutting me out with lower " prices."

19,384. (*Mr. Mathews.*) Are the fluctuations extreme?—They used to be, but except during the American war they have been very slight.

19,385. (*Mr. Hughes.*) I understood you to say that the fluctuations before the establishment of your board were very great?—Yes.

19,386. (*Mr. Mathews.*) Would the establishment of the board interfere materially with the price of the raw material?—Not at all.

19,387. So that in fact the establishment of the board has no reference at all to the price of the raw material?—It has some reference to it, for instance in regard to cotton.

19,388. What proportion of the cost of the finished article would consist of raw material and what of labour?—In the common class of goods two-thirds would consist of the raw material; in the best class of goods not more than 10 per cent. would consist of raw material. I am speaking now of the cotton hosiery trade strictly.

19,389. When you speak of labour, do you include in that the mechanical part of the labour?—Every part of the labour. For instance, in the making of stockings there is the machine working, then the sewing up, then the bleaching, then the boxing and finishing. A stocking of 30*s.* a dozen will not have above four or five shillings worth of material in it.

13,390. The amount of mechanical labour will vary in different classes, will it not?—Yes, the stocking of 30*s.* a dozen will have 14*s.* or 15*s.* of mechanical labour in it; a stocking of 4*s.* a dozen will not have above 8*d.* of mechanical labour in it, if they are made by steam power.

19,391. So that taking the mechanical operation and the raw material, the labour is subordinate to those two combined, generally speaking?—When I speak of the mechanical operation I mean the labour performed by the two with the aid of the machine.

19,392. You do not mean the cost of the machinery?—No; I understood by the term "mechanical operation" what would be paid to the mechanic for working the machine. Our machinery is valuable, and we have to put on every dozen stockings a certain proportion of value for the wear and tear of that machinery, but the work done forms a very small part of the cost of the article.

19,393. So that it leaves, in point of fact, as the material element in the cost of your articles, labour?—The material element is labour and cotton. If it is a silk stocking then it is reversed; silk is the great cost.

19,394. As I understand you, in the higher articles only 10 per cent. goes to material and 90 per cent. to labour?—Yes.

19,395. In the lower articles two-thirds is the material and one-third labour?—Yes.

19,396. (*Mr. Harrison.*) Have you ever considered whether there is any absolute necessity in the trade for wages to fluctuate frequently up and down? Of course we know that wages will rise or fall in the long run; but is there any necessity for an immediate brisk demand for the article being followed by a rise of wages?—I believe that the great fluctuations which take place in wages are rather a consequence of the operations of two parties combining one against the other; the workman combining against the master to raise wages up to a higher level, often to a level which is injurious to himself in the long run and drives labour away; and then the master, taking advantage of the state of things and to bring wages down to a level unjust to the workman.

19,397. You think that the healthy state of things is that the wages should remain fixed on the long run?—They must fluctuate according to circumstances.

19,398. You say "they must;" are you sure that they must. Have you considered this, that there are

Mr. A. J. Mundella.

14 July 1868.

a great many trades where they do not?—I never knew a trade where they did not fluctuate.

19,399. Throughout the whole of the building trades in London practically for 12 years there has been no fluctuation, has there?—The building trades are practically different from any other trade. You cannot import a house ready made; there is no foreign competition in that trade, whereas in our trade there is. If our price is a mere trifle above the price of France or Germany for the same article, the American, and West Indian, and Australian traders, and our own colonists, then go to France and Germany; and so we are obliged to govern our wages and our cost under the influence of those foreign markets.

19,400. (*Mr. Mathews.*) Is there much difference between the wages which you pay and those paid by the French and Germans?—Yes; the wages paid by the French and Germans are much lower than those paid by us. The German labour is perhaps 25 per cent. lower. But I will say this, that is not all saved. The English workman is the best workman in the world, excepting perhaps the American, who has some advantages over him. I mean if you take up a machine of the same size and turn it by steam power the same number of revolutions a minute, and give that same machine to a Frenchman and a German, the Englishman shall beat the others 30 per cent.

19,401. (*Lord Elcho.*) He beats them through what? through physical endurance, or training of the eye, or skill of the hand?—Training of the eye and rapidity; an Englishman is the more energetic man.

19,402. The English workman is more skilled with his hand and eye than the Frenchman?—Yes, quicker. Suppose, for instance, that a machine is making a piece of lace, or a cotton fabric, there is always some rectification of the machine wanted now and then, and the Englishman will take less time in setting his frame and rectifying the frame than the Frenchman. The foreigners are much slower, the Englishman has a quicker perception.

19,403. You employ some Germans, do you not?—We have a place in Saxony where we employ 700.

19,404. You can therefore compare results as between English workmen and German workmen?—Yes; I have been accustomed to go to France and Germany for 20 years. I have taken out patents in France, and sold the same machines in France and Germany as I have worked in Nottingham. I have friends in France who when we bring out a good machine buy it. I see their workmen working in their factories and our workmen in ours, and I compare the relative production, and I send our workmen over to France to see how they do the thing.

19,405. (*Chairman.*) You say that you have works in Saxony; how long have you had them?—About five years.

19,406. Were they established since your system of arbitration was set on foot?—No, they were established by another manufacturer in Nottingham, who during the American war lost money and stopped in consequence. We bought them with a view of concentrating at our depôts in London and Nottingham every class of production, so that our buyers should not be necessitated to go to Germany for German goods.

19,407. Does the work which you do in your German establishments differ from the work done in England?—It does; it is not precisely the same work. They have a lower class of labour than we have, and the old looms that are passé, that our workmen will not work, we send over there and they work them. They make a class of work from those looms adapted particularly to the American market, and that brings the Americans to us in Nottingham to buy these goods instead of their going over to Germany to buy them, and perhaps to buy other things as well.

19,408. Do you find that your works in Germany act in any way as a check upon the men employed in your works in England, by showing them what can be done?—There is as much hosiery machinery in Germany as there is in England, and the men know it. But the Germans aim at a different class of goods. I was about to point out that we have some other advantages besides the rapidity of the Englishman. Although the German workman is cheaper, we get our cotton cheaper. Liverpool is the depôt for cotton; the German must buy his there or at Havre. It is then brought by the sea passage to Hamburg, and then he must carry it 1,200 miles inland, and then there is a stupid government that inflicts a duty upon the raw material; then he has to pay the charge out from Leipsic to Hamburg again, and then a Hamburg steamer will charge him 3*l.* a ton for the freight to America for what we here can ship for 30*s.* a ton.

19,409. Under the new organization of the North of Germany that disadvantage will disappear, perhaps?—The new organization of the North of Germany is the great thing that England has to look to. In many things they are a long way ahead of us, particularly in scientific education.

19,410. Is it particularly Germany that we have to look to in that respect?—Yes; I think nothing of France.

19,411. In your trade, you mean?—In every trade.

19,412. I understood you to say that the American was more skilful than the Englishman in your trade?—I would not like to say that. The Englishman is on an equality with him, but generally the American is better educated.

19,413. Can you say whether the persons employed in your trade in America are native-born Americans?—They are frequently native born; they very often mix with English workmen. They like the native-born Americans the best.

19,414. In the iron trade, I believe, there is no such thing as a native born-American among the workmen?—That is because every native-born American gets to be a master as soon as he can.

19,415. (*Chairman.*) What is the part of the States in which your business is carried on?—Boston, Philadelphia, and Massachusets.

19,416. (*Mr. Hughes.*) Do you not believe that the high rate of wage in America has a great deal to do with the great skill and energy of their workmen?—I believe that some of our workmen are better off than theirs. That has been proved to me of late years, because some of our men have come back again for that reason.

19,417. Do you not think that when the wages in Germany reach the same point as ours, that will develop more energy and more skill in them?—I think probably that it will. The wages in Germany are advanced something like 40 or 50 per cent. since I have known them, and they are getting higher and higher constantly, and they have a very intelligent docile population, and very careful and very honest.

19,418. You do not believe that there is any inherent incapacity in the German to equal the Englishman in work if he has the same inducements to it?—I may be a little conceited on that point, but I give the Englishman the preference over all others. I think there is more "go" in him; he is not so slow and heavy.

19,419. Then you do believe in a difference of race?—I believe that there is a difference of race, and that the English race is the best extant.

19,420. (*Mr. Harrison.*) With respect to your answer just now, I understood you to say that the fact of foreign competition entering into a trade made it impossible for wages to be steady; that is to say, not to fluctuate, though of course wages in the long run will gradually rise or gradually fall. When you say that foreign competition is a sufficient answer to the suggestion that it is possible for wages to be steady, have you considered this, that of all the trades, that in which foreign competition is said to be entering in the most formidable manner is that of the engineers, and that the engineers of large districts in England, and most notably of London, I believe, have had perfectly steady unvarying wages over periods of 10 or 12 years at a time, broken only by a uniform rise, and that fluctuation of wages is in their trade unknown, I may

say, over the whole kingdom?—I am quite satisfied that in a trade that has to contend with foreign competition, fluctuations of wages are absolutely necessary. For instance, we had the woven glove trade; the men were getting good wages, wages went higher and higher, and we had strikes (this was before the formation of our board), till the wages reached a tremendous point. I said, "I am sure this will not go "on; they have the same machines in Germany, "and they will set about this trade." And they did, and we have no glove trade left. The result was that the glove hands came down to nearly half what they formerly had; they made for 1*s.* 3*d.* what they used to make for 2*s.* 3*d.*, and then they could not get employment, and the trade has nearly died out.

19,421. Does not that precisely bear out the proposition that the principle of constantly changing wages regulated by the immediate profits in that particular business, leads to a disastrous state of things?—Yes, when the wages are forced up beyond what is the natural price—that is, the price at which the goods can be sold in the market without foreign competition taking the trade out of their hands. Beyond that point our trade gradually dribbles into our neighbours' hands.

19,422. Have you ever considered the plan of keeping the wages fixed at a point that leaves a considerable margin for foreign competition and rise and fall?—I am afraid that I have not devoted much attention to that. You know that I am strictly a practical man, and not a philosopher.

19,423. It is a very practical question, I think, with respect to your board. For instance, the engineers are subject to immense fluctuations of profits; occasionally the great employers will be making enormous profits and occasionally working at immense loss. The wages of that trade, I understand, are so regulated that there is a margin which will bear the whole of the rise and fall, and the foreign competition, and all the rest, and the result is a nearly uniform wage?—I am quite sure of this, that if the foreign engineer, Hartzmann of Chemitz, can buy his iron as cheap as the English engineer, and can get his labour 35 per cent. less, he will beat the English engineer; and if the English customer can buy his goods cheaper in Germany, he will not care where he gets them from; even our own countrymen will take an article to a German manufacturer and ask him what he will do it for. I have known strikes drive away trade, and I have known strikes introduce trade in other localities abroad.

19,424. (*Mr. Mathews.*) So that given the same ability to make the same character of goods in England and abroad, the only advantage of the Englishman is superior intellect and adroitness?—Superior intellect and adroitness, and superior capital and machinery, and all these things have great influence, and where you have large capitals brought together you have more division of labour.

19,425. When you speak of large capital, you include, I suppose, the facilities of railroads and canals, which do not exist in Saxony to the extent to which they do here?—They exist there as well as they do with us.

19,426. A Saxon manufacturer has to import his cotton from Liverpool to Hamburgh, and then to take it on over a large distance, you have told us, to his works?—That is a natural disadvantage which he cannot get over.

19,427. (*Mr. Hughes.*) The position of England, and the fact that it has been so long the centre of trade, will for a long time give it a great advantage?—Undoubtedly, and if our artizans were only as well educated as those of our neighbours, and if a good feeling were cultivated between employers and employed, I should not have the least fear for English trade.

19,428. (*Mr. Mathews.*) But the English workman must look forward to this fact, that as the foreign manufacturers improve in their machinery, and gain other facilities that the Englishmen now have, the Englishman must put himself in competition with the foreign manufacturer?—But if the Englishman is as well educated as the foreigner he will still keep ahead of the foreigner. I believe that the Englishman is more inventive than any other man; our common workmen are very superior to theirs in that respect.

19,429. (*Mr. Roebuck.*) Take the Englishman who has to make a dozen stockings, what is the education which the Saxon has had which gives him any advantage over the Englishman?—In this way; we are constantly introducing new machinery into our trade. The best machines in our trade are principally the inventions of working men. It is many years since I remember one being invented by a manufacturer, but those men are often a long time over them, simply because they have none of that scientific knowledge which I believe Germany has.

19,430. Do they make more rapid improvements in Germany than we do?—No, they get our improvements and improve upon them.

19,431. If so, where am I to see this great influence of education, because you say that the English workman works the loom more rapidly than the German, then where is the great advantage of the German education, I ask?—Because there are many things, such for instance as chemical dyeing and things of that kind, where his education is useful to him.

19,432. There is not much dyeing in cotton stockings, is there?—Yes, dyeing or bleaching. Every stocking goes through a process of dyeing or bleaching.

19,433. Does a white stocking?—It is bleached; that bleaching is a chemical process, and requires a chemical knowledge.

19,434. The German workman has not a good chemical knowledge, has he?—Those men have excellent chemical knowledge. You must bear in mind that we have had possession of the ground so long, that we have a certain amount of hereditary knowledge that has come to us; we do not know how we have got it. These men have, comparatively, only recently been making these great strides. But in regard to our competition with France and Germany, I can recollect that only 12 years ago there was scarcely a steam-power hosiery machine in France, now they are making as good as we are.

19,435. I am puzzled to understand why you attribute such great advantage to the German education?—I do not attribute great advantages to it, except that it makes their men sober, temperate, thrifty, law-abiding; but what I say is this, if you give the Englishman the same advantages he will go beyond what he is himself at present, and will keep ahead of others.

19,436. Putting aside the question of the moral education, I want to know where the great advantage is which is derived by the German artizan in the peculiar education which he has?—Let me give you an instance of Hartzmann and Zimmermann, two German firms. One is the rival certainly in quality of Whitworth, namely Zimmermann, he employs many hundred workmen as tool makers, he makes the most beautiful tools you ever beheld. I heard a Manchester man say last week, "I think that Zimmermann's tools are coming very close to Whitworth's;" and Hartzmann, who employs 4,000 men, says, "I will "not take an apprentice or an artizan who has not "been through our Polytechnical school;" the result is that these men who have been through this school are much more scientific in their application of principles than our men are.

19,437. Going back to my former example, a man, we will suppose, has to make a dozen of stockings: the Englishman, you say, is a better workman than the German; I want to know wherein the German who makes a rival dozen of stockings derives that peculiar advantage from his technical education?—I do not speak of technical education as applied to every artizan; there is not such a thing in Germany, it is only applied to the leading artizans, the inventors and over-

Mr. A. J. Mundella.

14 July 1868.

lookers, and managers. Perhaps in all Chennitz there are only 400 men qualifying at the Polytechnic school in that way, and out of a population of 50,000 that may be a small number; but we have not 400 either in London or Manchester.

19,438. Do you find that your over-lookers are beneath their work?—I am sorry to say that they are beneath their work.

19,439. The great difference, you remark, is in the overlooker, not the workman and the ordinary artizan?—No; technical education is not of great value that I can see to a man who has to superintend the motions of a machine, except that if he were an inventive man he might then understand what was going on in that machine, and suggest improvements for the benefit of himself and for the benefit of the country. But the man who has the superintendence of 100 machines, and is an inventor or constructor, is the man who would derive the benefit from technical education.

19,440. You say that this technical education is the great advantage of Germany over England?—Yes, but in primary instruction also there is no comparison whatever. Our manager in Saxony, who has been there for many years, says that he has never yet met with a man, woman, or child who could not correspond with him respectably; and I have been making inquiries to ascertain the state of education in Germany, and could have produced to you the signatures of the poor mill girls in Germany, their name, age, description, and all about them, given in their own handwriting; and I could have produced the writing of 200 mill girls, everyone of whom writes well, and whose signatures would do credit to any ladies in Mayfair. I am sure that if you were to go round and collect the same number of signatures from ladies in Belgravia, you would not find better writing than that of these Saxons.

19,441. You said that you would give us some information about the application of these boards of arbitration to other trades than your own; will you do so?—Yes, but perhaps I had better exhaust first what I had to say about our own trade. In the first place, instead of our workmen having to pay 1*s.* and 1*s.* 6*d.* a week, as they commonly did to their trades unions to support themselves on strike (for they never had donations, or benefit, or sick fund; all the money they paid in to the trades unions in Nottingham went for strike purposes), since the establishment of this board they have paid 1*s.* a year, 1*d.* a month, and that more than suffices to pay all their expenses. The secretaries get, I think it is, 6*d.* the hour. I have examined their trade union accounts, and I have seen that 2,300 men in one union have spent 93*l.* in 16 months. I stated just now to you that our voting produced two secessions of men who were dissatisfied with this system. They went away, but they came back again shortly. Just as an indication of the kind of feeling, I have copied two resolutions out of our minute book which were proposed by working men at our board. I should explain that in the first case one of our best firms have had their whole premises burnt down, and the working men wanted to express their sympathy. "Proposed by "Mr. Farrands, and seconded by Mr. Foster, and carried "unanimously" (that is we agreed), "That this board "desires to express deep sympathy with Messrs. "Lee and Gee, and with Mr. Lee especially as a "member of this board, at the calamity which has "befallen them, and to express a hope that a future "of health and prosperity may be in store for them." That was sent to Mr. Lee. Here is another proposed by Mr. Kendall, and seconded by Mr. Saxton (two working men), and carried unanimously. (I should explain that Mr. Samuel Morley found that at his narrow handloom his working men could not earn enough to save money for their old age, and he set aside as a fund for them 1,000*l.* a year for an annuity of 20*l.* a year for 50 workmen. This is the resolution proposed by the men on that occasion: "Proposed "by Mr. Kendall, and seconded by Mr. Saxton, and "carried unanimously, That the board of arbitration "desires to express its high appreciation of the unprecedented liberality and generosity of Samuel "Morley, Esq., in the handsome annuity granted by "him to his aged workpeople. Such noble acts "strengthen the hands of this board in its efforts to "produce a good understanding between employer "and employed, and the board desire to thank Mr. "Morley for his splendid example." It was very gratifying for Mr. Morley to receive that from the working men of course.

19,442. You said that you had two secessions of working men; have you had any secessions of masters?—Yes, only last week one master refused to submit to the decision of the board; said he would not pay the price, and so on. The result was that we appointed a deputation of our board to go and see him. There were three of them really that were not paying up to the mark. Mr. Lee, one of our magistrates, and Mr. Morley's partner, went, and two of them said, "Yes, we do not want a general reduction." The men stand by us in such a case as that; they say, "If you pay us the price we will not allow them to work at a lower price than you," and throughout the whole district we keep up a uniform price for performing a certain amount of work. Supposing, for instance, that it was making a dozen of stockings, and the price is 30*s.* and we pay 10*s.*, and everyone else pays 10*s.*, the men look pretty sharp after those outside the board, and we do the same with the employers, and we say, "If it comes to a necessity that "you have to withhold your labour, we will try and "find you employment."

19,443. (*Mr. Hughes.*) In fact you form together a great guild?—Yes.

19,444. (*Mr. Harrison.*) Are you not there interfering as a third party?—No, we are deputed by the employers to settle the rate of wages, and the men are deputed by the employed to settle the rate of wages; only, instead of bringing about the result by strikes and lock-outs, we bring it about by amicable means.

19,445. (*Mr. Mathews.*) In the event of any of the masters not being willing to agree to the decision of the board, you exercise your influence with those masters, and the men in the same way exercise their influence with the men?—Yes, I have been myself to some masters who say, "We will deal with our workmen only." Sometimes they ask whether we are not delegates from the trade union, and treat us sneeringly; but we talk to them and say, "We are all in the same boat; you do not want to make any dispute," but some masters do.

19,446. In your experience does your exhortation have any effect on these outsiders?—If it does not the men bring theirs in.

19,447. (*Mr. Roebuck.*) How?—They say, "We "will not work for you; if 19/20ths of the masters "are paying 10*s.* for an article, and 1/20th want to "pay only 9*s.* 6*d.*, we will not go and work for 9*s.* 6*d.*"

19,448. Supposing that some workmen did not go with the other workmen, but were recalcitrant, what would be done with them?—I never found a man recalcitrant in the way of wishing to take 9*s.* 6*d.* instead of 10*s.*

19,449. But supposing the workmen of a particular factory stood out, and supposing the employers said, "Now we will go into the market and see whether we could not get workmen for 9*s.* 6*d.*," could anything be done to prevent workmen from going to them?—No, nothing could be done to these men; but in case these men were refused work at 10*s.* a dozen, or whatever might be the price for the time being, the workmen would say, "Now we will keep these men on our funds," and they would do it. Supposing that the whole of the trade except one master says, "We will all pay 10*s.*;" but this one man says, "No, I shall not more than 9*s.* 6*d.*;" then the whole of the workmen say, "No, we will keep your men till you are prepared to do it." I am happy to say that I have never had such a case yet except some small matter. I believe only 60*l.* odd in several years has been spent for men who have refused work.

19,450. Whom do you find the hardest master, the great capitalist or the little capitalist?—It is not a question of how much or how little capital a man possesses; it is how much or how little conscience he possesses. I have sometimes found very rich men who are determined to have and will have the last penny they can screw out of a man.

19,451. (*Mr. Mathews.*) You think the capital and the conscience do not always go together?—By no means.

19,452. When you come to debate the point of a fair rate of wages, do you take what the majority of individuals will give and the majority of individuals accept as the substratum?—Yes.

19,453. And the outsiders, the small minority which you have been describing to us, do not constitute an element in fixing the value?—No. Last Tuesday the men came for an advance on one quality of work. They said, "We are badly paid," and we said "We know you are, but if we give you 1*s.* a head "more, that is 1*s.* premium to the Frenchmen and "Germans to take your trade; can we do that?" They said, "We do not want anything to drive the trade "away from the town; we mean to keep it if we "can, and it is better to have 15*s.* and 16*s.* a week in "full work than half work at 1*s.* a dozen more."

19,454. (*Mr. Roebuck.*) Is there any reason why the handloom weaver should be retained?—Yes, there is a certain class of work for which he is needed. The best class of hosiery worn by the upper ten thousand is made by the handloom weaver, and he is the worst paid for it. The worst paid article in the trade is a fine silk stocking.

19,455. Could you not make it by machinery?—Yes, but not as perfectly as these men do it.

19,456. (*Mr. Hughes.*) But do not those articles bear their own price?—No, if you try to put 1*s.* a pair upon fine silk stockings, it is a fact that women will wear cotton immediately; they say, "Silk has "gone up to such a price I cannot afford to pay 12*s.* a "pair; 10*s.* is about my price." The man who weaves the commonest goods for the poor Hindoo to wear once a year gets large wages; the man who weaves a silk stocking for a princess to get married in gets bad wages for it.

19,457. (*Mr. Roebuck.*) I want to know whether you could not get a machine to make that silk stocking for the princess to be married in?—As yet we have not been able to do so, we are always approaching it.

19,458. Is the handloom weaver destined to be driven out by machinery?—I think he is in time, because we get nearer and nearer perfection, but we have not yet arrived at that perfection in machinery when we want the finest articles.

19,459. What is the per centage of handloom weavers to others?—Half. When a fine cotton stocking has to be made by steam one man may make 200 or 300 dozen of stockings a week, but a man who makes silk stockings will not make above 7 or 8 or 9 pairs a week.

19,460. What do you give him for making one pair?—Not above 12*s.* a week on an average. I have tested the wages of a number of clever men, old men they were, who made the trousseau for one of our princesses, and they did not average above 11*s.* 7½*d.*

19,461. Do you find that the young people enter that trade?—No, the consumption is steadily dying out, and the number of men going into the trade is dying off; but if you stopped it at once it would be a calamity, because they have these looms in their own houses and are able to do this work when they could not do other work.

19,462. Is the eye very important in that work?—Yes, but they can see very close to the eye with this hand machine, whereas in a large machine a man requires a good eye to see from one end of the machine to the other.

19,463. So that I think we may conclude that the handloom weaver will die off in time?—Yes; he is much better off now than he has been before.

19,464. (*Mr. Hughes.*) Because of the regularity of the employment do you mean?—Not on this account, because we have weeded them of all the best men and put them to steam power machinery, and the more machinery we introduce the more wages the men get. I am convinced that so far as our trade is concerned machinery has been a great blessing.

19,465. (*Mr. Harrison.*) Do you find now any indisposition on the part of the men to the introduction of new machines?—Not a bit, that is all gone; there was plenty of it till the introduction of this board.

19,466. What do you attribute that opposition to?—They thought it was going to ruin them, it was their ignorance. If I have illustrated the working of the board sufficiently, I will now point out its extension to other branches. I may say that about last Christmas 12 months the members of the board said, "We ought to do something to make its operations known." We published that report, when I was asked by our chamber of commerce to represent them at the Associated Chambers in London, where 30 or 40 chambers meet annually, to show the advantages of the thing to the merchants; our chamber also urged the lace trade to adopt it. The lace trade has been as bad for those calamitous strikes as the hosiery trade, and of late years even worse. I was applied to by the men, and discussed the thing over and over again, and went to their trade union and talked it over. The masters held back. It has been the most difficult thing in the world to bring masters and men together. At last the men issued this notice in the lace trade. (The quarterly meeting of the lace trade was held in the Assembly Rooms, Nottingham.) "That this com-"mittee being fully aware of the unpleasant diffe-"rences our trade has been subject to, and the bad "effect they have had on all concerned, and the need "of a better arrangement for the settlement of the "same, we are of opinion that some better system "might be established for the settlement of disputes "that may arise in future; and we are willing to meet "the employers for the purpose of forming a board of "arbitration and conciliation, so that any difference "which may arise may be fairly and honestly dis-"cussed and settled amicably, so that employer and "employed may work in harmony with each other, "and be the means of building up the trade of our "Good Old Town."

19,467. (*Mr. Hughes.*) This first step came from the workmen?—It came from us in the hosiery trade.

19,468. As far as the lace trade was concerned it came from the men?—Yes, and then the workmen found that the masters held back for a time. "At a "subsequent meeting held June 17th, it was further "agreed to solicit A. J. Mundella, Esq., President of "the Chamber of Commerce, and Chairman of the "Board of Arbitration in the Hosiery Trade, to com-"municate with our employers, and if possible to "arrange a meeting." I went to their masters and did arrange a meeting, and here are the rules of the lace trade which I hold in my hand. They are a little different from ours, they call in a referee. A gentleman who has retired from business, an old manufacturer and magistrate, a man of great uprightness and integrity, is appointed as referee in case they cannot agree. There has not been any dispute in that trade since, though they used to be constantly placarding the streets previously. I have pointed out to you that the first operation of our board was to reduce the men's subscription to their union. The second was this: we found that men in the country under small middle masters, who do not take these men individually, but employ 50 or 100 men, were being oppressed, and truck was going on. We immediately advertised that we would prosecute anybody that trucked, and we did, and stopped it. Another thing which these little masters would do was this, they would go on late on Saturday night, and not pay the men till Sunday morning. We set to work and stopped that. We stopped many abuses that really cost us nothing, and that restored good feeling between the masters and men, and produced a good state of feeling in the neighbourhood.

Mr. A. J. Mundella.

14 July 1868.

19,469. In every case I suppose you have had the concurrent aid of the men and the masters?—Yes, the working men are generally ready, but the difficulty is to get the masters to move.

19,470. (*Mr. Hughes.*) Had they ever tried anything of this sort in the iron trade?—Several other trades have adopted it, but the iron trade not as yet; though I believe they are about to do so.

19,471. (*Mr. Roebuck.*) Does Lord St. Leonards's Act help any of these cases?—I have thought a good deal about Lord St. Leonards's Act, but I cannot work it. I am no lawyer, it ties you down under pains and penalties, and that seems to me a disadvantage.

19,472. (*Lord Elcho.*) It is done by talk round the table?—Yes, we have what the men call a long jaw; we settle it by that means.

19,473. (*Mr. Mathews.*) If you were to introduce any strict legal formula you would fail in your object you think?—We should frighten our masters away, if we tried to bring employers to join in it under those pains and penalties; they would never come near us.

19,474. (*Earl of Lichfield.*) Have you any machinery whatever for enforcing your decisions?—None but moral influence, and we have always succeeded. You will bear in mind that if any master sinned against the board and his men struck, he would have the whole people in the district against him. They would say, "You are a pretty fellow, your own equals have given decision against you, and yet you resist it." And the public sympathy would go with the men in that case. I may say with respect to the iron trade, of which I have been asked, all I know is this, I was asked a few weeks ago to Wigan while that dispute was on—the colliers' strike—and I went and saw that they were in a very bad case, that they had been out nine weeks. The young men said that they could stay out three months longer, but the married men said that they could not. The masters offered a reduction of 15 per cent. The history of that matter has been before you in evidence. I said, "What do you fellows want?" "Well we want arbitration; we have had enough of this, if we can only arrange." I said, "Will you go in "on the masters' terms, if I can get the masters to "consent to arbitration boards for the future?" They said, "Well, we believe our men will." I went and saw Mr. John Lancaster and others among the masters, and they said, "Well, we are not combined, but we shall be quite willing to consider your suggestions." I arranged these terms—that the men should go in at 15 per cent. reduction (the men had consented to 10 per cent.); that there should be no distinction made between union and non-union workmen; and that they should as soon as possible try and form a board of arbitration. I asked the men whether they would accept that, they said that they would call a meeting the next Monday morning, and in 24 hours they were all at work. I said to them, "If you will sacrifice five per "cent. it is nothing if you get a board of arbitration, "because that will prevent you having such calamity "in future." They said, "We will agree to that," and they did, and went to work. And since that the masters have kept their word faithfully, and have written to me that they are willing to try and arrange for a board of arbitration for the South Lancashire district. I am sorry to say that I am so overworked that I cannot go everywhere that I could wish. I have had a formal request from Middlesborough to go down there. They say, "There is "only one black cloud hanging over us in the future, "and that is the question of wages." I went to Bradford, and they have formed two boards of arbitration (in the mason's and builder's trades), and I have heard that they are going on nicely, and that they will soon have a third. When I spoke to them I pointed out to them the rules that they had; a gentleman who sits here now was on the platform at the time, and he said, "You had better go home and cross out those rules," and they did. A Mr. Nield, a builder, a very respectable man, is the chairman of that board. At Derby they have made a board of the masons, builders, elastic fabric manufacturers, and several other trades. Then I have the rules of a board of arbitration relating to the Staffordshire china and earthenware manufacture. Mr. Hollins, through having carried it at the Associated Chambers of Commerce, has introduced it there, but mainly on the advocacy of a working men's newspaper. All the working men advocate this everywhere. I am bound to say that in almost every trade the reports of the intelligent trades unions that I have seen for the last six months hold that arbitration is the thing that they are looking to to put them right. And my obstacle, my difficulty, wherever I go to get a board formed, is that masters have that old feudal notion they will deal with men one at a time; they expect the men to give up the advantages of association; and until the masters acknowledge that the men are right in associating there is no chance, I think, for peace.

19,475. (*Mr. Harrison.*) Do you think that these boards can embrace several trades together as you say is the case at Derby?—I am a little doubtful about that, but they are going to try it at Derby in this way. They have formed a rule of this kind: "The board to "consist of an equal number (not less than two or "more than four) of employers and operatives from "each trade represented on the board." There is to be a committee of inquiry consisting of four members, and those four will try and agree; and if they cannot, then the whole board, as I suggested, will be called in to try and reconcile the parties; but the whole secret is bringing the two parties face to face.

19,476. (*Mr. Roebuck.*) What are those rules that you pronounce ridiculous, and which Mr. Applegarth told the men to go home and erase from their books?—It was a labourer's rule which stated that any man who worked too hard would be fined, and would be brought before the notice of the society. I denounced that as a most iniquitous rule, because I say that every man when he engages to serve his master should make the best bargain he can for his wages, but should give his honest services to his master and not withhold them.

19,477. You have not come across the doctrine of keeping down the number of apprentices, perhaps?—Yes, and there is a good deal to be said on both sides there. I certainly think that it would be an awful thing to have only women and boys employed in a trade.

19,478. You are in favour of regulating the number of apprentices?—I may say that I know, in regard to the file trade in Sheffield, that the men in that trade have asked their masters to form boards of arbitration, but the masters want to make some condition about apprenticeship beforehand. I say, "Go into the board "and then make your conditions afterwards." That is the distinction. It is no use one party saying, "We "will arbitrate with you providing that you make "certain conditions."

19,479. Have you really tried to induce them to form a board of that sort?—I have; I spoke to two or three, Mr. Hall and Mr. Atkinson, I think, who represent the Chamber of Commerce, and they have said that they would try; I am quite satisfied that they will be astonished at the results. Ours was quite a tentative effort.

19,480. They must be startled at any result which will bring the men into amicable relations with them; hitherto there have been hostilities on both sides?—I may say that I have had to stand sneers and opposition on all sides, and have been told that Nottingham is a sort of Agapemone, and all that sort of thing, and we have had our political squabbles thrown in our face. The masters are, as a rule, opposed to any inroad upon their old-established notions; they have not yet realised the new order of things, that is the truth of the matter, and they have to do that. At this moment I am inundated with applications to go to all sorts of places. It is not easy work going lecturing round the country, and it is not cheap work; it has cost me hundreds of pounds; I never received a farthing of expenses yet, and never will. All that I have done has been to bring masters and men together, and I am quite satis-

fied that if it had the endorsement of the approval of this Commission that would do more for its success than anything else. But it is this hostile feeling between masters and men that is the cause of the mischief. In the old time, when I was an apprentice, my master knew every man that he employed and knew his circumstances. When his wife was sick he helped him, or lent him money, or helped to send his boys to school. Now we employ thousands; we do not now know their faces; they are "hands" to us, they are not men; there is no sort of mutual sympathy, and that is the top and bottom of all the mischief.

Mr. A. J. Mundella.
14 July 1868.

The witness withdrew.

Adjourned to Wednesday, July 22nd, at 11 o'clock.

1, Park Prospect, Westminster, Wednesday, 22d July 1868.

PRESENT:

The Right Hon. Sir WILLIAM ERLE.
The Right Hon. the EARL of LICHFIELD.
LORD ELCHO, M.P.
Sir DANIEL GOOCH, Bart., M.P.
HERMAN MERIVALE, Esq., C.B.
JOHN ARTHUR ROEBUCK, Esq., Q.C., M.P.
FREDERIC HARRISON, Esq.

THE RIGHT HON. SIR WILLIAM ERLE IN THE CHAIR.

Mr. GEORGE LEVEY examined.

Mr. G. Levey.
22 July 1868.

19,481. (*Chairman.*) Are you a member of the Master Printers' Association?—I am.

19,482. How long has that association existed?—In a very definite form I think that it may be said only to have existed about 12 or 13 years.

19,483. Was it instituted in consequence of there being unions among the working men?—It was instituted in its present shape mainly, I think, in consequence of the compositors' union having, during an interval of abeyance of the Committee of Master Printers, acquired very considerable power which they were beginning to exercise rather unpleasantly.

19,484. You say "in the interval;" that implies that there had been a master printers' association before, which had had a temporary stop?—There were previous temporary associations, and there has always existed I believe, since the printing trade was introduced into England, a sort of committee of masters, that were appointed on each special occasion when the men required, as they did at various times, an increase of wages in consequence of the gradually increasing price of provisions and the gradually increasing price of labour throughout the country generally. On all those occasions a few of the leading masters of London constituted themselves into a sort of committee in order to meet and confer with committees similarly appointed by the journeymen. But as to any absolute society, I believe that none existed on the part of the journeymen till the year 1816, and none of an organized character on the part of the masters till the year 1854 or 1855 or thereabouts. There was a society of journeymen formed in 1801, but it ceased to exist in a few years; and there was an association of masters formed in 1836, but that, too, discontinued its meetings in 1849.

19,485. The meeting of the masters before that was in the nature of a general communication about the interests of the trade?—That is my belief. Formerly the masters met together, and agreed as the representatives of the trade generally, to confer with committees of the men similarly constituted, a few of them being appointed to confer with the masters; but there was no definite society on the part of the men till I believe about 1816, and on the part of the masters till about 1854 or 1855; I am not quite sure of the precise year. There were at different times, from the early introduction of printing into England, conferences held between committees of masters and committees of men for the purpose of settling from time to time increased wages as the necessity arose for that increase. In 1847 there occurred the last considerable revision of the Scale—that is, the Scale of Prices by which the masters and the men are equally regulated. In 1847 a conference was held between an equal number of masters and journeymen by which the Scale was then adapted to the existing state of the trade.

19,486. (*Mr. Merivale.*) When you speak of journeymen, are you speaking of compositors only?—Compositors only.

19,487. Who are there besides compositors?—There were then pressmen, and there are now machine minders.

19,488. (*Mr. Roebuck.*) The binders being distinct?—The binders are a totally distinct trade. This was the state of affairs in 1847 when the last great revision of the Scale took place; after that period there was an interval of quiescence. Soon after that time the masters' committee fell into abeyance, but during the whole of this period the organization of the men was being concentrated and extending over a larger and larger number of the compositors. In about 1851-4 the compositors in the union were making demands upon the masters in different houses, and it was thought desirable that there should be some combined body for the purpose of examining those demands and resisting them when necessary. Accordingly the masters in London were called together in 1855, and a society named the Master Printers' Association was then constituted, and by them a committee was formed. That committee is at present in existence, and is regulated by precisely the same rules that were then formed. Here are the rules (*producing them*). During the whole of this time the association of the men had been increasing in power. Prior to this period it had been the custom of the men, whenever a question arose as to the interpretation of any article in the Scale, to refer the decision to the Committee of Masters, who consisted of the leading masters of the trade, such men as Spottiswoode, Clowes, and Rivington, and many others whose names are familiar to the Commission; but about this period, 1853 or 1854, the men as a body seemed to hesitate very considerably about deferring to the decision of the masters, and various questions arose which it was found rather difficult to settle without reference to a court of law. That was thought a very undesirable thing, and after considerable negotiation a Court of Arbitration was formed, the rules of which are contained in the book which I have put in. That Court of Arbitration was thus constituted: it was to be formed as occasion required, that is to say, there was no permanent court, but when the committee of the masters and the committee of the men arrived at different conclusions, and there was no possibility of settling the matter but by reference to a court of law, then this Arbitration Committee was to be called in instead of a court of law. It was to consist of three journeymen, neither of whom was interested in the question at issue, and three masters, neither of whom was interested in the question at issue, and it was to be

Mr. G. Levey.

22 July 1868.

presided over by a barrister; and evidence was to be produced to this court consisting of the six jurymen, so to say, and the president; and if the result of that evidence was that a majority of the six decided in any way their decision was absolute; but if the trade feeling and the personal feeling was so strong that the three masters remained of the same opinion as that with which they commenced their negotiation, and the three journeymen remained so too, then the barrister, who had heard the whole of the evidence, was to decide the question according to his judgment.

19,489. Who selected the barrister?—The barrister was mutually selected by the masters and men, and was appointed for twelve months; and at the end of that twelve months he was liable to be superseded. This Arbitration Court met upon three different occasions, and only upon three different occasions. The first two questions that were submitted to this Arbitration Court were decided by the six who constituted the jury without reference to the barrister, and they were decided in each case in favour of the journeymen. The third case, which was a very important one, and which was debated for a great many hours, was ultimately decided by the barrister in favour of the masters.

19,490. What were the questions on those occasions?—The first two were comparatively unimportant questions, questions of standing matter, and questions of whether certain matter that had been partially distributed and partially recomposed should be paid to the journeymen as a recomposition fully, or only partially. However, these were decided in favour of the men. I do not remember the particular circumstances of the first two cases, but of the third case I do, because I was concerned in it. It was a question of standing advertisements. There is a rule in the trade by which, in certain circumstances, standing advertisements belong to the compositor, that is, they are to be paid for over again. I will suppose that a sheet of advertisements is printed for a January Magazine, consisting of 16 pages. When the publication has been completed it is found that for the February number of that magazine a considerable portion of the advertisements is to be repeated, and I will suppose that there are five and three-quarter pages so repeated. The masters contended that the compositors were entitled to be paid for only 11 pages of the February number, that is to say, for the $10\frac{1}{4}$ pages entirely recomposed, and for the three quarters of a page, which, being a fragment, was given to them as a concession. The men on the contrary contended that, although in making up the second 16 pages, that is the 16 pages for February, there were five and three-quarter pages standing, if the fresh advertisements, consisting of only a few lines, that is a quarter of a page in the whole, were spread over the whole of these five and three-quarter pages, so that no one page consisted entirely of standing matter, but comprised 19/20ths of standing matter and 1/20th of fresh matter, in that case they were entitled to be paid for the whole 16 pages. That was the point of contention before this Arbitration Court.

19,491. (*Chairman*). And you supposed that the decision would apply to all future cases?—Yes.

19,492. The question was whether they were to be paid for that, as if printed *de novo*, or whether the master had a property in that standing matter; and the barrister said that the master had?—Yes.

19,493. (*Mr. Merivale.*) How was this decision of the barrister accepted by the compositors?—As far as that special case was concerned, his decision was considered conclusive, and acted upon, and the masters as a body immediately concluded that that settled the rule in the trade, and that hereafter all standing advertisements would be measured off, the quantity would be ascertained, the number of even pages would be the property of the master, and the fragment, whatever it consisted of, would be the property of the compositors; and that if in the re-making up of any number to the necessary length there was any change from one page to the other, the men who had the trouble of that re-making up would be paid the value of their time. Immediately after this decision two or three masters in the trade commenced to act upon that principle. I was one of them. I gave directions to the overseer in my office that the advertisement sheet in a certain magazine (I believe it was Fraser's Magazine) would in future be paid for according to the decision of that Arbitration Committee. I have reason to believe that that communication was never made by the overseer to the men. However, ultimately the men claimed the whole of the standing pages in which any new matter had been introduced.

19,494. How soon was that claim renewed after the decision you have spoken of?—The next month, and the compositors said in answer to us, "The Arbitration "Court have decided that case, but we cannot hold it as "a rule for future cases." The compositors commenced proceedings. The case was carried from the Court of Exchequer at Guildhall to the Court of Error, and the judges of the Court of Error decided against the masters.

19,495. What is the name under which that case is reported?—I cannot tell you that, but we have a full report of the proceedings in one of our reports. Such having been the action of the compositors, we felt that an Arbitration Court that really decided nothing was useless.

19,496. How long ago was it that this decision of the Court of Error was pronounced?—I think in 1856 or 1857.*

19,497. Since that have you renewed the Arbitration Court?—We have never had any Arbitration Court from that time to the present.

19,498. What was the expense which that put the masters to?—It cost us between 800*l.* and 1,000*l.*; I do not exactly remember the precise amount.

19,499. (*Mr. Roebuck.*) What was the mode of proceeding before the Arbitration Court. You say that there were three journeymen and three masters, and one barrister presiding; was any barrister introduced to argue the case before them?—No.

19,500. How was it conducted then?—It was conducted by the masters on the one side with whom the question arose, and by the committee of the association of the journeymen on their side.

19,501. And had you any evidence?—Plenty of evidence, both oral and written evidence.

19,502. And, I suppose, questions were asked of witnesses just as they are at this board?—Exactly.

19,503. You mean, not bound down to technical rules?—No, not at all; it was considered rather a conversational discussion.

19,504. (*Mr. Merivale.*) To turn to a rather more general subject; have the wages of compositors risen in your experience?—A rise of wages has been effected within the last fifteen or eighteen months. That is the only rise of wages in my experience.

19,505. How long does your experience extend?—In London, since about 1826; but I know absolutely that no rise of wages till the end of 1866 has taken place in compositors' wages since 1810.

19,506. Do you think that the printer's trade is now at a greater disadvantage than it formerly was as compared with foreign countries?—Yes.

19,507. In what respect is it at a greater disadvantage, if wages have not risen?—In the first place, the wages in London have always been very much higher than they were in the country, very much higher than they were in Scotland, and considerably higher than they were in Belgium. Until the extension of our railway system, and the invention of the telegraphs, distance stood as a considerable obstacle to the transference of work from London, but now directions from an author to a printer can be sent by telegraph, and facilities for transmission by railway and through the Book Post are so great, that printing can be done almost as well for a London author in Belgium as in London; and inasmuch as the wages in Belgium are so

* The case will be found under Hill *v.* Levey, 3 Hurlstone & Norman, 7 and 702 (Exchequer, 25 Feb. 1858; Exchequer Chamber, 19 June 1858).

much lower than they are in England, and especially in London, the temptation is a very strong one, and it is a temptation that is being yielded to increasingly, for publishers to send their works to Belgium to be printed. I know that at this moment the great house of Murray, which has hitherto employed Clowes almost exclusively to do its printing, is now getting a large proportion of it done in Belgium.

19,508. As far as wages are concerned, that might have been as much the case in 1826 as now?—Yes. The last increase of wages has increased the disadvantage, but you are quite right in suggesting that other causes rather than the increase of wages have produced the present state of the London trade.

19,509. It is the competition abroad in consequence of the increase of communication?—That is true as far as the continent is concerned, but the other causes mainly operate as far as our provinces and Scotland are concerned.

19,510. Have wages remained stationary, do you think, in Scotland as in London till 1867?—They have increased, but not in the same proportion as in London. They were very much higher, in proportion to the London rate of wages, in 1810 than they are now. The increase that has taken place in 1866–7 has been mainly to the disadvantage of the London masters; that is to say, the wages in the provinces and in Scotland have not increased in the same proportion as in London, to the best of my belief.

19,511. Till this late increase wages in the provinces had been increasing more than in London, inasmuch as wages in London as you state had not increased at all?—Yes.

19,512. Up to 1867 you were better off as against provincial competitors as time went on, because their wages were increasing?—Yes.

19,513. About 15 per cent. was the average increase in 1867, I think?—Yes.

19,514. (*Earl of Lichfield.*) The system of arbitration referred to by you as adopted in your trade was only brought into action after the dispute had arisen, was it not?—Only after the dispute had arisen. The rule was, that the question in the first instance, if it was a question raised by the compositors, should be submitted to the committee of the compositors' union. If they decided it against the compositors there was an end of the matter, but if they decided it in the compositors' favour it was then submitted to the masters committee. If the two committees concurred in their decision, that was an end of the matter; but if they differed, then the Arbitration Committee was called in to settle the question.

19,515. Had you never been in the habit of settling these matters between yourself and the persons in your employ beforehand?—Constantly. These questions have constantly arisen, and as a rule there has been little difficulty in settling them; but of late years the men, when they would willingly have acceded to the masters' view of the question, have been obliged by the laws of the union to refer the matter to their committee, and many questions have been litigated much to the unwillingness of the men themselves.

19,516. (*Mr. Roebuck.*) When you say the "men themselves" you mean the men themselves interested?—Yes, the men themselves interested and personally engaged in the matter.

19,517. (*Earl of Lichfield.*) Do you not think that if you had been in the habit of meeting your men and discussing these matters before the dispute arose there would have been a better chance of settling the differences?—We have always been in the habit of doing that while there was any use in it. It was only when the men were obliged to defer to the decisions of their committee that we had to adopt another course.

19,518. (*Mr. Roebuck.*) Can you fix the date when that change took place?—It was gradual. As the union of the men became more and more extended, and more and more concentrated, their influence became larger and larger. When first I had experience of London compositors it did not happen that in the majority of offices there were above two out of five who were members of the union. Now it is a difficult thing to find a single man in an office not a member of the union.

19,519. To turn to another matter, are there any records of the history of the trade generally in London?—I think that the only records which we have will be found in the reports of the Master Printers' Association, and I suppose that there are similar reports of the compositors' union.

19,520. In what year was that Masters' Association instituted?—I believe that these reports do not go further back continuously than 1855 or 1856. We have a copy of a report issued in 1839.

19,521. You say that an association (or committee) began pretty much with the beginning of printing; have you any records of that?—No, none whatever.

19,522. That is a tradition, I suppose?—There are records in existence; I believe that Mr. Hansard collected together and published a history of printing. There have been two or three histories of printing that have been collected together, in which these different statements appear. I think Mr. Hansard's Typographia contains pretty well all that is known of the history of the trade in England. There are also Savage's Dictionary of Printing, and Johnson's Typographia.

19,523. Could you tell me whether you have any knowledge of this fact, as to which I want to establish whether it is a fact or not? Supposing that printing began in England with Caxton, have you any idea of there being some affiliated firm from Caxton downwards, that has a history of the doings of printers?—I do not think there is any such.

19,524. Have you any idea when the firm of which Caxton was the beginning ended?—I know that Dean Stanley has very lately connected the first printing in Westminster Abbey with Caxton.

19,525. Have you any further information that you would wish to give?—The only thing that I should be inclined to say, would be that it appears to me, with regard to the existence of an arbitration court, that if it were constituted something after the style of the one that we constituted, and were made absolutely binding upon both masters and men, and its decisions were treated as part of the law, that would facilitate very greatly the operations of the printing trade in London, and would prevent all the disputes and strikes between masters and men, and would, in every sense of the word, conduce to the harmony and well-being of the various members of the trade.

19,526. (*Mr. Merivale*). Supposing that the compositors asked for an advance of wages, is that a matter which you would have settled by this body whose decisions should have the force of law?—Most certainly.

19,527. (*Mr. Roebuck.*) Then, again, to whom would the effect extend? Would you confine the effect of that arbitration court to the persons who voluntarily came in and said, "We will be members under that court;" or would you extend it to anybody in the trade?—I would extend it to the whole trade that worked by the Scale.

19,528. Whether they came in or not?—Whether they came in or not. Of course, I first take for granted that there is an established scale of wages, (which has always been the case for a period of 70 or 80 years in London,) by which certain work was to be paid for; that that rate was a fixed and absolute one, by which, on the one hand the masters, and on the other the men, were bound; that such questions as arose from the development of the trade, or from the change of circumstances subsequently to the settlement of these prices—whatever change took place—should be settled by the arbitration court from time to time as the questions arose; and the general circumstances of the trade, and the general circumstances of the country as to the rate of wages, and the price of provisions and other matters, should also be taken into consideration by this arbitration court, consisting of an equal number of masters and men,

Mr. G. Levey.
22 July 1868.

and presided over by an independent and educated person.

19,529. (*Mr. Merivale.*) Then you would have this arbitration court fix the rate of wages from time to time?—As circumstances rendered it necessary.

19,530. Only by the agreement of both parties?—Yes.

19,531. And that then any man refusing to work for the wages the court so fixed should be liable to what?—I do not say that you could force him to work for such wages, but I would say that he should not be able to recover more than the amount that had been settled by this arbitration committee.

19,532. (*Mr. Roebuck.*) You are aware that by this plan you would entirely get rid of individual enterprise and responsibility?—No, there is a good deal to be said there. Our trade is different from a great many. If a table has to be made, it may be made well or ill; but if a page of type has to be composed, it must go to the public complete and perfect, and therefore whether it is well done, as far as the composition is concerned, is an affair which the public have little to do with. Of course the capable men, who did what they had to do well in the first instance, and had very little correcting to do afterwards, would get their reward in not losing their time in rectifying their own errors.

19,533. Supposing there were an ambitious person in the trade, and he said, "I think I could drive a "better trade if I had my own individual liberty, and I "would begin first of all by saying I will lower the "price of my books, but to do that I must lower the "price of wages;" you would not allow him to do that?—I do not think that a reduction in the price of books would be affected by the question of the rate of compositors' wages, at least, not to the extent which you fancy; that is to say, that there would not be the possibility of so testing the market, and raising or reducing the price a little more or a little less. I believe that now the price of books is regulated almost entirely by the price of paper and by the extent of the probable circulation, and little, if at all, by the rate of wages paid to the compositor.

19,534. You are aware, no doubt, of the effect produced by Charles Knight, who introduced a set of much cheaper books than are accustomed to be sold here in London?—But he did not pay less for the composition. The compositors engaged upon one of those books received the same rate for their work as if it had been one of the most rare and expensive books produced.

19,535. So that in fact his power of selling a cheap article did not at all depend upon the amount of money he paid to his compositors?—I do not think it did. I think that the wages of compositors are as low in London now, even after the recent rise, as it is fair they should be, and that men cannot live respectably, considering the rate of expense that London life entails, upon any lower rate of wages.

19,536. What do you think would be the effect of a publisher going abroad—of Mr. Murray for example, having his publications printed in Germany?—He will get them done at a cheaper rate.

19,537. Will that render the life of the London compositor more difficult?—No doubt. The facts are that the increase of wages for the last 18 or 20 months has had the effect of driving a very large proportion of work out of London, and at this moment the number of compositors who are unemployed, or only partially employed, is almost unprecedented, and I believe partly from that cause.

19,538. (*Mr. Merivale.*) Compositors generally work by piecework, do they not?—Yes, four-fifths of them I should say.

19,539. (*Mr. Roebuck.*) Are there distinctions in the Scale; for instance, if a compositor sets a book with various sorts of type, would he receive anything more than a man who sets only one sort of type?—Yes, there are many distinctions in the Scale; for instance, if a compositor sets a book in a foreign language, he gets paid at a higher rate per 1,000. The wages are regulated by the square of the page, and that is calculated to contain a certain number of thousands of type, and the printer gets paid a higher price for a foreign language, and for Greek or German, or any other foreign characters, than he would be paid for English, in order to compensate for the slower progress he must necessarily make, and the greater amount of intelligence that he must possess.

19,540. All that is pre-ordained, if I may use the expression, by the Scale?—Yes, by the Scale of Prices.

19,541. The Scale contemplates every case that can happen?—It certainly contemplates every case that could have happened at the time of its constitution.

19,542. If a new case were to arise, how would you settle it?—I would settle it by reference to the arbitration court. Perhaps it might be desirable that the president of the arbitration court should be appointed by the Home Secretary or by the Board of Trade; and it might also be necessary, in order to protect the public interests from monopoly, to allow appeals to a higher court (the Court of Chancery, perhaps) in certain cases approved by such president. If every trade had its Masters' Committee and Workmens' Committee for mutual conference, and its distinct legal arbitration court for ultimate decision, on something of the same principles as those proposed by the printers of London, I believe that nearly all the evils of trades unions would be removed, and that their operation might become beneficial to both to the respective trades and the community at large.

The witness withdrew.

Mr. M. D. Hollins.

Mr. Michael Daintry Hollins examined.

19,543. (*Earl of Lichfield.*) You are engaged in the pottery trade, are you not?—I am.

19,544. And your firm employs a very large number of men in the trade?—We employ about 1,500 men, women, and children.

19,545. Formerly there were a great many strikes in the pottery trade, and a great many disputes between employers and employed, I believe?—Yes. About three years before I became connected with the business there was one of the longest, perhaps, and most determined strikes that ever occurred in this country. I think it lasted some four months or more before it terminated, the whole of the manufactories being closed during that period.

19,546. What date was that?—I think it would be about 34 or 35 years ago. It resulted in a very considerable loss to most of the workpeople as well as to the manufacturers, and in the breaking up of a very strong union, and for some time after that period the district was more or less quiet from any disputes between the workmen and the masters.

19,547. What was the cause of that strike?—I am not acquainted with that; it was some time before I was connected with the district.

19,548. Did it arise out of a question of wages, do you know?—I think so. After that period, during some years the men were frequently agitated by delegates coming down into the district and always making it appear that the masters did not act fairly towards them. We have in our district, as you are aware, a form of agreement—an annual hiring paper; and this was always said by these delegates to be one-sided in its action; that is to say, that it favoured the master more than the man.

19,549. The workmen are engaged for 12 months under that form of agreement?—For 12 months; and the delegates held out to the men that it ought really to contain a mode of settlement, if during that 12 months any dispute arose, and that it should not be left entirely to whatever the master might choose to say; he was willing to pay for any fresh article that he had to make.

19,550. When was the arrangement as to that form of agreement made between the masters and the men?—That has been in existence almost from time immemorial; the original agreement—the hiring paper—I mean.

19,551. Was not an arbitration clause introduced into that agreement?—I, as chairman of the Chamber of Commerce, induced the manufacturers to agree to the introduction into that agreement of an arbitration clause. That arbitration clause consisted in the appointment (in case of a dispute arising) of three masters and three workmen, who were to appoint an umpire and proceed to adjudicate upon the case in dispute.

19,552. (*Mr. Roebuck.*) What year was that?—That is about 15 years ago.

19,553. (*Earl of Lichfield.*) Has there been any strike since then?—There has been no strike since that, till about two years ago. It was not exactly a strike, but there was a wish expressed on the part of the workpeople that this form of hiring should be entirely discontinued throughout the trade.

19,554. The yearly hiring, you mean, with the arbitration clause?—Yes, that there should, in place of that, exist monthly agreements. It was also wished that the rule of working, which we term "good out of the oven," should also be discontinued. The manufacturers considered that those two matters were matters affecting the trade to a considerable extent, and that they were what might be termed usages of the trade, and they thought it advisable not to relinquish either of them. The works were closed, but I think that none of them were closed for more than 10 days. At the end of that time they relinquished these points with a sort of understanding, I think on the part of both masters and workmen, that the hiring agreement, if they did not wish to have it, would be discontinued, and I think that last year probably there were no men hired under that agreement.

19,555. I believe that you have established a court of arbitration?—The men, about six months ago, wrote to me as chairman of the Chamber of Commerce, to request that I would use my influence along with them in forming a court of arbitration and conciliation, and they intimated that as far as they were concerned the rules which they had been advised were in use at Nottingham should form the basis of a court of arbitration and conciliation in our district. I then brought the subject before the manufacturers in our district, and we have established now a board of arbitration and conciliation which consists of 10 masters and 10 workmen; and we have got up to this point that the masters will hold their meeting on my return home, probably next week, to appoint out of their number the 10 who shall act as the masters' arbitrators. The workmen will elect their own 10, and they with the 10 masters will form a permanent board, meeting quarterly to discuss any subject which may arise. I may state, that out of the 10 masters and the 10 men there are four elected as a working committee, two masters and two men, and before any question of dispute can be brought before the board of arbitration it is to be referred in writing to this working committee. They will endeavour, in a conciliatory kind of way, to bring the matter to an arrangement. If they fail in doing that, then it has to be referred to the board of arbitration.

19,555*a*. (*Mr. Roebuck.*) The whole of this is entirely voluntary then?—Entirely voluntary.

19,556. Supposing that the ultimate decision of the arbitration court should not be accepted by anybody, you have no means of legally enforcing it?—None whatever.

19,557. You do not seek to have it?—We do not. We consider that if this board of arbitration is carefully and judiciously managed, the moral effect of any decision which it may come to will make it binding either upon any master or any body of workmen.

19,558. (*Sir D. Gooch.*) You have not said whether you have an umpire appointed for this board?—We shall have a standing umpire appointed. After the 10 masters and 10 men forming the board have been elected they will proceed to elect the umpire.

19,559. (*Mr. Roebuck.*) This court has not yet acted?—It has not yet acted. The former board was called into operation several times and decisions were given, and they were never disputed.

19,560. (*Earl of Lichfield.*) The satisfactory working of your board up to the present time has induced you to carry the system further, and you propose to do so by having a larger board?—And having that board permanent, which I think is a great advantage over the one that was called into action only when the dispute had arisen.

19,561. Now you propose a permanent board to discuss these questions before the dispute has actually arisen?—Yes. Any party on that board would at the quarterly meeting bring it forward, if it was a case likely to cause any dispute, it would then be discussed before the dispute had arisen, and if possible all ground of dispute removed.

19,562. (*Mr. Roebuck.*) Is there any purpose of giving any salary to the members of that board of arbitration, or to the umpire?—None.

19,563. Then they give all their services gratis?—Yes. There are two secretaries to be appointed, one for the masters and one for the men, and they will be paid secretaries.

19,564. Will the working men not be paid for their time at all?—No. I may state with regard to the previous board, that I have known occasions when I feel quite satisfied that the mere fact of its existence had the effect of preventing the board being called, that is to say, a knowledge that this arbitration clause existed has brought both masters and men to settle the matter in dispute amicably.

19,565. Do I rightly understand you to say that that arbitration clause was admitted into your agreement more than 10 years ago?—Yes.

19,566. (*Earl of Lichfield.*) Several points of dispute have been satisfactorily settled by that board?—Yes.

19,567. I believe the principal cause of disagreement between the employers and employed in the pottery trade is the question which you have referred to "good from the oven"?—Yes.

19,568. That is that the goods when they have passed through the oven should be of the proper quality?—That anything defective after being fired is not paid for by the master. Frequent disputes arise from the fact that some masters will take these defective goods for which they have not paid the workmen and appropriate them to their own use. The rule in the trade is that they should be broken.

19,569. (*Mr. Harrison.*) Is there not another element of dispute; does not the workman allege that it is not his fault that the work does not come out of the oven sound, but that it is the fault of the fireman?—That may frequently be the case, but I believe that any master can always judge as to where the fault really exists. I know that in our own establishment we always concede the point to the workman if it can be shown to us that the fault is not his, and that if it is from some defect in the crucibles or from the fault of the firemen I should always make an allowance in such cases.

19,570. It would be a question that would come before the foreman, not before the principal, except in case of dispute?—The workman is always at liberty to come himself to the master if he cannot settle it satisfactorily with the foreman.

19,571. I suppose that it is a case of almost daily occurrence, that what is put into the oven does not come out sound?—Yes, the best workman will always lose two or three per cent.

19,572. Then it becomes a question whether it is a failure arising from the defective work of the workman or whether it is from a defect of the oven. That is always a matter for arrangement in the particular case?—It does not always follow that there must be a dispute about it. Both the workman and the foreman would tell you immediately where the fault was.

Mr. M. D. Hollins.

22 July 1868.

19,573. In many cases it is obvious?—Yes.

19,574. It is always a question for arrangement between the workman and the foreman in the first instance?—Always.

19,575. The rule still remains now that the workman is responsible under all circumstances?—Yes, the rule is that the workman is paid "good from the oven."

19,576. If the failure arises from a cause over which he has no control, that is a matter for which he is still liable, but for which an allowance is usually made him?—Yes, by any master who conducts his works properly.

19,577. Do you think that there is no mode of altering that rule which is obviously one that may lead to constant dispute?—No, I think there is no mode of altering it to the advantage of the workmen as a general rule; on this ground, that if it were altered, the workmen must agree to a certain allowance for defective ware, in lieu of this working "good from the oven." The effect of that would be that the best workmen and the most careful workmen would lose a greater per-centage by that allowance than under the present system.

19,578. Supposing it is put in this way, that the workman be paid for every article which he sends to the oven, without respect to its coming out at all?—The answer to that is that no manufacturer and no overlooker, whatever care he may exercise, would be able to state positively that each piece of ware would come out good, or that it would not come out good, owing not to any improper treatment in the oven, but simply to a defect in the workmanship.

19,579. (*Mr. Roebuck.*) The test of the work is really the fact whether it does come out good?—That is the test of a good workman; and the fact that some workmen will lose double and treble what others do is a simple proof that it is the test; and you can apply no other test because nothing but firing will absolutely tell you.

19,580. (*Mr. Harrison.*) At the same time it is not a regular test, not an infallible test, but a test that occasionally breaks down?—It is infallible as far as this, that any workman would be able to tell you after the article is fired whether the failure was the fault of the workman in making it. All those defects from workmanship have on them a certain character which a good workman or foreman can always distinguish.

19,581. Not before it goes in?—Not before it goes in.

19,582. (*Mr. Roebuck.*) You say the general rule is that it is "good out of the oven" that you pay for. Now, supposing that the article is highly ornamented porcelain with painted flowers upon it, would the artist who painted those flowers run the risk too?—No; as far as the rule goes it is simply applicable to biscuit earthenware; that is to say, that if it is moulded by the workman and it passes through the first fire, that is the only time when it is "good out of the oven," because that is the only time when the workmanship can come into question at all. After once having got a piece of ware in the biscuit state perfect, we know perfectly well that it would remain perfect throughout the other processes.

19,583. Then the artist paints it after it has been fired?—After it has been fired and glazed.

19,584. Then the artist runs no risk of that sort?—No, the rule does not apply.

19,585. (*Earl of Lichfield.*) In calculating the rate of wages is any allowance made for the probable loss on these goods in passing out of the oven?—It is always understood in fixing the prices (it is all piece-work), that there is a sufficient allowance made to cover any casual loss, any probable loss from anything but absolute bad workmanship.

19,586. (*Mr. Harrison.*) In this court of arbitration of which you have spoken have they power to entertain cases of that kind?—All cases. It will have the power of entertaining the very question of payment for "good out of the oven."

19,587. That question is a fruitful cause of dispute in certain works, is it not?—I never heard of its being made a point of to any extent till the last year but one.

19,588. I think the local newspapers have been full of it?—It is a subject which so few understand that the local newspapers make a great many mistakes and write a great deal of nonsense on it.

19,589. I suppose in point of fact the easy settlement of the question depends on the confidence that the men have in the particular foreman?—The foreman and manager; in fact it is a case which in respectable works never arises.

19,590. (*Mr. Roebuck.*) What do you suppose will be the number of persons, masters, and men, who will really subject themselves to the jurisdiction of this court?—I expect that at once we shall have perhaps 70 to 80 out of about 130 manufacturers, the others being only very small manufacturers. We have now got all the principal manufacturers and they are quite sufficient of themselves to rule the rest.

19,591. That being the case, how many do you suppose will be the aggregate, workmen included?—I suppose that those men would employ some 25,000 to 30,000 men.

19,592. So that altogether you would say that there would be 30,000 persons that would subject themselves to the jurisdiction of this court?—Yes, and that if the court becomes established and works as I expect it will, the moral effect of it will include a great many more.

19,593. (*Mr. Harrison.*) How are the representatives of the employers on the proposed committee to be selected?—They are to be selected by the manufacturers who have subscribed to these rules. I shall call a meeting next week of those manufacturers who have subscribed to elect their ten representatives.

19,594. How are the representatives of the men to be selected?—They will do it in their own way.

19,595. Through whom—through the union?—They may go to any body they like. They have their unions, their meetings, and committees; we do not interfere with them.

19,596. This body is to act in union. The first thing you will do will be to see that the ten men who come from the men to meet the ten on your side have been legally selected. What sort of constituency are they to have?—They will elect themselves from their own bodies, no doubt taking care that each different branch of the trade is represented, but as to their mode of selecting them I do not know what it will be. They may have considered it, but the rules leave it entirely open.

19,597. "Ten representatives of the men" is very vague. You have 30,000 men; and supposing that knots of these, 1,000 men in one place and another, claim the right to send one representative, is the election to be by absolutely universal suffrage of the whole 30,000, in which case every man and boy employed has a right to vote, or are you dealing with a union, because if dealing with a union you are dealing with a distinct body, you know?—We do not deal with any body, but the ten men that will be sent to us.

19,598. Supposing that 20 come and say that they are all representatives of the men?—Then we refer it back to the men. We have dealt with them. They send representatives to us; we believe that they are representatives, and do not question their being so. We have settled with three or four men these rules, and we expect that when we have elected our 10 men they will likewise elect their 10 men. We shall not question the power by which or the way in which those 10 men are selected.

19,599. (*Mr. Merivale.*) Have you any doubt in point of fact that they will come from the union?—I have no doubt that they will come from the union, but that the men who will send them are in connexion with the union. I firmly believe, in fact I know, that the majority of the workpeople in the Staffordshire Potteries are connected with the union, and therefore it would be absurd to say that these men did not come with the cognizance of the unions of the different branches. There is a union in the Staffordshire Potteries for every branch of the trade, and it is

no doubt through those unions that the representatives of each branch will be sent.

19,600. (*Mr. Harrison.*) It could not be worked without the organization of the union, could it?—I do not think that the working of it will be exactly working with the union as it is worked at present.

19,601. (*Mr. Roebuck.*) How many different branches are there in your business?—12 or 14.

19,602. And has each branch its own separate union?—Yes.

19,603. Supposing there should be a dispute between No. 10 and No. 11 whether they should be represented, how would that be arranged?—When the rules were agreed upon, or rather when the consultation or meeting took place for the arrangement of the rules, the men were very anxious that each branch should be represented upon this board. I objected to that on the ground that it would make the board so large that I thought it would be almost unmanageable, that is to say, if they were to have two men from each branch, making from 28 to 30 of the workmen, the masters, of course, must have the same number, and you would have a board of 60 people, which I consider was far too large for working purposes, and therefore I proposed to limit it to 10 masters and 10 men, and they agreed to that, and they would settle as to whom they should send in the best way they could.

19,604. Then in fact now it is unsettled, and has to be settled by the men themselves, and you do not know the mode in which it will be settled?—We do not know the mode in which they will elect their delegates.

19,605. (*Mr. Harrison.*) You have no doubt that it will be done by the society taking the lead, and that they will be men, if not exclusively, yet principally representing the whole body of the union?—Yes.

19,606. You do not anticipate that men will come and say, "We are not any unionists, but we select 10 men of our own"?—We do not anticipate that, because we could not receive any other 10 men.

19,607. (*Earl of Lichfield.*) You say the majority of your men are in the union?—There are exceptions, but the majority are in the union.

19,608. You feel very confident that all these questions of difference that have arisen up to the present time will be satisfactorily settled by a board of arbitration, such as you propose to establish in your trade?—I think there is every probability of such being the case.

Mr. M. D. Hollins.
22 July 1868.

19,609. And you think that the same system might be applied advantageously to all other trades?—I do not see any greater difficulty in any other trade than there would be in ours. We have perhaps as many different branches and as many difficulties to contend with as almost any other trade. Those are the rules of the new arbitration court (*handing them in*), and that is the form of the old agreement with the arbitration clause marked (*handing it in*).

19,610. (*Mr. Harrison.*) You settle wages prospectively?—Men are usually hired under a schedule of wages which exists on the works, and of course any alteration of that must be a subject of arrangement between the masters and the employed.

19,611. (*Mr. Roebuck.*) You do not ask any legal sanction but the decision of the board; you do not wish it to be enforced by law?—No, we would rather not have it so.

19,612. You would rather leave it to the voluntary good feeling of the people concerned, than ask for the sanction of the law?—Yes, I think that if you asked for the sanction of any third party it would lead to mutual distrust and dissatisfaction.

19,613. I daresay you heard what Mr. Levey said just now, that his plan would contemplate that it should be made imperative by law?—I do not think it would be possible to carry such an arrangement out in the pottery trade.

19,614. Why do you doubt it?—In the first place you cannot compel men to come under such an arrangement.

19,615. The law can compel anybody to anything?—But I question whether you would get the opinion of the country sufficiently in favour of a compulsory power of that kind. I think you would find it difficult to get an expression of opinion in favour of it. Both among the employers and the employed I believe that the general opinion would be against it, and I am sure that the feeling in our district of both employers and employed would be against any such measure.

19,616. You think that the general feeling of the employers and employed in your district is in favour of trying the voluntary system, but you believe that they would not be in favour of trying a compulsory one?—I think they would not be in favour of trying a compulsory one.

The witness withdrew.

Mr. Charles William Henry Wyman examined.

Mr. C. W. H. Wyman.

19,617. (*Chairman.*) You are chairman of the Association of Master Printers, are you not?—I am chairman for the year.

19,618. You have heard the evidence of Mr. Levey to-day on the subject of printing?—Yes.

19,619. His account of the origin of the association was that the fact of the compositors having an organized association, made it necessary that the masters should have a well-organized association. Is that according to your remembrance?—I have no remembrance of it, but what knowledge I have from looking back would tell me that a slight error was made by Mr. Levey on that point, and that there was an association with reports, issued similar to those which I have here, as early as 1836. I think Mr. Levey was slightly in error as to the origin of the association having been so late as he thought it was.

19,620. He, as I understood, stated that there was a meeting of the masters who met to consult about the interests of the trade having some of the effects of an association in 1832, but in 1854 it became necessary to have the organization more complete?—Yes. The fact was that the Association of Master Printers was always a very mild and moderate association. There was no very vast amount of politics in our trade, and it lapsed from mere want of activity. We got on amicably and pleasantly with the men, I suppose. I am a young man and cannot state that from experience, but my knowledge, derived from my father and from others who preceded me, would show me that there were not moot points to occupy the association, and it lapsed. In the interval the men became more active in their organization, and it was found in individual cases that a master was no longer left to settle with his men, but that he had to deal with a body out of doors as well. That led to a revival of the association of the masters. I have a series of reports which I propose to hand in, and the first of them dates 1856. The earliest of the reports that I have handed in has reference to our arbitration committee. The masters felt that as there was a growing organization, which might be called an opposition to them, among the men, the proper and desirable course would be, since we are ruled by a scale which is an Act of Parliament to us and admits of many interpretations and requires very nice discrimination to do justice in all cases, to have a court of conciliation or arbitration, and they conferred with the men, as the men and the masters had been in the habit of conferring on previous occasions, and the result of their joint action was this court of arbitration and those rules. The masters felt that a very great thing had been achieved by this, and that the result would be that if any case were tried, such as that which Mr. Levey has alluded to, which involved a principle that would occur often, the precedent having been established, the thing should not be

Mr. C. W. H. Wyman.

22 July 1868.

retried, but that it should be considered *res adjudicata*. But the men took a different view. They accepted the verdict when it was in their favour on the two occasions of which Mr. Levey has spoken, and on the third occasion they also accepted it as far as that particular case went; but they repudiated it for the general practice of the trade, and it was to determine and assimilate the general practice of the trade that the court of arbitration was thought to be most potent and most desirable. In consequence of that there have been no more cases tried under arbitration, but the rules of the arbitration court exist, and if a proper understanding could be arrived at between the masters and the men, I am confident that I may say for the masters that they would be only too delighted never to go to law on any question that touched the trade.

19,621. (*Mr. Roebuck.*) I suppose that cases of dispute have arisen since the arbitration court ceased to act?—Yes.

19,622. How have you settled them?—In many cases, though the amount in dispute is not large, it involves a principle, and then they go either to the city, before Mr. Commissioner Kerr—who has tried many cases, indeed the majority of them—or they go to the county courts; but as county courts very much vary in their practice, the masters have a strong disinclination to accept their law, because we do not get a determination of principles in those courts, and the masters have sought to establish a principle in all cases.

19,623. So that in fact the disputes that have arisen since the cessation of the arbitration court, have been settled by courts of law?—Yes; in the old way. Generally speaking a technical question was at issue which the judge could not deal with himself, and he has not uncommonly referred it to an overseer in the trade, who has given his opinion in the matter, and by the judgment of such overseer the judge has been governed. I have cases amongst my papers here. There was one which Mr. Commissioner Kerr referred to Mr. Day, the overseer at Clowes's, and Mr. Day gave his answer, and upon the strength of that the judge gave a verdict in favour of the masters.

19,624. (*Chairman.*) The masters are desirous of getting a principle established, as I understand you?—They are most desirous of that.

19,625. And they are convinced that the decision of a specific case is of importance to the parties, but not of the least use generally in the trade or business?—I think I have not quite made myself understood. The masters' feeling has been this, that where these cases arise they always involve the question of a precedent, as for instance, this question of standing advertisements. To adjust that question was a very desirable thing for the men as well as the masters, and we wanted to establish a precedent. Of course you could not expect men to be bound in a case that was not on all-fours with it, nor would the masters be bound in such a case.

19,626. I understand that the question tried in the Court of Exchequer was the very same that had been settled by arbitration?—Not exactly the same, but it was tantamount to the same. As a technical question it was the same. It was a question of standing advertisements.

19,627. Then the arbitration did not bind the parties?—No more than in the one case.

19,628. Nor did the decision bind, because I know enough of the law to know that a decision in a case between A and B does not bind between C and D?—No, but it has this effect, that the masters would not go against a declared decision like that in law.

19,629. Is not the whole of it a matter of contract? If I hire you as a compositor, I hire you to be paid at so much for the work that you do for me, but if there is a standing advertisement I am to be allowed for that, and you are not to be paid at all for it, or you are to be paid one-half or three-fourths, or whatever the contract may be?—I can explain the relation of the compositors and the employers. We have a Scale of Prices, the result of various conferences, and in 1866 the rate per thousand was increased by $\frac{1}{2}d$. This Scale is really our law.

19,630. It is law for any parties who choose to agree to it?—There are only a few among the large houses, such as Woodfall and Kinder, and Spottiswoode, that do not acknowledge this scale, and the *Times* is not governed by commonly accepted rules. The rule is that we all work under this scale, and it is binding between us as an Act of Parliament. It is binding in a court of law because it has been mutually subscribed by masters and men.

19,631. It binds on all who have agreed to it?—In practice both masters and men have always treated it as binding on them all round. Anything contained in this scale I should feel myself as a master printer bound by as much as by an Act of Parliament.

19,632. (*Mr. Roebuck.*) Might there not be a question as to what the scale meant?—Yes, that is what we often want to arrive at, and that is where our differences arise. I think that my meaning would be made clear if I read the passage here on which the difference arose. We say in this scale which we both subscribe to, "Standing advertisements, or stereo blocks, if "forming a complete page, or when collected together, "making one or more complete pages, in a wrapper or "advertisement sheet of a magazine, or review, not to "be chargeable, the compositor to charge only for his "time in making them up." The master's idea was this: there might be a classified advertisement sheet; that, for instance, we should put all the hatters in one portion, all the clothiers in another portion, and all the bootmakers in another, and so on. In the standing advertisements in the sheet that went to press last week, we will say, two or three hatters or clothiers might be taken out and new matter imported. In a printing office to measure new matter we take a piece, of cord and run it over the page, and then say there are so many pages of standing matter. The men, however, took us on this expression in the scale, "if forming a complete page, or when collected together." We said that "when collected together" meant when run together in that way which I have described. They said, "No, you must not insert any "new matter in that page, or else you will destroy the "idea of a standing page." We could not go to our customers and say, "We are obliged to charge this 40 or "50 times over to you because our men insist on being "paid for it," and the result was that when the decision was given in the Court of Error the masters were forced to do such work on the establishment, as it is termed; and it had this effect on the journeymen's interests, that it compelled the masters to keep establishments at fixed wages, which I conceive to have a depressing effect on the men, and to be undesirable for the master as well, because he could neither afford to turn away his work or to have his house in continual conflict.

19,633. (*Chairman.*) In consequence of your being obliged to pay for the advertisements collected together you were obliged to put certain workmen on fixed wages?—Yes, because if there were in a gross amount, say $20\frac{3}{4}$ pages of standing matter, the whole 20 pages might not any one of them remain intact from the previous publication; but when collected together they might come to 20 in the gross, or $20\frac{3}{4}$. The three-quarters of a page we gave the men, but took the 20 as ours. But the men say that if the integrity of a page is interfered with by the insertion of any fresh matter, then it ceases to be a standing page. Taken simply as a verbal rendering of the scale I do not consider it is so, and it was against the understanding of those who framed that rule in the scale.

19,634. What is the meaning of the "fixed wages" to which you referred just now?—When we pay a man on fixed wages he is our servant in a matter of that sort, and the thing is indifferent to him. It is the interest of the journeymen that this work should be capable of being done on the piece, but owing to their insisting on this peculiar interpretation of the scale, and as we cannot go to the public and get paid what the men claim, we do it as we say "on the establishment." If a man is on the establishment,

in contradistinction to being on the piece, he does his master's bidding in any description of work, and as long as his master is satisfied with his work for the week it is not a question he cares about, the work can then be charged in any way the master chooses, and the scale becomes so far a nullity to a man on the establishment. Practically, the result of it was that it led this work, which might have been done by piece hands, to be forced on the establishment, and the piece hands are frequently idle in consequence.

19,635. (*Mr. Harrison.*) They may charge for composing the same advertisement 30 times over when it is only composed once?—Yes, and our interest was evident. There was no reason why we should continue to give the men that work when we might give it to our establishment men.

19,636. (*Chairman.*) Then it would be to the advantage of the workmen to consult the mutual interests of both parties?—I am perfectly certain that it would have been to their advantage to have let the decision of the arbitration committee stand. I am sure that they have lost by the course that they adopted.

19,637. They are for the most part men that know their own interest; cannot they be induced now to come to terms so that the general principle should be settled by arbitration, and then workmen who are men of good faith, who have assented to the arbitration, would work under it afterwards?—I think the difficulty is this. When the master printers and compositors have met together they have always got on very well, as far as I am able to judge (and I have had some opportunity of judging), but the fact is that the men who send the journeymen to confer with the masters exercise a very great power over those men whenever they come to a decision adverse to the popular notion of the men, and they have to go back and argue these questions at a general meeting, which is a very bad arena for arguing nice questions. A case arose in 1866 where we got on very well in a conference between the masters and the men on a question of wages, but when the men went to their general meeting, although we had every reason to believe that whatever was accepted by the representatives of the men at the conference would be accepted by the men generally, they were cast over by their constituents; and I have documents here to show that at that meeting there was such a stormy state of feeling as rendered it impossible to deliberate the question at that meeting. The delegates were thoroughly competent men, but because the masters did not assent to everything that they went to propose it was thought that the delegates had failed in their duty, and that was very openly expressed by their own body.

19,638. The practical result of that is, that the decision of universal suffrage is less satisfactory than the decision of the chosen delegates?—It wants calmness and discretion.

19,639. The practical result is, that the chosen delegates who came to represent the compositors were men of sense and worth, and would have settled the thing in a satisfactory way, but they went back to the whole body, and the whole body came up with a great deal of excited feeling and decided that which was prejudicial to their own interests and hostile to the masters?—In the case that I refer to they did eventually see that it was necessary to yield somewhat, for after the masters had given up all they possibly could, they were willing to deal with these representatives, but the workmen themselves carried it to such a pitch that the masters felt "we have made a great mistake." They had felt before, "we have given more than we can afford; still we will make this concession for peace and quietness." And when this answer came from the general body of compositors they felt that they had wasted their time and conceded too much.

19,640. "As soon as we have established that gain, then we will demand more," that has been avowed as the practice in some cases?—Yes, and we were met in that spirit.

19,641. Have you contemplated the difficulty of getting an indefinite number of workmen to be bound by an agreement. If they are not men of good faith, and men to abide by the award, and if they do not like the award, they may go to the country and new men may come, and new men are not bound by the award, are they?—I still go back to this scale, this is what guides us, and while the scale lasts it is our law; it is just as operative to us as printers as the common law of the land is to us as citizens, and therefore we need do no wrong under the scale while the scale stands.

19,641*a*. Might not I as a compositor go to you as an employer and say, "I will not accept wages according to the scale"?—I should not agree to that, for this reason that it would be too troublesome. As a fact, nobody who comes to me for employment says, "Do you work under the scale?" nor do we say, "We are going to work under the scale." It is a perfectly understood thing.

19,642. What are the practical conclusions you wish us to draw?—I heard the evidence of Mr. Hollins, and I think that such an arbitration committee as he speaks of would in our London Printing Trade be utterly worthless, and I have not such an opinion of the voluntary principle as to like the idea of those who belong to a trade being sometimes liable to arbitration, and sometimes not. If you have a body of men capable of dealing with a technical matter, and you establish a precedent under their jurisdiction, and another case similar to that arises, what is the use of arguing that subject again? It ought to be a just decision at first, and if another case on all-fours with it is brought forward it ought to be accepted on the basis of the previous decision. If it is not so you would never get any person of self-respect to sit as an arbitrator and feel that that very self-same question would be discussed somewhere else and perhaps decided differently the next day.

19,643. (*Mr. Merivale.*) If I understand you rightly, you think that the difficulties of arbitration are considerably lessened where there is a charter to be interpreted, such as your scale, so that the arbitration is then only limited to the meaning of that charter?—Quite so. I think that there are many masters who would be glad to burn this scale, and destroy unionism, and go in for free trade in printing. I consider that though there are disadvantages in the scale, they are neutralized by the fact that we are accustomed to them. The advantages are that we know what we are to pay for our work, and again we know what our neighbours are paying, that is to say we know the cost that they can get the thing done for, and that governs us in giving estimates; besides which, the men are prevented from constantly varying their prices. And I think that in having reference to an arbitration court, the scale takes you a long way through the difficulty; and if there were no scale, the basis of arbitration would be extremely undefined.

19,644. You say that there are three considerable firms, the "Times" office, Woodfall and Kinder, and Spottiswoode and Co., that do not adopt this scale; what do they do instead?—I have taken some pains to ascertain that. I saw Mr. McDonald, the manager for the "Times," and he stated to me that owing to the exactions of the men on small points (and all our quarrels arise on small points—sometimes a question of a farthing, but involving perhaps hundreds of pounds)—they now manage their affairs in the "Times" office in their own way; but he declined to tell me how many men they employed or their precise earnings. The Messrs. Waterlow also do not (or did not) work under the scale, for this reason; they had a dispute with their men which was taken to trial and decided against the men. Similar work was put in hand a short time after that, but although the decision had been against them the trade union told the compositors not to go on with the job, simply because there was a decision against them. The result was that Mr. Waterlow then decided to have no union men on his establishment.

19,645. (*Mr. Roebuck.*) How does he get on without them?—He said very well.

Mr. C. W. H. Wyman.

22 July 1868.

19,646. (*Chairman.*) The compositors are non-union men in his office?—Yes; they were so, I know.

19,647. (*Mr. Roebuck.*) Has there been any complaint of any interference with his men?—If you refer to picqueting and that sort of thing, I am happy to say that our trade has not shown anything of that sort, and in fact the relations between the Master Printers Association, who represent the master printers of London, and the Society of Compositors have always been of a very honourable and creditable character, as far as I am able to judge, and personally there is nothing in their intercourse different from what could be desired.

19,648. (*Chairman.*) When you referred just now to the delegates going back to a body consisting of large numbers, were they compositors?—Yes.

19,649. (*Sir D. Gooch.*) Have you any idea of the number of compositors in London?—I am not so competent to give you that information as Mr. Self who will be subsequently examined. Such statistics of the business are more in the hands of the men themselves.

19,650. (*Mr. Merivale.*) You have heard what Mr. Levey said on the subject of foreign competition in your business; do you generally agree with him?—Yes; I am bound to agree with him from my own experience and from the evidence which I felt it due to this Commission to collect in reference to the matter. I have letters here bearing on the subject, some of which I will read. "27, Paternoster Row, "London, June 22, 1868. This is to certify, that a "volume published annually, entitled '* * * "* * *' and a magazine published monthly, "entitled '* * * ' were taken away "from Messrs. * * * printers, of London, "and given to printers at Aylesbury, Bucks, and "Frome, Somersetshire, solely on account of the "great difference in the price charged. Both these "works have been removed since the advance in "the London scale of wages. (Signed) JACKSON, "WALFORD, AND HODDER." That alludes to the advance of 1866. I should state that the masters and the men met at the suggestion of the journeymen, and in the abstract, as Mr. Levey justly observed, most of the masters felt that the compositors were, strictly speaking, underpaid. So were the masters for compositors' work; the fact is that printing is underpaid in regard to that part of it. But the question was not whether the rate of wages in the abstract was too much, but what was best to be done under a given state of circumstances. The masters felt that at that particular moment, when we were exposed to the competition of foreign houses, and provincial and Scotch houses, and when there were the increased facilities of the telegraph, and the railway, and of the book-post (which last has not been alluded to yet, but which increased the facilities of sending parcels of large bulk), they were at a greater disadvantage than formerly in reference to the class of work which can go out of London.

19,651. Taking the period before 1867 and up to this late advance, can you state any way in which the existence of the compositors' union intensified the force of foreign competition?—No, I do not think it did; as a union it had nothing to do with it.

19,652. The rise in 1867, though you think it just to the compositors, has placed you in considerable difficulty, as I understand you?—I think it was impolitic, but we were met in such a spirit by them that it was a question of concession or strike.

19,653. You think that they have overdone it in fact?—I should think that they have got more wages and less work, so that in the result they are not so well off, and the masters are much worse off.

19,654. (*Mr. Roebuck.*) Mr. Levey said that there are a large number of compositors in London unemployed; is that your experience?—Yes, I know that many of my own compositors are unemployed or only very partially employed, and I know it in regard to other offices from hearsay.

19,655. Have you any specific evidence of work being sent from London to provincial towns or foreign towns?—The case which I have just adduced is an instance of that. Here is a memorandum given me by an eminent firm: "A work was offered to us by a "London publisher who prints largely in Scotland. "Our cost price paid to compositors was 1*l.* 15*s.* 6*d.* "To get the work we had to put only 12*s.* 6*d.* on this "price, which did not cover other charges (the "Scotch get nearly 100 per cent.)." Their wages and their extras go to make the cost of their work much less than ours. While we pay more per thousand it does not stop there. The London compositors, though not at all an overpaid class of men under the present system, get a great deal more than any other compositors in extras and various things, as I can show you by a statement which we prepared in dealing with the question when the men came to us for more money. We adopted this principle. We made inquiries as to what was paid in other parts, and the result of those inquiries led us to this conclusion, "You have asked for a halfpenny increase, and we cannot afford to give it you." The thing went to an extremity, and rather than have a strike in a busy season we gave the halfpenny, but I believe the best thing in the interests of all of us would be to go back to the former price per 1,000. Still, the compositor is not overpaid.

19,656. Then the real conclusion to be drawn from what you state is that the printing business ought not to be done in London?—No, not so at all; that would be to announce one's own dissolution. There is a certain amount of business that must be done in London; but there is a certain amount that used to be done in London, and that can be done in the country.

19,657. Which cannot profitably be done in London?—Not as things stand.

19,658. Is not the immediate consequence of that that it will go from London?—It has begun to go, and is going fast.

19,659. You believe, then, that under the present state of things London will cease to be a printing place?—It must always have a large amount of printing, but it will not be the place that it has been. London has hitherto been the centre of science and literature, and so forth, and therefore naturally printing has been chiefly carried on in London.

19,660. But all great works (I do not speak of periodicals) may be as well printed in the country as in London, may they not. Take a History of Rome; may it not now, with the facilities of which you speak, be printed in any country town, supposing that it is as well printed there as in London?—Yes, presuming that the printer has the establishment and the plant.

19,661. The solid and steady class of literature—for example, large works of history, Bibles, and so on, in fact, everything but periodical literature (including therein newspapers), could be as well printed in the country as in London, could it not?—Presuming that there was an establishment equal to the London printer's establishment. Hitherto we have had the cream of the workmen in London; till quite recently you could not get good work done except in London.

19,662. Mr. Levey, I think, said that there is no such great difference in your work. He said that a page printed is a page printed?—He did not mean it in that sense, I think. There is a difference in the quality of compositors' work. There is no doubt that by purgation and correction you may remove the first errors of a printer and dress his work into shape; that is to say, the compositor's work may be brought to perfection by correction instead of being set up right at first.

19,663. (*Mr. Merivale.*) I suppose that so long as authors continue to live in London, London will have a considerable advantage in the printing trade from the fact of authors liking to be near the printer?—All authors know that it is a great comfort to be near the printer, but still there is a great deal of work done in Scotland and in the country.

19,664. (*Mr. Roebuck.*) Articles for the Edinburgh Review, while printed in Edinburgh, are for the most part written in London; is not that the case?—I am not sure about that. We print the Dublin Review

at our office here in London, and it does not follow that the Edinburgh Review is printed in Edinburgh.

19,665. Longman is the publisher of that review, is he not?—Yes.

19,666. At the time that Jeffrey was the editor of the Edinburgh Review all matter had to be sent down to him, and if it was printed in London, he, being in Edinburgh, had to look at every proof that was printed here in London?—Yes, that is possible.

19,667. (*Mr. Harrison.*) Is it not the case that the printing of foreign languages has principally gone to Germany and abroad?—Yes, of classical works.

19,668. Is not that in great part due to the superior education of the German compositors?—I do not think that it is entirely due to that, but that has a good deal to do with it, I have no doubt. The common compositor there may have had a classical education.

19,669. In point of fact some slight knowledge of the classical languages is to be had at a cheaper rate in Germany than in England?—Yes; I believe so.

19,670. (*Mr. Roebuck.*) You say that works in foreign languages are sent abroad. Supposing that they sent a French book to Germany, there would be the same difficulty as in having it done in England, would there not?—I do not know anything as to the practice between those two countries.

19,671. (*Mr. Harrison.*) I was speaking principally of the Latin and Greek languages. I have been informed, and that seems to be your experience, that they are printed abroad?—Yes, they are very good classical printers in Germany.

19,672. (*Mr. Roebuck.*) When works are sent over from here to be printed in Germany, do you send over English paper?—That is a publisher's question, but I believe some English paper has gone abroad, though I do not think a very large quantity has for this reason, that the English papermakers are competing with great difficulty with the German, so that the publisher who makes his arrangements to print abroad, would save the carriage of the paper to Germany and buy it on the spot.

19,673. You know that the cheap classics printed on German paper are very queer things to look at, and that you cannot write upon them, or is it your experience that the German paper is now good?—It is a question of practice with them. They use unsized paper, it is very good for printing upon, but you cannot write upon it. We never make it except to order.

19,674. (*Mr. Harrison.*) I do not know whether you happen to know that with regard to Messrs. Williams and Norgate, in Henrietta Street, nearly the whole of the books which they publish, many of which are classical and some oriental, are printed as a matter of course in Germany, and hardly any done in this country?—Yes, they have a large amount in Germany. Here is another communication to me: "As "a small contribution to the information which "you are collecting, I beg to submit the following "illustration of the tyrannical operation of the "trades union in the printing business. Previous to "the '* *' newspaper, of which I was printer, "ceasing to be issued, in May of 1867, from certain "circumstances I was unable to give the 54 men em- "ployed upon that paper more than one week's notice, "and of course they claimed the two statutory weeks. "This was not resisted, but I requested the men to "come to work as usual and I would employ them "upon some ordinary book or magazine work, and "that only for a few hours per diem, so as to lessen "the loss. The majority of the men were at first "willing to do so, but several thought it would be "better to consult the society, and the result was, that "the society did not approve of the men working as "proposed, and instructed them not to work upon any "other work than that upon which they had been "engaged, viz., '* * *' newspaper. The con- "sequence was, the men came every day during the "remaining week, did nothing, and claimed and "received a total sum of 84*l.* 7*s.* 11½*d.* I am informed "that I might have contested this in a court of equity, "but I felt unable and unwilling to contest the matter "with such a powerful body as the trade union." That is a matter of fact, and the men by a recent decision would not be legally entitled to a fortnight's notice. Here is another communication:—"As to "the transfer of printing from London to country "offices and abroad, we regret to say we write "with a very bitter experience, as it has been our lot "to lose several works, especially novels, by the com- "petition of printers carrying on business out of Lon- "don; and it is our opinion that unless some change "can be effected the whole of the novel printing busi- "ness will be transferred to the printers doing business "in the country suburbs, and as a natural sequence "many valuable books will find their way to the same "sources, and in the end leave the London printers "nothing but newspaper, magazine, and such book- "work as may require to be done in very great haste "or under the actual supervision of an author living "in London. We feel that this is a subject of great "and vital interest to the master printers of London; "and while unprepared at present to suggest a remedy "we think it very properly worthy of the fullest con- "sideration before any evidence is offered to the "Commission, as undoubtedly the high scale of charges "has driven and will continue to drive large quantities "of work out of London, and in some instances on the "continent, although the latter we think is of very "rare occurrence."

19,675. (*Sir D. Gooch.*) You say yourself that the men could not live upon less money than they have?—I think they could not keep themselves properly: but the practical question is not that, but can we change it in such a way as not to send the work from us. But they are really prospering less under the increased prices than they were before, that is my argument. Here is another letter, which is from a firm of printers in London: "Disputes as to prices." On this point they are in favour of an arbitration board of masters and men. They say, "Legislative sanction should be asked for "the establishment of a permanent board of men and "masters to whom questions should be submitted, "and whose decisions should have the authority of "law. Leaving engagements without submitting "questions to this tribunal, or without notice, should "be punishable, in view of the serious results attend- "ing interruption to newspapers, &c." Then under "Apprentices," they say, "The rules existing among "machine minders seriously interfere with the Lon- "don trade, and are tending to the worst form of "tyranny to which employers can be subjected, "forcing upon them incompetent men. Overwhelming "proof can be given that the men in this department "are the best paid and the most incompetent of "workmen, and rule their employers to the serious "detriment of masters and men." Then under "Transfer of work," they say: "Recently two monthly "publications of large circulation, after going through "the trade and in our hands being twice reduced in "charge, were removed to the country; the price "now charged by the printers in the country being "less than the actual cost in London, notwithstand- "ing cost of carriage, &c. Another very heavy "order for bills, millions per month, transferred for "the same reason after the same process. If the "details of these cases are of any use they can be "had."

19,676. (*Mr. Merivale.*) The letter does not say where that firm in the country carry on their business?—At Frome, I think. I wrote to another master printer, and this is his reply: "I have to "acknowledge the receipt of your note in reference to "the evidence to be submitted to the Trades Union "Commission in connection with the printing trade, "and have much pleasure in forwarding to you my "opinion upon the three heads of inquiry which it "contains. (a) Disputes as to prices. As regards the "disputes respecting prices which have arisen "between me and the men in my employ, I have "every reason to believe, from their own statement, "that they were attributable to the advice given to "them by the council of their union. In confirmation

Mr. C. W. H. Wyman.

22 July 1868.

" of this remark, the case recently submitted by me " to the master printers' committee may be adduced. " Upon the men being asked to state the ground upon " which the increase upon the charge made in former " years was based, they stated that they had been " instructed to cast up the work according to the scale " as laid down in certain unauthorized memoranda. " The men themselves had charged for what they had " done as in former years. Subsequently they were " ordered by the council of their union to make the " demand for an increase in price, which led to the " dispute to which I have referred." The dispute was referred to the Master Printers' Association, and it was thought to be so wrong on the part of the men as to justify the master in resisting them even at law, but it was eventually withdrawn. As to apprentices, he says, " Until very recently I had no apprentices in " the book department, and consequently have nothing " to report under this head. The transfer of printing " from London to the country, &c. Owing to the late " increase of wages a great deal of book work has " gone, and will continue to go, into the country. " Messrs. Nisbet, Hatchard, Seeley, and Low, largely " employ Scotch and English country printers." I have got here a very interesting report, which I intend to hand in, which was the basis of our decision when we met the men in connection with this subject of wages. The masters took great pains not to judge without data, and they went to Glasgow, and Edinburgh, and Leeds, and here there is formulated a series of prices showing what is paid in Edinburgh and elsewhere, and what in London, and what the men desire to be paid, showing the excess that the men in London were asking over what the men were paid elsewhere, and it was in view of this that we said, " If we increase the wages, the work will go " away." We took the Quarterly Review as a test, " The following table will shew the comparative " prices in Edinburgh, Glasgow, and London, of a " sheet of demy 8vo., MS., and solid on a page of " the size of 'The Quarterly Review,' in six founts, " from small pica to nonpareil without extras." Then there is the Edinburgh and Glasgow scale, and the London scale. The result is this, that, " the excess " of the prices proposed by the London compositors " over those of the Scotch scales on the castings in " the foregoing table is as follows: small pica, 4*s.* 6*d.*; " longprimer, 6*s.*; bourgeois, 7*s.* 6*d.*; brevier, 9*s.*; " minion, 13*s.* 6*d.*; nonpareil, 1*l.* 6*s.* 0*d.* The " following table will shew the comparative prices " of the same sheet if it consists of mere reprint " solid." Then there is the same sort of information there and we get similar figures. Then again, " Table " matter is paid in Edinburgh and Glasgow, in founts " from English to minion, at 9*d.* per 1,000; in non- " pareil at 10*d.*; in London at double the price of plain " matter. The following table will show the compara- " tive results, a sheet of the Quarterly Review in demy " 8vo. being taken as the basis." Then the table is given, and it appears that the excess of proposed London over Scotch prices was, small pica, 11*s.* 6*d.*; longprimer, 16*s.*; bourgeois, 1*l.* 0*s.* 6*d.*; brevier, 1*l.* 4*s.* 6*d.*; minion, 1*l.* 14*s.* 6*d.*; nonpareil, 2*l.* 12*s.* 6*d.*; the difference per sheet of 16 pages, as between what we were asked to pay in London and what they were paying in Edinburgh, was 2*l.* 12*s.* 6*d.* The masters said, " We cannot contend against a disparity of that sort." " Foot-notes are paid in Edinburgh and Glasgow at " the rate of 1*d.* per three lines in 8vo. up to the price " of page in small type; in London at 1*s.* per sheet if " two notes, and not exceeding four pages in every 10 " sheets. Thus, if two notes consisting of three lines " or under occur in 10 sheets, the Edinburgh and " Glasgow compositor would be paid 2*d.*, the London " compositor 10*s.*" That is an illustration of the difference in extras that the London compositor enjoys over the country compositor; without any alteration of the scale he got 10*s.* in London, whereas in Scotland he would only get 2*d.* The conclusion that we came to was this: " From these particulars it results that " compositors in London not only enjoy a higher rate " per 1,000, as compared with those in Edinburgh " and Glasgow, but they have also a great advantage " in the more liberal payment of extras. Both these " causes greatly enhance the comparative cost of " composition in London, calculated merely according " to the present scale of prices."

19,677. (*Chairman.*) The paper with which you have furnished us contains the general conclusions at which you have arrived?—Yes. In that paper I gave this summary of my evidence: " 1. I believe that " many master printers would prefer the abolition of " trades unions both of masters and men, and the " abolition of the compositors' scale of prices; in fact " free trade in printing. I am not prepared indivi- " dually to go so far, for reasons which I have named. " 2. Presuming the continuance of trades unions, " proper legal recognition had better be accorded to " them, and the fulfilment of given duties and respon- " sibilities exacted. 3. I would suggest that all " trade associations should be licensed and their rules " settled by a government officer, none being sanc- " tioned which restricted, (I.) the liberty of the " master to make his own arrangements with his " workmen and plant, (II.) the liberty of the work- " men to be equally free and to belong or not to any " society, (III.) the separation of funds subscribed " for provident purposes, such as sickness, burial, " &c., from funds subscribed for trade purposes; such " as strikes, increase of wages, &c. (IV.) That it be " illegal for one trade union, in its collective capacity, " to vote its funds in support of another trade union " for any purpose whatever. Thus it would be illegal " for the builders to support the printers on strike. " (V.) That the chairman and secretary for the time " being of a trade union be personally liable for all " infractions of the law committed by such union. " *General considerations.*—Trade unions as at present " constituted, in my opinion act in restraint of trade, " and have not on the whole been productive of pecu- " niary advantage to the workmen; while they have " diminished proper sympathy between employers and " employed, as well as individuality and enterprise in " the workman himself. Under their influence the " men have become more litigious, they have at times " exacted higher pay than circumstances justified, but " have not been permanently benefited thereby, having " obtained more pay but less occupation. Whereas " the governing members of trades unions exercise " apparently unlimited powers of coercion for so-called " trade objects, they do not appear to use their power " to raise the morality, efficiency, and social respec- " tability of their members, as they might and could " do. Thus, a workman may be guilty of drunken- " ness, of leaving his situation in debt to his employer, " or of leaving without proper notice, and in fact " almost any sort of bad conduct towards his employer " and not suffer punishment, rebuke, or loss of status " in the estimation of his union, and in any trade " question would rank on an equality with the most " respectable of workmen. For the promotion of im- " proved relations between capital and labour, period- " ical conferences between employers and employed " (similar to those held by the Social Science Con- " gress), and not limited to particular trades or " localities, should be held from time to time, for the " discussion of topics of mutual interest, such as wages, " technical education, councils of arbitration, &c., in a " broad and enlightened spirit. I am strongly in " favour of it being made compulsory to refer all trade " disputes to arbitration." I would add that unless you make it absolutely necessary to put these technical questions before an arbitration committee, composed of people competent to deal with them, arbitration ceases to be of any value. In fact, we want the award if it establishes a precedent to be binding in law, which it is not now.

19,678. Have you any further observations to make? —I have only this to observe, that these reports of our association ranging over a number of years will show that the desire of the Master Printers' Association has been to assist the practice of their trade in moot and

difficult questions, and that they do not favour the masters as against the men, numbers of decisions having been given in favour of the men against the masters. We have sought to increase the morality of the trade, having regard to the welfare of our boys; and at all times we are prepared to assist the journeymen in any question that they choose to lay before us. And generally there has been a great deal of respect shown to our association. Financially, we are not an important association, our balance at the banker's not being 30*l.*, so that we possess no money power of coercion.

Mr. C. W. H. Wyman.

22 July 1868.

The witness withdrew.

Mr. Anthony John Mundella further examined.

Mr. A. J. Mundella.

19,679. (*Chairman.*) I believe you have some additions to make to the evidence which you gave on the last occasion?—I have only just had a copy of my evidence on the last occasion placed in my hands, and I can hardly know what I have left unsaid. I trust therefore that the Commissioners will excuse me if I repeat my evidence at all now.

19,680. (*Mr. Merivale.*) Your last observation, on the last occasion, had reference to the difficulties which you have experienced in Nottingham in bringing about an understanding of the principles which you have adopted?—Yes, I may say that I find that in the former part of my evidence I omitted to mention that we accomplished a good many things for the men, which ameliorated their condition, and bettered them considerably without being of any cost to the employers. Where we have not given an advance of wages we really have advanced the wages of the men. For instance the workmen are employed under the middlemen, because we have, as I explained the last time I was here, masters who employ from 20 to 100 middlemen under the warehouse-man. These men used to be guilty of great injustice occasionally. Our board remedied all that. One of the first things observed was that the Truck Act was constantly infringed. Although the man did not sell the goods himself he would have a son or nephew who sold goods in the same village, and if the workmen did not buy their articles in this shop, their employment would cease, and other workmen would be put in their place. There was great complaint on that score, and the result of it was that the men were supplied with inferior articles at an enhanced price. We, the employers, when the men brought this before us advertized in all the newspapers of the county, that we would remove the machinery from any middle master who took undue advantage of his men in this way whenever it was brought before us. We took up two or three cases and prosecuted, and that put an end to the truck system. Then there was a system of paying very late on Saturday night or early on Sunday morning; and we put an end to that by a half-holiday on Saturday, and paying before mid-day on Saturday. I should like to lay before the Commission the other side of the question. I think that last time I shewed how well the system had worked. I should like to show what are our real difficulties, and the questions that have always met me when I have spoken to men in other trades about adopting it. The first question is, "How will you enforce this with the master; how will you bind the men?" Now we have three or four employers out of 45, I think, who have never assented to this system, and who are only governed by the force of public opinion, and by the resolution of the men not to work for these outside employers at a less rate than that at which they work for the employers on the board. While I was giving my evidence here last week, very singularly one of these employers resolved upon a reduction from one of the printed statements. I put in a number of printed statements, but I believe that that very statement was agreed to by the employers and workmen last January. This employer wanted to pay something that would be equivalent to a reduction of nearly 2*s.* a week in the wages of 43 workmen. The workmen objected to this, and said that they should appeal to the committee of inquiry. They appealed to our committee of inquiry (there are four members of the board who are appointed annually members of the committee of inquiry) and the committee of inquiry said, "This is quite wrong, we will see your master upon it;" whereupon three manufacturers went with the workmen complaining to the employer in question. Those manufacturers were Mr. Lee, one of our magistrates and a large manufacturer; Mr. Hill, Mr. Morley's partner; and Mr. R. W. Smith; so that three of the oldest manufacturers went. They reasoned with him, and he ultimately promised that he would pay the price. The men went to work. They placed themselves entirely at the discretion of the board. The advice that the board gives to the workmen is, never to use an angry word, or do anything irritating to the employer, but to say "We will abide by the decision of the board"; and if the workmen should take off their belts—that is to say, stop the machinery without the orders of the board—we invariably say, "Go back to your work, put your belts "on, and then come to us at the end of the week and "we will tell you what you have to do." That is the principle that we have found desirable and proper to adopt in order that a factory may not be stopped arbitrarily on light pretences; because, sometimes, the men are in the wrong as well as the masters. Still it is a fact that in all trades there are a number of men who are screwing down their workmen, and these are the men who are often keeping the whole trade in hot water; because if my neighbour is allowed to work at a certain per-centage below me I cannot sell against him, and trade becomes completely upset. I must go down to his price or he come up to mine. A manufacturer hearing that so-and-so is working at a reduction, says, "Well, I must do the same, or otherwise he will be underselling me." We went to this man and reasoned it out with him for half an hour, and finally he gave us a note signed with the signature of the firm, that they would consent to pay the prices. The men went to work the next morning, and that was settled. That is our mode of settling a dispute. We do not leave some of the men to go alone to the employer, but we bring to bear our influence as fellow manufacturers, the influence that our social position gives us, and reason with the other employers in the trade, and ask them why we should have all this trouble, and why they are not willing to pay the same price as ourselves, and it is a sort of public opinion brought to bear upon them that they can very seldom resist. On the other hand, the men are sometimes difficult to deal with. I happen to have an illustration here. This is dated July and August last year. There was a new branch of work introduced into the trade a few years ago, and it was a profitable branch, and all sorts of prices were paid for this work. It was begun in Nottingham, extended to Belper, went to Mansfield, and ultimately to Loughborough. In the first instance each manufacturer got perhaps only one or two machines, and as the profits were good the prices were very irregular. However, as the machinery extended largely and competition become closer, it was found desirable that there should be something like a regulation of prices throughout the trade. So the workmen brought it before the board. They said that at Loughborough they were paying 1*s.*, at Nottingham 7½*d.*, at Mansfield 5½*d.*, and at Belper 8*d.*, and that this would not do. The result was that a committee was appointed to produce what was called a regulated statement, an equal statement for the whole district. That had come before us for the first time in that shape. We do not interfere with new machinery till it comes before us in the shape of a dispute. The result would have been, had we refused to maintain this, that the low price men would have struck at the highest price, or the manufacturer paying

Mr. A. J. Mundella.

22 July 1868.

the highest would have wanted to have the lowest price. Well, we equalized the list throughout the three counties of Nottingham, Derby, and Leicester, and published that. When we did so Loughborough was considerably reduced, some 25 per cent. The Loughborough men on the 31st of July put out this statement: "Fellow-workmen,—We, the committee, "have received a copy of the Nottingham Heeling "statement," (it is the machinery for making Heeling stockings) "which has been adopted by the committee "of Nottingham and Derby, and which we now lay "before you. We request the different factories and "shops to send a delegate to the committee room "with your instructions as to whether you will or will "not agree to adopt the appended statement. Each "delegate to attend punctually at 8 o'clock this "evening. Committee Room, 'Prince of Wales,' "Church Gate. Signed on behalf of the committee, "Joseph Blake, Secretary." Then this paper was issued, dated August 1st, 1867: "To the framework "knitters of Loughborough. Fellow workmen,—We, "the committee of the above society, beg to say that "there will be a public meeting held at the Co-"operative Room, Woodgate, on Monday evening "next, at 7 o'clock, in accordance with a resolution "passed at the delegate meeting, which was held at "the 'Prince of Wales,' on Wednesday, July 31st, to "take into consideration the Heeling statement. The "object of the meeting is to consider the advisability "or inadvisability of acting in accordance with the "Nottingham Board of Arbitration." (Here was a case that looked like secession.) "The committee "request that all workmen that can attend will do so "to take part in this very important question of the "trade." On the 8th of August our secretary to the board received the following letter: "Dear sir,— "Enclosed is a copy of resolutions which were carried "unanimously at a public meeting held at Lough-"borough, on Monday, August 5th, which you will "please to lay before the board. Please forward a "copy of the rules of the board, and information as to "the time when the board meet. And will much "oblige yours truly, Joseph Blake, Wood Gate, "Loughborough, secretary to the trade.—Resolution "1. That in the opinion of this meeting it is desirable "that the framework knitters of Loughborough do "work under the regulations issued by the Board of "Arbitration and Conciliation of Nottingham in re-"ference to price on different sorts of work made at "Nottingham and Loughborough, and that we the "workmen of the above place, do hereby agree to work "by any change or regulation entered into by the board "in respect to price paid for Nottingham and Lough-"borough hosiery goods. 2. That if in the opinion of "the Board of Arbitration and Conciliation it is incon-"venient to make any charge in its present arrange-"ments, we the other workmen of Loughborough hope "that it may be practicable at the next election of "the board to admit a workman from Loughborough "to take part in its future deliberations." They held their public meeting and considered whether they would submit to our decision. They did ultimately, because otherwise the result would have been this, that one town would have set itself against all the other towns in the trade, and the other towns would not have supported them if they had stood out against the decision of the trade, and I may say that up to this moment though we have had little difficulties of this kind, and mutterings, and murmurings of discontent, and though we have two or three manufacturers who still dislike the board because it is a great obstacle to their working under price, yet on the whole, every resolution that the board has come to has always been practically carried into effect, as thoroughly as though we had been backed up by positive enactments; perhaps not immediately, but a week or more after the thing has been discussed. The trade during the last four years has been in a more prosperous state than I ever saw it in before, and the men have been more contented and happy than they ever have been before. They make their applications to us in writing when they want an advance, and it is very singular that at our last board meeting this was one of them. This is a petition signed by 800 men. "Drawer, pantaloon, and "shirt branch. To the Board of Arbitration and "Conciliation for the Hosiery Trade. Gentlemen,— "We the undersigned workmen in the above branch "having applied several times (though unsuccessfully) "through the medium of our representatives for an "advance upon our present prices, again most respect-"fully repeat the request of the particulars of which "the president of the board has received notice. The "present high price of provisions, the laborious nature "of our employment, and the low average rate of our "wages (compared with that of other operatives), we "hope will be deemed sufficient reasons for us urging "this subject again upon your consideration. We feel "assured that you have a desire to promote our moral "and social welfare, and if you can make us this little "concession it will be properly appreciated by your "obedient servants the petitioners." Those 800 men perhaps represented a total of a thousand in that branch. They have the fullest confidence in the board; and I believe that the working men, though at first they regarded it with so much suspicion, and only came into it gradually, would now regard it as the greatest possible calamity that could happen to them if the board was removed.

19,681. (*Mr. Harrison.*) Had there been a previous application to the employers irrespective of the board?—It is always to the board. They never make an application now to the employers; they come direct to the board.

19,682. (*Mr. Merivale.*) What would have been the effect of the employer refusing to listen to the board in the case which you mentioned just now?—The effect would have been this, that if these 43 men had not been taken on by their employer, I was prepared myself to take 10 of them, and the other three employers were prepared to take the rest of them, because rather than have a small reduction in wages, which would not have promoted our trade at all, and which would have spread discontent among the workmen and broken up a system which has been of great benefit to both masters and workmen, we would have made a little extra stock; and when 40 of our own employers are content to give the price, we do not see why three or four working with the same machinery, and with equally expert workmen, should object to pay the price. But in every centre of industry in which I have spoken to manufacturers, my experience is this, that it is some few who are opposed to giving a fair price for labour, and who think that every farthing gained off the working man is worth a penny gained in any other way. The feeling that is cherished by some employers towards working men is so bad that it is the foundation of many of the strikes that happen.

19,683. Such men are in your opinion the fit subjects of moral coercion, if I may call it so?—We have never done anything to coerce them in any way; all we are anxious to do is this, to make an agreeable bargain. We consider that in buying labour we should treat the seller just as courteously as the seller of coal or cotton, or any other commodity we buy. We see no degradation in sitting down and talking the question over, and we find not only that we make a better bargain for ourselves, but that we make the seller more content by that means.

19,684. (*Earl of Lichfield.*) Is your trade influenced by competition in any way with other districts in England?—Not at all.

19,685. If it were so, how would you bring that moral influence to bear upon the manufacturers in the other districts?—Well, I may say it used to be so to this extent: when you came to Belper and Matlock the wages used to be lower than they would be in Nottinghamshire. The southern part of Leicestershire was also cheaper when you got to the agricultural villages, where the unions had not the same power. But it was found that by establishing a board of arbitration, even the manufacturers both at Belper and Lough-

borough would acquiesce in the same scale; and I may say that at Belper we are supported by the two chief houses in the hosiery trade, namely Ward's and Bettle's. They were the pioneers of the trade, even before Samuel Morley achieved his great success; Strutt's inventions were brought out there. They quite acquiesced in our view of things, that it was better that there should be a uniform price, because when there were a few men always trying to work under the price, sometimes small manufacturers and sometimes larger ones, it produced such an amount of confusion in the trade that we did not know what price we were going to get. We have been much better ever since. Since I have been here, I have had a letter from Hawick, in Scotland, where all the Scotch hosiery is made, and it says that they adopted our system two years ago. They copied our rules almost *verbatim*, and they say that it has worked admirably with them, and they have never had but one very tough question, and it was settled in a proper and friendly manner, and all the minor questions are settled off hand.

19,686. (*Mr. Harrison.*) Would your German workpeople sign their names better than these names to this petition which you have just now read?—I am afraid that in the case of that petition one man would sign for 10 in a shop, or perhaps more than that; but a German workman would invariably sign his own name, and in a good hand. I never saw a bad specimen of handwriting among our German workmen; and as to the boys and girls more recently educated, their caligraphy is beautiful, really like copper plate. With us the man who writes for the shop would sign for the shop. The correspondence of our workmen in England, and the correspondence of our workmen in Germany, is a most humiliating contrast.

19,687. (*Mr. Merivale.*) Do you mean as a matter of caligraphy, or as a matter of sense also?—Both the sense and grammar would be very poor indeed in the case of the English workmen, because the men are not trained. We often deal with individual workmen in Germany, in England very rarely, except with the master of 20 or 30; but those masters do not compare with the individual workmen in Germany.

19,688–9. Has it at all occurred to your mind in what manner you would propose to work this system if you had other trades combined with your own?—The builders have been combined in Nottingham. The last week they arranged to have two carpenters, two painters, two plumbers, and so on. I consider that every branch must have its own board.

19,690. That is not exactly what I mean. Supposing that your particular industry were to establish itself in any other locality in England, have you thought how you would then work the system?—I think it should be confined to districts. Take the Lancashire district; there should be a board for Lancashire, another for London, another for each of the great centres. For instance, Mr. Rupert Kettle has introduced one at Wolverhampton; last week he commenced another at Leeds. Leeds will have its own local board, and probably what is done at Leeds will give the tone for Yorkshire. The day after I was last examined here I met Mr. Lancaster, who I may say represents the coal proprietors of South Lancashire, and Mr. Pickard, who represents the miners at South Lancashire, at Lord Elcho's house. They are quite agreed that they shall at once set about establishing a board of arbitration for South Lancashire. The same thing is about to be done in Staffordshire. They are waiting too for me to go to Middlesborough, and I have an invitation from the Cleveland engineers to arrange the same thing for the North of England. The conditions under which mining, for example, is conducted in Middlesborough and Staffordshire are different, and therefore the wages will be different; but where the conditions are alike I do not see why the wages should not be alike, and I see no difficulty in carrying it out; but it must come through an enlightened public opinion being brought to bear both on masters and on workmen. Where there is a bad feeling between them it ends in disastrous strikes and outrages, and everything mischievous. There are some centres I have been to where I have met the masters and heard their private opinions freely, and one could hardly believe that they could be speaking of the same race when speaking of their workmen; and when I was a lad the feeling of the stocking makers and hosiers was that there could not be an honest employer, that he must be an oppressor from his position. Now all that has disappeared in the last few years, and now they discriminate between a good and honest employer and one not so.

19,691. (*Mr. Harrison.*) You have now had opportunities of seeing the disposition of the districts into which you have been called in various parts of the country. Have you found, generally speaking, on the part of the existing unions, that they resist this movement, or the contrary?—I am bound to say that since this Commission has been instituted, the disposition on the part of the unions, with the exception of the masons (I always except the masons because they have been very stupid indeed in the matter) has almost always been this, that there is a readiness, and not only a readiness, but a demand, an asking and praying, for arbitration all over the country. The employers look upon it with suspicion, but still in those districts the intelligent employers are prepared to accept it, and are anxious to establish it. In Bradford I found the employers quite ready for it, and they established it in the worst trade of all, the builders' trade, at once.

19,692. (*Earl of Lichfield.*) But do you not attribute this disposition to adopt arbitration to the depression in all trades at the present moment?—Yes.

19,693. I ask you that question because this system of arbitration was advocated quite as strongly by some men 10 years ago as now, and still it did not bring about the results?—Yes, but we had then had no specific experience. It was then advocated as a theory, but since then we have had experience which has established beyond a doubt that it does work; but it is also due I believe, to the fact that there is much more intelligence among both employers and employed on this subject, and they are pretty well convinced that the old system of screwing down on the part of the masters in depressed times, and on the part of the men screwing up in good times, is injurious to both parties. Under that system it is a strike whether you go up or go down, and it is just the strike at the most inconvenient time.

19,694. (*Mr. Harrison.*) Do you consider that the establishment of such a board of arbitration is promoted by the existence in the district of an established union, supposing that it has been conducted reasonably?—I do not see how you can establish a board without a union. A union seems to me to be necessary in order that there may be something like cohesion on the part both of masters and men.

19,695. (*Earl of Lichfield.*) In point of fact it comes to this, does it not, that it becomes an association of masters and men combined?—The masters must delegate to a few of their number the power of dealing with the men.

19,696. Then how is the public to protect itself against a combination of masters and men in any particular trade?—There is no danger I think of masters and men combining against the public. That I cannot understand at all

19,697. I mean in a trade not influenced by foreign competition. I will take the builders' trade, for instance. You know that I am a strong advocate for bringing the masters and men to discuss these questions practically between themselves, but what you have told us this morning raises the practical difficulty in my mind which I have mentioned, and which I wish to have explained?—The masters are always in favour of cheapness, and naturally so, because if I am a builder and I can cheapen labour I can get more employment. The more you enhance the cost of building, the more difficult it is to get work to do. And it is the same with everything else, it is always the interest of the employer to cheapen the cost of his productions. I

Mr. A. J. Mundella.

22 July 1868.

do not at all anticipate that it would be possible to establish any sort of union between masters and men that would give an artificial price to the articles that were sold. Let me give you an instance from our own trade. If we fixed any artificial price we should immediately have the French and Germans sending to our own markets, because there are no duties on the French goods, but they come to London on the same terms as our own, and it is nearly as cheap to send them across the channel to London as it is to send them from Nottingham to London.

19,698. Are you not afraid it might give rise to a strong feeling among both masters and men in favour of protection if they combined in this manner?—I never witnessed anything of that kind. I think it is quite exploded now. Let me explain how I think it would operate in the building trade for example, as I have shown the operative masons in my own town. They have had rules in Nottingham to this effect, that worked stone shall not come into Nottingham except Yorkshire flag. The result of that has been that stucco has been used instead of stone. I have shown the workmen this, and pointed out to them the folly of it, and shown them that the cheaper stone can be used the more likely are persons to build houses.

19,699. But that is the case in which the men have refused to enter into combination with the masters?—Not in Nottingham, they have conceded that point.

19,700. With regard to the introduction of worked stone into Nottingham, there the interest of the men is not the same as the interest of the masters; the masters have been in favour of the introduction of worked stone into the town, and the men have not agreed to it?—The men have now agreed to that in Nottingham. When you bring them together and show them the influence of these things you can manage much better than when they are left to themselves.

19,701. You have proved to us that the masters and men can agree together as to these points, but now I am asking you how the public is interested?—As against the public it is impossible it can do injury, because if you make things dear the public will not buy. You may take almost all our trades in England and say that except the building trade there is scarcely one in which we have not foreign competition. Let me take as an illustration axes and picks. A friend of mine, an Australian merchant, told me last week, "I have just imported a hundred cases of axes and "picks from America into the Thames to re-export "to Queensland, and I cannot buy them in Birming-"ham and Sheffield." Then take the iron trade; it is quite the same, they have the French and Belgian competitors. Take machinery, it is quite the same. Our own interest is to produce all our articles as cheap as we possibly can, and to pay the workmen as fair a price as we can, in order to compete with foreign manufacturers.

19,702. At the same time your interest is to get as much for these articles as you can make the public pay for them?—Of course we always do that, and everybody does.

19,703. (*Mr. Harrison.*) Have they shown any disposition to withdraw that rule of the masons at Bradford, which was discussed, I think, in your presence?—It was discussed in my presence, and I know that they got Mr. Applegarth down from London to meet me on that occasion, and he said, "It is a most "absurd rule; you had better go home, and to-mor-"row form a board of arbitration." They formed a board of arbitration, and I have no doubt they altered that rule.

19,704. (*Earl of Lichfield.*) I believe that one of the principal subjects of disagreement between the masters and men in your trade was the renting of the frames originally, was it not?—That was a very old case, in the time of the handlooms. I think we had ten or a dozen Acts of Parliament about it; now they are all a dead letter.

19,705. How is that point managed now?—These frames are used and rent paid for them, but the rent is agreed upon at the board of arbitration, as is everything else connected with the hosiery trade.

19,706. Formerly very high rents were exacted, were they not, for these frames belonging to the masters, and upon which the men worked?—Yes.

19,707. And upon that serious disagreement arose between the masters and men?—Yes.

19,708. And that has been entirely removed?—The practice has not been entirely removed. Rent is still paid, but the rate of the rent is agreed upon between the masters and the men. As far as the disagreement on the subject is concerned it is quite removed, although there are men I believe who still think that they ought not to pay that rent.

19,709. What is the value of one of these frames?—Take a frame that costs say 25*l.* or 30*l*; the rent of that frame would be 1*s.* 9*d.* a week, but that frame continually requires keeping up in repair.

19,710. Is that done by the masters?—Entirely. And at the end of seven years it requires a complete renewal, what is called a recruit, which will cost half as much as the original cost of the frame.

19,711. Some of the frames cost very much less than that, do they not?—Only the narrow frames for which the rent is in proportion, about 10*d.* a week. Those cost about half the money, or little more than half. I may say that I do not think that frame rent now pays on the average more than six per cent. when all the repairs are taken into consideration.

19,712. Do you consider that frame rent does not pay so large a per-centage as it used to do before the introduction of this system of arbitration into your district?—No it does not, because the middle men then also got a profit out of the working men which we put a stop to; if the hosier charged 1*s.* 9*d.* the middle man would charge 2*s.* 6*d.* or 3*s.* perhaps.

19,713. Do you think a manufacturer is receiving as large a return upon his capital embarked in these frames now as he received before the introduction of this system into your district?—No, that has been considerably modified. We have often discussed what rate has been received from the frames in the handlooms, and I am quite satisfied that it does not amount to more than six per cent.

19,714. Do you attribute that to the question having been discussed between the masters and the men, and the masters having been persuaded by the men that the rent they have hitherto exacted for these frames has been too large?—Yes, wherever it has been discussed it was found too large. Some five or six years ago it was entirely re-arranged, and a new rental fixed according to the width of the machine; and that has given satisfaction. Whenever a middle man is found charging more than that the men bring it before the board and the large employer is communicated with, and is told he is doing that which is wrong, and must refund. In all the steam power factories which are now fast taking the place of these old handlooms there are no charges at all, a man is paid so much per piece for his work and no reductions whatever are taken from it; and the result has been that both in hand work and in steam work the condition of the men has completely changed from what it was at the time when Sir Henry Halford and Lord John Manners took up their cause in about 1844; wages are very much larger. There is one piece of evidence that I think it is desirable should be put in, and that is that the workmen formed what they call the "three counties union" some two or three years ago, and in that three counties union, which included the counties of Nottingham, Leicester, and Derby, the whole trade delegates resolved that the legislation for the trades should in all cases be referred to the board of arbitration, and they bound themselves to abide by this decision; it was quite a voluntary act on their part.

19,715. (*Mr. Harrison.*) Do you find that the experience which you have gained as chairman of the board of arbitration has enabled you to learn, and has brought before your notice facts connected with the working of the trade, the minutiæ of the business, and the work of your neighbours, which you were not

previously acquainted with, and that in that way you know more of the practical working of the trade and what it is desirable that you should know?—Yes, much better, and the men too. We each understand our own position much better. I could illustrate that by one case. Some time ago the manufacturers wanted the men to work long hours because we were very busy. We had worked them then some two months 14 hours a day in the factory. Then a request came from the workmen that they should go back to 10 hours. It was thought then that it would inconvenience us, because we had a large demand from America. I was appointed with another manufacturer to meet the men and consider the question with them as to whether it was desirable to work long hours or not; they invited us to meet at the committee room of their trade union, where we met 30 or 50 of the workmen, and the evidence brought before us was so clear and convincing that it was most injurious to the men, and not beneficial to us either, that they should work long hours, that we went back to the board and reported so. Men got up, most respectable men in the trade, and said, and we knew that what they said was true, "I have worked these two months from 6 in the "morning till 8 or 10 at night, and the last two hours "in the factory are killing me, the gas and the heat "are such no man can endure; and when we go "home we require a stimulant. We suffer from "languor and lassitude, and several of us have broken "down in consequence." And we went back and reported that 10 hours a day was enough for them, and that a man could not perform the amount of work we had a right to expect of him if he made this extra effort; and we know ourselves that if we work extra hours in our counting-houses that produces fatigue, and the men are affected in the same way. This is the advantage of coming face to face. We learn what the workman's position is, and he learns what ours is. I ask permission to make two or three explanations that may seem to arise out of my evidence on the last occasion. In the first place it seems to me that I have been misunderstood with reference to deputations of manufacturers to other manufacturers who are not members of or not consenting parties to the board of arbitration. Now the board of arbitration agrees with the working men for a fixed statement of wages similar to the one that lies before you. When a manufacturer who does not agree to that scale of wages has any difficulty with his workmen his workmen always come to the board to ask us to pronounce whether they are in the right or not. If we pronounce that they are in the right the men have no alternative, as they think, if the masters will not pay that rate of wages, but to go and strike. Now our object in going as employers, often as friends, to our fellow manufacturer who may not be an assenting party to the board, is simply to persuade him that it is desirable to avoid a strike if possible. It is purely with conciliatory motives that we go, not at all to threaten or overawe him for a moment. I wish to clear up any idea of that kind. There is no attempt at dictation, for we have no power whatever of enforcing any decision, except the influence which we may exert to prevent any calamity in our own neighbourhood. The next point that I would like to speak to is this, and I do not think I referred to it before, that in addition to the working men sending their representatives to the board of arbitration, we have always willingly received deputations from each branch of the trade if they think that they can place before us in a clearer light by means of a deputation any complaint that they have to make. The first business at every one of our board meetings is always to receive deputations to take down any statements they may make; then we say, "Now you may retire, "and we shall decide by the aid of your own repre-"sentatives what it is best to do."

Mr. A. J. Mundella.

22 July 1868.

The witness withdrew.

Mr. Benjamin Pardon examined.

Mr. B. Pardon.

19,716. (*Mr. Merivale.*) You belong to a firm of printers in Paternoster Row?—Yes.

19,717. I think you have some observations to make on the subject of apprentices?—Yes, and that is all I would wish to detain the Commission with. The compositors do not assert any power of restriction as to the number of apprentices that an employer may take, but the other two branches, namely, the pressmen and the machinists, assert that power.

19,718. When you say machinists, are they the machine minders?—Yes, the men who attend to the steam machines. They say that no employer shall be permitted to take more than one apprentice for three journeymen. And on two occasions during the last 10 years I have had a strike of machine men in my employ on the question of taking an additional apprentice. The whole of the machine minders left about the year 1858, because I took a lad to the machine who was a little better than one whom I superseded, who was a stupid fellow; and simply on the question of this lad being engaged instead of the other the whole of the men, some of whom had been in my employ many years, left. But the second case, which occurred about five years since, was in my view perfectly intolerable. I have several sons, and am bringing three of them up to the business, and am naturally anxious that before they assume the post of directors they should understand what they are directing. I accordingly arranged with the overseer of the room that he should take my son into the room and give him, say, some six months' drilling in the room, that he might understand the general principles of the machines and the various details of the room. I was waited upon by a deputation from the room, at the suggestion of the trade union, pointing out the impropriety of which I was guilty in seeking to bring my own son into the room, there being already the full stipulated and allowed number of apprentices in the room. I pointed out to them that this lad could never by any possibility injure them in the labour market, because he was not intended to be a journeyman, but simply to get a smattering of knowledge. They said that that did not matter, he must be removed. It appeared to me a monstrous thing then, as it does now, that I should not be permitted to do with my son, or indeed with any other lad, as I chose; and the whole of the men left me on that occasion. There is also an unwholesome restriction in those two branches of the business with regard to the necessity for joining the union. It is made an absolute necessity. It was sought to be accomplished many years ago on the part of the compositors, and one or two compositors whom I had in my employ, who had objected to join the trade union, were annoyed and insulted in every conceivable way until they were obliged to join the union. In mentioning that I am now speaking of perhaps some 20 years since. But it is the case at the present moment that every man is virtually obliged to join the union of the respective branch of the business to which he belongs; and a year and a half ago this occurred to a man who had been in my employ 20 years or more as the overseer of the machine-room. I was rebuilding my office, and instead of erecting my machinery temporarily, I put my machine work out to other printers, and the men were consequently all discharged. This man as a machine overseer had not joined the union, and when he sought employment as a simple machine minder, he was hunted out of the house in which he was working because he did not belong to the union, and his own son who does belong to the union was obliged to leave his employment, which was of a temporary character, and take his father's place, in order that he out of his earnings might contribute something

Mr. B. Pardon.

22 July 1868.

towards the support of his father, whose wife at that time was dying. I mention this to show the intolerable tyranny of such actions; that men are not permitted to use the only capital of which they are possessed, their industry and their intelligence, in the way which they think best. That has presented itself to my attention very forcibly for many years, and when men have come to me to complain of my having another lad in the department beyond the number authorized by the trade regulations, I have said to them, "If your argument is valid it is equally "valid to be used by any other branch of industry. "Now what is to be done with the children as they "are born from day to day; would you have their "throats cut and send them out of the world sum-"marily?" Their answer is, "Sir, we cannot argue "that question; all we know is that we cannot suffer "this lad to be in the house; if he is we must leave."

19,719. (*Mr. Roebuck.*) What was the result of that strike of which you have spoken?—The men left, and others were taken on in their places.

19,720. Did you find others?—I did with some difficulty. I print a great number of periodicals which must be out at the day and hour, and it placed me to extreme inconvenience.

19,721. Were those others trades unionists?—No, they were not trades unionists.

19,722. (*Mr. Merivale.*) I thought you said that there were none but unionists allowed by the men to work in the shops?—They do not permit any who are not members of the union to be employed while there are any of the members of the union out of work; that is the principle on which they act.

19,723. (*Chairman.*) I am asked to put this question to you. Can you specify any workman working in your house who has been compelled to join the union?—The only persons who were annoyed and insulted in that way, were persons who were compelled to join the compositors' union some 20 years ago, and their names I do not remember, but all the pressmen and machine men in my employ are members of the union, and no such difficulty arises with respect to them.

The witness withdrew.

Mr. J. Shreeve.

Mr. John Shreeve examined.

19,724. (*Chairman.*) What are you?—I am secretary to the Printing Machine Managers' Trade Society.

19,725. What do you wish to state to the Commission?—Mr. Pardon stated that when he put his son into the machine room as an apprentice, the men objected. That is perfectly true, they did object at first. But Mr. Pardon made a statement (or else I misunderstood him) that they struck through it. Now that I confidently deny; they never struck through that. There was a strike, as Mr. Pardon says, shutting up the house some five years previously to this, but not on Mr. Pardon's son going into the machine room. There has never been but one strike in Mr. Pardon's house to my knowledge, and that, as I say, was some years before, the house was then reopened and made fair, as we call it. When Mr. Pardon's son came into the machine room, the men objected to it, and there was a deputation waited upon Mr. Pardon, but the men never struck through it.

19,726. And did the son continue?—Yes. Mr. Pardon said he was only there to learn the routine of the business; we saw the fairness of that and took no further notice. I understood Mr. Pardon to say that we shut up the house through it. I contend that we did not Then Mr. Pardon says that his overseer, who did not belong to the Machine Managers' Association, in fact left it through being overseer or foreman; that when he pulled down his premises, and this man went out in the trade he was hunted out of every house because he was not an union man. I deny this. The man has since applied for re-admission into the society without solicitation, and was admitted immediately.

(*Mr. Pardon.*) The information I have given to the Commission was on the man's own statement.

(*Witness.*) Then I deny it; we never do such a thing as hunt a man out of a house; all we look to is that he has served his seven years to the business. He can either belong to the society or not.

The witness withdrew.

Mr. W. H. Blatchley.

Mr. William Hugh Blatchley examined.

19,727. (*Chairman.*) Do you belong to any union?—Yes, I am the secretary of the pressmen, that is, of the Printers' Pressmen's Society. The compositors are the people who pick up the types, and we are the people who print off the types.

19,728. Have you belonged to the society for some time?—Yes, and my father before me.

19,729. Have you been secretary for some time?—Nearly two years.

19,730. As far as you know has there been any interference on the part of your union with the perfect freedom of the men as to the employers they should be employed by, or as to the work they should do?—In some instances there has been, but it is merely to protect those interests which have been granted to us by our forefathers and for the carrying out of the scale that you have heard mentioned.

19,731. You do not interfere with the free choice of employers for the sake of protecting the interests handed down to you by your forefathers, as you express it?—No, not to that extent, but we insist upon the scale being carried out, that is, the price agreed to by the masters on their part, and the journeymen on the other part.

19,732. There has been a scale, a rate of wages prevailing for a very considerable time, as we have heard?—Yes.

19,733. And if any employer tries to depart from that scale, or any workman tries to get employment departing from that scale, you make an objection to it and interfere?—Yes.

19,734. To what extent do you interfere—in what way?—By the men generally speaking submitting a copy of the work to the committee of our union and their referring again then to the scale.

19,735. Then can the workmen judge whether the terms offered are according to your understanding of the scale?—Yes.

19,736. If it is so it is all right, but if it is not so, what is the course taken?—Generally the course taken is that perhaps the secretary of the trade with one or more of the committee or the chairman of the union waits upon the master and explains to him that such and such is not a sufficient remuneration for the men.

19,737. Not according to the scale, that is?—Just so.

19,738. Then that is settled as the case may be after discussion?—In a great number of cases, because we must give the masters credit just the same as we received from them to-day that the scale is positively our Act of Parliament, by which we are regulated, and of course we receive concessions from them and also concede to them in certain instances.

19,739. What I understood to be matter of complaint against you was that when there is difference of opinion and the matter has been referred to arbitration, if the award is in your favour it is abided by, but if the award is against you, you treat it as nothing

and set up a claim again shortly after. Are you aware of that charge?—There has been nothing in our branch of business in reference to conciliation yet, it is with regard to the other branch.

19,740. (*Mr. Merivale.*) Is there any fixed scale at all between masters and pressmen?—Yes, which was agreed on at the same time as the compositors' scale was agreed on; it is contained in Hansard's Typographia.

(*Mr. Channell.*) I beg to suggest that that scale is not in operation at the present day.

19,741. (*Mr. Merivale to the witness.*) Is there an existing press scale at the present day?—My friend, Mr. Channell, says that it is not in operation, and yet if you can have the term qualified it must be said to be in operation. In a number of houses where they still continue to do large descriptions of work they still work by the scale, but in other houses it is not so—it would make Mr. Channell's answer strictly correct if I illustrate it in this way,—that such has been the improvement in printing from the time that that scale was made that we do not profess to work simply by the scale, but that by a particular course we happen to meet the masters with their price, and it is mutually agreed upon; and sometimes these prices were even double the original prices agreed to. But you must bear in mind at the same time that when the scale was made there was such a difference between fine printing and the printing that is commonly called readable printing, that the workmen would not now produce quite half so much as they used to do at the time of the scale when it was in its full operation; so that the workmen doing as they did in 1810, when the masters and workmen agreed to the scale then worked upon, for 500 copies they would hardly produce 250 copies now, so much better is the work executed, and so much more of what we call "making ready" is adopted. When that scale was made wooden presses were generally in vogue, and the labour was very excessive, and the formes, that is printing matter, were laid on, and they were produced by so many blankets, and no what we call making ready or preparation was then thought of. But now, in lieu of the blanket going over the forme, there is so much paper put inside, which materially increases the labour of our workmen, and which produces a very nice flat surface, and produces the printing in a readable style.

19,742. Then in establishments which adopt the old press scale the business of your society is to enforce that scale.—Yes.

19,743. But in other cases to enforce what they conceive a reasonable understanding?—Yes. There are some men swifter than others in the trade; one man would make a job pay better than the other; we cannot put the same speed in all, nor can we put the same ability in everyone, and the smaller masters have some reason to complain at times at getting the most inferior workmen, while the larger firms paying in excess and getting the best workmen are generally most satisfied. For instance, De La Rue's people pay 7*s.*, while most other firms only pay 6*s.* per day for their work, the consequence is that De La Rue's people generally control the best workmen.

19,744. (*Chairman.*) Is there anything else that you wish to state?—Only this, that we adopt no coercive measures whatsoever in compelling persons to belong to our society, in any way or shape. They may, or they may not, belong to us; it is a matter of very little consequence to us whether they do join or whether they leave us alone, any more than this, that as a matter of course we rather hold out the hand of brotherhood to those who belong to us than to those who do not, because they pay and the others do not.

19,745. It may be that you like to live with a number of persons on friendly terms, and increase the number of people who are friendly towards you?—I think that that should be the feeling of all of us so far as we can promote it.

19,746. Have you superannuation allowances?—No; the funds that arrive in my hands and my colleague's hands are simply voted or paid for the purpose of protecting this scale that has been spoken of. The contribution is simply one penny per week each member.

19,747. To trade purposes, not for benefits, sickness, or death, or superannuation?—Some years ago a few of the younger ones thought that a death fund would be advantageous, and the consequences was that instead of so many trade raffles they introduced a system of paying 6*d.* to each death and 3*d.* to a female's death, and at each male's death we pay 8*l.* 8*s.* out of this fund and 2*l.* 2*s.* out of the union fund.

19,748. (*Mr. Roebuck.*) You say that you seek to protect the scale of prices, and yet you say that you do not work by the scale of prices; what do you mean by that?—Because there is such an improved system of working.

19,749. I want you to tell us what you mean by saying that you protect the scale of prices and yet do not work by it?—We do not work less, but we get as much more as we possibly can.

19,750. Then you do not protect the scale of prices; you seek to change it, to raise it?—That is forced upon us through circumstances.

19,751. A scale of prices is a scale of prices; you seek to raise it. Your meaning of the word "protection" is to raise the scale?—I beg you will not take that. You must understand that in a number of houses even now the scale is strictly abided by; while if a master requires his work differently done from that scale, in a superior way, then a compromise is made between the men, and in lieu of 7*d.* per hour for their work (per hour you must bear in mind is working on 250 sheets and making the forme ready) they very often get 8*d.* or 9*d.*, or what not, according to the arrangement between the master and the man.

19,752. Then do not you see that it is not a scale of prices that you talk about, but what you are wanting to do is to get more wages?—I beg your pardon.

19,753. (*Mr. Harrison.*) The scale is adhered to for ordinary work and the special work is done at special contract prices?—Yes.

19,754. (*Mr. Roebuck.*) Do the masters ever attempt to lower the scale?—In some instances it is rather difficult to get the point settled which you would like to have settled. There is only one case where we have been obliged to go to law that I know of, and in that case, although Mr. Commissioner Kerr said that 7*d.* per hour was not too much, he also said that 6½*d.* would be about a fair price, and the consequence was that Mr. Commissioner Kerr gave us 6½*d.*

19,755. My question was, did you ever find the masters endeavouring to lower the scale, to get work done under the scale?—Well, I have nothing to complain of in that direction; because our scale of prices was so very low that any person would almost prove that he had lost his senses by offering us less than the scale does.

19,756. Then you see I come back again to my difficulty about protecting the scale of prices. If there be no danger of lowering them, and the only thing that you have in view is raising them, is not what I said true, that protecting the scale means raising the scale?—No, because, as I told you before, a number of houses in London at the present time work simply on the scale, and had Mr. Rivington been here to-day he could have convinced you that such is the fact. I may state that Spottiswoode's house is a house where they do nine-tenths of the work on that scale. I presume that you have seen the difference between the printing put before you now and the printing put before our grandfathers.

19,757. Have you any rule in your branch of business about apprentices?—Yes, that has been already alluded to to-day. We admit one apprentice to three journeymen.

19,758. Have you ever found masters endeavouring to break through that rule?—Yes, in a number of cases; in fact these are the cheap printers of the city of London and other places besides.

Mr. W. H. Blatchley.

22 July 1868.

19,759. What do you do on those occasions?—We simply do the same in such a case as that as in many other cases; we go to the master and tell him that he is acting very wrong; but I never knew of our people striking nor of any intimidation whatever being used in our business. We act on the moral principle.

19,760. Supposing that the master is a pig-headed fellow and says he will do exactly as he likes, and that he will still keep a number of apprentices, what do you do?—We allow him to do it, but he does not have the best of the workmen to work for him, which very materially alters his trade.

19,761. You think that good workmen leave him and bad workmen go to him under those circumstances?—Yes.

19,762. That is your way of telling him what he ought to do?—Of remedying the defect.

19,763. You do not strike in reality in an open way, but the best men go from him?—Yes, generally speaking; but we always carry out our contracts with our masters; that is to say, if a lad is put to a man for a twelvemonth, which is generally the period adopted, he always continues the agreement time, we never draw that man away; so that we do not sanction his endeavouring to do any great injustice to the master, but by that means we endeavour to make him finish his contract.

19,764. As far as the apprentice question goes you say that the good men go away and the bad men remain when a master takes an undue number of apprentices?—Generally speaking that is the case.

The witness withdrew.

Mr. H. Self.

Mr. Henry Self examined.

19,765. (*Chairman.*) Are you a compositor?—Yes, and the secretary of the London Society of Compositors.

19,766. I believe you wish to make some comments on the evidence which has been given here to-day?—Yes. Prior to answering any questions with respect to the organization of our society, perhaps it would be better that I should make some observations on some two or three points which I noted of matters that were brought before the Commission by the gentlemen who have been examined on the part of the masters; and first, Mr. Levey in his examination stated that the masters' society was drawn into action by the men displaying a more active spirit in 1851 than they had hitherto done. All I can say is that if the men did display an active spirit in that year, (and it is a singular one to select, for it was a year of great slackness,) that active spirit was merely displayed in the direction of a scale mutually agreed upon between the employers and the employed; because Mr. Levey himself admits that no rise, that is, no general rise, in the wages of the compositors took place until the year 1866. But it is quite true that very many demands had been made from time to time which have remained dormant in consequence of men not thoroughly understanding the scale; and I presume that that is the active spirit which was aroused by the committees looking more closely into their scale, and the customary charges that have grown up. With respect to the arbitration case Mr. Levey seems to leave out a matter that I think it is important should be noticed.

19,767. It is the standing advertisement case that you are alluding to?—Yes; in that case it is quite true that we had established an arbitration court, but there was nothing in the rules of that arbitration court which made the decision of one case binding in all similar cases. Now the selection of the chairman was a very unfortunate thing, for he was connected indirectly, if not directly with a publishing firm.

19,768. (*Mr. Roebuck.*) Do you mean the barrister?—Yes.

19,769. Do you recollect his name?—I can give it you. In that case Mr. Levey himself was the chief party interested as the defendant throughout. When it was first mooted the arbitration court decided, as Mr. Levey stated, against us. But it was so extraordinary a decision, so much at variance with the words of the scale, and with the thoroughly well-known practice of the trade running in accordance with the scale, that we could not assent to it as a matter that should govern all like cases, and we determined to try the question ultimately in a court of law. It was tried in the Court of Exchequer in the first instance before Chief Baron Pollock, who immediately that he took the scale in his hand said that it was a matter of wonder to him how any man taking that scale in hand and reading it could interpret it as the arbitrator had done. The result of that trial was that by the suggestion of the defendants' own counsel it was referred to the full Court of Exchequer, and a verdict was taken for the plaintiff subject to that reference, and Mr. Barstow was ordered to examine witnesses in the case. And the two questions ultimately submitted to the Court were, "Were the compositors bound by the interpretation in one case, "and secondly, If not, was the interpretation of the "compositors the correct one?" The Court decided in favour of the men. The masters, dissatisfied, appealed to the Court of Error, and the eleven judges all decided in favour of the men; and I think that nothing of the kind has since been before the arbitration court. In fact it was understood after that that the arbitration court was at an end as far as the two parties were concerned.

19,770. (*Chairman.*) You are paid for the standing advertisements?—Yes.

19,771. Paid as if you set up the type afresh?—Yes.

19,772. It seems strange that when you do not do any work you should be paid as if you had done the work?—Our scale was formed upon the give and take principle—perhaps not a very wise one.

19,773. That is the interpretation of the words of the scale?—Yes.

19,774. And if the law is so, you take the benefit of the interpretation that the law gives you?—Yes. Then with regard to the men being obliged to defer to the law of a society, I say that the law of our society is simply this, to defend the scale agreed upon between the men and the employers. That is the primary law of our society. If the men come to the committee of the society the committee give them advice in accordance with what they believe to be the meaning of the scale, or upon a doubtful custom that may have arisen in the trade where the scale is silent. The men are not sought out by the committee; the men always seek out the committee. If there is any dispute it is placed before the chapel of the house, that is, the aggregation of the men, for their decision. If the chapel are unable to decide, then they send down to the committee for their decision, and the committee being composed of men drawn from various houses in the trade, and men of experience, they are enabled to give a conclusive opinion on the subject. If it should happen that our opinion runs counter to the employers, and we believe that we are right in the interpretation of the scale, we undoubtedly should proceed to enforce it legally, so far as the law would sanction our demand and no further. That is the action of our committee. So that the men in deferring to the law of their society, are deferring to that law which is a binding one between themselves and their employers; that is to say, the scale.

19,775. All that had the sanction of the master printers, I think; but what they complain of is, that although the committee are extremely reasonable, when they come back to their constituency they receive orders to make extreme demands. The evidence given to us was rather that the committee would be satisfactory, if they were allowed to decide finally, but the committee had to take the views of the whole society, and that the resolution of the society

was for the most part against the committee?—That was in the case of the advance of wages question. I am now speaking of the mere questions of dispute which constantly arise in different offices as to the interpretation of this or that particular clause of the scale.

19,776. Then you say that the real essence of your society is that every member of the body should consult the governing committee of that body and be guided by the decision of that committee?—Yes; but what I wish to show is this, that the committee in no degree take action to force men into contests with their employers. The initiative is taken by the men themselves coming to the committee.

19,777. (*Mr. Roebuck.*) You heard the statement made just now that the decision of the Court of Error led really to the injury of the men by forcing the masters to have establishment hands who printed these advertisements, which the men who worked by piecework would otherwise have printed; do you agree in that?—That may to a certain extent be true, but I do not believe it to be true to the extent assumed, for the reason that these advertisements are usually brought in in a great hurry at the end of a month, and the establishment hands are not readily applicable for any such work. It must in many cases be distributed through the house, and come into the hands of the piece men. At any rate at the time that it was contested we considered it a very important matter, because in the aggregate it made a very considerable difference of amount in the wage fund of the London compositors during the 12 months. Whether the full injury suggested by Mr. Wyman has accrued I do not know, but I am rather inclined to think that he is wrong.

19,778. There is another thing which you must have heard, and on which I should like to have your opinion. You have heard the proposal to establish courts of arbitration, and to give its judgments the sanction of law. Do you concur in that proposal, and would you rather have that court of arbitration than the ordinary courts of justice?—I think it would be better that we should have a court of arbitration. The difficulty appears to me to be to get a court that would be satisfactory to both parties.

19,779. Do you also agree in the view that its decisions should be enforced, as those of a court of law, upon persons that do not belong to the arbitration court?—No, I think that would create great dissatisfaction in the minds of a great body of men. I think that the arbitration court, if formed, should be accepted voluntarily, and afterwards their decisions should be binding only upon those who are assenting parties.

(*Mr. Wyman.*) I was only assuming assenting parties.

(*Witness.*) There is another point that I wish to explain with reference to our recent rise of wages in 1866 which was spoken of by Mr. Wyman. It was stated that the men took the matter out of the hands of their committee. Well, I am fain to confess that the men did go ahead of their committee, for the men believed that the masters really offered them too little—that was the plain fact. The committee were very desirous of doing everything that would prevent anything approaching to a strike; that was the policy of the committee, and they thought, and I think so still, that by a little patience there might have been got what we have got. However, the action of the men was more trenchant, and they got it immediately, while, I believe, we should have had to wait a little longer to get it by our policy. Then it is said that the recent rise of wages has driven the work out of the town. I must beg leave to doubt it very much. I have heard letters read to-day stating that such and such firms have had work sent into the provinces. Well, that was the case long before the advance of wages took place. I believe that the three firms of Nisbet, Seeley, and Low, were in the constant habit of sending a certain class of work into the country long before 1866, and so it has been with other firms.

19,780. (*Mr. Harrison to Mr. Wyman.*) You did not say, did you, that the loss of work in London was owing to the rise of wages in 1866?—I stated that it was the cause of a flow of work from London into the country, which work would have remained in London if the wages had not been altered. We have had practical evidence of it in our own experience and from what I have gathered from others.

(*Witness.*) All I have got to say is that contemporaneously with the depression that has been existing in the metropolis, a similar depression has existed in all the great towns in the provinces, and even in Scotland, which it is insisted upon is getting the greatest proportion of the work abstracted from London. Now the change effected by our 1866 arrangement left the London printers in a better position with respect to Edinburgh prices than they had occupied for many years before, for our rise when compared with the rise that the Edinburgh men had got before us, was not of so great an amount as that which they had obtained, and so consequently the London master is now competing with the Edinburgh master upon more favourable terms than he was in 1862.

19,781. (*Mr. Roebuck.*) Might not this have been the case, that there being a greater rise in Edinburgh, as you say, than in London, heretofore business flowed to Edinburgh which now flows to the continent?—With respect to that I may say that a short time ago I was reading a letter from Leipzig bearing on the subject, sent to a friend of mine, a gentleman in the employment of a large firm in the city. We had been told that the work was going to the continent, and I asked my friend to write to the secretary at Leipzig and make the inquiry, and the secretary's answer was, "No, we do not find anything "here further than that which usually comes from cer- "tain London houses—that is, classical work—and so "far from trade being brisk with us from an overflow "of work from London it is slack with us."

19,782. You have heard the statement in regard to Mr. Murray, whose work is not classical, that a large proportion of his printing, not classical printing, flows to the continent; have you any idea whether that is correct?—I have no information on that point.

(*Mr. Wyman.*) I think it will be in this way, that the work is composed, and set up in Germany, and the plates are struck off in England, and are worked in England after the first edition. Stereotypes are created abroad and they are struck off in England, because the machine power here is superior to the continental machine power.

(*Witness.*) If it existed to any very great extent it would affect very materially the compositors' means of employment here in London; and it has been insisted that there are a great many men out of employment. Well, that is quite true at present; but that want of employment amongst the London printers is referable to a cause well understood by the Commissioners, a cause which has not ceased to operate, namely, the panic of 1866. All the speculative spirit which employed a large number of men and had gradually drawn them to the centre of all labour, here in the metropolis, seems to have been crushed out, and a large amount of Parliamentary and legal work which employed in those seasons a great number of hands has suddenly ceased; and hence there has happened a great dearth of employment amongst the printers. But if you take the general run of printing work I do not believe in that dearth at all.

19,783. (*Mr. Roebuck.*) Do you mean to say that Parliamentary work has diminished in the year 1868 from what it was in 1867?—Yes, and still more from what it was in previous years. The immense amount of work that arises out of Parliamentary bills has employed a great number of compositors hitherto, the private bills notably so. They have been very few in number lately. Then there are articles of association and all sorts of work that flow from those bills as well; and they have all suddenly ceased. Out of 3,300 men on my books, I have 127 who had up to yesterday signed their names as out of employment. I am quite aware that in many of the houses there is but partial

Mr. H. Self.
22 July 1868.

employment, but this is usually the worst season of the year, just in summer. Those are the only observations that I wish to make upon the matters which have been placed before the Commissioners on the part of the employers, for I am very happy to find that they had no great charges to bring against our association; indeed, nothing at all.

19,784. You say that Parliamentary printing has diminished; have other classes of literature been diminished, novels, histories, poems, and so on?—No, I think not. As an illustration of the way in which the publishers are proceeding, I may mention this fact. Here are two great firms, Messrs. Warne and Routledge; Mr. Routledge gets a shilling Shakespeare printed in the country, and he gets a nine days' start of Mr. Warne; Mr. Warne gets another shilling Shakespeare printed by a London house. Though Mr. Routledge had a nine days' start, Mr. Warne was only two days behind him. And that appears to be the chief difficulty of the country printers in competing with London printers—the necessity of completing the work at a given time; and the question of $\frac{1}{2}d.$ a 1,000 more or less for the composing I do not think is at all material to the issue.

19,785. That question of time in such publications as the shilling Shakespeare may be of great importance; but take an historical work, would you suppose that in that a question of time would enter?—No; there is a certain class of work which I have no doubt they would be enabled to do as well in the country as in town, given the time, although many historical works are hurried on very much by their authors. I will now give the Commission as succinctly as I can a notion of the nature of our organization. I should say that up to the year 1810 there had been no real organization of the London compositors. The men had managed by extemporizing committees for any particular occasion, to meet the masters, even so early as 1785. However, in 1810 was the chief settlement, and the scale was formed which is practically now the scale in operation in London for compositors' work. Between then and 1816 there was no society of London compositors that I can find a notice of, but in the year 1816 a very important lowering of one portion of our scale was effected by the decision of the masters who had hitherto acted with the men in committees to settle the question. The masters, about 20 of them I think, by a resolution did away with one of the agreements with reference to reprints. Now this suggested to a great many of the compositors of that day the necessity of forming an association to defend that compact; and accordingly an association was formed, but it did not number a great many. In 1820 another association was formed of the daily newspaper hands to defend their compact. In 1826 a third society was formed, also to defend the scale of 1810; and the 1816 society, and the 1826 society, were amalgamated in 1834, and became what was called "The London Union of Compositors," the daily newspaper hands still remaining a separate society to represent their interests. The society formed in 1834 then consisted, I think, of about 800 members—the two societies united; but in the second year of its amalgamation it amounted to something like 1,700 members, and it went on increasing from time to time. Then it began to decrease from various differences in the views of the compositors themselves; and ultimately another change was effected in 1844, when all the various typographical associations throughout England, Ireland, and Scotland were united in one general society, called "The National Typographical Association," the country being mapped out into districts, London forming the south-eastern district, and so on. However, the differences of feeling, and the different modes of payment and customs of the provinces as compared with London, soon broke that up; it did not last above three years, I think, and then the London society as it is at present constituted was formed, namely in 1848. (The newspaper hands' society, which was established in 1820, not amalgamating with the general society till 1853.) The first year of its existence it consisted of about 1,000 members, and it has gradually gone on increasing in numbers until at the present time there are 3,300 men on my books. When it first started it did so upon the basis of a shifting system of payment, that is to say, men paid according to their earnings; if a man earned little he paid little, if he earned much he paid much, and so on. Of course there was a minimum point, and a maximum point. The maximum point up to 1863 was 4*d.* per week, and the minimum 2*d.*; but in 1863, in consequence of a change effected in the organization of the society, and the members determining that the whole area of membership should be open to the receipt of a certain amount of relief when unemployed, the subscriptions were raised, and the rates ran from 2*d.* to 6*d.* per week, and that is the position that they at present occupy as far as their subscriptions go. In reference to the government of the society, it is governed by a committee, consisting of 12 persons from the book trade and two from the news department. I should explain to the Commission that there is a difference between what we understand by the book trade and the news trade. Newspaper work is paid for at a very much higher rate than book work.

19,786. Is that because the men on newspaper work work to later hours?—Yes, generally because they work at all sorts of hours, and they have what we call short takings, that is, a man has two or three lines, and has to cast it off, and has the difficulty of making even lines; he has not a blank to run out, but he must complete his work and make it come into a certain number of lines. Hence it was thought better that they should be paid at a certain rate, and get rid of all extras, I suppose. The book men (although the book and news compositors now form one association) are distinct in their charges from the newspaper men. But they are both governed by a committee of 13—that is to say, 12 of the book department and one of the news department, with the exception that there is a committee which meets once a month for the consideration of questions solely appertaining to newspapers. The newspaper men have the right to send two to sit upon the general committee, but they seldom send more than one. To that committee all questions of dispute are referred, by chapels sending down deputations to ask the opinion of the committee; and they have general governing powers, and give general advice, and carry on all the action of the society. They are always liable to have their judgments overruled by a quarterly delegate meeting, or by a general meeting. We have a chief secretary and an assistant-secretary, who also acts as librarian and housekeeper, we renting premises for ourselves.

19,787. (*Mr. Harrison.*) The reports will show all this, I presume?—The reports which I forwarded some time ago to the secretary of the Commission will show pretty well the matters which I am now detailing. I have merely detailed them in order to invite any questions which may arise out of our organization.

The witness withdrew.

Mr. R. Lee.

Mr. Richard Lee examined.

19,788. (*Chairman.*) I believe that you have some statements which you wish to make to the Commission?—Yes. Mr. Levey mentioned that in 1851 or 1852 pressing cases arose causing the masters' association to be revived. Now, with regard to 1851 and 1852, I can answer for it, from my own recollection, distinctly, that they were years of very great slackness in the business, as in 1851 I left a very large office to go to work at Mr. Levey's own place on a new French newspaper, and this may possibly bear on the point of foreign competition. That French newspaper was "The Illustrated London

News en Français." Mr. Levey preferred having British compositors to importing Frenchmen to do it. The compositors engaged were Englishmen or Scotchmen, with one or two foreigners, and they were on that paper till just before the *coup d'état* of December 2, 1851, when its admission into France was suppressed. I think that that would show the Commission that Mr. Levey did not think much of the quality of the foreign competition, if he engaged Englishmen to work on that French newspaper. With reference to the standing advertisements, the men gained, I think, very greatly by that decision of the Court of Error, although it cost them a large amount; because there were certain publications which could not be put upon the establishment. I know that in a house I was connected with at the time the decision was given, there was a large amount due to the men pending the decision, and they received it. Mr. Wyman spoke of the classification of advertisements. Now, many advertisers highly object to any classification: they will not have their advertisements placed on the pages where similar advertisements occur. Take sewing machines, for example. I am speaking now of the wrappers and advertisements of the "London Journal" and of the advertising sheets of Madame Tussaud's Catalogue. The advertiser sends the advertisement, and with it he sends this: "I will not have this in, if another of a similar article goes into the same page;" so that the printer cannot classify them.

19,789. Cannot you move an advertisement freely?—Yes; but it was stated that the advertisements were classified, that they might be kept compact in pages. Mr. Wyman admitted that the compositors' wages had, generally speaking, little to do with the price of books. So that we have not very much to say on that point; it is only with regard to the rise of wages at the end of 1866–7. Working as I have done for a number of years now, in a house where a great deal of private parliamentary work is done, and legal work, and general works of societies, memoranda of association, articles of association, prospectuses, and all work pertaining to proposed speculative schemes, I can answer for it that the work has gone off purely on account of the commercial crisis. Only two years ago we did nearly 60 private parliamentary bills, I think, and last year, or rather in the current year, they diminished to about 15. They went down last year, and they went down much more this year. Then, of course, the less number of private parliamentary bills, the less number of private committees, the less quantity of evidence, the less quantity of petitions for and against, and the less quantity of a great deal of work which must necessarily be done in a hurry, and done in London. The general work has gone off very much in consequence of that commercial crisis. With regard to the bookselling trade, I have no doubt that if trade generally was good, the booksellers would do better than they can do when trade generally is bad, the same as in every other trade; and consequently that must have affected us a great deal more than any supposed connexion between the compositors obtaining an advance of wages at the commencement of last year, and the diminution of employment. With regard to the question of foreign competition, I may suggest that the foreign paper is perhaps the cause of work there being very much cheaper. With regard to that Leipzic letter, I may say I know the gentleman who wrote over to the secretary of the Leipzic society, who mentioned it before a general meeting of the compositors there, and it was denied that there was any increase of work. With regard to its going into the country, I can say that in the case of historical works, and so on, it is not a mere compositors' wages question, but it has a great deal to do with the work being properly done; an author who valued the appearance of his works would like, for instance, the division of words looked after, the spacings between the words made equal, and so on. To get all these things you must get superior workmen. You must have, for instance, the colour of an equal character; you do not want to open a book and find two pages of a colour quite light, and a sheet or two further on a colour quite heavy and black. That is very much the kind of work which is done in the country. I recently had passing through my hands various works for extracts to be printed, as specimens sent from publishers of the literary quality of their books. One of these books was printed at Aylesbury: I never saw more wretched spacing, punctuation, or printing generally in my life than there was in that work. And another work that came from a house close to Mr. Wyman's was a model of what good work should be in the colour of the pages, the inking, the carefulness generally with which it was produced, and the pleasure with which you could read it. That employer is a man who attaches some value to what you may term good printing.

19,790. You say that the rise of wages has not driven work away?—No. Then there was a house mentioned, namely, Waterlow's, as to which it was stated that they do not pay the scale in that house; now that is quite a mistake. The great majority of the compositors at Waterlow's are members of our society. Up to the end of last May I was chairman of our committee. There is a rule that no house can be on the committee more than 12 months, so as to enlarge the area of selection, and prevent the formation of cliques; and during 12 months that I was there, I had for one of my colleagues a representative of the members of the society at Waterlow's, so that it is a total mistake to say that Waterlow's house does not contain men belonging to the society.

(*Mr. Self.*) I have 70 members on my books belonging to that house.

(*Witness.*) Then, too, the foreign paper, as I have said, has to do with the question of price. If any gentleman on this Commission gets hold of a good classical work, and wants to make any marginal note on it, he does not care to have that note unintelligible to himself through the ink running together. With regard to the point which was mentioned about a daily newspaper, I believe that if the men obtained their money, it was owing to their ground of claim, and the firm wanted not only to get work from the men, but a fortnight's work out of them in another way on other kinds of work. With regard to arbitration courts, I am of the same opinion as Mr. Self entirely.

(*Mr. Scrouch.*) May I be allowed to remark that in nearly every printing office in which I have worked the employers have largely increased their machinery in the last 10 years, and I could instance many employers of printers who have increased their machinery and enlarged their premises. There was a sentence in a letter read this morning in which it was stated that the machine managers' society allowed most tyrannical despotism to be exercised in maintaining their rules in many offices in London. I do not think that such a statement as that should go forth to the world unless substantiated. I think that such a statement should be withdrawn, or the letter not published. I do not think that there is an employer in London who can instance any act of tyrannical despotism exercised by the machine managers' society in the maintenance of their rules. They are the most peaceful measures that they have adopted, and in extreme cases the men leave of their own accord. As to our allowing tyrannical acts, I never heard of the perpetration of one. I could state that never at any time have we tolerated such.

The witness withdrew.

Adjourned to Friday next at 11 o'clock.

1, Park Prospect, Westminster, Friday, 24th July 1868.

PRESENT:

The Right Hon. the EARL of LICHFIELD.
Sir DANIEL GOOCH, Bart., M.P.
HERMAN MERIVALE, Esq., C.B.
JOHN ARTHUR ROEBUCK, Esq., Q.C., M.P.
FREDERIC HARRISON, Esq.

THE RIGHT HON. THE EARL OF LICHFIELD IN THE CHAIR.

Mr. HENRY SELF further examined.

Mr. H. Self.
24 July 1868.

19,791. (*Chairman.*) I believe that you wish to make a reply to some statements made here by the master printers the other day?—I have made all the reply that I think is necessary upon the special matters which were introduced by the employers, with the exception of one point which I omitted to mention. It was assumed that in the overriding of the views of the committee by the general body of the men in the question of our advance of wages, it was done simply by a sort of catch vote, or that a kind of mob law was imposed upon us. But the real fact is, that before the ultimate decision was come to as to whether the masters' propositions should be accepted or not, a deliberate ballot of the trade was taken, so that there was nothing like imposing upon the trade by a mere catch vote, and the excited views of a public meeting. That is a very important consideration, and I merely wish to state it now in order that there may be no misapprehension of the character of the decision ultimately come to by the compositors.

19,792. (*Mr. Roebuck.*) How were the delegates chosen who then represented the men, and from whose decision they retired, as it were?—There was a general meeting of the members.

19,793. They elected delegates to represent them?—Yes.

19,794. And the delegates representing them came to an agreement that was afterwards rescinded by another general meeting?—No, they did not come to an agreement, for they told the masters that they were not enabled to assent to the agreement. They did so far assent that they were of opinion that what had been offered should be accepted by the compositors; but they could not absolutely accept that which was offered without reference to the general body.

19,795. Have you any means of ascertaining the powers given to that delegation?—The powers given were simply these, that they should draw up a memorial claiming certain things which were left to the judgment of the committee appointed, and that they were then to go into conference upon it, and before they admitted any settlement upon the matters proposed, they were to refer to a general meeting for their decision.

19,796. Were the masters given to understand that that was the limited power of the delegation?—Yes; I clearly gave them to understand that, because the masters at first claimed from us absolute powers of settlement.

19,797. You will see why I ask these questions. They are very important, because if the masters were not informed, then they might complain, but if they were informed they could not complain?—We informed them by letter that we had no such power. The reports which bore upon the question, and which I believe I sent in 1867 to the secretary of the Commission at that time, clearly point that out.

19,798. (*Chairman.*) What advice did you give to the members of your society after the interview with the masters?—The advice that we gave them was this, that they should accept what was offered. We thought that better than that any hazards should be run which might possibly lead up to a strike. That seemed to be the feeling of the committee, and although we did not for a moment bate one jot of our belief that what we had asked was fair to ourselves, we thought that we might in time get the remainder.

19,799. Was that advice given at a public meeting to the members of your society?—Yes, in a report read to them.

19,800. And at that public meeting they decided to refer the matter to the members of the society in general by ballot, as I understand?—Yes, by ballot. After the masters made their offer the following resolution was moved at the general meeting: "This "meeting, in authorizing the acceptance and confir- "mation of propositions 2, 3, 4, 5, and 6, as modified, "does so as an earnest proof of the desire of the "trade to terminate by amicable means long standing "grievances; at the same time this meeting ex- "presses its firm conviction that any agreement "which does not provide for an increase both in "the price per 1,000 and the establishment rate of "wages cannot be regarded as a final and complete "satisfaction of the just claims of the compositors of "London to that fair recompense for their labour, of "which they have been deprived by the great depre- "ciation in the value of money."

19,801. Practically, then, you may say that the question was decided at that meeting in favour of adopting the masters' terms?—No; upon that resolution, the following amendment was moved, and adopted by the meeting, "That this meeting being of "opinion that the memorial is based on equity and "justice, and worthy of the strenuous support and "advocacy of the trade in every possible manner, "decline most respectfully to accept the modifications "proposed by the masters, and hereby affirms its "determination to uphold the memorial in its "entirety." That was supplemented by another amendment, "That the report of the special com- "mittee, together with the masters' propositions, be "printed and circulated in the trade, and that a "ballot of the trade be taken as to whether those "modified propositions be accepted or not."

19,802. (*Mr. Roebuck.*) I want to understand the history of this case. I find that on May the 1st 1866, a letter was written by the Association of Master Printers, in which it is said that they propose to refer the five propositions to a committee. This is the letter written by Mr. Moore to you, "In reference to "the proposed conference between a committee of "employers and a committee of compositors, I have "to state that the employers have on their part con- "fided the discussion, and also the settlement of the "five propositions in question, to a committee of "eight masters, whom they have selected for that "purpose; and I am directed to inquire whether the "compositors who have been deputed on the part of "the general body have had confided to them also "the absolute settlement of those propositions." Then, on May the 4th, there is this answer sent by you, "In answer to your communication of May the "2d" (May the 1st I suppose it should be), "I have to "inform you that the following resolutions were "passed at the general meeting of the compositors of "London, held on the 28th of March: Resolved, "first, 'That this meeting, while regretting the refusal "'of the master printers of London to grant the prayer "'of the memorial of the compositors for an advance "'of wages, &c., is of opinion that the memorial, being "'based on equity and justice, is worthy the strenuous "'support and advocacy of the trade in every possible "'manner, and this meeting in accepting the confer- "'ence do so without prejudice to questions one and "'seven.' Resolved, second, 'That the committee "'entrusted with the duty of conferring shall not "'accept any modification of the five points open for "'discussion without first referring such modifications "'to a special general meeting.'" Now, so far the masters had perfect notice that that was the state of the case?—Yes.

19,803. But let me bring your attention to the next paragraph of the letter—"In view of these resolutions, "the special committee desire me to express their "earnest hope that they will not prove an insuperable "difficulty in the way of the conference desired, as "they feel satisfied that whatever agreement of opinion "might be arrived at between its members would "probably be accepted by the compositors of London "generally, and an amicable settlement come to." Do not you think that by that language the masters might probably have been led to believe that the compositors would adhere to the resolutions of their delegation?—I think it quite probable that they might, indeed I had been led to believe that myself, and I might say for the committee that they were deeply impressed with the belief at the outset of the agitation that their views would be confirmed by the general body. There is no doubt about that, and I wrote that letter in the most perfect good faith, and in the belief that what would be decided by the two committees would be accepted by the general body.

19,804. Then you do not wonder at the surprise and some degree of pain on the part of the masters on finding that their resolution and yours had been rescinded?—Not at all. I do not wonder at it by any means. I was desirous when I was before the Commission on the last occasion of pointing out generally the way in which we proceed in carrying out the objects of our society, the primary object being undoubtedly to defend the mutual compact between ourselves and the masters. I have already stated that the committee which governs the society does not take the initiative in disputes. Indeed, we have a printed document of which I have a copy here now, which will show that rather than take the initiative, we suggest that chapels—that is, the aggregate of the compositors in the several houses—should first take the question up, and that then, if they are unable to settle it, they should appeal to their committee, because, of course, on the committee are assembled men drawn from all sorts of houses, and the chances are, that if it is a customary charge or a scale charge they would be better able to get a fair interpretation of the scale or custom by that means. We say in the document to which I allude that "whenever "any trade question arises which cannot be settled by "the members in the house, a deputation should be "sent by the chapel to ask the advice of the trade "committee." That is the general action which is implied in that paragraph; settle it if you can, if not, then appeal to the trade committee in the interests of the compact made with the employers. That is our view. I have prepared an abstract of the income and expenditure of the London Society of Compositors for the 10 years ending January 1868, and that abstract will show clearly the amounts paid under certain heads (which constitute the bulk of our expenditure), the chief of which is relief to unemployed members. And I should here state that up to the year 1863 we had a separate fund called the Provident Fund, to belong to which was optional on the part of the members of the trade fund, the trade society undertaking to supplement their efforts by a payment of 200*l.* a year. However, they found in the course of years that that did not succeed, for they had considerable demands outside the 200*l.* to assist the unemployed, and in 1863 they determined to extinguish the Provident Fund as a separate fund, to raise the general subscriptions of the society, and to extend the unemployed claim over the whole area of the members. Of course, therefore, it will be found on this paper that our payments to the unemployed have very materially increased since 1863.

19,805. (*Chairman.*) Have you put in any reports for those years containing any financial statements?—I propose to put in this abstract of the income and expenditure for 10 years past, which will deal with all the chief heads. Then there is an outside column for sundry disbursements which it is not necessary to set out in detail.

19,806. When was it that you decided upon combining the two funds?—In 1863.

19,807. Your abstract then, in fact, will go beyond that?—It will embrace four complete years of the operation of the new system. The actual income for the 10 years was 25,105*l.*, excluding fractions.

19,808. (*Sir D. Gooch.*) Do you mean per annum?—No, for the 10 years. Out of that sum 9,836*l.* 10*s.* has been paid for the relief of the unemployed members; 2,756*l.* 1*s.* has been paid for law and defence of scale. I should explain that under that head of "law and defence of scale" are included very heavy legal expenses which may have been incurred in the prosecution of suits for the recovery of the usual fortnight's notice and various other matters that we have found it necessary to contest in a court of law, and the remainder has been spent in what is commonly known in trade societies as the strike fund, although in many of these cases they have been lock-outs and not strikes, that is to say, a master has been annoyed by some question perhaps being raised in his house with respect to charges, and he has discharged the man or three or four men, and in such cases, if the committee think the men unjustly discharged, they simply place them on the strike fund, and take no further notice of the matter. It has frequently happened that these sums which have been paid have arisen out of matters in which the masters have practically admitted the right of the man's claim by paying the money, but feeling annoyed they have discharged the man, or men, afterwards.

19,809. (*Mr. Roebuck.*) You say that you united the two funds in 1863?—Yes, in 1863 we extinguished the Provident Fund as it existed in a separate form, raised the general subscriptions, and threw the unemployed relief over the whole area of membership.

19,810. Will you tell me your distinct reason for doing that?—The reason was this; we found that the voluntary principle did not act well. There were not above 600 or 700 members who volunteered to belong to the separate society, and although their subscriptions were supplemented by 200*l.* a year from the trade fund, still there was a constant claim for further assistance to the unemployed, therefore we thought that we had better get rid of it as a separate fund.

19,811. In your original state you found that the subscriptions to the trade fund were not sufficient?—No, I allude to the separate fund, the Provident Fund. This Provident Fund was the fund of a separate society, to belong to which was perfectly optional on the part of the members of the trade fund.

19,812. Was the Provident Fund the one which provided for men out of work?—Yes, for men out of work.

19,813. (*Mr. Harrison.*) Not for men on strike?—No, not for men on strike. We have a separate fund altogether for that, called "the strike fund."

19,814. (*Mr. Roebuck.*) How do you know what is contributed to the strike fund?—There is no contribution to this or that fund; they are all governed by the general subscriptions.

19,815. They are now, but how was it before?—Before that it was the same.

19,816. You under one name got a subscription and applied it for strike purposes, or provident purposes, or benefit purposes, as it occurred to you to be wise or proper to do?—Yes, any purposes embraced in the rules which I have already handed in to the Commission.

19,817. Coming back to my previous question you changed the system because under the voluntary system you found that the money did not come in sufficiently for those purposes which you call provident purposes?—Yes.

19,818. Does it now?—Yes; I think the present system will answer very well. We raised our general subscriptions to such a point as we thought would meet all exigencies.

19,819. What is the difference, what rise was there?—It is impossible to test that when you come to throw open the whole area of 3,300 men and compare it with 600.

19,820. I mean each particular man; how much did he subscribe formerly, and how much when you raised

Mr. H. Self.

24 July 1868.

the subscriptions?—We had but three rates formerly, 2*d.*, 3*d.*, and 4*d.*; now we have five rates, 2*d.*, 3*d.*, 4*d.*, 5*d.*, and 6*d.*, and the greatest bulk I should say of the members under the first arrangement might possibly have paid the maximum, 4*d.*

19,821. What do you mean by "rate" there?—Our rate of payment is governed by a man's earnings, we do not all pay alike; if a man earns nothing and from that up to 15*s.*, he pays 2*d.* a week; from 15*s.* up to 20*s.*, 3*d.*; from 20*s.* to 25*s.*, 4*d.*; from 25*s.* to 35*s.*, 5*d.*; and from that point upwards, 6*d.*

19,822. From which rate do you get the most money?—I apprehend that the average would stand at about 5*d.*

19,823. You think that 5*d.* pays the most money?—I think 5*d.* is the average.

19,824. (*Mr. Merivale.*) How do you ascertain the amounts that they do earn, is it by their own statement?—We have a peculiar system; we have a great many houses here in London to which we issue collecting sheets, and the aggregate of the men, called "chapels," appoint a "father," who is the president, and a clerk whose duty it is to collect all dues for the society and other matters; and the clerk collects these dues and pays them over to me in bulk. That is how the general amount is collected. Of course there are individual members who pay their own subscriptions and upon whose honour I am bound to rely for a fair return.

19,825. (*Mr. Roebuck.*) There is a question which I want to put to you, and which you are quite capable of thoroughly answering. It has been suggested (I do not say more than suggested) by some persons that it would be wise to have an account of all your different funds—funds subscribed for benefit purposes, funds subscribed for what you call provident purposes, and funds subscribed for strikes; that the accounts of such societies should be so kept that you could see distinctly what was subscribed for strike purposes, what for benefit purposes, and what for provident purposes. Do you see any objection to establishing a plan like that?—No, I see no particular objection to that. Our fund is not based upon that principle, but an analysis could readily be made which would supply that information at any time, because you can see by the proportion paid in and the proportion paid out what relative bearing the one has upon the other.

19,826. I will tell you the real object of my question. Supposing that you have a large sum of money subscribed for what are called benefit purposes (I am not talking of your trade specially, but of any trade), there comes perhaps a pressure upon the strike fund and they have not money enough in that fund, then they transfer a large sum of money that has been subscribed for benefit purposes to strike purposes, and a provident-minded man who, looking forward for instance to the possibility that he might be sick and that he might be injured by accident, has subscribed for that purpose, finds that his funds have been taken away from the purpose to which he subscribed them and diverted to the strike fund. It is proposed by certain persons that that should be prevented, and that money subscribed for one purpose should not be applied to another. Do you see any objection to that?—Not so long as members choose to accept such rules. But in a purely trade fund we undertake to do nothing of the kind, we collect a fund which proposes to carry out certain objects, and we do not propose to guarantee a man any one of these benefits further than the funds will go. In a benefit society, however, I can readily understand that if a man subscribes for a special object that fund should be perfectly secured to him, and that it should not be invaded for any purpose foreign to that for which he subscribed.

19,827. You think that that is a rule to be laid down as a rule of morality in your view?—I think that that should be so in any benefit society, but I think that you could not apply the rule to a purely trade society.

19,828. Does not your society comprise both, is it not also a benefit society?—Not what you would fairly call a benefit society, the only benefit being the amount paid to unemployed men.

19,829. Have you not a sick fund?—No.

19,830. Nor a funeral fund?—No.*

19,831. Are you under Mr. Tidd Pratt's Bill?—No, not even registered, so that ours is purely a trade society.

19,832. (*Mr. Harrison.*) What would you say to a proposal put in this form, that in order to obtain legalization the obligation should be imposed, say, by Act of Parliament, that your society or union and others should divide themselves into two classes of subscribers, one to the benefit fund and the other to the fund for trade purposes, with or without the benefit purposes, so that those who went upon the benefit fund alone should have no right of coming upon the trade fund, or of receiving assistance from it; while, on the other hand, the trade fund, if it fell through, should never be supplemented out of the benefit fund, however high it was. Supposing it was made a condition of legalization that the union should be divided into those two great classes of subscribers, what would you say to such a proposal?—It would seem to me that the proposition there amounts to this, that no trade society shall embrace in its operations a benefit society.

19,833. (*Mr. Roebuck.*) The same society might be both. It might be a trade fund, or it might be a benefit fund, so you do not compel them to be one or the other, but you do compel them to keep their funds separate according to the proposition stated by Mr. Harrison?—You would then absolutely prohibit a trade society (for that would be what it would come to) if it desired to obtain legalization (that is, I suppose, legalization to protect its funds) from taking into account anything that savoured of a benefit society.

19,834. No; I think the proposition is that any moneys that were subscribed to the benefit fund should not be passed over to and taken by the other fund for its purposes; that if I subscribed 3*d.* a week for a benefit fund, that 3*d.* a week should really be confined to that fund, and though the strike fund might run low, it should not borrow from the other fund?—I quite admit that where any society proposes to adopt such a principle that would be correct enough; but in the general run of trade societies that would be impracticable.

19,835. Why is it impracticable?—My view of the case is this, that in a purely trade society you raise a certain fund which is to be available at all times in its full force for the primary object of that society. Unless it were so, a trade society would have no strength at all. But if, as you suggest, there should be a fund for this, and a fund for that, and a fund for the other thing, neither fund being invaded for the purposes of the other, that is simply dividing a trade society from a benefit society, and it would force the trade society into this, that they should collect moneys simply for the specific object of a trade society, and that they should never unite the two purposes of a benefit and trade society.

19,836. They may be worked by the same people; but the proposal is that the money subscribed for one purpose shall not be applied to the other. Do you see anything wrong in that, anything imperious or harsh?—I see nothing wrong in this that if a man gives his money for one purpose it should not be taken and applied to a totally different one. But a man who joins a society, such as ours, does it with a full understanding of the obligations implied, and that his subscriptions may be all absorbed by each or all of the heads that I have set forth in the abstract.

---

* The witness subsequently added the following statement: "In my evidence on Friday, July 24, I stated that we had "no system of death payments. I should, however, have "added, that a scheme had been proposed and adopted, which "would provide a benefit of the nature mentioned for the "future; the representatives of deceased members of five years' "standing being entitled to receive 5*l.*, and an additional 1*l.* for "each year's membership beyond being paid, till a maximum of "12*l.* is reached."

19,837. But the question which I want to put to you is, what would be your opinion if by law, for example, it was required that the funds should be kept separate?—I think it is quite possible that in such a case some of the purely trade societies would simply delete from their rules anything that bore upon merely benefit matters.

19,838. Would you see any harm in that?—I could see no harm if they chose to unite the other things—it would be merely keeping a double set of books.

19,839. (*Mr. Harrison.*) Is it not your experience that what is called a purely strike union without any benefit at all, one existing solely for trade purposes, is a weaker, a worse managed, and a less desirable institution than one which combines benefit with it?—I do not admit that as my own experience by any means.

19,840. (*Sir D. Gooch.*) Nor is your society at all a benefit society?—Not in the common acceptation of the term. We have no sick or burial fund whatever.

19,841. (*Mr. Harrison.*) But you have a widow and orphan fund, and a permanent sick fund, have you not?—Yes, but they are merely supported by those members of the trade society who choose to enter them, and not out of the trade fund.

19,842. (*Mr. Roebuck.*) In the case of those funds which you now speak of, are not the subscriptions paid to your society?—No. There is a fund called the Permanent Sick Fund, the members of which are permitted to hold their meetings at our house, because it is constituted of members of our own body; and so with the Widow and Orphan Fund; but they are distinct bodies, and their funds are distinct.

19,843. (*Sir D. Gooch.*) Supposing that the members of your trade thought it desirable to have a sick fund and a trade fund, and that the subscription to one was 3*d.* and to the other 4*d.*, we will suppose, you see no objection to having those subscriptions kept separate in the form of account, and applied to the particular purpose for which they were subscribed?—None whatever.

19,844. And that each man might have the option of being a member of both, or of one or of the other?—I see no objection to that further than this: I think that if you propose to unite it with a trade society it would not be capable of being carried out in that way, because a trade society generally insists that a man is answerable for all that may arise in the action of that trade society, and that he shall not receive one of the benefits, and deny his right to be called upon to pay for the others.

19,845. But would you not think it rather hard upon a man who may for many years have subscribed to a benefit society, with a view of having an annuity at a certain period of his life, that because the strike fund may be unable to meet the demand made upon it his capital should be all absorbed by something which he may not approve of in the shape of a strike for trade purposes?—Yes, and I do not believe that the London Society of Compositors would adopt any such principle. They are careful in adopting any benefit principle, because they believe that any such funds should be secured absolutely for the purposes intended.

19,846. (*Mr. Roebuck.*) As a practical point you say that you have two societies in fact, one a trade society, the other a benefit society; and that they are under different government?—These two benefit societies, of which I have spoken, are merely societies that have been established quite apart from the trade society by a few of the members. As to this permanent sick fund, for instance, I do not suppose that there are above 300 members in it.

19,847. Are there any members of that permanent sick fund who are not members of the trade fund?—No, I believe every one of them is in fact a member of the trade fund.

19,848. Is there not in fact a sort of moral pressure put upon them to join both?—No, none whatever.

19,849. If I, for example, being rather a curious-minded man, chose simply to be a member of the sick fund, and not to subscribe to the other, do you think there would be no notice taken of that by the men with whom I worked in the shop?—A man would be incompetent to join the sick fund unless he was a member of the trade fund. This is only established for the members of our society, and no persons are eligible for entrance into this permanent sick fund but those who are members of the other society.

19,850. (*Mr. Harrison.*) Would you be good enough to state what every ordinary member of your union who pays his subscriptions is entitled to?—Every ordinary member is entitled first to have his scale protected, that is to say, if he gets into any disturbance and we can protect him we do so with the whole force of the fund if necessary. Then he is entitled, if unemployed, to 13 weeks' relief during the year at the rate of 10*s.* a week.

19,851. (*Mr. Roebuck.*) I suppose you take into consideration why he is not employed; whether it is for a moral offence, for instance?—Yes, the rules provide for that. If he neglects work, or is unemployed through drunkenness or anything of that kind, I have power to deny him relief. Those are the chief benefits. There are various others, such as the library and reading rooms, and medical charities. Then we contribute a small amount to enable our members to obtain work in other places when work fails here, and also relieve members of other societies when they come to seek work here.

19,852. You do combine other purposes besides those of a strike fund in your society?—Yes. The strike fund is a totally distinct affair. If a man is on strike it arises on a dispute upon the scale.

19,853. (*Sir D. Gooch.*) Does your union extend at all to the provinces?—No, we have no connexion with them further than by correspondence.

19,854. There are unions of your trade at Manchester and other large towns, are there not?—Yes, it is known as the Provincial Typographical Association; that is the aggregation of towns all over the country.

19,855. (*Mr. Roebuck.*) Supposing that one of your members travels to find work and finds it at Leicester, he still continues a member of your society, does he?—Yes, he takes out his "travelling card." If he goes to Leicester his first duty is to go to the secretary of the branch of the Provincial Typographical Association there and deposit his card, and he gets in exchange a provincial card, and so long as he works in that town he holds that provincial card. If he leaves that town within a twelvemonth of depositing my card, he relifts my card, but if he goes beyond the twelvemonth he ceases to be a member of our society, and becomes a country member.

19,856. (*Mr. Harrison.*) Supposing that by alterations in the law it was brought about that your society were prevented from defending the scale, and from giving the other benefits of which you have just spoken out of a common fund, but were compelled to keep separate funds without any power of mutual accommodation between those funds, would you regard that as tantamount to a practical suppression of the society?—Yes, I should as far as the mere protection of the scale went.

19,857. (*Chairman.*) Supposing a proposal were made in your society to combine under one subscription benefits such as you have told us you provide under the head of trade funds, and also payments in case of sickness, and sums at death; would you approve of that proposal, which would involve this, that money subscribed for the purpose of obtaining a benefit in the shape of payment at death or in case of sickness, might be used for the purpose of supporting members of your society who are on strike in defence of your scale?—Generally, I do not approve of that. I think that a trade society should be distinct from a benefit society, for the reason that I believe that when a man pays for sick benefit, or that his representatives shall receive a certain amount at his death, or anything of that kind, the less such funds are placed in a state of

Mr. H. Self.
24 July 1868.

incertitude the better; they ought to be as certain as possible, and therefore if they were subjected to the exigencies of a trade society, that in my belief would be a fault, and the less a trade society has to do with a benefit society the better. I am aware that in our own body it is argued in this way, "If "you adopt certain other benefits it gives cohesion to "your society, which the purely trade society may "want." I believe that that has been asserted by some, but I do not entirely admit its correctness myself.

19,858. Then you find that the advantages in the trade purposes of your society are in themselves sufficient inducement to the members to join your society?—We have found that to be the case.

19,859. And you think that that ought to be the case in other trades?—Yes.

19,860. (*Sir D. Gooch.*) How many compositors are there employed in London?—I cannot say certainly how many are employed in London, but I have 3,300 on my books.

19,861. Does that form any large proportion of the whole?—I should say that it forms three-fourths of the whole.

19,862. How many of those are unemployed at present?—On Wednesday I stated that I had 127 signing my book. That is the only test that I can place before the Commission as to the number unemployed now. Every man unemployed is entitled upon signing—and only upon signing—my book within certain hours, to receive 10*s.* from me at the end of the week, and I had only 127 out of the whole 3,300 signing on that particular day. I did not look yesterday, but I believe that it was not so many.

19,863. (*Chairman.*) I think you said just now that the members of your society had the advantage of access to a library provided by the funds of your society?—We have spent during the 10 years on that library 891*l.* 8*s.* I may state that we had hitherto, like many other trade societies, held our meetings at public-houses, but many years ago we thought it high time to get rid of that, and therefore leased premises in the city, which we have held now for 14 years, and then established the library and reading room. The library at its establishment was handsomely contributed to by the late Prince Consort and a great many noblemen and gentlemen, and now we support it ourselves.

19,864. (*Sir D. Gooch.*) How many books does that library contain?—We have 6,000 volumes on our shelves at the present time. There is a great wear and tear of books, and we are compelled annually to place on our shelves new copies of the works most in use. Then the reading room itself costs us over 40*l.* a year.

19,865. You get your books cheap, I presume?—Yes, we get them at the trade price generally. Then there is a sum of 569*l.* 2*s.*, which we have given to the various hospitals in the 10 years. The committee is authorized from time to time by the general meeting to expend a certain amount in the direction of the public hospitals, to become, in short, an annual subscriber. We have a list of about 22 hospitals of the metropolis to which we annually subscribe.

19,866. To which you send your members?—Yes, in case they require letters of admission. There were one or two points named on the schedule sent to me on the last occasion from the Commission to which I wish to refer. For instance, the question of the mode of working piece or establishment. I wish to state to this Commission that we have the double system, and that in working we have no regulations at all to restrict a man in his working. If he goes on the establishment he is quite at liberty, although he has a fixed rate, to do as much work as he may be capable of performing or his master can expect.

19,867. Do you mean that he may vary the scale if he likes?—No. We have a fixed scale; we have agreed upon a minimum rate to be paid, but the man is not bound to produce only a certain amount of work as the result of that payment. With respect to the piece men, of course they are paid simply as the scale which has been handed in to the Commission directs.

19,868. (*Mr. Roebuck.*) A man on the establishment does not work on the scale?—Only so far as the scale settles the rate to be paid.

19,869. Supposing that I have two men on the establishment, and I agree to give them 1*l.* a week; then I give them whatever work comes in to me, and whatever I require they should do for me, they do; they do not work according to a scale, but do what they can and receive 20*s.* a week?—Yes, that is what I am showing. It has been objected that there are rules that bind a man not to produce more than a certain amount of work.

19,870. You have no rule of that sort, as I understand you?—No. With respect to the establishment hands, it was noted by Mr. Wyman, I think, that they were made use of to deprive the piece compositor of that work designated in the trade as "fat" work, more advantageous work than other work; and when the scale was too high, the result was that afterwards the work was put on the establishment, and that then the master would get the benefit of the difference. I quite agree in that. A man may have work which would pay him 9*d.* or 10*d.* an hour if he is on the piece; then the master puts him on the establishment, which only pays him slightly over 7*d.* an hour.

19,871. (*Sir D. Gooch.*) Then you make no objection to piece work?—No; contrary to the experience of most societies, we would rather have piece work than establishment work. The establishment work is practically reducing the value of our piece scale.

19,872. (*Mr. Roebuck.*) Did you ever in your experience find that men taken in that way upon the establishment were at all given the cold shoulder by their comrades?—Never.

19,873. (*Chairman.*) You do not consider that piece work has a tendency to reduce wages generally?—The very reverse of that in our experience. Having the piece scale we would rather work upon that piece scale.

19,874. (*Mr. Roebuck.*) Is there much difference in the artistic power of different compositors?—Yes.

19,875. One man can do more in an hour than another?—Yes.

19,876. But do you find that generally depend upon the general culture, or upon some peculiar dexterity of hand?—Dexterity of hand in very many cases. I have known some of the most ignorant compositors, "whips" as they are called in the trade, that is to say, they could pick up more stamps in a given time than some of the more cultivated men.

19,877. But I suppose you find that general education aids a compositor very much in acquiring his art?—No doubt about it. Of course the better educated a man is the less likely he is to pore over his copy to decipher a particular word, when possibly his own knowledge would naturally lead up to the word required.

19,878. What number of types would a man pick up in the hour?—They vary very much—where one man would only set 1,000 types in the hour, another can pick up 2,000.

19,879. Does the requisite art require a long time to learn, or can an intelligent man learn it in a short time?—I believe myself that it may be acquired in a much shorter time than is usually set out as the time of an apprenticeship, namely, seven years.

19,880. Then you have apprentices in your business?—Yes.

19,881. How long is the term of apprenticeship?—Seven years.

19,882. And you think that seven years is not required to learn that business?—I think not. My own private opinion is that five years would be amply sufficient.

19,883. Then a man taken as an apprentice for seven years becomes in the latter years of his apprenticeship, if he is a conscientious person, an exceedingly useful person to his master?—No doubt about that.

19,884. Have you any objection taken to the length

of the apprenticeship?—No. So far from any objection being taken, we insist upon it as the principle of admission to our society that a man must have served that term.

19,885. Have you ever thought on the other side of the question, that while you exclude those people from being compositors, you really give to the masters the benefit of an instructed person as an apprentice during the latter years of his apprenticeship?—Yes, and the question has been reasoned in that way by some members.

19,886. Does the apprentice work on scale?—Yes. Generally in the first year of his apprenticeship he is put on a stipulated amount, and then afterwards he is put on what are called his earnings. He may possibly be for two years on a certain fixed sum, and then after that he would be put on his earnings, that is to say, he would either receive one-half of his earnings, tested by our London scale, or two-thirds; it seldom goes beyond two-thirds, but in many instances they receive two-thirds in the last two years of their time.

19,887. (*Sir D. Gooch.*) You mean two-thirds of the journeyman's wages?—The apprentice would cast up his work just as a journeyman would, and then take one-half or two-thirds, as may be agreed, of his earnings on the scale.

19,888. (*Mr. Roebuck.*) So that the master would have an advantage by having a large number of apprentices?—Yes.

19,889. You do not make any objection to the number of apprentices?—No, we do not make any objection to the number of apprentices, although I have my doubts as to the value of a great number of apprentices; because I think that the wear and tear consequent on the proceedings of those young gentlemen, and the very little control exercised over them, outweighs any benefit to the master in many cases. But there is a class of small houses that we have chiefly to complain of in the question of apprentices. Their principle is this, they take any boy that can pick up stamps; he may be a runaway, and they accept him as what we call a "turnover," but there is no turning-over in the matter; they see nothing of his indenture; they simply ask him to pick up a certain number of stamps, and when they have done with him they turn him loose again. This class of apprentice is chiefly used by the printers of small papers and publications, the chief copy being reprint, which boys can very readily do.

19,890. Has there been any increase in the number of compositors consequent on the change in regard to the newspaper stamp and the increase of newspapers?—I should apprehend that that must be so, but I cannot say.

19,891. You have no statistics to show it?—No, we have no statistics. I have here a report of a committee that was appointed not very long ago to consider amongst other matters that question of apprentices, and we found that a great many evils exist with respect to the number. The fact is, these boys are taken in and are not taught their business at all; they are cast loose; there is no effort made in a great number of instances to teach them anything. Then they come out of their so-called time not printers at all. They are thrust upon the trade as journeymen, but have to pick up their instruction afterwards or become a burthen upon the journeymen.

19,892. (*Sir D. Gooch.*) Do you admit them into the union as apprentices?—No, we take no cognizance of them till they have served their time.

19,893. (*Mr. Roebuck.*) And nobody can be a member of your association without having served an apprenticeship?—I should be wrong in saying that they cannot, because our committees have power to relax the rules in certain cases. For instance, if we found that it was the custom in a country town (as it is in some towns in the West of England) to indenture a youth only for five years, if he was of age we should not let the fact of his having served only five years stand in the way of admission into our society.

19,894. Supposing that there was a heaven-born printer—there are cases, no doubt, of men who can acquire the art of printing without going through an apprenticeship—supposing for example that A. B. became a very famous compositor without going through an apprenticeship, would you allow him to enter your association?—I believe it would depend upon circumstances. I believe that he would not find any insuperable difficulty in the way of obtaining admission to our society. Of course, if a man of 24 or 25 who was a competent workman came to us and wished to join our society it would be absurd of us to say, "Because you cannot show that you have been a certain number of years an apprentice we will not admit you."

19,895. Do you prevent men who are not members of the union working in the shops where members of the union work?—No.

19,896. You have those who are not members of the union working harmoniously with those who are?—Yes.

19,897. You have no rule against that?—We have no trade rule of that sort at all.

19,898. Have you a trade practice against it?—Every house regulates that matter for itself.

19,899. Taking your own experience, do you know of any house where they make it uncomfortable for non-members to work with the unionists?—I do not know of one. I never heard the complaint.

19,900. Would you be likely to be the person to whom the complaint would come?—No, but I think that I should hear of it. The fact is that we have never had any difficulties there. If a man goes into a house, if it is what we call a society house, he is asked for his card. If he says that he has not one, he is told that it is a society house, and he will then generally come to me and get his card. I daresay he might imagine that unless he did that he would be put to some difficulty in the matter, but I never heard of any active interference taking place.

19,901. You know that you can make things uncomfortable to a man without active interference?—Yes; but I am aware that in some of the large houses there are society men and non-society men working together in harmony; so that the mere fact of a man's not holding a card is no absolute bar to his working with union men.

19,902. (*Sir D. Gooch.*) I think we heard that one of the houses in the city does not employ society men?—Mr. Wyman is under a misapprehension there. The house, which is Waterlow's, was closed in consequence of a dispute; but it has been re-opened, and at present I have 70 members there, and in that house, though the members of the society are in the majority, there are a great number of non-society men also, and they are working harmoniously together. All we seek for is that they are paid the London scale.

19,903. (*Mr. Roebuck.*) If men were to come in there and work for a less sum than the London scale, what do you think would happen?—In that case it would be a question between ourselves and the employers, not between ourselves and those men.

19,904. Supposing that an employer were to get a man to do for 15*s.* what you require 20*s.* for, and that he came into a shop where your men worked, what would be the upshot?—Most probably we should make a representation to the employer that he was paying below the London scale, and we should seek to bring him to an acceptance of the London scale, and if he failed to pay it in all its parts we should simply tell our own members to withdraw, that is, we should strike the house, because we should do that in the interests of the scale. We are bound to support not only ourselves but the fair masters also; indeed, a master has complained to me that we allowed for a time a house which generally paid less than the scale to receive assistance from us when pushed, and a man paying the London scale was placed at a disadvantage in making estimates for his work. That house to which I allude was ultimately closed, because the employer would not accept the London scale though he paid our members by it.

Mr. H. Self.
24 July 1868.

19,905. When you say that the "house was closed," did the man fail or did you take away your men?—We merely withdrew our men, that is what we call closing a house.

19,906. Did he go on?—I cannot say what he is doing now. I believe that he is in business, but a very short time ago he was in the Bankruptcy Court. Before I go I will hand in our five last balance sheets (*handing in the same*), which are complete in themselves, together with some reports and rules, amongst them a report on the apprenticeship question. Then too a good deal of talk arose at this table with reference to the arbitration case, and having at home the judgment of the court of error, I copied it out and I beg to hand it in (*handing in the same*).

19,907. (*Mr. Roebuck.*) Is that from some law report?—No, that is as it appeared in the public prints.

The following paper (referred to in the answer to question 19,805) was handed in by the witness.

ABSTRACT of INCOME and EXPENDITURE of the LONDON SOCIETY of COMPOSITORS for the Ten Years ending January 1868.

Years.	Income.	Relief to unemployed members.	Law and defence of Scale.	Travelling relief.	Executive Committee, &c.	Medical Charities.	Library and Reading Room.	Assistance to other trades.	Salaries, &c.	Sundry Disbursements during 10 years.

* This sum includes 150*l.* returned loan from the Printers' Almshouse Society

The witness withdrew.

Mr. J. Shreeve.

Mr. JOHN SHREEVE further examined.

19,908. (*Chairman.*) You are secretary, I think, to the Printing Machine Managers' Trade Society?—I am.

19,909. Do you wish to add anything to the evidence which you gave on the last occasion?—The principal reason why I wished to be examined to-day was to make some observations on the evidence of Mr. Pardon on Wednesday, in order to clear up two assertions that Mr. Pardon made. Before I do that, I will observe that there was a letter read by Mr. Wyman in reference to the work going into the country through the rise of the wages in London, and in that letter there was an extract which he read which stated that the machine managers of London were a most intolerant and despotic body. Of course I am aware that that is only the private opinion, or the expressed opinion, of the writers, but I wish to contradict that, or rather to explain that we cannot be such a despotic and intolerable body as the letter states.

19,910. (*Mr. Merivale.*) What they say in their letter is, that particular rules of yours have a tyrannical tendency; that is surely a different way of putting it?—All I wish to say is, although next December we shall have been established 29 years, we have never had a strike in our branch of the trade, that we have never had more than half a dozen houses closed in the trade in that 29 years, and have not more than two closed now.

19,911. (*Mr. Roebuck.*) What is the distinction you draw between "closed" and "struck"?—What we call closing a house is our men refusing to go there to work. When we close a house we never interfere with it.

19,912. When you strike what do you do?—A strike is generally a strike of the whole trade.

19,913. Is not that closing of the house striking it on your part?—Yes, on our part, but it does not affect the trade generally.

19,914. Surely there are strikes against individual houses?—We call that closing the houses.

19,915. You have had strikes in that sense?—Yes, perhaps a house with three or four machines in it. I merely mention this to remove the impression which that letter might cause. I do not think that the words in that letter will carry out a proper definition of our rules. Then Mr. Pardon in his evidence on Wednesday made a statement with reference to his son being brought into the machine room.
